Fasolo's earliest printed collections are of secular arias for voice and guitar. The first of these, *La barchetta passaggiera*, is now lost but a copy was in the possession of Oscar Chilesotti in the early 1900s. The title-page was missing and had been replaced with the handwritten title *Misticanza di vigna alla bergamasca*. This is, in fact, just the title of the first aria, but it convinced Chilesotti that the composer was a native of Bergamo and therefore a different composer from the Fasolo 'd'Asti'. Chilesotti left transcriptions of almost the entire collection of arias and these have now been published. Vogel had access to the print in Chilesotti's possession and wrote that it contained 21 arias. However, a manuscript copy extant at the home of Chilesotti's descendants in Bassano contains only 18 arias. The first aria, 'Misticanza di vigna alla bergamasca', is a comic composition where the characters sing in several foreign languages and various Italian dialects. The other arias set literary texts, two by Chiabrera, one by Guarini. The dialogue in Fasolo's second collection of secular arias, *Il carro di Madama Lucia*, follows the usage of the *commedia dell'arte*, beginning with the lament of Lucia. The resemblances with Francesco Manelli's *Luciata*, published in his *Musiche varie*, op.4 (Venice, 1636), and particularly the shared text of the first piece in each collection, caused some to believe that Fasolo and Manelli were the same person.

WORKS

SACRED

Motetti, 2–3vv, con una messa, 3vv [voci pari], bc (org), libro secondo, op.6 (Naples, 1635)

Annuale che contiene tutto quello, che deve far un organista per rispondere al choro tutto l'anno, op.8 (Venice, 1645); ed. R. Walter (Heidelberg, 1965–)

Arie spirituali morali, e indifferenti, 2–3vv ... nel fine alcuni dialoghi, 3vv ... e due arie, 1v, bc, 2 vn, op.9 (Palermo, 1659)

Magnificat, Beatus vir, 5vv, 1645[1]

Orats, all perf at Palermo, music lost: Il Costantino (P. Corsetto), 1653; L'Amazon d'innocenza, 1656; Il mondo vilipeso, 1657; Da la città felice, 1660; L'Empireo festeggiante, 1661; L'esequie di Santa Rosalia, 1664

SECULAR

La barchetta passaggiera di diversi sonatori e cantori, 1–3vv, gui, op.3 (Rome, 1627), facs. of a MS transcr. by O. Chilesotti (Lucca, 1994)

Il carro di Madama Lucia, et una serenata in lingua lombarda ... et altre arie, e correnti francese, 1–3vv, gui (Rome, 1628)

Se desiate, o bella, aria, 1629[9]

ELEANOR SELFRIDGE-FIELD/MARIANGELA DONÀ

Fassbaender, Brigitte (*b* Berlin, 3 July 1939). German mezzo-soprano. She studied with her father, Willi Domgraf-Fassbänder, at the Nuremberg Conservatory, and made her début at the Staatsoper, Munich, in 1961 as Nicklausse. After playing Hänsel, Carlotta (*Die schweigsame Frau*), and the various pages and maids of the repertory, she scored a great success in 1964 as Clarice (Rossini's *La pietra del paragone*). Later her roles included Gluck's Orpheus, Sextus (*La clemenza di Tito*), Cherubino, Dorabella, Carmen, Azucena, Eboli, Brangäne and Marina. Her débuts at Covent Garden (1971) and the Metropolitan Opera (1974) were as Octavian, a part in which her dashing looks and her warm, darkly attractive tone won her particular praise, as it did for her wicked Orlofsky. In 1973 she sang Fricka (*Das Rheingold*) at the Salzburg Festival and in 1976 created Lady Milford in von Einem's *Kabale und Liebe* in Vienna; she has also appeared in San Francisco, Paris and Japan. Charlotte (*Werther*), Mistress Quickly, Countess Geschwitz, Clytemnestra, the Nurse (*Die Frau ohne Schatten*) and Clairon (*Capriccio*) were among the successful roles of her later career. To every one she brought an intensity of acting and utterance all her own, as can be heard in her recordings of Dorabella, Sextus, Hänsel, Charlotte (live from Munich), Geschwitz (twice) and Orlofsky. Fassbaender was also one of the most perceptive and original interpreters of lieder, her recordings of *Winterreise* and *Schwanengesang* psychologically searing in her own unique, idiosyncratic manner. She retired from public performance in 1995. From the early 1990s she has been increasingly active as an opera director.

Brigitte Fassbaender as Octavian in Richard Strauss's 'Der Rosenkavalier', Covent Garden, London, 1975

Fassler, Margot E(lsbeth) (*b* Oswego, NY, 2 July 1949). American musicologist. She earned the BA at SUNY and the MA in music history at Syracuse University (1978). At Cornell University she received the MA (1980) and the PhD in medieval studies with a dissertation on musical exegesis in medieval sequences (1983). She taught at Mills College, Oakland, CA (1982–3), Yale (1983–9) and Brandeis (1989–94). Returning to Yale in 1994, she was appointed director of the Yale Institute of Sacred Music; she holds joint appointments as professor of musicology at the Yale School of Music and professor of music and religion at the Yale Divinity School. Her research focusses on medieval chant and liturgy, medieval drama and the liturgical arts. For her publications she has received the Elliot and John Nicholas Brown Prizes of the Medieval Academy of America (1985, 1997) and the Otto Kinkeldey Award of the American Musicological Society (1994).

PAULA MORGAN

Faster, Otto. *See* FETRÁS, OSCAR.

Fäsy, Albert Rudolph (*b* Zürich, 1 April 1837; *d* Konstanz, 5 May 1891). Swiss composer. His father was a wealthy merchant and politician. Fäsy studied in Zürich with Franz Abt and with Wagner's friend Alexander Müller, and apparently became acquainted with Wagner himself. He continued his studies at the Leipzig Conservatory (1856–9) and lived in Vienna and Dresden before returning to Zürich in 1862. In 1868 he moved to Dresden, and he was apparently resident in Kreuzlingen in 1872; from 1879 he was in Konstanz. Fäsy composed several large-scale orchestral works of Lisztian scope, including *Columbus*, a dramatic suite. He also wrote a symphonic poem, *Sempach*, songs and piano pieces. Although none of these was performed in his lifetime, his scores display an unusual inventiveness of orchestration. Manuscripts of his works are in the Zentralbibliothek in Zürich.

CHRIS WALTON

Fatius, Anselmus. *See* DI FAZIO, ANSELMO.

Fattorin da Reggio. *See* VALLA, DOMENICO.

Fattorini, Gabriele (*b* Faenza; *fl* 1598–1609). Italian composer. He was a member of the Camaldolite monastery of SS Trinità, Faenza, before 1598. From 1598 to 1601 he was *maestro di cappella* at Carceri Abbey, near Este, and between 1602 and 1604 he was in Venice, probably in the service of another Camaldolite monastery. In 1609 he was *maestro di cappella* at Faenza Cathedral. Fattorini's *Sacri concerti* (1600) are among the first works to make idiomatic use of the basso continuo, preceding as they did Viadana's *Cento concerti ecclesiastici* by two years. In these concertato pieces sections for solo voice

accompanied by the organ are interspersed with duets in which the organ doubles the bass voice. Their simple style renders them readily accessible to performers; they are characterized by conjunct melodic motion, linear rhythms, well-prepared dissonances and long-held bass notes denoting root-position chords. The continuo line is unfigured, a fact criticized by Banchieri, who nevertheless had praise for Fattorini's compositions. The *Sacri concerti* were reprinted twice in eight years; the second edition (1602) contains passages – mostly triple-meter refrains – for ripieno voices alone or with instruments, with a view to double-choir performance. The resulting contrast between chorus and solo foreshadows similar features in the works of Giovanni Croce and Giovanni Gabrieli.

DENIS ARNOLD/MARCO GAIO

Fau bordon [fauburdum] (Fr.). *See* FAUXBOURDON.

Faugues [Fagus], **Guillaume** (*fl c*1460–75). French composer. He was a chaplain at the Ste Chapelle, Bourges, in 1462–3, and was again considered for a chaplaincy there in 1471. In 1462 he also served briefly as master of the choirboys, having among his pupils the young Philippe Basiron, and almost certainly meeting Ockeghem, who visited Bourges in that year.

Although Faugues was mentioned among 13 *magistri cantilenarum* in Compère's *Omnium bonorum plena* (*c*1470), his only surviving works are five masses (more than left by most composers of his time). His achievements in this genre earned him the praise of Tinctoris, who singled out *Missa 'Vinus vina vinum'* as an outstanding example of compositional *varietas*, and ranked Faugues among the composers whose works 'are so redolent with sweetness that . . . they are to be considered most worthy not only for men and demigods, but even for the immortal gods themselves'. It is not always easy to see the grounds for Tinctoris's excitement, yet Faugues's masses were widely distributed in the 1460s and 70s, and he seems to have been a major influence on Johannes Martini (who may have played a part in the revision of Faugues's *Missa 'L'homme armé'*).

All five masses are based on secular cantus firmi. These are treated with a certain amount of flexibility, although the original outlines and rhythms are generally retained, so that reconstruction seems feasible even when the model has not survived independently. Faugues preferred to state his tenors in long note values, which gave him the opportunity to introduce three-part imitations in the surrounding parts. In masses based on monophonic tunes (*L'homme armé*, *La basse danse* and *Vinus vina vinum*) such imitations are sometimes derived from motifs in the tenor (especially in *Missa 'L'homme armé'*, whose cantus firmus is treated canonically in the two middle parts), but are more often freely invented. In masses based on polyphonic songs (*Le serviteur* and *Je suis en la mer*), Faugues rarely missed an opportunity to adopt and expand points of imitation that were (or must have been) present in the model. Partly on account of this latter procedure he has been accorded a prominent place in the early history of parody. A more important reason, however, is the fact that the top voice of *Missa 'Le serviteur'* persistently paraphrases the top voice of the song at corresponding places of the tenor.

The artistic significance of these early 'parody' procedures should not be overestimated. While the song's top voice is indeed clearly audible for much of the mass, it is often presented in doubled note values (to match the corresponding notes of the tenor), which yields the general impression that the model – itself a work of beautiful concision – is being temporally 'drawn out'. The expansion of the original three-part imitations to four-part imitations in the mass does not actually improve this (even when the motifs are quoted in their original note values), since the points of imitation are thereby made to last longer as well. On the whole, *Missa 'Le serviteur'* persists in its dependence on the model in so dogged and uneventful a manner that the general result is one of predictability rather than *varietas*.

It is open to question whether Faugues's penchant for structural repetition (the repeat of extended passages or sections across movements) reflects artistic design rather than mere expediency: it seems to contradict Tinctoris's principle of variety. (The revision of *Missa 'L'homme armé'* was in fact a reordering, by which the threefold repeat of the second Kyrie was eliminated, and the number of repeats for any section reduced to one.) The variety praised by Tinctoris is evident in the *Missa 'Vinus vina vinum'*, yet in comparison with the more fluent writing of Du Fay or Busnoys the alternation of different stylistic devices seems somewhat studied and methodical, and Faugues never quite overcame the ponderousness that characterized so much of his work. However, the late *Missa 'Je suis en la mer'*, arguably his finest and most elegant setting, is a genuinely varied work that seems to emulate the speed and fluency commanded by Faugues's more gifted contemporaries – composers whom he could inspire with his ideas more than with their execution.

ROB C. WEGMAN

Faul bordon [faul wordon, faulx bourdon] (Fr.). *See* FAUXBOURDON.

Fauquet, Joël-Marie (*b* Nogent-le-Rotrou, 27 April 1942). French musicologist. He studied the plastic arts before devoting himself to music (the piano, harmony and counterpoint) and musicology. He graduated in 1976 from the Ecole Pratique des Hautes Etudes with a dissertation on Alexis Castillon, written under the supervision of Lesure, and was awarded the doctorate by the Sorbonne in 1981 for his dissertation entitled *Les sociétés de musique de chambre à Paris de la Restauration à 1870*. He became a researcher at the CNRS in 1983. His main interest lies in the social history of music, and his research has been concentrated on French music in the 19th century, particularly chamber music and the work of Berlioz, Lalo and Franck and his pupils.

JEAN GRIBENSKI

Faure, Antoine. *See* FAVRE, ANTOINE.

Fauré, Gabriel (Urbain) (*b* Pamiers, Ariège, 12 May 1845; *d* Paris, 4 Nov 1924). French composer, teacher, pianist and organist. The most advanced composer of his generation in France, he developed a personal style that had considerable influence on many early 20th-century composers. His harmonic and melodic innovations also affected the teaching of harmony for later generations.

1. Life. 2. Style. 3. Works.

1. LIFE. He was the youngest of six children (one a daughter), born to Toussaint-Honoré Fauré (1810–85) and Marie-Antoinette-Hélène Lalène-Laprade (1809–87), a member of the minor aristocracy. Gabriel was sent to a foster-nurse in the village of Verniolle for four years. In 1849 his father was appointed director of the Ecole Normale at Montgauzy, near Foix; Fauré later recalled that from his early childhood he spent hours playing the harmonium in the chapel adjoining the school. An old blind lady, who came to listen and give advice, told his father about his gift for music; a certain Bernard Delgay shares the honour of having been his first music teacher. During the summer of 1853 Dufaur de Saubiac, official at the Paris Assemblée, heard him and advised his father to send him to the Ecole de Musique Classique et Religieuse, which Louis Niedermeyer had just established in Paris. After a year's reflection, Toussaint-Honoré decided that the Ecole Niedermeyer, as it was later called, could prepare his son for the profession of choirmaster while cultivating his natural gifts. He took Gabriel to Paris (a three-day journey) in October 1854.

Fauré remained a boarder at the Ecole Niedermeyer for 11 years, during which he was helped by a scholarship from the Bishop of Pamiers. His studies, which had a crucial influence on his style, were chiefly of church music (plainsong, the organ and Renaissance polyphonic works) since the pupils were to become organists and choirmasters; the musical training was supplemented by serious literary studies. Fauré was taught the organ by Clément Loret, harmony by Louis Dietsch, counterpoint and fugue by Xavier Wackenthaler and the piano, plainsong and composition by Niedermeyer himself. Niedermeyer's death (in March 1861) led to Fauré's fortunate encounter with Saint-Saëns, who now took the piano class. He introduced his pupils to contemporary music, which was not part of the school syllabus, including that of Schumann, Liszt and Wagner, and his teaching soon extended beyond the piano to composition. Fauré's first surviving works, *romances* on verses by Hugo and several piano pieces, date from this period (fig.1). His student career at the Ecole Niedermeyer was completed on 28 July 1865: he gained *premiers prix* in composition (for the *Cantique de Jean Racine* op.11), and in fugue and counterpoint. He had previously been awarded prizes for solfège (1857), harmony (1860) and piano (1860, with a special prize in 1862), and two literary prizes (1858 and 1862).

1. Gabriel Fauré, aged 19, in the uniform of the Ecole Niedermeyer

Fauré's first appointment was as organist of St Sauveur at Rennes, where he remained from January 1866 to March 1870. Austere provincial life did not suit him, and he scandalized the local priest by accompanying the church scene of Gounod's *Faust* at the theatre. Nevertheless he found some friendly families to whom he gave lessons. The chronology of his output to 1875 is imprecise. His years in Rennes were apparently a period of intensive composition, when he wrote some piano pieces for his pupils, various attempts in symphonic form, church music and his first songs, in which he was clearly searching for a personal style.

On returning to Paris he was immediately appointed assistant organist at the church of Notre-Dame de Clignancourt, where he remained for only a few months. During the Franco-Prussian War he enlisted (16 August 1870) in the first light infantry regiment of the Imperial Guard, from which he went to the 28th temporary regiment; he took part in the action to raise the siege of Paris. On being discharged (9 March 1871) he was appointed organist at the Parisian church of St Honoré d'Eylau. During the period of the Commune he stayed at Rambouillet, and he spent the whole summer in Switzerland, where he taught composition at the Ecole Niedermeyer, which had taken refuge in Cours-sous-Lausanne. On his return to Paris he was appointed assistant organist at St Sulpice (October 1871) and became a regular visitor at Saint-Saëns's salon, where he met all the members of Parisian musical society; in 1872 Saint-Saëns introduced him into the salon of Pauline Viardot. His friends included d'Indy, Lalo, Duparc and Chabrier, with whom he formed the Société Nationale de Musique on 25 February 1871. The subsequent meetings of this society were the occasions of many of his works' first performances.

In January 1874 he left St Sulpice to deputize for Saint-Saëns at the Madeleine during his absences. When Saint-Saëns resigned in April 1877, Théodore Dubois succeeded him as organist and Fauré became choirmaster. In July he became engaged to Marianne Viardot (daughter of Pauline) with whom he had been in love for five years, but the engagement was broken off in October by the girl, who felt only affection mixed with fear for her fiancé. Some friends, the Clerc family, helped him recover. It was about this time that he composed the three masterpieces of his youth: the First Violin Sonata, the First Piano Quartet and the Ballade for piano. A period of musical travels followed. In Weimar (December 1877) he met Liszt, who was performing Saint-Saëns's *Samson et Dalila*; he presented his Ballade op.19, which Liszt said he found too difficult to play. But his main concern was to see Wagner productions, and this led him to Cologne (April 1879) for *Das Rheingold* and *Die Walküre*, and to Munich for the *Ring* (September 1879), *Tannhäuser* (July 1880), *Die Meistersinger* (July 1880 and September 1881), *Lohengrin* and *Tristan* (September 1881) and to London for the *Ring* (May 1882). He was fascinated by Wagner but, almost alone among his contemporaries, did not come under his influence. He met Liszt again in July 1882 in Zürich.

On 27 March 1883 he married Marie Fremiet, the daughter of a highly regarded sculptor. Although he always retained great affection for his wife, her withdrawn, bitter and difficult character, coupled with his keen sensuality and desire to please, explain his infidelities. They had two sons, Emmanuel (*b* 29 Dec 1883; *d* 6 Nov 1971) and Philippe (*b* 28 July 1889; *d* 19 Nov 1954). To support his family Fauré spent most of his time in tedious and futile activities, such as organizing the daily service at the Madeleine (which he called his 'mercenary job'), and giving piano and harmony lessons. His music brought him almost nothing because his publisher bought his songs, with full copyright, for 50 francs each. Throughout his life he was able to compose mainly during the summer holidays.

His principal compositions of this period were piano pieces and numerous songs, including those of his second collection (1878–87). He also attempted some large-scale compositions, but disowned them after a few performances, keeping manuscript copies of certain movements, from which he later re-used the themes. The works involved were the Symphony in D minor op.40 (his second symphony, taking into account that in F op.20, written in early youth and also rejected), and the Violin Concerto op.14, of which he completed only two movements. Such severe self-criticism is regrettable in that his wider reputation has suffered from the lack of large-scale works in his published output, despite the existence and enormous popularity of his Requiem op.48. The success of this work cannot be explained without reference to the religious works which preceded it: the *Cantique de Jean Racine* (1865), some motets and (particularly) the touching *Messe basse* for female voices, written in 1881 during a holiday at Villerville on the Normandy coast. The Requiem was not composed to the memory of a specific person but, in Fauré's words, 'for the pleasure of it'; it was long unknown that the work took over 20 years to assume its present form, the composition extending

from 1877 to about 1893, and the re-orchestration for full ensemble being completed only in 1900. A restoration of the version that evolved between 1888 and 1892, for small orchestra (without violins and woodwind), was published only in 1995. The other important work of this period is the Second Piano Quartet op.45. And for the Théâtre de l'Odéon Fauré composed two sets of incidental music: *Caligula* op.52 (1888) for the tragedy by Dumas *père*, and *Shylock* op.57 (1889) for a play by Edmond de Haraucourt after Shakespeare. He valued incidental music as a form, writing to Saint-Saëns in 1893 that it was 'the only [form] which is suited to my meagre talents'. The symphonic suite from *Shylock* is seldom played, despite the scarcity of symphonic works by Fauré.

Until he was about 40 Fauré retained his youthful liveliness and gaiety, was easily satisfied and happy with his friends and was without any marked ambition or self-importance. The breaking of his engagement to Marianne Viardot, however, brought out a certain violence in his temperament in spite of his apparent good nature. In the years 1880–90 he often suffered from depression, which he himself called 'spleen'. Too many occupations prevented him from concentrating on composition; he was disturbed about writing too slowly and dreamt of vast works – concertos, symphonies and innumerable operatic projects in collaboration with Verlaine, Bouchor, Samain, Maeterlinck, Mendès and others. As the years passed he despaired of ever reaching the public and was angry with performers who played 'always the same eight or ten pieces'. His jealousy (quickly forgotten) was aroused by the popularity of Théodore Dubois, Charles Lenepveu, Charles-Marie Widor and Massenet, and his taste for musical purity and sobriety of expression made him condemn the Italian *verismo*.

The 1890s were a turning-point in his life and work; he began to realize some of his ambitions: in May and June 1891 he was received in Venice, with a group of friends, by the Princesse Edmond de Polignac, then Princesse de Scey-Montbéliard. This delightful visit, prolonged by a brief stay in Florence, occasioned the *Cinq mélodies* op.58 on poems by Verlaine; these directly anticipate *La bonne chanson*. It was also the period of his happy liaison with Emma Bardac, the future second Mme Debussy, to whom he dedicated *La bonne chanson* and the *Salve regina*; to her daughter he dedicated *Dolly* (1894–6), the collection for piano duet. In May 1892 he succeeded Ernest Guiraud as inspector of the national conservatories in the provinces; this post relieved him of his teaching but obliged him to make tedious journeys across the whole of France. On 2 June 1896 he became chief organist at the Madeleine, and in October he succeeded Massenet as teacher of the composition class at the Conservatoire. For Fauré this was an act of retribution, as he had been refused the post four years earlier when the director, Ambroise Thomas, thought him too revolutionary, even though the Institut had awarded him the Chartier Prize for chamber music in 1885; he had won it again in 1893. His pupils at the Conservatoire included Ravel, Florent Schmitt, Koechlin, Louis Aubert, Roger-Ducasse, Enescu, Paul Ladmirault, Nadia Boulanger and Emile Vuillermoz.

Now over 50, Fauré was becoming known. He had previously been esteemed only by a restricted group of friends and musicians in the Société Nationale de Musique; and this was not fame, for his music was too modern to appear in a concert where even Wagner was considered advanced. He was not, however, a stereotype of the rejected artist, for he was much fêted in the grand salons, such as those of Mme de Saint-Marceaux and of the Princesse Edmond de Polignac, which were then the stronghold of the avant garde. Music was important to a society passionately interested in 'art' and its fashions. Proust, who knew Fauré, was, as he once wrote to him, 'intoxicated' by his music, and drew his inspiration for the descriptions of Vinteuil's music from it. Both Proust and Fauré have been criticized for the brilliant but superficial company they kept. But Fauré was not snobbish, and moved in these circles through friendship and also out of necessity, since the salons offered the best means of making his music known. Most of his friends probably admired his personality more than his music, which was considered too complicated. He was always so unsure of the real value of his compositions that he submitted them to the judgment of colleagues before publication; and he needed this private recognition to encourage him to continue. As a pianist he was not a virtuoso, such as his friend Saint-Saëns was, but he was an admirable performer of his works, as is shown by a dozen player piano rolls that he recorded for the firms Hupfeld and Welte-Mignon between 1904 and 1913. The rolls of the *Romance sans paroles* no.3, Barcarolle no.1, Prelude no.3, *Pavane*, Nocturne no.3, *Sicilienne*, *Thème et variations* and *Valses-caprices* nos.1, 3 and 4 survive, and several rolls have been re-recorded on disc.

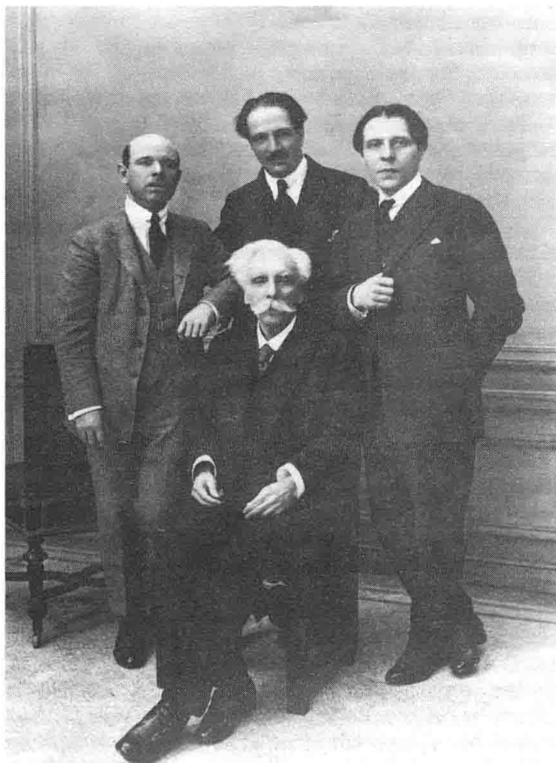
He often went to London for private festivals organized by loyal friends like the Maddisons, Frank Schuster and John Singer Sargent (who painted his portrait); he returned almost every year between 1892 and 1900, and so acquired the commission to write incidental music for the English translation of Maeterlinck's *Pelléas et Mélisande* (1898). The original version for small orchestra was orchestrated by Koechlin, as Fauré was too overworked; Fauré drew from it a Suite op.80, which is his symphonic masterpiece. Saint-Saëns, who urged Fauré to write large-scale works, got him a commission for a lyric tragedy for the amphitheatre at Béziers. This work, *Prométhée*, being intended for open-air performance, is scored for three wind bands, 100 strings and 12 harps, choirs and solo voices. The success of the productions on 27 and 28 August 1900 was immense; the work was revived there on 25 and 27 August 1901, and in Paris on 5 and 15 December 1907. With the help of his favourite pupil Roger-Ducasse, Fauré completed a reduction of the original orchestration for normal symphony orchestra, a version introduced at the Paris Opéra on 17 May 1917.

From 2 March 1903 to 1921 Fauré was music critic of *Le Figaro*. He was not a natural critic and was prompted mainly by need to accept a duty that he fulfilled with some inner torment. His natural kindness and broad-mindedness predisposed him to see the positive aspects of a work, and he had no inclination to polemics. When he disliked a composition, he preferred to remain silent. His criticisms are not brilliant, but interesting to those who know how to read between the lines.

The year 1905 marked a crucial stage in his career: in October he succeeded Théodore Dubois as director of the Conservatoire, where he initiated a series of important reforms that led to the resignations of certain reactionary professors. In carrying out his aims he showed such astonishing resoluteness that his adversaries nicknamed him 'Robespierre'. The directorship made him better off,

though not rich (he had never sought wealth), and it also made him suddenly famous: his works were performed at important concerts, and on 13 March 1909 he was elected to the Institut, succeeding Ernest Reyer (he had been passed over in favour of Théodore Dubois in 1894 and Lenepveu in 1896). His official position did not prevent him from breaking with the established Société Nationale de Musique in the same year and accepting the presidency of a dissident society founded by the young musicians evicted by the Société Nationale, nearly all of whom were his pupils (fig.2). Also his late recognition was overshadowed by growing deafness, and, still worse, the general weakening of his hearing was compounded by a systematic distortion that produced, he said, a 'veritable cacophony': high sounds were heard a 3rd lower, low sounds a 3rd higher, while the middle of the range remained correct.

The responsibilities of the Conservatoire left him too little time to compose, and it took him five summers to finish the lyric drama *Pénélope*, which the singer Lucienne Bréval had persuaded him to write in collaboration with René Fauchois. It was begun in 1907, set aside in 1910, and finished just in time for the première (inadequately rehearsed by Raoul Gunsbourg) in Monte Carlo on 4 March 1913. The Paris première on 10 May 1913 was a triumph, but the run was terminated by the bankruptcy of the Théâtre des Champs-Elysées the following October, and the revival at the Opéra-Comique was delayed for five years by World War I. The work never recovered from this unhappy beginning, despite its musical qualities. The period of *Pénélope* was also that of great piano pieces (Nocturnes nos.9–11, Barcarolles nos.7–11) and songs (the cycle *La chanson d'Eve* op.95, to verses by Van Lerberghe). In autumn 1910 Fauré undertook his most extended journey. Concerts were organized in St Petersburg, where he had a triumphant reception, Helsinki and Moscow. For his composing holidays he generally returned to Switzerland, where he found the calm he needed. *Pénélope* was composed at Lausanne and Lugano, while the gardens of the Italian lakes inspired *Paradis*, the first song of *La chanson d'Eve*, written at Stresa.



2. Founding committee of the Société Musicale Indépendante, 1910, with (standing, from left to right) Louis Aubert, A.Z. Mathot, Ravel, André Caplet, Charles Koechlin, Emile Vuillermoz, Jean Huré, and (seated) Fauré and Jean Roger-Ducasse

During the war Fauré remained in Paris as head of the Conservatoire, giving up his visits to Switzerland in favour of Evian or the south of France, which he loved. The years of the war, with the years 1894–1900, were the most productive of his life. His compositions of this period are among the most powerful in French music, having unusual force and even violence; they include the Second Violin Sonata (op.108), the First Cello Sonata (op.109), the *Fantaisie* for piano and orchestra op.111 and a second song cycle on poems by Van Lerberghe, *Le jardin clos*. During this productive period, which continued without interruption until 1921, he revised for the Durand editions the complete piano works of Schumann (one of his favourite composers) and, in collaboration with Joseph Bonnet, the organ works of Bach.

In October 1920 he retired from the Conservatoire. Having reached the age of 75, he could at last devote himself entirely to composition, and produced a series of works that crown his whole output: the Second Cello Sonata, the Second Piano Quintet, the song cycle *L'horizon chimérique* and the Nocturne no.13. He had by now become a celebrity: in 1920 he was awarded the Grand-Croix of the Légion d'Honneur (exceptional for a musician), and on 20 June 1922 his friend Fernand Maillot organized a national tribute at the Sorbonne, where noted performers of his music played to an enthusiastic gathering in the presence of President Millerand. His last two years were overshadowed by declining health, with increasing symptoms of sclerosis, poor breathing (due to heavy smoking) and deafness. In 1922 and 1923 he spent long months in his room while his work was acclaimed everywhere; *Pénélope* was staged in Antwerp and in the Roman theatre at Orange, and *Prométhée* at the Théâtre des Champs-Elysées, where Mengelberg had just conducted the Requiem. To the end, however, he made himself available to others, particularly to such young musicians as Arthur Honegger, who with other members of Les Six fervently admired him. His creative faculties remained intact, but were easily tired; however, the two works he wrote between 1922 and 1924 – the Piano Trio and the String Quartet, his first attempt in that form – were masterpieces.

All witnesses agree that Fauré was extraordinarily attractive; he had a dark complexion (which contrasted with his white hair), a somewhat distant expression of the eyes, a soft voice and gentle manner of speech that retained the rolled provincial 'r', and a simple and charming bearing. His eventual fame did not modify his simple habits; he remained sympathetic towards others and clearsighted in his judgments. In old age he attained a kind of serenity, without losing any of his remarkable spiritual vitality, but rather removed from the sensualism and the passion of the works he wrote between 1875 and 1895.

2. STYLE. Fauré's stylistic development links the end of Romanticism with the second quarter of the 20th century, and covers a period in which the evolution of musical language was particularly rapid. When Fauré was born,

3. *Gabriel Fauré (seated) with (from left to right) Casals, Thibaud and Cortot*

Berlioz was writing *La damnation de Faust*; he died in the age of *Wozzeck* and early Shostakovich. He nevertheless remained the most advanced figure in French music until the appearance of Debussy's *Pelléas et Mélisande*. As early as 1877–9 he was using some elements of the whole-tone scale (the *Sérénade toscane*) and anticipated Impressionism (Ballade op.19). Furthermore, he developed an immediately identifiable style and (even rarer) created a personal musical language.

His music may be divided into four styles, roughly corresponding to chronological periods, which represent his responses to the musical problems of his time. After early attempts (1860–70) in the Classical manner of a follower of Haydn and Mendelssohn, his first personal style shows him assimilating the language and aesthetics of Romanticism; he initially set poems by Hugo and Gautier, but he also set Baudelaire, and his best passages are either sombre (*La chanson du pêcheur*, *L'absent*, *Elégie*) or express rapt emotion (*Le voyageur*, *Automne*, the chorus *Les djinns*). His second period was that of the Parnassian poets, and coincided with his discovery of Verlaine, as in *Clair de lune* (1887), which accorded with his sprightly yet melancholy temper. He also sometimes yielded to the gracefulness of the '1880s style' – melodious, tortuous and languid – which he used in certain piano pieces and the works for women's chorus (such as *Caligula*). The success this music achieved in its own time has since damaged his reputation. In the 1890s his third style matured with an accession of bold and forceful expressiveness; the great piano works and *La bonne chanson* have real breadth. This expansiveness is particularly evident in the lyric tragedy *Prométhée*, which sums up all the facets of his style at the turn of the century: delicacy and profundity, but also measured force. In the style of his last period, he pursued a solitary and confident course, ignoring the attractive innovations of younger composers and the beguiling elements of his 1880s style. The increasing economy of expression, boldness of harmony and enrichment of polyphony give his work of this period an authentic place in 20th-century composition; the expressive dissonances of the Nocturne no.11 (ex.1), the whole-tone writing in the Impromptu no.5 (ex.2) and such highly chromatic music as the Scherzo of the Second Piano Quintet are representative.

In spite of Fauré's continuous stylistic development, certain traits characterize nearly all his music. Much of his individuality comes from his handling of harmony and tonality. Without completely destroying the sense of tonality, and with a sure intuitive awareness of what limits ought to be retained, he freed himself from its restrictions. Attention has frequently been drawn to the rapidity of his modulations: these appear less numerous if they are viewed according to the precepts of Fauré's harmonic training, contained in the *Traité d'harmonie* (Paris, 1889) by Gustave Lefèvre, Niedermeyer's son-in-law and successor. This harmonic theory can be traced back to the work of Gottfried Weber, whose ideas had been disseminated in France by Lefèvre and Pierre de Maleden, the teacher of Saint-Saëns. Their concept of tonality was broader than Rameau's classical theory, since for them foreign notes and altered chords did not signify a change in tonality, 7th and 9th chords were no longer considered dissonant, and the alteration of the mediant was possible without a change of tonality or even

Ex.1 Nocturne no.11, op.104 no.1

Ex.2 Impromptu no.5, op.102

of mode. So a student of Fauré's harmony (with its delicate combination of expanded tonality and modality) must consider entire phrases rather than individual chords. Thus the opening of *Les présents* op.46 no.1 (ex.3) is in F, despite its hints of A♭. The mobility of the

Ex.3 *Les présents* op.46 no.1

3rd (A♭ to A♮) and the harmonic alternations are typical of Fauré's style. His familiarity with the church modes is reflected in the frequently modal character of his music, particularly in the elision of the leading note (the E is flattened in ex.3) facilitating both modulation to a neighbouring key and the pungent use of the plagal cadence (ex.4). But the flexibility of the modulations to remote keys and the sudden short cuts back to the original key are unprecedented aspects of Fauré's originality.

Fauré's harmonic richness is matched by his melodic invention. He was a consummate master of the art of unfolding a melody: from a harmonic and rhythmic cell he constructed chains of sequences that convey – despite their constant variety, inventiveness and unexpected turns – an impression of inevitability. The long entreaty of the 'In paradisum' in the Requiem is a perfect example of such coherence: its 30 bars form one continuous sentence. In Fauré's music the relationship between harmony and melody is complex; often the melody seems to be the linear expression of the harmony, as in ex.4.

Close study of Fauré's use of rhythm reveals certain constant features of his style, in particular his predilection for fluidity within bars; his association of duple and triple time and subtle use of syncopation link him with Brahms (ex.5). Yet Fauré never emphasized rhythmic values; once a rhythmic formula was established, he tended to maintain it for long passages, thus incurring the charge of monotony. The idea of line was too important for him to tolerate sudden interruption in the manner of Beethoven.

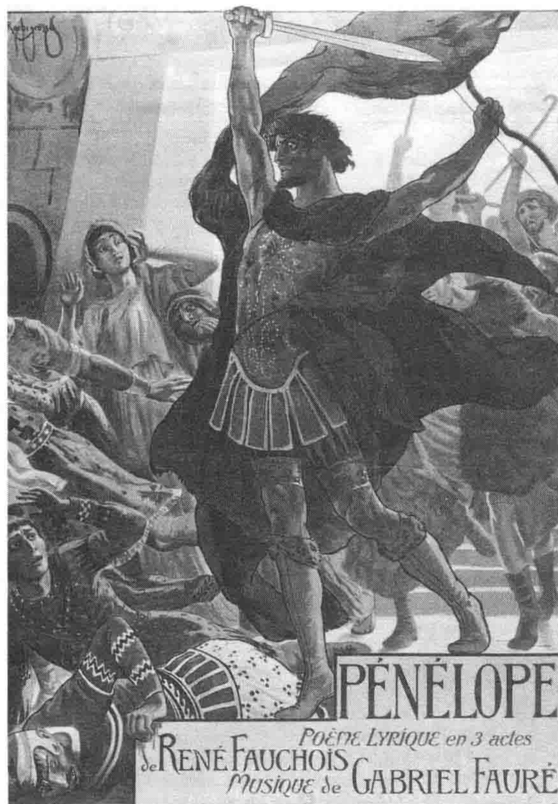
Andante moderato ♩. = 76

Fauré's early chamber works have traditional formal structures and his early songs are in strophic or rondo form, but for the piano Ballade op.19 he invented a new and peculiarly unifying three-theme form. In his last chamber works he moved away from Classical schemes and generally adopted a four-section form. The free variations in his finales show great richness of melodic and contrapuntal invention. He also had a liking for the scherzo – not the fantastic nocturnal dance of the German Romantics but a sunny, skipping movement with bursts of pizzicato, whose prototype was established in the First Violin Sonata op.13 (1875). Fauré could be described as the creator of the 'French scherzo' that Debussy and Ravel used in their quartets.



3. Works. Fauré is widely regarded as the greatest master of French song. Apart from the important song cycles and some individual songs, his works in this form are grouped in three collections (1879, 1897 and 1908), each containing 20 pieces (the second volume originally had 25 songs, but a few items were reordered with the publication of the third). The first includes *romances* and songs from his youth. The influence of Niedermeyer and Saint-Saëns is clear, though Fauré's association with the Viardots from 1872 to 1877 inclined him temporarily towards an Italian style (*Après un rêve*, *Sérénade toscane*, *Barcarolle*, *Tarentelle* for two sopranos). His most successful works are those in which the music is inspired directly by the form of the poem, as in *L'absent*, where the dialogue is as restrained as it is dramatic, or *La chanson du pêcheur*, in which a second theme is introduced, thus foreshadowing later songs. Many of the songs of the second collection use the *ABA* scheme (*Automne*, *Les berceaux*), while the boldest pieces, such as the familiar *Clair de lune*, anticipate the formal invention of the third collection. In *Spleen* and *Le parfum impérissable* from the final set, the melodic curve coincides with the unfolding of the poem, while in *Prison* the movement of the music matches that of the poetic syntax and the melody develops continuously, with a consistent forward movement. It is regrettable that the third collection, in which prosody, melody, harmony and polyphony achieve a beautiful balance, is much less known than the second, and that a masterpiece such as *Le don silencieux* is rarely performed simply because it was not published in a collection.

The criticism that Fauré composed almost half his songs to rather mediocre poems ignores the fact that he

4. Autograph manuscript of the opening of 'Exaucement', the first song in Fauré's cycle 'Le jardin clos' op.106, composed July–November 1914

sometimes chose his texts for their pliability, lack of reference to sounds and, particularly, lack of visual descriptions that would restrict him (hence his predilection for such poets as Armand Silvestre). He apparently remarked that he aimed to convey the prevailing atmosphere rather than detailed images in poems of this kind. The most 'pliable' poems were most easily adapted to his melodic inspiration, and in setting them, he often took great liberties with the prosody. In *Les berceaux*, for example, he superimposed a strong and varied musical rhythm on the flat rhythm of Prudhomme's verses, creating contradiction, though a felicitous one. Such settings contrast strikingly with his treatment of such poems as Verlaine's.

From 1891 Fauré broadened the scope of his melodic invention by giving a novel structure to a song cycle. The *Cinq mélodies* op.58, and still more *La bonne chanson* op.61, have a dual organization: a literary organization,

5. Poster by Georges Rochegrosse for Fauré's 'Pénélope': lithograph printed for Maquet for the first Paris performances at the Théâtre des Champs-Elysées, 1913

by virtue of the selection and arrangement of Verlaine's poems to form a story; and a musical organization based on the use of recurrent themes throughout the cycle. The harmonic and formal novelty of *La bonne chanson* shocked Saint-Saëns, and even daunted the young Debussy; the expressive power, the free and varied vocal style and the importance of the piano part seemed to exceed the proper limits of the song. It was difficult to go beyond the form of *La bonne chanson*, so Fauré looked for other means of unifying the song cycle. In *La chanson d'Eve*, a sequel to *La bonne chanson*, he reduced the number of recurrent themes from six to two, concentrated the vocal style and gave a new polyphonic richness to the piano accompaniment. The last three cycles, *Le jardin clos* op.106, *Mirages* op.113 and *L'horizon chimérique* op.118, no longer have common themes; the unity is in the subject, the atmosphere and mainly in the writing, which renounces luxuriance and moves in the direction of total simplicity.

Fauré's stylistic evolution can also be observed in his works for piano. The elegant and captivating first pieces, which made the composer famous, show the influence of Chopin, Saint-Saëns and Liszt. The lyricism and complexity of his style in the 1890s are evident in the Nocturnes nos.6 and 7, the Barcarolle no.5 and the *Thème et variations*. Finally, the stripped-down style of the final period informs the last nocturnes (nos.10–13), the series of great barcarolles (nos.8–11) and the astonishing Impromptu no.5. The piano writing, based on the flexible undulations of the arpeggio, achieves a free counterpoint that is always expressive, as in the opening of the Nocturne no.13, the summit of Fauré's piano writing, where the dissonances result from a kind of time-lag between the hands.

Unlike Saint-Saëns, Fauré was not interested in piano writing as such and cannot be recognized from particular formulae. Characteristic is the way in which arpeggios break the music into pieces like a mosaic, the accompaniment, in syncopation, working itself into the interstices of the melody. Even more original and characteristic is the equal importance of the hands, which in many passages alternate and complement each other for the presentation of a theme or the execution of a run. This trait (which reflects the fact that Fauré was ambidextrous), together with the finger substitutions familiar to organists, have discouraged many performers from attempting these otherwise admirable pieces. Nevertheless, the piano is central to his work. It is used in all his songs and in his two concertante works, the Ballade and the *Fantaisie*.

In Fauré's chamber music the piano is also prominent; he freed himself from it only in his last work, the String Quartet op.121. With the songs, the chamber music constitutes Fauré's most important contribution to music. He enriched all the genres he attempted: the violin sonata, the cello sonata, the piano quintet, the quartet and the trio. In chamber music he established his style most rapidly; the First Violin Sonata (1875, 11 years before Franck's), and the First Quartet (1876–9) display astonishing novelty of conception.

Fauré's apparent lack of interest in the orchestra is sometimes criticized as a weakness. He had a horror of vivid colours and effects, and showed little interest in combinations of tone-colours, which he thought were too commonly a form of self-indulgence and a disguise for the absence of ideas. Nevertheless, his orchestral writing has substance, and certain piano pieces and his greatest chamber music, even *La bonne chanson*, have convincing power and an almost symphonic breadth.

For long Fauré did not attempt musical stage works; he felt no contempt for them (as has been suggested), but had difficulty in finding a subject that suited him. There are about ten abandoned projects. His early incidental music led to the highly successful *Prométhée* (1900), a lyric tragedy with spoken interludes, which is easily adapted to concert performance with a narrated text (the usual solution, for the original text is now dated). In *Pénélope*, begun seven years later, Fauré found a subject that enchanted him, and this lyric drama contains his personal solution to the problem of post-Wagnerian opera; *Pénélope* can be described as a 'song opera', since it uses neither the classical aria with recitative nor Wagner's continuous melody but rather a sequence of short lyrical flights, without repetition, linked by passages of arioso and, less often, plain recitative, sometimes without accompaniment. *Pénélope* thus meets the challenge of maintaining a balance between the voices and the orchestra, whose role is important because it provides a commentary on the action by means of several leitmotifs in the manner of Debussy's *Pelléas et Mélisande*, which in other respects it does not resemble at all. Like *Pelléas* and *Wozzeck*, *Pénélope* proposed an original solution, but like them it had no true successors. Yet Fauré felt too much distaste for theatrical effects to be able to create a popular work. *Pénélope* is a powerful masterpiece, but a masterpiece of pure music.

JEAN-MICHEL NECTOUX

Faure, Jean-Baptiste (*b* Moulins, 15 Jan 1830; *d* Paris, 9 Nov 1914). French baritone. He studied at the Paris Conservatoire, making his début in 1852 as Pygmalion (Massé's *Galathée*) at the Opéra-Comique, where he also created Hoël in Meyerbeer's *Le pardon de Ploërmel* (1859). He made his London début at Covent Garden in 1860 as Hoël, and during the next decade sang Alphonse (*La favorite*), Fernando (*La gazza ladra*), Nevers (*Les Huguenots*), Don Giovanni, William Tell, Méphistophélès in the first Covent Garden performance of *Faust* (1863), Belcore, Peter the Great (*L'étoile du Nord*), Count Rodolfo (*La sonnambula*) and Mozart's Figaro. His début at the Paris Opéra was in 1861 as Julien (Poniatowski's *Pierre de Médicis*); there he created Pedro in Massé's *La mule de Pedro* (1863), Nélusko in *L'Africaine* (1865), Posa in *Don Carlos* (1867) and the title role in Thomas' *Hamlet* (1868; see illustration), also singing Méphistophélès in the first performance at the Opéra of *Faust* (1869). In 1870 he sang Lothario in the first London performance of *Mignon* at Her Majesty's Theatre. Returning to Covent Garden (1871–5), he sang Hamlet, Caspar (*Der Freischütz*). Cacico (*Il Guarany*), Lothario and Assur (*Semiramide*). He sang Don Giovanni at the first performance of Mozart's opera given at the newly built Palais Garnier (1875), and then created Charles VII in Mermet's *Jeanne d'Arc* (1876). He retired from the stage in 1886. Although he possessed a fine, resonant, even and extensive voice, Faure was chiefly notable for the innate musicality and stylishness of his singing and for his great gifts as an actor. He taught singing at the Paris Conservatoire from 1857 to 1860 and published two books on the art of singing. His voice can be heard on a private cylinder recorded in Milan (*c*1897–9), singing 'Jardins d'Alcazar' from *La favorite*.

Faustini, Giovanni (*b* Venice, 19 May 1615; *d* Venice, 19 Dec 1651). Italian librettist and theatre manager. His mother, Isabetta Vecellio, was the daughter of the noted artist and costume illustrator Cesare Vecellio. He wrote 14 librettos for the Venetian stage between 1642 and 1651, most of them set to music by Cavalli, and was impresario of the S Moisè and S Apollinare theatres. At his death he left five librettos in various states of completion, which were subsequently finished and, with the exception of *Medea placata*, performed under the auspices of his brother, the impresario MARCO FAUSTINI. The Faustini-Cavalli collaborations constituted the most constant presence during a highly unstable and formative decade in the history of Venetian opera. Faustini's dramas, the plots and characters of which are usually newly invented, rather than historical or mythological, often develop the entangled relations of two pairs of lovers, cleverly resolving all problems at the last moment to the satisfaction of all (or nearly all) concerned. Some of the later plots are highly intricate, notably *L'Eritrea* (performed in 1652), his last completed work, which may have profited from the influence of G.A. Cicognini. A keen sense of intrigue and superior dramatic craftsmanship characterize Faustini's librettos. His versification has a variety and flexibility otherwise rarely found in dramas of the 1640s.

THOMAS WALKER/BETH L. GLIXON, JONATHAN E. GLIXON

Faustini, Marco (*b* Venice, 17 May 1606; *d* Venice, 7 Jan 1676). Italian impresario, brother of GIOVANNI FAUSTINI. Until recently it was thought that his career as an impresario began at the time of his brother's death on 19 December 1651, but documents reveal that he was involved in the operations of the Teatro S Apollinare from the preceding summer, possibly even earlier. He managed three public theatres in Venice (with the help of Alvise Duodo and Marc'Antonio Correr): S Apollinare (1651–2 and 1654–7); S Cassiano (1657–60); and SS Giovanni e Paolo (1660–68, probably with a gap, 1663–5). Faustini worked with the most important composers of his day (Cavalli, P.A. Ziani and Antonio Cesti) and was able to attract some of Italy's leading singers, including Anna Renzi, Antonia Coresi and Vincenza Giulia Masotti. He produced new librettos by Aureli, Francesco Piccoli, Minato, Beregan, P.A. Zaguri and Ivanovich, as well as several left unfinished by his brother. Faustini's papers (in *I-Vas*, Scuola grande di S Marco), including letters from singers, account books and contracts, represent the most comprehensive repository of information about the production of Venetian opera of the period.

BETH L. GLIXON, JONATHAN E. GLIXON

Fauvel, Roman de. An extended medieval poem in two books, of which the second at least was written by Gervès du Bus, presenting an elaborate allegory of royal governance and the state in France in the second decade of the 14th century. The *Roman de Fauvel* is partly cast in the long tradition of *admonitio regum*, of advice to kings; it also finds satirical targets in the church and in contemporary society more generally. Two versions of the text survive. The shorter and earlier, a poem of 3280 lines completed in 1314, survives in 14 manuscripts (including excerpts). The longer, which includes extensive interpolated additions of poetry, prose, music and pictures, survives only in *F-Pn* fr.146 (though other, possibly different, interpolated versions have been lost) and was completed probably in 1317 or 1318. The richly varied and largely anonymous musical contents of the interpolated *Fauvel* of fr.146 include the single most important collection of polyphony from the early 14th century, marking the inception of the French Ars Nova and having far-reaching significance in the history of music. The most recent musical items were almost certainly written for this collection, but all of the interpolated material is harnessed to serve the political and allegorical messages of the work. Both versions appear to have originated in royal and higher noble circles, close to the chancery and other organs of central government.

1. Date and authorship: (i) The short *Fauvel* (ii) The interpolated *Fauvel* of fr.146. 2. The allegory and the literary context of the original poem. 3. The interpolations in *Fauvel*, and other works in fr.146. 4. Musical categories and the *Fauvel* index. 5. The interpolation of the music. 6. The political context of the *Fauvel* allegory.

1. Date and authorship.

(i) The short 'Fauvel'. Book 1 (1226 lines) of the short *Roman de Fauvel* ends with a couplet assigning its completion to 1310 ('Qui fut complectement edis/En l'an mil e trois e dis'). Book 2 (2054 lines) is similarly ascribed in the text of the *Roman* to 6 December 1314:

> Ici fine cest second livre,
> Qui fu parfait l'an mil et .iiij.
> .ccc. et .x., sans riens rabatre,
> Trestout droit, si com il me membre, v.3275
> Le .vj. jour de decembre.

This passage appears in all complete sources of the short *Fauvel*, though two apparent copying errors render the date as 16 December and two others give the month as September. There is no external evidence on which to dispute the date of 6 December 1314, but some scholars have argued that it may have been entered retrospectively because it marks an event – the downfall of Enguerran de Marigny – that is highly significant for the *Fauvel* narrative. The short *Fauvel* must, however, predate the interpolated version of fr.146.

In one important branch of the tradition this passage is followed by four lines naming the author of Book 2:

> Ge rues doi .v. boi .v. esse
> Le nom et le sournom confesse
> De celui qui a fet cest livre.
> Diex de cez pechiez le delivre. v.3280

The words *doi*, *boi* and *esse* are the spelt-out letter names of D, B and S: the line may thus be read as 'Ge rues d.v. B.u.s.', that is, Gervès du Bus. The sole source of the longer *Fauvel*, *F-Pn* fr.146, does not contain these verses, but includes a line near the end of Book 2 (f.23*v* b) that names the author as 'Un clerc du Roy Gervès' (misspelled 'de Rues', with a marginally indicated correction substituting 'g' for 'd'). In addition, the anonymous *Tombel de Chartreuse* (completed between 1330 and 1339) links the *Roman de Fauvel* with a 'Maistre Gervaise'. Although Gervès du Bus's explicit involvement with the *Roman de Fauvel* is limited to Book 2, it has been persuasively argued that he was also responsible for Book 1. Furthermore, he may have played a significant role in the redaction of the interpolated *Fauvel* of fr.146: if, as is generally accepted, this version of the text and its manuscript were produced in or near to the French royal chancery, where Gervès was employed as a *notaire* from 1313 until at least 1345, it is hard to see how he could have been ignorant of its compilation.

Gervès du Bus is first recorded in 1312, described as a chaplain of Enguerran de Marigny, which may have provided a vantage-point from which to observe the *Roman*'s target. Gervès's move to royal service in 1313 coincided with the recruitment of a number of senior officials to whom he was attached, notably Michel de Maucondit and Philippe le Convers, whose own connections with Charles, Count of Valois (see below), provided Gervès with ready access to royal business and the

political circles in which the interpolated *Roman* was created. A Norman by birth, he was a canon of Senlis by 1316 and is last recorded in 1345 acting as the executor of another royal *notaire*.

(ii) The interpolated 'Fauvel' of fr.146. The interpolated *Roman de Fauvel*, containing copious musical, literary and pictorial additions, is found only in fr.146 (ff.1–45), a sumptuous manuscript that also contains French and Latin political *dits*, ballades and rondeaux by Jehannot de l'Escurel and a metrical chronicle in French. This version of *Fauvel* cannot have been compiled before the coronation of Philip V at Reims on 9 January 1317, since a prose line among the interpolations refers to 'Phelippe qui regne ores' and the motet *Servant regem/O Philippe* (no.33) appears here in the form of this work celebrating Philip V's reign. Later in the manuscript (f.51) the Latin *dit Hora rex est* refers to events shortly after Easter (3 April) 1317. Most recent authors have followed the working hypothesis that fr.146 as a whole was assembled during or shortly after the early months of 1317; there is physical evidence that the plan of the manuscript was expanded at least once during the process of compilation and the book may thus have reached its present state over a period of time. The year 1316, which ran from 11 April 1316 to 2 April 1317 new style, is mentioned in the added tournament episode (v.1064), but this confirms only that the passage was included after the beginning of that year. The abrupt close of the *Chronique métrique* at the end of fr.146 in the autumn of 1316 is similarly inconclusive: this was a contemporaneous addition to the manuscript and in its present form may simply be what the compiler of fr.146 had to hand at the time.

A prose note placed after Book 1 credits CHAILLOU DE PESSTAIN with the interpolated materials: '[C]i s'ensivent les addicions que mesire Chaillou de Pesstain ha mises en ce livre, oultre les choses dessus dites qui sont en chant' ('Here follow the additions that messire Chaillou de Pesstain has put in this book, apart from the musical pieces found above'). Chaillou still eludes definite identification, but he may be the Geoffroy Engelor *dit* Chalop who was a *notaire* in the French chancery from 1303 to 1334. He possibly composed some of the 169 musical interpolations in fr.146, but many were drawn from pre-existing repertories and the direct testimony of this manuscript discloses only his role as an interpolator or editor working in conjunction with others. Those involved in the assembly of the interpolated *Fauvel* very probably included the royal *notaires* Gervès du Bus, the author of the short *Fauvel*, and Jean Maillart, whose *Roman du Comte d'Anjou* (1316) was several times quoted in the interpolations to Book 2, and possibly those on the fringes of the royal court with ready access to this milieu, including perhaps Philippe de Vitry, the only composer to whom any polyphonic piece in the interpolated *Fauvel* can be attributed with even moderate confidence.

A further interpolated version of *Fauvel*, now lost, is described in French royal inventories of 1411–24 as 'Un livre de torchefauvel, historié et noté, bien escript de lettre de forme. Commençant *Benedicite domino*. Fin *vous ay dame*'; still further interpolated versions may once have existed. Fr.146 was probably taken to Savoy in the early 15th century and was among the books owned by Philip II, Duke of Savoy, at his death in 1498, returning to the French royal collections during the reign of François I.

2. THE ALLEGORY AND THE LITERARY CONTEXT OF THE ORIGINAL POEM. The *Roman de Fauvel* is an extended Beast Epic, a moralizing satirical allegory in the tradition of the Renart tales of the 12th and 13th centuries. It may have been inspired directly by the *Couronnement de Renart* (1263–70), which it quotes, and by Jacquemart Giélée's *Renart le Nouvel* (completed 1289). Giélée's text was particularly influential, providing a series of narrative and allegorical models and turns of phrase for the Fauvel tale as well as a feminine precursor for its central character in the dun-coloured mule Fauvain/Fauveille ridden by Dame Guile. Gervès du Bus appears to be the first to cast the male horse Fauvel as the central character symbolic of triumphant evil, though a horse of this name is found in the late 12th- and early 13th-century *chansons de geste Gaydon* and *Otinel*. 'Fauve', a dark yellow intermingled with hints of red, had acquired connotations of hypocrisy and falsehood by the 12th century, possibly by association with 'faus'; it assumed figurative expression, symbolizing treachery and deceit, in the 'fauve ânesse' (fallow she-ass or mare) found in the *Roman de Renart* (late 12th century) and later proverbially. As a symbol of heresy or hypocrisy, the 'cheval pâle' appears widely in medieval sources from Bede onwards. Gervès du Bus provided both a mock etymological and an acrostic explanation:

Ausi par etimologie
Pues savoir ce qu'il senefie v.240
Fauvel est de Faus et de vel [=voile]
Compost, quer il a son revel
Assis sus fausseté velee
Et sus tricherie meslee
Flaterie si s'en derrive
Qui de nul bien n'a fons ne rive
De Fauvel descent *F*laterie
Qui du monde a seignorie
Et puis en descent *A*varice
Qui de torchier Fauvel n'est nice v.250
*V*ilanie et *V*ariété
Et puis *E*nvie et *L*ascheté
Ces siex dames qui j'ai nommees
Sont par Fauvel signifiee:
Se ton entendement veus mestre
Pren un mot de cescune letre

The short *Roman de Fauvel* may have been less widely read than the highly successful *Roman de Renart* but it proved influential nevertheless. The slightly later *Roman de Fauvain* by Raoul le Petit, surviving uniquely in *F-Pn* fr.571 (*c*1326), presents an adaptation of the Fauvel story in pictorial form and is now thought to have drawn on both the original and the interpolated versions of Gervès's text (in addition, two *Fauvel* motets – nos.12 and 33 – appear in this manuscript). The equine imagery of Gervès's text was quickly disseminated. The phrase 'torchier [étriller] Fauvel' appears in *Renart le Contrefait* (1319), a descendant of *Renart le Nouvel*, and quickly became proverbial, appearing in literature up to the time of Rabelais and Marot (it is the origin of the English expression 'to curry favour', and similar expressions survive in Dutch and in the German 'den falben Hengst streichen', 'to stroke the fallow stallion'). Fauvel appears as Renart's servant in the *Dit de la queue de Renart* (1319–42) and alongside Fortune, an important figure in Gervès's *Fauvel*, in Henri de Ferrières's *Livres du roy Modus et de la royne Ratio* (after 1377). The *Dit de Loyauté* by Watriquet de Couvin (*fl* 1319–29), closely related to *Renart le Nouvel*, preserves the iconographic

tradition of three estates grooming a horse, found in the *Roman de Fauvel*, but without naming its protagonist.

The first book describes the ascent of Fauvel, symbol of the arriviste royal minister, with the assistance of Fortune, from the stable to a position of power, where he is 'stroked' or flattered (*torchée*, *estrilée*) by the pope, the king and princes of church and state. He presides over a world 'bestorné' (inverted or reversed): the moon rises above the sun, the king is superior to the pope, the mendicant orders have become rich, and women are set over their husbands. France is thus enslaved and the era of Antichrist approaches. The second book opens with an elaborate portrayal of Fauvel's court (inhabited by Charnalité, Avarice, Envie, Haine, Paresse, Gloutonnie, Ivresse, Orgueil, Hypocrisie, Vilenie, Barat, Tricherie, Parjure, Hérésie, Sodomie and others) in the palace of Macrocosm. Fauvel decides to marry Fortune but his suit is rejected and instead he must be content with her handmaiden, Vaine Gloire (fig.1). After an elaborate wedding celebration, their union produces numerous 'fauveaux' who defile the world and especially the 'fair garden of France'. The *Roman* concludes with a prayer that the lily of virginity might save France, but even this is uncertain and an apocalyptic vision of the future predominates.

The *Roman de Fauvel* drew from the language of contemporary criticisms of the church and public affairs, and from referential models in classical and biblical sources, medieval philosophy and learning more generally. Specific works from which *Fauvel* took phraseology and rhetorical devices include the second part of the *Roman de la Rose* (*c*1275–80) by Jean de Meun (*d* 1305), cited

1. Fauvel, dressed as a man, is going to bed with Vaine Gloire (Fortune's handmaiden) when they are disturbed by a carnival procession: miniature from the interpolated 'Roman de Fauvel', completed 1317–18 (F-Pn fr.146, f.34r)

by name, and *Renart le Nouvel*. Its treatment of the Templars echoes that of several contemporary works. Its historical allegory, commenting on the politics of the French court and firmly located within a Parisian context, reflects both longer traditions of admonition and more contemporary political literature from Hainaut–Valois circles, including the *dits* of Watriquet de Couvin and Jehan de Condé.

3. The interpolations in 'Fauvel', and other works in fr.146. The interpolations in fr.146 comprise 169 musical items, 72 high-quality pictorial images and 2877 lines of verse, the last almost doubling the length of the poem (1808 lines were published in the appendix to Långfors's edition; 1069 further lines and the texts of the musical interpolations were published by Dahnk). The most important literary interpolations appear in Book 2, expanding the scene with Fortuna to incorporate a lament by Fauvel (ff.24–8) and adding an extended account of the wedding feast for Fauvel and Vaine Gloire, a charivari and a tournament between the Virtues and Vices. The last of these draws extensively on the *Tournoiement d'Antichrist* by Huon le Méry, while the wedding feast quotes from Jean Maillart's *Roman du Conte d'Anjou*. The careful planning and positioning of all the interpolated material serves to reinforce the messages of *Fauvel* and to support the more directly anti-Marigny focus adopted in this version. Pictorial interpolations make an important contribution, stressing the themes of hybridity and animal transformation, depicting royal rule and its subversion and helping to locate the interpolated *Fauvel* more firmly in a Parisian political context. To a considerable extent, the form of the interpolated *Fauvel* is determined by the format and layout of fr.146; in this sense fr.146 is the interpolated *Faurel*. The work of the *Fauvel* artist appears in several other books with royal connections, including two illuminated for the French chancery. Avril (in Roesner, Avril and Regalado, 1990) tentatively identified the *Fauvel* artist with Geoffroy de Saint-Leger, a Parisian *enlumineur* documented between 1316 and 1332.

The three other main items in fr.146 present many of the themes found in the interpolated *Fauvel*, and their inclusion here was almost certainly intended to reflect or explain the work's allegories. Six French and two Latin *dits* ascribed to Geofroy de Paris deal with the royal succession and political events in 1314–17; the last describes events of late April to early May 1317 (Holford-Strevens, *Fauvel Studies*, 1998), thus establishing a *terminus post quem* for the manuscript as it survives. The lyric compositions of the otherwise unknown Jehannot de l'Escurel (no longer identifiable with the clerk hanged in 1304) deal in places with Parisian themes and use a novel musical language that is also deployed to reinforce characterization in *Fauvel*. Clearly related to the narratives and message of *Fauvel* is the anonymous *Chronique métrique* of events from 1300 to 1316, which is almost 8000 lines long (formerly, but no longer, attributed to Geofroy de Paris). Written from a standpoint favourable to Charles de Valois, the younger brother of Philip IV, this chronicle is a major witness to the years 1312–16, describing the *Grant feste* of 1313 (the model for Fauvel's wedding feast) in particular detail and culminating with the fall of Marigny. Though probably not composed specifically for fr.146, its late inclusion after the compilation of the index may have been intended to provide a

historical key for the events satirized in the interpolated *Fauvel*. Fr.146 is the unique source of these texts and their inclusion was probably planned if not from the outset then very shortly after as the manuscript took shape. Also probably part of one early (but not final) scheme is the fragmentary *Complainte d'Amours*, a discarded bifolium that was re-used for the copying of the index on folio B.

4. Musical categories and the 'Fauvel' index. The music in the interpolated *Fauvel* comprises some 169 items of various lengths, from short snippets of chant or pseudo-chant to elaborate monophonic forms and motets. Only the last are polyphonic, ranging in date from motets and conductus of the late 12th or early 13th century to new, topical works that were probably composed specifically for this manuscript. A contemporary index, perhaps intended to facilitate musical use of the manuscript, organizes the musical items by genre and number of voices under the heading 'En ce volume sunt contenuz le Premier et le Secont livre de fauvel. Et parmi les .ij. livres sunt escripz et notez les moteiz, lais, proses, balades, rondeaux, respons, antenes et versez qui sensuivent'. This lists 24 'motez a trebles et a tenures', 10 'Motez a tenures sanz trebles', 10 two-voice Latin motets, 26 'Proses et lays', 14 'Rondeaux, balades et reffrez de Chancons' and 52 'Alleluyes, antenes, respons, ygnes Et verssez'.

Of the first group of motets, 23 are for three voices with texts in Latin (16; one lacks music though staves are drawn), French (four) or both (three), and one is a four-voice Latin motet. This group includes the 11 topical motets, most of which were probably written specifically for fr.146. The 'Motez a tenures sanz trebles' are all two-voice Latin works. All the *Fauvel* motets are anonymous but some can be attributed, with different degrees of certainty, to Philippe de Vitry, and others included here are possibly also by him.

The 'Proses et lays' comprise 26 Latin works and four lais in French (nos.44, 46, 64, 90), but only 26 are listed in the index; nos.6, 24 and 64, added later, are omitted and no.69 is mistakenly deleted and re-entered among the 'Rondeaux . . .'. The proses are of various origins, including conductus (nos.14 and 23), single voices taken from three-voice motets (nos.28 and 36, the latter possibly by Vitry), a Latin contrafactum of a French lai (no.52), a sequence (no.85), a prosula (no.87) and some apparently new pieces.

Under 'Rondeaux . . .' the index lists only 14 items, including four rondeaux, six ballades, some pieces in virelai form (reflecting the still fluid identity of virelai and ballade) and a 'Fauvelized' prose or conductus, but no refrains. Omitted are 12 fragments of *sottes chancons* (nine on f.34*v*, three on f.36*v*) and 26 refrains (of which one, no.14, lacks music). 11 of the refrains are successive segments of a single French motetus found in the three-voice *Trahunt/An diex/Displicebat* (in *B-Br* 19606 only, but the music appears again, re-texted, in the four-voice Latin motet, no.21), here interspersed with couplets of text in a single section of the courtship 'addicion' (f.26*v*).

The Latin chant genres in *Fauvel* include one alleluia, one liturgical blessing (altered), nine antiphons, ten Office responsories and 32 new compositions (the 'verssez'), effectively pseudo-chant dynamically related to the *Fauvel* narrative, whose texts and music are largely adapted from existing liturgical and biblical sources. The index omits two pieces (no.114 and the added no.121) and, perhaps in error, includes the closing refrain of the *Roman*.

5. The interpolation of the music. The interpolated *Fauvel* can be regarded as the last and most extravagant example of the 13th-century tradition of lyric insertions within larger poetic works (e.g. *Guillaume de Dole*, *Renart le Nouvel*, the *Ludus de Anticlaudiano* and the *Miracles* by Gautier de Coincy; *see*Roman). But it also transcends this genre: nowhere else is found the extraordinary richness, structure and depth of allusion here present, and in no other collection is the additional material so tightly focussed and integrated within the main theme of the literary work. The large body of interpolated material, when not specifically composed for this version of *Fauvel*, was brilliantly adapted, shaped and positioned – textually, musically and pictorially – to amplify Gervès's work or to turn its messages to the interpolators' new purposes. The musical compositions are emphatically not marginal but vital to the interpolated *Fauvel*.

About two-thirds of the 34 polyphonic items were drawn from earlier repertories, and many of these were adapted to their new use in *Fauvel*. The techniques employed, many of which were current in 13th-century repertories, include adding new music and/or texts to relate existing pieces more closely to the theme of *Fauvel*, recasting single voices from conductus and motets, and migrating works from one polyphonic genre to another. Several texts are 'Fauvelized' to render their texts and music more apposite or to parody the message of the original: in no.80 the words 'Falvellum dolorem inferni' are substituted for the original 'cum peccatorem' of Psalm cviii.6; no.13, commenting on Fauvel's evil kingship, is based on the Notre Dame conductus *Redit etas aurea* whose subject is the virtuous rule of Richard the Lionheart. Notations are updated, frequently assimilating the rhythmic idiom even of monophonic items to that of more contemporary motets. Plainchant items and secular songs are also adapted, or partly or wholly recomposed, to produce works no less tied to *Fauvel* allegory than the polyphonic interpolations.

New compositions intended specifically for *Fauvel* include the large body of pseudo-chant pieces, at least one of the French secular lyrics, and, probably, many of an important group of 11 topical motets. The texts of these works describe political events in the second decade of the 14th century, including the suppression of the Templars (no.27), the death of the Emperor Henry VII in 1313 (no.5), the royal adultery scandal in 1314 (no.32), the kingship of Philip IV, Louis X and Philip V (nos.9, 32 and 33) and most spectacularly the downfall of Enguerran de Marigny, represented by a group of three motets strategically placed in the *Fauvel* narrative (nos.71, 120, shown in fig.2, and 129), of which two if not three are attributable to Philippe de Vitry. (No.12 may be a further Marigny motet.) The topical motets clearly represent recent compositional styles and, on the presumption that they were written contemporaneously with events they describe, they have been used as the basis of stylistic chronologies for the motet and the work of Philippe de Vitry in particular and for the compilation of the interpolated *Fauvel* (Sanders, 1975; Leech-Wilkinson, 1982–3, 1995). More recently (Bent, 1997; Bent and Wathey, 1998) it has been argued that many were written especially for *Fauvel* and that they historicize the events

2. Page from the interpolated version of the 'Roman de Fauvel' (F-Pn fr.146, f.42), showing part of Philippe de Vitry's motet 'Tribum que non abhorruit/Quoniam secta latronum/Merito hec patimur' (no.120), and the image depicting the Fountain of Youth, from which the old emerge rejuvenated after bathing in 'fex' (excrement)

they report for the purpose of the *Fauvel* narratives. Other motets possibly intended for *Fauvel* but not eventually included (*Floret/Florens/Neuma*, triplum only re-texted as no.36; *Trahunt/An diex/Displicebat*, see above) survive in the closely related *B-Br* 19606. The placing of each interpolated item is carefully calculated and many comment on or gloss the *Roman* on several levels. The 'royal' motets articulate an expository crux in its admonition on f.10*v*–11, accompanied by a parodistic depiction of the king in majesty (for illustrations see *Fauvel Studies*, 1990, fig.13.5 and pl.IV). The three Marigny motets present real events in reverse order as a counterpoint to the fictive

events of the *Roman*. Other items illustrate specific events described in the literary text (e.g. no.27, on the Templars), focus the narrative in groups of a single genre or articulate its main structural divisions.

The interpolated *Fauvel* is a remarkable and unique *Gesamtkunstwerk*, of outstanding importance in its own right as well as for contemporary repertories. It is by far the most significant motet source from the early 14th century, spanning the gap between the late 13th-century *D-BAs* Lit.115 and *F-MOf* H196 and the mid-14th-century *F-Pn* n.a.fr.23190 (*Trem*). With *I-IV* 115, it is the principal source of works attributable to PHILIPPE DE VITRY, the only identifiable composer in the collection. It is a vital witness to the newly emergingFORMES FIXES, to crucial early 14th-century transformations in several musical and poetic genres, and to the continued currency of earlier repertories. The newest motets in *Fauvel* appear in several contemporary and even 15th-century sources (including *B-Br* 19606, *F-CA* 1328 and *GB-Ob* Bodley 271; there is no overlap with *I-IV* 115) and a number are also cited in theARS NOVA group of treatises (including Wolf anon. 3) and elsewhere up to the mid century.

6. THE POLITICAL CONTEXT OF THE 'FAUVEL' ALLEGORY. The relevance of the *Fauvel* allegories to contemporary politics was first recognized by Langlois, who cast the short *Fauvel* as a royal *admonitio*; it was considerably extended and deepened by Dahnk, and also by Becker who first identified Marigny as a key focus in the interpolated text. More recent work (Roesner, Mühlethaler) has viewed both versions of *Fauvel* as elaborate admonitions, collections of advice and carefully couched criticism, warnings against evil counsellors and injunctions to rule wisely addressed directly or indirectly to the king. The addressee of the short *Fauvel*, containing some criticism of Philip IV and his policies, has been identified as Louis X, though Philip IV is not ruled out. That of the interpolated text, and by extension the whole of fr.146, is more clearly intended to be Philip V, the early years of whose reign were blighted by the succession crisis of 1316 and by the court factionalism it engendered. It is doubtful perhaps whether either version led a truly clandestine existence, even if the dates cited in the short *Fauvel* are taken at face value, but either or both may have been circulated initially within distinct political groups at court.

The interpolated *Fauvel* retains the biting anti-clerical satire of the short version, but its main political exemplum was Enguerran de Marigny, a minor Norman noble who rose to dominate the French government as royal chamberlain at the end of Philip IV's reign, usurping the royal princes. Marigny lost his political protection on Philip's death in 1314 and was swiftly indicted for financial mismanagement and then for necromancy. After a brief show trial he was executed at Montfaucon on 30 April 1315. The chief architect of Marigny's downfall was Charles, Count of Valois, and it has been suggested that he is also the most plausible instigator both of the interpolated *Fauvel* and of fr.146 more generally. Charles's own links with the French royal chancery were strong and, while serving as a clerk in the French royal chancery, Gervès du Bus worked directly for Valois supporters among the higher echelons of the royal administration. The *Chronique métrique* included in fr.146 expresses views highly favourable to the count and almost certainly originated in Valois circles. Though Marigny, two years dead, could no longer present a real danger, he was a plausible allegory for any new threat to the integrity of royal rule. After Philip V's accession in 1316, Charles de Valois was temporarily displaced at court by his half-brother Louis, Count of Evreux, who thus emerges as one (of several, perhaps) whom Valois might have wished to present to the king as a potential usurper, through the allegory, chronicle, music and images in fr.146.

The manuscript *F-Pn* fr.146 was created in or near the royal chancery in Paris and the authorial origin of much of its contents, including the interpolated *Roman de Fauvel*, probably lies close to if not within these circles. Three chancery clerks (Gervès du Bus, Maillart, Chaillon de Pesstain) and one other close to this milieu (Vitry) have been linked with the compilation of this version of the text. The *Fauvel* of fr.146 (unusually for a literary work) was copied in a chancery hand normally used for documents and illuminated by an identifiable artist who had worked on other chancery books. It is unclear who might have read or otherwise used this sumptuously prepared manuscript: the interpolated *Fauvel* is in many ways its own performance and there is no evidence for or against a spoken or sung performance from beginning to end. But this and other lost interpolations of *Fauvel* may well have played a part in assuring the popularity of the short *Fauvel*, which appears to have achieved a wide readership quickly and whose popularity endured well into the 15th century.

ANDREW WATHEY

Fauxbourdon [faulx bourdon; fau(l) bordon, fau(l) wordon; fauburdum] (Fr.; Ger. *Faberdon*, *Faberton*, *Fabordon*, *Fabourdon* etc.; It. *falsobordone*; Sp. *fabordón*, *favordón*; Port. *fabordão*). A technique of either improvised singing or shorthand notation particularly associated with sacred music of the 15th century. The Iberian and Germanic forms of the word appear to derive from the English FABURDEN, although the French form was also known in these areas. The Italian FALSOBORDONE seems to be a translation from French but evolved a rather different style and history.

1. The term in musical sources. 2. Fauxbourdon extemporized from plainchant. 3. Typology, distribution and nationality of written fauxbourdon. 4. The first fauxbourdons; explanations of the term. 5. Technical characteristics and applications. 6. Later developments.

1. THE TERM IN MUSICAL SOURCES. 'Fauxbourdon' was an enigmatic French phrase attached as a tag or label to short compositions or sections of longer ones, normally sacred and written as apparently two-voice pieces with the cantus firmus in the upper part, appearing in continental musical manuscripts from about 1430 to about 1510. The words 'faux bourdon' were often preceded by the preposition 'à' or 'per', sometimes 'au' (even 'aux') or 'in'; the expression might also be shortened to 'per faulx' or 'per bardunum'. Although some scribes contracted the two words into one, this article follows Trumble in reserving 'fauxbourdon' for use as a generic term referring to the whole technique or complex of voices, or to the category of composition.

The designation 'faux bourdon', or one of its variants, was usually placed in either the discantus or the tenor part – more often the latter, especially in the earlier years, perhaps because the tenor directed the ensemble; it might also appear in both parts, or elsewhere on the page. It signalled the fact that the two given voices had been so composed – essentially by using a framework of 6ths and octaves – that the performer or performers could add a third and eventually a fourth part to them by following certain strictly formulaic procedures. The earliest method was to derive a *contratenor altus* from the written discantus by singing the same notes simultaneously at the 4th below, which produced essentially a chain of what would now be called 6-3 chords, varied and punctuated by single 8-5 chords, though with some decorative passing notes and suspensions, particularly at cadences, and on occasion more licentious dissonances. This was still regarded as the 'classic' manner by most music theorists of the late 15th century and has become known in musical literature as the '6th-chord' or 'fauxbourdon' style. But around 1450, or even before, composers and performers started to use a *contratenor bassus*, derived not from the discantus but from the tenor, beneath which they sang alternate 3rds and 5ths, beginning and ending with a unison or octave, and with the cadential octave preceded by a 5th; to the resulting tricinium a new kind of *contratenor altus* might also be added, by singing alternate 3rds and 4ths above the tenor, beginning and ending with a 5th, and with the cadential 5th preceded by a 4th (see exx.3 and 4 below).

'Faux bourdon', though not in itself a mandatory canonic instruction, is therefore a kind of trademark that tells the performers that they may increase the sonority of the music by adding one or two canonically derived parts. Trumble, the latest and most thorough historian of fauxbourdon, assumed that this might not be done in the absence of the trademark, even though there are 37 cases where a composition inscribed 'faux bourdon' in one source lacks the designation in another. He thus excluded from consideration (*a*) a fairly high number of two-part compositions which with the addition of the missing tag would be indistinguishable from his 'true' fauxbourdons (25 in Trent MS 93 alone); and (*b*) a smaller number of pieces realized as three-voice compositions, either as lightly ornamented fauxbourdons or as fauxbourdon

bicinia to which an unlabelled, freely composed 'contratenor sine fauxbourdon' has been added (8 in Trent 93). A 'gymel' in 6ths and octaves in Guilielmus Monachus's more restricted use of the term (he also allows 10ths) would of course have made sense on its own; but it cannot be proved, and seems unlikely, that singers confronted by such a gymel were actually precluded from adding a canonic contratenor altus by the omission, which might have been accidental, of the tag 'faux bourdon'. The term 'gymel' is almost unknown in continental sources and was not used as a prescriptive tag; on the other hand, it is surely significant that of the many 'gymels' in the Trent manuscripts, most of them embedded in longer three-voice compositions, not one bears the designation 'duo' which is otherwise used to distinguish duets; this suggests that they were not intended as such. Guilielmus (*c*1480) also showed how both a gymel and a fauxbourdon might be turned into a four-voice piece, a licence which seems to have been left entirely to the discretion of the performers, since no musical manuscript is known to contain directions deliberately prescribing its application.

2. Fauxbourdon extemporized from plainchant. Besseler and Trumble have given a very full picture of fauxbourdon as a *res facta* in the form of compositions labelled 'faux bourdon' in musical manuscripts. Their surveys have sorted out much of the confusion created by earlier historians, who had relied too heavily on the rather late evidence afforded by the writings of music theorists; the collection and categorization of all the known fauxbourdon pieces has also served to clarify many of the theorists' ambiguities and obscurities. But it is possible that the resulting emphasis on fauxbourdon as a technique of written composition may lead us to neglect the likelihood that fauxbourdon was used quite early in its history, like faburden, as a simple means of harmonizing a plainchant *super librum*. This was certainly the case later on, although there is no direct evidence for the early years. Tinctoris's specimen of fauxbourdon (1477), *Lauda Sion*, is written in a succession of equal breves, nearer to plainchant than to the rhythm of most surviving fauxbourdon compositions; curiously, it places the chant in the tenor, a practice unknown in music manuscripts.

The earliest Spanish reference to 'fabordón' is also suggestive. Juan de Lucena's *Libro de vida beata* (probably mostly 1452–3, drafted by 1463) mentioned 'fabordón' as a traditional way of singing 'por uso', which he contrasted unfavourably with the more skilled singing 'por razon' of 'músicos'. Referring plainly to the relationship between the two upper parts of three-voice faburden or fauxbourdon, Lucena found the technique contradictory and inharmonious: 'one [singer] is in the flat [hexachord] and the other in the natural; one on a line, the other in a space' (the passage is not present in Lucena's model, the *De humanae vitae felicitate liber* of B. Fazio). There are no surviving written *fabordones* from this early period. A German poem published in 1447 described Conrad Paumann playing the organ – therefore presumably extemporizing – and 'tenoring, with Contratenor, Faberdon and Primitonus' (Hanns Rosenplüt, *Spruchgedichten*, Nuremberg; see Bukofzer, 1936, p.123); there are among the compositions of Paumann's *Fundamenta organisandi* in the Buxheimer Orgelbuch and the Lochamer Liederbuch pieces which do indeed seem to employ the sonorities of faburden or fauxbourdon (Trowell, 1977, pp.47–8). A century later, two German organs had 'Faberthon' stops which sounded the 5th and octave above the played note, doubtless intended to facilitate the performance of fauxbourdon in the classic 6th-chord manner (see I. Rücker: *Die deutsche Orgel am Oberrhein um 1500*, Freiburg, 1940, pp.121, 157). A search among liturgical books and choirmasters' indentures from northern France and Burgundy would perhaps produce early evidence of extemporized fauxbourdon. This could have been achieved by simple directions akin to those for Faburden or for Guilielmus Monachus's fauxbourdon: two singers would have transposed the plainchant up an octave and a 5th respectively, while another sang unisons with and 3rds above its written pitch. The octave transposition of English treble sight (*see* Sight, sighting) was known to several continental theorists at the end of the 15th century; Burtius (1487) said, for example, that it was extensively practised among 'ultramontane singers . . . in princely chapels' for extemporizing over a plainchant (see Bukofzer, 1936, pp.156ff). There is one written fauxbourdon (a *Magnificat* in *I-TRmp* 87, no.85) whose discantus must be read in transposition at the upper octave and 5th, a device also used in a set of harmonized psalm tones in the St Emmeram manuscript (*D-Mbs* Clm 14274) which are not, however, labelled 'faux bourdon' (see Trumble, 1959, p.45). Late evidence of the apparently extempore application of fabordón – which the scribe equates with the French technique, 'faulxbourdon (ut sic dicam)' – to a wide range of liturgical types and occasions may be found in the constitutions of Charles V's chapel, said to replicate those of the Netherlands chapel of Philip the Fair (*d* 1506). They include psalms (even-numbered verses), a processional psalm, masses, versicles and responses, antiphons, responsories, litanies, and a lesson, the second of three; the fauxbourdon is distinguished from written music in the regulation that no-one must start singing until the *phonascus* or his deputy has given the note, 'tam in faulxbourdon . . . quam in musicis' (*Vander StraetenMPB*).

3. Typology, distribution and nationality of written fauxbourdon. At the latest count there appear to be 29 continental manuscripts containing a total of 175 compositions labelled 'faux bourdon' in one or more of their sources – 172 if we subtract three instances where Du Fay used the same music for different texts. They are listed in Trumble (1959), to which subsequent research adds four more: Mikołaj Radomski's *Magnificat primi toni* in *PL-Wn* Krasiński 52 (bearing the designation 'per bardunum' and a canon), apparently a very early specimen, as must be the Kyrie by Grossin – a composer older than Du Fay – duplicated but transposed in the same manuscript, with the direction [contratenor] 'a discantu' (facs. and edn in AMP, xiii–xiv, nos.12–13); the anonymous sequence *Eya recolamus* in *I-TRmd* 93, no.1751; Busnoys' *Magnificat* [*6ti toni*] in *B-Br* 5557 (ed. in Masters and Monuments of the Renaissance, v, 1990, pp.111–24; a similarly structured anonymous *Magnificat* [*8vi toni*] from *I-Rvat* S Pietro B80 which, however, lacks the tag 'faux bourdon', is printed ibid., 193–207); and the very late example of the Sanctus in Isaac's six-voice *Missa paschalis*, where the 'Pleni sunt celi' calls for fauxbourdon in the two discantus and alto (or tenor) in dialogue with the lower voices (ed. in CMM, lxv/1, 20–22, from *D-Ju* 30, *D-Bsb* 40013 and *I-Rvat* C.S.160) (see Trumble, 1960, 1990; Elders, 1977). In 154 of these

172 compositions the plainchant has been transposed in the discantus to the upper octave (though if a *contratenor altus* is supplied it will also present the plainchant, transposed to the upper 5th). Five pieces appear to have no cantus firmus; in five the chant is in the discantus at the upper 4th (as in faburden), in three at the upper 5th, in one at its original pitch, in one at the upper 7th and in one at the lower 2nd; there are three cases of migrant cantus firmus (Trumble, 1960, p.20). All the compositions are sacred except two: Du Fay's fragmentary *Juvenis qui puellam*, a lawsuit set to music that wittily parodies liturgical recitation; and Busnoys' *Terrible dame*, where the two lower voices, in 'empty' and unsatisfied gymel, represent the lover who complains that he is dying 'par deffaut', while his lady, characterized by the top two voices with a third in fauxbourdon, asks 'Que vous fault?' ('What do you lack?'), after which the four voices mesh contentedly together for four beats in four-voice fauxbourdon. Among the 170 sacred compositions employing fauxbourdon (and in those 'gymels' where the tag is missing), most use it for short passages alternating with sections composed in traditional ways, or with plainchant. There are 43 different settings of hymn melodies and 12 sequences. There are 14 Kyries, where the *alternatim* mode proved attractive, and nine other mass movements. Psalmodic recitation was a popular field (this was probably also a natural home for fauxbourdon *super librum*): there are 31 psalms and canticles, with 22 *Magnificat* settings; the 19 introits often favour the technique for their psalm verses. 12 of the 14 antiphons, on the other hand, are set to fauxbourdon throughout. Among the six miscellaneous items it is not surprising to find short forms such as the versicle with response, the preface, two communions and a sectional Passion. More unexpected is perhaps the most famous use of the technique, in Du Fay's isorhythmic motet *Supremum est mortalibus bonum* (1433): here there is no cantus firmus, but the instantly recognizable texture of fauxbourdon is used as a colouristic device to articulate the structure.

Of the 21 composers known to have written fauxbourdons (counting C. and N. de Merques as the same man), at least 15 were Franco-Burgundian; they composed no fewer than 68 of the 79 ascribed pieces, as against 93 anonymous compositions. Du Fay alone composed 24 (excluding duplications), almost as many as Merques (7), Binchois (6), Brassart (6) and Roullet (6) put together; Johannes de Lymburgia composed five, Benoit, Busnoys, Feragut, Liebert and Sarto two each, and Fede, Grossin, 'Ray. de Lan' (*see* LANTINS, DE) and Johannes Martini one. The other composers are 'Arnulphus' (1), Antonius Janue (5), Hermann Edlerawer (2), Cristofferus Anthonii (1), Isaac (1) and Mikołaj Radomski (1).

The striking preponderance of French-speaking composers would suggest that the origins of fauxbourdon are to be sought in France and Burgundy, where, however, the musical manuscripts have largely perished; the fact that the bulk of the repertory survives in north Italian manuscripts (21 sources out of 29) is hardly in itself conclusive evidence of Italian origin. The term 'faux bourdon' is French (a unique case of such a vernacular tag in Latin sacred music of the time). Even Besseler, a strong advocate of Italian origin, suggested (*AcM*, 1948; 1950) that the first fauxbourdon was composed by Du Fay as part of a mass then thought to have been intended for St Jacques-de-la-Boucherie in Paris. Many Franco-Burgundian composers of fauxbourdon apparently never worked in Italy, including Binchois; his six pieces are in an unusually simple, almost mechanical style, very different from Du Fay's, which may perhaps reflect extempore practice (he also wrote a number of fully realized three-voice pieces composed in a rather similar manner). It is striking that no English composer ever wrote a fauxbourdon piece or used the standard two-voice notation or the term 'faux bourdon', although the French term is adduced by Scottish Anonymous – in 1558 or later – as equivalent to 'faburdoun' (f.54: see S. Allenson, *ML*, lxx, 1989, pp.1–45, esp. 11).

4. THE FIRST FAUXBOURDONS; EXPLANATIONS OF THE TERM. The two earliest known examples of fauxbourdon appear in the older section of *I-Bc* Q15. First in the manuscript, and bearing an explanatory canon in Latin, is the communion *Vos qui secuti estis me*, the closing item in Du Fay's *Missa Sancti Jacobi*. It may well be the first composition to use the term 'faux bourdon', as Besseler maintained. The mysterious words are fittingly taken as a punning allusion to St James's *bourdon* or staff, shown in the miniature at the head of the mass. (Explanations of the term as meaning 'false staff' have not however won acceptance: Adler, 1881, referred it to the tenor, as having no cantus firmus or true independence from the discantus, Ficker, 1951, to the unwritten contratenor, as a 'false support' for the discantus.) Most other modern attempts to explain the term 'faux bourdon' rely on the idea that *bourdon* meant a low-voice part in early 15th-century French, for which there is no proof, although *burdoun* had had this meaning in English and Anglo-Norman French since before 1300 (*see* FABURDEN, §2); Adam von Fulda (*c*1490) referred to the 'feigning' in the octave transposition of the cantus firmus, which however would only really make sense if the discantus were being extemporized straight from the chant by using treble sight (*fictus visus*). Trumble (1954) advanced the ingenious but unprovable explanation that the strong resultant tones from the consecutive 4ths in the upper parts produced a ghostly 'fictus bardunus' an octave lower, in the register of Arnaut de Zwolle's organ-pipe 'barduni'.

G.B. Rossi (1618, probably written by 1585) advanced the notion that fauxbourdon was a hybrid form between *canto fermo* and *canto figurato*, a bastardized 'sport' whose name must derive from *burdo* ('mule') – a derivation related to Vogel's claim, in our own time, that fauxbourdon meant 'mule's larynx', or bagpipe. For Burmeister (1606: see F. Feldmann, *AMw*, 1958, pp.123–43, esp. 137–8), with his interest in rhetoric, it was a catachresis (a solecism, a perversion of a figure or trope). Praetorius (1618) offered a number of explanations besides the idea of the 'false bass' that has been taken up in various senses by several later writers, especially Besseler. He also pointed to *bourdon* meaning 'bee', an idea further explored by Elders (1989), whose theory, though apt and ingenious in its quest for symbolic meaning, fails to allow for the necessary distinction between the honey-gathering Apostles of Du Fay's communion, seen as worker bees, and the laziness of a drone bee (a meaning of 'fauxbourdon' not apparently attested before Littré's dictionary of 1863). Praetorius fancifully likened what he saw as the false cadences of fauxbourdon to the back-turned, parallel hem on a garment; he alluded to *bourdon* as 'prop' or 'support' (a

meaning adduced by Ficker, 1951 and Wallin, 1953) and also as 'St James's staff' or 'pilgrim's staff'.

This reminds us that the English King Henry VIII, at his death in 1547, owned a set of 'Shalmes . . . v . . . pipes caulled pilgrim staves' (F.W. Galpin: *Old English Instruments of Music*, 1910, pp.122, 219), which surface again in Mersenne (*Harmonie universelle*, ii, 299, propositio xxxii) as a kind of courtaut, fagot or short bassoon resembling a large stick or staff: 'de la vient que quelques-uns en font de grands bourdons semblables à ceux des Pelerins de sainct Jacques' (*see also* FABURDEN, §2, for Harrison's derivation of the English voice-name 'burdoun' from *burdo*: 'shawm'). The pilgrim's staff, hollowed to make a shawm, might equally conceal a weapon: Thomas Thomas's Latin–English dictionary of 1588 defines *dolo* as 'a great sparre or staffe with a small head of iron and a sword within it: a Iacobs staffe' (*Oxford English Dictionary*, under 'Jacob's staff', 3). Here is yet another sense in which a 'bourdon' might be 'false', the visible outer structure (discantus and tenor) concealing a hidden element (the unwritten contra).

It is perhaps significant that the earliest French literary uses of the term 'fauxbourdon' play on the idea of something lacking, a deceptive omission. Busnoys' *Terrible dame* (see above) turns on the emptiness of the two outer parts without the middle one; and in a still earlier rondeau dating from 1459–60 by the musically inclined Charles d'Orléans (which, ironically, lacks its music) the poet speaks of 'Musique notée par fainte / Avec faulxbourdon de Maleur'; the 'new singer', asked who he is, replies 'Je ne tiens contre ne teneur'.

It is curious that 'bourdon' emerged much later on in 1690 as printer's jargon for a passage omitted in error, and that a 'coquille' or cockle, St James's other symbol, came to be used to mean a jumble of letters: was the saint the patron of a printers' confraternity? And do these terms go back further to the scriveners of the Rue des Ecrivains, which ran alongside the church of St Jacques-de-la-Boucherie in Paris, where Du Fay's friend Robert Auclou, whose name and position form an acrostic in Du Fay's motet *Rite maiorem*, was curate? It is no longer generally believed that Du Fay composed or assembled the *Missa Sancti Iacobi*, which contains what may be the first fauxbourdon, for his friend's church; but 'fauxbourdon', or rather 'faubourdon', strangely unites their two names, since 'fau' is a variant of 'fou', 'fay' or *fagus* ('beech', whence du Fay) and 'bourdon' may also mean a flat-headed nail (au Clou).

The significance of the name 'fauxbourdon' had plainly been lost by the time the first theorists wrote about the technique, hence their conflicting opinions. In the absence of early evidence we shall probably get no further. Since the word is not Latin, it is likely that the term had little or nothing directly to do with techniques of composition, for which a perfectly good Latin vocabulary existed. If, as Flasdieck (1953) thought plausible, its first user or users were imitating the sound of the English word 'faburden' (a term which does permit of a technical explanation), they nevertheless would probably have had some French rationale in mind, whether serious or humorous.

5. TECHNICAL CHARACTERISTICS AND APPLICATIONS. The canon appended to Du Fay's communion, translated, says: 'if you desire a threefold piece, take the notes from the top [part] and begin simultaneously, going down a 4th'. The canon in Nicolaus de Radom's *Magnificat*, thrice repeated in much the same form, runs: 'per bardunum: Hic recipe in quinta [or 'tercia'] et fiet contratenor' (the first two entries muddle up 'quinta' and 'tercia'). The realization of Du Fay's canon, in *Vos qui secuti estis*, produces a piece curiously unlike the traditional image of the genre.

Many early fauxbourdons, from *I-Bc* Q15 and elsewhere, seem to struggle against the logic of parallel movement; it is as if the composers were taking up a new and revolutionary idea but adapting it to late Gothic taste by making the discantus (with its derived contratenor) as different as possible from the tenor, within the limits of the style. The tenor is textless and looks like an instrumental part, while both the upper parts are presumably to be sung by soloists: this would throw the unusual parallel 4ths into sharp relief. The chant is at times quite heavily ornamented and rhythmicized in chanson style with frequent melismas and strong dissonances over the slower-moving tenor; octaves, producing contrary motion, frequently interrupt the flow of 6ths; the rhythm of the tenor is surprisingly independent, with overlapping phrase lengths, anticipations and syncopations. Ex.1 is the opening of Du Fay's communion (the notes taken from the chant are marked with asterisks).

The other fauxbourdon in the earlier part of *I-Bc* Q15, Johannes de Lymburgia's antiphon *Regina celi letare* (ex.2), is a much simpler composition with none of Du Fay's rhythmic and contrapuntal ingenuity; in spite of the composer's frequent introduction of octaves, the impression is very much nearer to note-against-note movement.

Johannes de Lymburgia's *Magnificat secundi toni*, one of the 17 fauxbourdons in the later part of *I-Bc* Q15, is the only such piece in the manuscript in which an extended text is given to the tenor as well as the discantus, and must be one of the first examples of entirely vocal fauxbourdon. Binchois' fauxbourdons resemble Johannes de Lymburgia's in their simplicity, and one of them, the hymn *Ut queant laxis*, occurs in a manuscript only slightly later than *I-Bc* Q15 and in a deviant notation: the contratenor is given, and the discantus must be supplied at the 4th above (*I-Vnm* IX 145; the piece also survives in normal notation in *D-Mbs* Clm 14274). For historians who believe that fauxbourdon was the model for English faburden, Johannes de Lymburgia was simply a clumsy composer and Binchois' hymn was copied by an ignorant scribe (though he also managed to copy Benoit's hymn *Tibi Christe* in normal fauxbourdon notation). For those who believe that fauxbourdon was an interpretation of English faburden, the simpler and more vocal of the two styles of early fauxbourdon reflects the sonority of vocalized faburden, and the unusual notation of *Ut queant laxis* reflects its technical derivation, in which the cantus firmus was thought of as the middle voice.

The difficulties involved in determining the relationship between fauxbourdon and faburden are discussed under FABURDEN. Whatever the truth of the matter, both techniques represented important technical advances in 15th-century music. In each, the cantus firmus is moved from the low tenor into the upper voice or voices; in faburden the chant seems to have been declaimed very plainly in note-against-note style; in fauxbourdon, the Gothic and contrapuntal early manner of Du Fay existed alongside a simpler manner employed by Johannes de Lymburgia and Binchois, which Kirkman (1990) has rightly related to the genre of chant involved; later on, vocal performance with simultaneous declamation became the rule. Both faburden and fauxbourdon rejoiced in the use of continuous parallel 4ths between the upper voices (still found 'offensive' by Adam von Fulda in 1490), provided they were made good by the lowest voice; long sequences of parallel 6ths were also legitimized, and the traditional insistence on contrary motion in discant and counterpoint was for a time denied in the interests of sensuous euphony. Both devices brought a feeling for vertical harmony into European music at a time when the new medium of choral polyphony was looking for appropriate new techniques. The Gothic ideals of disparate colours and rhythmically differentiated, frequently overlapping lines were giving way to Renaissance ideals of the blending of similar colours and rhythms in a smooth and carefully stratified texture. Probably the most important innovation in faburden and fauxbourdon was the notion of part-writing in which the separate strands never overlapped. This remained the case in four-voice fauxbourdon as well, when the tenor, though itself tied to the movement of the upper voice, gave birth to a functional bass line; the new bass supported a logically spaced harmony which was to become a model for simple four-part writing in 'familiar style' (and continuo chording) that endured for centuries. (Korth, however, whose study of 1988 offers valuable technical insights, would attribute these innovations to more general trends rather than to fauxbourdon.)

The characteristic sonority of fauxbourdon was almost never thought tolerable in long compositions. The fauxbourdons in *I-Bc* Q15 are nearly all short, and most of them are strophic hymn and *Magnificat* settings. In many of these, a verse in fauxbourdon alternates with monophonic plainchant. Sometimes an independent contrapuntal setting of the chant is included as a further *alternatim* element. This may also be achieved by providing a new three-voice setting of the original fauxbourdon discantus with two quite different lower voices; or by leaving the fauxbourdon discantus and tenor intact, but writing a new and independent 'contratenor sine fauxbourdon' which may cross beneath the tenor or sing a unison with it so that the parallelism of the original bicinium is less apparent. Fauxbourdon was early recognized as a highly distinctive sonority which could play a valued part in successive contrasts of colour. Of the specimens in *I-Bc* Q15 only the *Magnificat* settings of Feragut and Johannes de Lymburgia and the latter's *Regina celi letare* offer long stretches of uninterrupted fauxbourdon.

During the 1430s fauxbourdon started to appear in northern Italian and central European manuscript repertories, principally Trent manuscripts 87 and 92, with 45 pieces, and the Aosta manuscript with 13; here it is used more extensively in the Ordinary of the mass, especially for *alternatim* Kyries, and for the first time in alternate verses of sequences and in introits. Fauxbourdon from this time also appears in the German St Emmeram manuscript (*D-Mbs* Clm 14274), whose later fascicles apply fauxbourdon to an unparalleled variety of liturgical contexts.

6. LATER DEVELOPMENTS. Trumble identified a major change in style solidifying during the 1440s, pointing to the Ferrarese manuscript *I-MOe* α.X.1.11, which contains 17 fauxbourdons and moves more firmly into the realm of entirely vocalized fauxbourdon with fully texted tenor parts. The tenor is more and more adapted to the rhythm of the discantus, and the melismatic style gives way to simple functional declamation, simultaneous in all voices, moving more slowly and in duple time: in earlier fauxbourdons, *tempus perfectum* had predominated. Some of these 'new' characteristics, however, are due simply to the application of fauxbourdon to less melismatic types of chant. The new manner also makes itself felt in Trent manuscripts 90 and 93 (20 and 23 pieces respectively, with 17 in common) and in *I-Fn* Magl.XIX 112*bis* (12 pieces). The latter source includes a new phenomenon, made possible by the increasing homogeneity of discantus and tenor: fauxbourdon with *contratenor bassus* replacing the *contratenor altus*. The Italian Antonius Janue's hymn *Gloria laus* has an alternative contratenor which is mostly in alternate 5ths and 3rds beneath the tenor (there are also a few upper 5ths and consecutive 5ths). Ex.3 shows how the passage begins.

Though clumsily executed here, this type of *contratenor bassus* points the way to the improvised four-voice gymel and fauxbourdon described some 30 years later by

Guilielmus Monachus and so fruitfully investigated by Trumble, who found other compositions to illustrate the theorist's remarks. Ex.4 is a condensed version of one of Guilielmus's examples in Trumble's interpretation: (*a*) can be performed either as a gymel in 6ths and octaves or, with the small notes, as three-voice fauxbourdon with *contratenor altus*; (*b*) shows how the same bicinium may be performed either as three-voice fauxbourdon with *contratenor bassus* or, with the small notes, as four-voice fauxbourdon with *contratenor altus* as well (Trumble, 1959, pp.60–61).

Ex.4

These techniques may also be traced in the last large collection of fauxbourdon with a character of its own, a pair of Ferrarese choirbooks (*I-MOe* Lat.454–5), which contain 28 fauxbourdons; 24 of them are psalms arranged for two choirs in a tradition that points to the polychoral style of 16th-century Venice (see Trumble, 1959, pp.41ff); there are also many 6th–octave gymels. Besides the psalms there are three *Magnificat* settings and a *St Matthew Passion*. All the works are unique and anonymous except a *Magnificat* by Martini which also appears in *I-Rvat* C.S.15 (a largely retrospective collection of 18 fauxbourdons). The psalms of the Modena choirbook, though often simple and functional to the point of dullness, use a variety of techniques which allowed Trumble to demonstrate convincingly how four-voice fauxbourdon came to lose its technical identity in the varied practices of 16th-century Italian FALSOBORDONE and Spanish *fabordón*. (It is curious that the original technique of three-voice fauxbourdon was nevertheless still known to Doni in the second quarter of the 17th century: he recommended that theatrical choruses should be declaimed 'in falso Bordone, cioè in seste divise da una voce di mezzo'). To Trumble's survey of the sources for the latter should be added the manuscripts *I-Rvat* C.S.60, 63 and 343 and the long, testy and instructive (but doubtless also inventive) footnote in Baini (1828), as well as the passage in Martini (1757) to which Baini took such exception, containing a valuable list of theorists who discussed fauxbourdon. The allegedly 14th-century 'fogli laceri' that Baini speaks of as containing fauxbourdons are no longer to be found in the archives of the Cappella Sistina and presumably never existed or were wrongly dated, although Buck (revising Wooldridge, *OHM*, i, 2/1929, pp.298–329) believed him; the Spanish *Enciclopedia universal ilustrada* cites a 15th-century three-voice fauxbourdon psalm tone emanating from Baini, to which he added a free soprano part.

BRIAN TROWELL

Favart. French family of dramatists, singers and actors active in musical theatre.

(1) Charles-Simon Favart (*b* Paris, 13 Nov 1710; *d* Belleville [now in Paris], 12 May 1792). Librettist, playwright, composer and impresario. He was one of the most highly regarded and prolific librettists of *opéra comique* during the mid-18th century, which saw both the Querelle des Bouffons and the gradual replacement in the genre of vaudevilles (popular songs) by newly composed, italianate *ariettes*.

According to his own fragmentary memoirs Favart inherited from his father, a pastrycook, a love of the theatre and of song; his mother encouraged his literary studies. He attended a *collège* until the death of his father in 1730 necessitated his return to the family business, in which he continued even after his first successes at the fairground theatres of the Opéra-Comique. Many of his early pieces (among them several parodies) were written with others, including his mentor Charles-François Panard, whose allegorical satire he imitated. These nevertheless brought him to the attention of noble patrons, including the Maréchal de Saxe.

Favart's first masterpiece was *La chercheuse d'esprit* of 1741 (after La Fontaine), which portrayed the awakening to love of young rustic *ingénus* (fig.1). It was with this 'genre galant et comique' (as Favart called it) that he sought to ennoble the tone of *opéra comique*, previously prone to gross indecency. Without altogether eliminating *double entendre*, Favart emphasized comic naivety of utterance with a transparency of sentiment that looks forward to Rousseau. In 1743 Favart joined with Jean Monnet, the new impresario of the Opéra-Comique, in an effort to reform the spectacle both morally and materially. For a salary of 2000 francs, he agreed to write and adapt pieces, recruit and train new actors and supervise rehearsals; Monnet constructed a fine new theatre at the Foire St Laurent, and engaged Jean-Georges Noverre and François Boucher to create ballets and decors respectively. Favart not only collaborated with Boucher; scenes from his pantomime *La vallée de Montmorency* also inspired a whole series of pastoral paintings (and designs for porcelain or tapestry) by the artist, as was noted by the brothers Parfaict. In 1743 the Foire St Laurent saw the premières of Favart's *Le siège de Cythère* (a veiled parody of Quinault and Lully's *Armide*) and *Le ballet des Dindons* (a parody of Fuzelier and Rameau's *Les Indes galantes*). During 1745 Marie-Justine Duronceray (as 'Mlle Chantilly') made her début in *Les fêtes*

1. Frontispiece to Charles Simon Favart's 'La chercheuse d'esprit' (1741): engraving by Jacques Aliamet after François Eisen, from 'Théâtre de M. et Mme Favart' (Paris, 1763–72), vi

publiques, which celebrated the dauphin's wedding; by the end of the year she and Favart had married. Also during this year the Comédie-Italienne and the Comédie-Française, jealous of the Opéra-Comique's success, suppressed all but pantomime entertainments, and then completely shut down the spectacle. At this point Favart secured employment as director of the theatrical company of Maurice, Maréchal de Saxe, commander of French forces in Flanders.

De Saxe told Favart that his troupe entered into his military and political thinking; this manifested itself in the choice of repertory (as in Favart's reworking of *Le siège de Cythère*), in such topical compositions as a sung *annonce de battaille* and, extraordinarily, in the troupe's performing alternately in allied and enemy camps. During this period the Favarts met the Genoan diplomat Giacomo Durazzo, who as head of Viennese theatres was later to engage Favart as his theatrical agent. The hardships of operating a theatre in wartime were aggravated for Favart by De Saxe's amorous pursuit of his wife, which provoked her flight to Paris. De Saxe later had her imprisoned in a convent, while Favart fled a trumped-up prosecution for debt. After the marshal's death in 1750 the couple resumed their careers, working both at the Opéra-Comique (reopened under Monnet in 1752) and at the Comédie-Italienne, where Mme Favart had performed briefly in 1749.

The 1750s saw the creation of some of Favart's most genial pieces and his reputation at its height. Parodies such as *Les amours de Bastien et Bastienne* (after Rousseau's *Le devin du village*) and *Raton et Rosette* (after Mondonville's *Titon et l'Aurore*) rivalled their models in popularity. Parisian performances of Italian intermezzos by the 'Bouffon' troupe between 1752 and 1754 prompted Favart (and others) to insert *ariettes* from them into new *opéras comiques*; he also translated several intermezzos, and wrote pasticcios using selections of their *ariettes*. These transitional genres evolved rapidly into the modern form of *opéra comique*.

During this period Favart benefited from the patronage of Mme de Pompadour and the court, especially after 1758, when he became a director of the Comédie-Italienne (which merged with the Opéra-Comique in 1762). Beginning in 1756, Favart composed a number of entertainments for the Marquise de Mauconseil and her palace theatre at Bagatelle. He served briefly as 'Historiographe des Menus-Plaisirs du Roi', and in 1763 was commissioned by the court to write a comedy, *L'Anglais à Bordeaux*, celebrating the end of the Seven Years' War. This work earned him a royal pension of 1000 livres, later increased when he was named *compositeur des spectacles de la cour*. (The title first appears in the libretto, dedicated to the dauphine Marie Antoinette, of *L'amitié à l'épreuve*).

In 1759 Favart renewed his contacts with Durazzo, who desired his services as a recruiting agent, adapter, censor and supplier of pieces for the French theatre in Vienna (the Burgtheater), and as a window on the Parisian theatrical and literary scene. Their correspondence, of which portions (some of them tendentiously edited) have been published, shows Favart assuming much the same urbane tone as Friedrich Grimm in his *Correspondance littéraire*. Favart was originally to have collaborated with Gluck on new works, but did not do so: Durazzo was unable to use a ballet scenario Favart had drafted but sent too late for celebrations of Archduke Joseph's first wedding in 1760, and later there were misunderstandings concerning some of his other works. Favart helped engineer Durazzo's dismissal in 1764, although, before this, he had helped considerably in recruiting for the Viennese company, as he and his wife had at their disposal a vast network of theatrical contacts throughout Europe. He had also supervised the first (Parisian) edition of Gluck's *Orfeo ed Euridice*, thereby greatly enhancing thc composer's reputation.

During the latter part of his career Favart attempted, with mixed success, to come to terms with the new *comédie mêlée d'ariettes*, of the sort being written by younger authors such as Sedaine and Marmontel. *Soliman second* (1761), which did achieve wide and lasting success, is really a verse play interspersed with a few musical numbers and with a closing *divertissement*. *Annette et Lubin* (1762, after Marmontel) contains some new music, but many more vaudevilles; in writing the piece (with which the newly reconstituted troupe of the Comédie-Italienne made its début) Favart had aimed to 'ramener le public à l'ancien goût de l'opéra comique', and indeed the work was immensely popular. *La fée Urgèle* (1765, after Voltaire) and *Les moissonneurs* (1768), both true *comédies mêlées d'ariettes*, were well received, but Favart's 1775 recasting of *Cythère assiégée* as an opéra-ballet was neither a success nor an improvement on his version of 1748. After his wife's death in 1772 Favart largely withdrew from active work in the theatre to his home at Belleville.

Favart's fame rests principally on his vaudeville comedies, from *La chercheuse d'esprit* onward, although these have not been universally admired. Contemporary critics such as Diderot and Grimm saw in Favart's pieces a false naivety that ill masked their risqué content, while, more recently, Maurice Barthélemy has decried Favart's betrayal of the carnivalesque humour of the early Opéra-Comique; both complaints are indicative of an antipathy to the *galant* aesthetic in general. As a parodist Favart was unrivalled, and gentler than most; the playwright La Noue staged Favart's parody of his own *Mahomet II*, and sent the poet his compliments. Though honoured still as a literary figure, Favart has yet fully to be rediscovered as a musician. He composed many of the airs in his *opéras comiques*, mimicking traditional *airs* and *galant* modern melodies with equal ease. But his greatest talent lay in the appropriate choice and retexting of popular tunes so as to take full advantage of their salient musical features.

On the whole, Favart was a progressive force in French musical theatre. He and his wife pioneered accurate, historical costume before Le Kain at the Comédie-Française. Favart's letters to Durazzo are full of derisive comments on the traditional repertory of the Opéra and news of the triumphs of modern *opéra comique*. Though not entirely able himself to accommodate developments in the new form of the spectacle, he supported its best composers, such as Monsigny, Philidor and Grétry. The most important collection of his works is the *Théâtre de M. et Mme Favart, ou Recueil des comédies, parodies et opéras-comiques*, published in ten volumes (Paris, 1763–72). Favart's works were enormously popular abroad, in translations and resettings as well as in their original versions.

WORKS

PCI – *Paris, Comédie-Italienne (Hôtel de Bourgogne)*
PSG – *Paris, Foire St Germain*

La rosière de Salency, Blaise, Duni, Monsigny, Philidor and G. van Swieten, 1769 (x)
L'amitié à l'épreuve (with Voisenon), Grétry, 1770 (x); rev., 1786, as Les vrais amis, ou L'amitié à l'épreuve
La belle Arsène, Monsigny, 1773 (x)
La vieillesse d'Annette et Lubin (with C.-N.-J. Favart), Jadin, 1791; also as *La vengeance du bailli*

(2) Marie-Justine-Benoîte ['Mlle Chantilly'] **Favart** [née Duronceray] (*b* Avignon, 14 June 1727; *d* Paris, 21 April 1772). Singer, actress, dancer and dramatist, wife of (1) Charles-Simon Favart. After training as a performer at the court of the exiled Polish king Stanisław Leszczińksi at Nancy, early in 1745 she joined the Parisian Opéra-Comique troupe, making her début in Favart's *Les fêtes publiques*. Later that year she won acclaim in *Les vendanges de Tempé*, a pantomime produced by Favart in response to a ban on spoken dialogue at the fairground theatres; she married the playwright in December 1745. After the suppression of the Opéra-Comique, Maurice, Maréchal de Saxe appointed her husband director of his theatrical company in the French-occupied Austrian Netherlands, and Mme Favart accompanied him as a member of the troupe. By the summer of 1747 the unwelcome attentions of the Maréchal (which later inspired several fictionalizations) had caused her to flee to Paris; further threats and periods of incarceration or exile largely kept her off the stage for the next several years, although she performed briefly at the Comédie-Italienne in 1749.

Following the Maréchal's death in 1750, and her husband's return to Paris, Mme Favart rejoined the Comédie-Italienne, initially as a dancer and singer in divertissements, but from 1752 as a regular member of the company. Her versatility (e.g. in mimicking accents and dialects, and in trouser roles), and the seductiveness, mischievousness and naivety she brought to her roles quickly established her as a favourite with the public. Of her performance in Favart's *Ninette à la cour*, the Marquis d'Argenson noted 'des endroits *pathétiques*, où elle se montre aussy grande que jolie et naturelle dans le badinage'. Her singing of italianate *ariettes* (in which she received lessons from the composer Charles Sodi), in translations or parodies of *opere buffe*, was crucial in establishing the vogue for such music in *opéra comique*. She was influential also in reforming theatrical dress, starting with her wearing of a simple peasant dress and wooden shoes in *Les amours de Bastien et Bastienne* of 1753 (fig.2), at a time when operatic shepherdesses routinely wore their most opulent costumes and jewellery. Another of her famous roles was Roxelane in Favart's *Soliman second* in which she wore authentic Turkish robes and accompanied herself on the harp.

Mme Favart's part in conceiving the pieces attributed to her was widely doubted during her lifetime; the issue is even treated humorously in the preface to *La fête d'amour*. But in a posthumous tribute her husband confirmed her

2. *Marie-Justine-Benoîte Favart as Bastienne in 'Les amours de Bastien et Bastienne', Comédie-Italienne, Paris, 1753: engraving after Carle Vanloo*

authorship, specifying that she had helped choose subjects, draft scenarios, compose or choose vaudevilles and write couplets; for the most part, she left versification to her husband or other collaborators.

LIBRETTOS

oc – *opéra comique*
par – *parody*
all first performed at the Comédie-Italienne, Paris;
composer and title of parodied musical works are in square brackets

Les amours de Bastien et Bastienne (par, with C.-S. Favart and Harny de Guerville) [Rousseau: Le Devin du village], 4 Aug 1753
La fête d'amour, ou Lucas et Colinette(oc, with C.-S. Favart and Chevalier), 5 Dec 1754
Les ensorcelées, ou Jeannot et Jeannette(par, with C.-S. Favart, J.N. Guérin de Frémicourt and Harny de Guerville) [Rameau: Les surprises de l'Amour], 1 Sept 1757
La fille mal gardée, ou Le pédant amoureux (par, with C.-S. Favart and Lourdet de Santerre) [Mouret: La Provençale, 5th entrée of Les fêtes de Thalie], Duni, 4 Mar 1758
La fortune au village (par, with C.-S. Favart and Bertrand) [Lagarde: Aeglé], Gibert, 8 Oct 1760
Annette et Lubin (comédie mêlée d'ariettes et de vaudevilles, with C.-S. Favart and Lourdet de Santerre), Blaise, 15 Feb 1762

(3) **Charles Nicolas Joseph Justin Favart** (*b* Paris, 17 March 1749; *d* Belleville [now in Paris], 2 Feb 1806). Dramatist and actor, son of (1) Charles-Simon Favart and (2) Marie-Justine-Benoîte Favart. He made his acting début at the Comédie-Italienne in 1779 as Cassandre in Grétry's *Le tableau parlant*, and was admitted as a full member in 1780. He left the theatre in 1796 and took employment in the Tribunat library. He wrote, apart from Revolutionary hymns and patriotic songs, *opéras comiques en vaudevilles* such as *Le diable boiteux* (1782) and *La sagesse humaine, ou, Arlequin Memnon* (1797), some of which were published.

Favart's son, Antoine Pierre Charles Favart (1780–1867), was also a dramatist. He wrote several *comédies avec vaudevilles*, including *La jeunesse de Favart*, a 'comédie anecdotique' (1808). He published his grandfather's *Mémoires et correspondance* in 1808.

BRUCE ALAN BROWN (1–2), PAULETTE LETAILLEUR/R (3), BRUCE ALAN BROWN (with PAULETTE LETAILLEUR), bibliography

Favel, Andrée. Stage name of Claudine Duclairfait, wife of LOUIS LACOMBE.

Favereo, Joannin [Janino] (*fl c*1590–1610). Italian composer. By 1593 he was assistant choirmaster, under Antonius Gosswin (*d* 1594) to Ernst of Bavaria, Elector of Cologne, and he may have served the Elector for some years after that. His book of canzonettas (Cologne, 1593) consists of settings of 21 strophic poems based on symmetrical patterns of changing rhymed couplets. Binary musical forms predominate. The upper voices cross frequently and are paired in a high tessitura over a supporting bass. Rapid declamation and passages in ternary metre are characteristic features of his style.

WORKS

Il primo libro di canzonette, napolitane, 3vv (Cologne, 1593); 2 intabulations in 1594[19]
Teutsche lieder auff Neapolitanische Art componiret, 4vv (Cologne, 1596); lost, listed in Draudius, see Ameln

Cantiones, a 4–5, ad quaeunque instrumenta accommodatae (Cologne, 1606); listed in Draudius, see Ameln
1 motet, 5vv, in 1604[7]

DONNA G. CARDAMONE

Faveretto [Favretto, Favereto, Fabreti], **Bartolomeo** (*b* Padua; *d* probably Padua, 1616). Italian composer, *maestro di cappella* and instrumentalist. He was a priest. A document dated 7 March 1595 shows that he was a trombone player at S Antonio, Padua. In the same year he was appointed for three years from 1 May as a trombonist in the chapel of Padua Cathedral, and this position was renewed in 1598. He was *maestro di cappella* at Montagnana, following Lucrezio Venturo, from 14 October 1600 to 24 August 1603; he was succeeded by Vincenzo Neriti. He maintained connections, during this period, with the chapel of Padua Cathedral and had occasional engagements there. On 21 February 1602 he had returned to the cathedral as a chorister. On 21 November 1602 he obtained a papal *brève* which allowed him to receive his salary while out of residence, and on 6 July 1606 he was appointed for six years as assistant *maestro* in succession to Lelio Bertani 'on the condition that he cannot ask an increase during those six years, and that the canons are free to appoint another *maestro* if they can find one better [than Faveretto]'. His conduct was presumably satisfactory since on 8 August 1609 he was appointed *maestro* for six years as from 6 July 1610. In 1612 during Holy Week he brought to Montagnana some singers from the chapel of Padua Cathedral. Since the chapter decided to seek another *maestro* on 26 July 1616 it may be assumed that Faveretto died shortly before that date. The final notice of him is dated 20 January 1616 when he was awarded expenses for the binding of books and for transporting instruments. He contributed two madrigals, *Amor se leghi* and *Ma desio ben ch'accenda*, to the collection *Laudi d'amore* (RISM 1598[7]) and was the composer of *Laude spirituali nella Assontione della gloriosa Vergine* (RISM 1604[9]), for four voices. One of his compositions also appears in Giulio Radino's *Concerti per sonare et cantare* (1607[8]). A set of *Madrigali, laudi spirituali* for two to four voices by him is advertised in Vincenti's trade lists of 1621 and 1635 (*MischiatiI* VII:51; VIII:72; may refer to 1604[9]).

PIER PAOLO SCATTOLIN

Favero, Mafalda (*b* Portomaggiore, nr Ferrara, 6 Jan 1903; *d* Milan, 3 Sept 1981). Italian soprano. She studied with Vezzani in Bologna and in 1926 made her début at Cremona, under the name of Maria Bianchi, as Lola (*Cavalleria rusticana*); her 'official' début was at Parma in 1927 as Liù. After singing Elsa and Margherita she was engaged at La Scala, where she made her début as Eva in 1928. She continued to sing there until 1950. A leading singer throughout Italy, she sang Norina, Liù and Zerlina at Covent Garden (1937, 1939) and in 1938 made her only American appearances, at San Francisco and the Metropolitan (where she made her début as Mimì). Her repertory included Carolina (*Il matrimonio segreto*), Susanna, Violetta, Martha, Suzel (*L'amico Fritz*), Zazà and – her most famous role – Puccini's Manon Lescaut. In addition, she created several roles, including the title role in Mascagni's *Pinotta* (1932), Laura in Zandonai's *La farsa amorosa* (1933) and, at La Scala, Gasparina in Wolf-Ferrari's *Il campiello* (1936) and Finea in his *La dama boba* (1939). Her voice and vibrant, appealing style can be heard in a number of recordings that also catch the immediate eloquence of her interpretations.

HAROLD ROSENTHAL/ALAN BLYTH

Favier, Jean [l'aîné] (*b* Paris, March 1648; *d* Paris, ?1719). French dancing-master, choreographer, violinist and possibly composer. He came from a family of violinists and dancing-masters. He danced the role of a monkey in 1660, and by 1666 he was clearly an accomplished and versatile professional. In 1674 he choreographed a *divertissement* by Cambert for performance at the English court. Among his illustrious pupils was the dauphine, Marie-Anne Christine-Victoire.

Favier was one of several late 17th-century French dancing-masters to devise a dance-notation system. He used it to preserve his choreography for A.D. Philidor's *Le mariage de la grosse Cathos* (1688), which includes movement notation for all 28 performers, including singers and instrumentalists. Favier notation lacks the visual attractiveness and readily discernible floor patterns of Beauchamp-Feuillet notation, but it has two advantages over the latter: dances for large groups are more easily notated, since each dancer has his own 'part', as in a music score; and greater rhythmic precision is possible.

He may have composed the music for a number of his own ball dance choreographies, as well as for the *pastrole Le triomphe de Bacchus* (lost).

CAROL G. MARSH

Favola in musica (It.: 'tale [presented] in music'). A term used to describe early 17th-century operas and (as 'favola per musica', i.e. 'for music') librettos. The Latin 'fabula' appears in titles of pastoral-mythological entertainments in the 15th century sometimes known as 'hybrid dramas' ('drammi mescidati'), for example Poliziano's *La fabula d'Orpheo* (1480). The classicizing label doubtless lent respectability to a genre lacking the solid precedents of classical tragedy and comedy. In the 16th century the Italian equivalent, alone or with a qualifier ('pastorale', 'boschereccia', 'marittima' etc.), is used for plays in the pastoral tradition, again filling a generic vacuum (but Guarini opted for the more loaded 'tragicommedia'). Marco da Gagliano, in the preface to his *Dafne* (1608), described the first opera librettos as 'favole', placing them squarely in the context of the pastoral, although Alessandro Striggio was the first librettist to use the title in print with *La favola d'Orfeo* (1607). Monteverdi followed suit, coining 'favola in musica' for the title-page of the score of *Orfeo* (published 1609). The term continued to be applied to librettos in the first half of the century and beyond – *La catena d'Adone* (D. Mazzocchi, 1626) is a 'favola boschereccia', and *Ormindo* (Cavalli, 1644) a 'favola regia' – although it fell out of use as operas lost their pastoral-mythological aura.

TIM CARTER

Favordón (Sp.). *See* FAUXBOURDON.

Favorita (It.). An Italian dance of the 16th and 17th centuries based on the same harmonic structure as the romanesca, but with diminished note values. Each of the eight main framework chords (*see* GROUND, ex.1*a*) usually occupies a single triple unit (in contrast to the ROMANESCA, where each framework chord usually spans two bars of triple metre). The main music is followed by two standard *riprese* or ritornellos (*see* RIPRESA, ex.1*b*); the earliest example, in Bernardino Balletti's lutebook of 1554, consists of three continuous variations on the scheme and its *riprese*. M.A. di Becchi in 1568 provided three separate lute examples followed by another, called 'la sua rotta', which has the same harmonic scheme in duple metre (both the Balletti and the Becchi pieces are transcribed by G. Lefkoff in *Five Sixteenth Century Venetian Lute Books*, Washington DC, 1960).

17th-century examples include one for theorbo by P.P. Melli (1616) and three variations for keyboard in the Chigi manuscripts (*I-Rvat*; ed. in CEKM, xxxii/3, 1968); another source (*I-Bc* Q34) gives the bass line as one of a series of *gagliarde diverse*. Chordal examples for the five-course guitar appear in tablatures of Montesardo (1606), Milanuzzi (1625), Fabrizio Costanzo (1627), Milioni (1627) and G.P. Ricci (1677) and in some manuscripts (*I-Fr*2951, *PEc* 586 [H72] and *Rsc* A 247). The guitar versions are often in duple metre, followed by a *rotta* or *tripla della favorita*. Ricci curiously provided his *favorita* with both 'sua ripresa' based on I–IV–V–I and a ritornello on III–VI–VII–III. The *Passamezzo della favorita* printed in Oscar Chilesotti's *Da un codice Lauten-Buch del Cinquecento* (Leipzig, 1890), as well as Barbetta's *Pavana ottava detta La favorita* (1569) and Salamone Rossi's *Gagliarda terza detta La favorita* (1622), is harmonically unrelated to the other pieces that bear the name *favorita*.

RICHARD HUDSON

Favoriti (It.: 'favoured'). A term used to designate the members of a choir of soloists, as opposed to those of the *cappella* or ripieno choir. According to Schütz's preface to his polychoral *Psalmen Davids* (1619), the *coro favorito* is to be accompanied only by an organ, whereas the *cappella* should use *colla parte* instrumental doublings and massed voices to form a contrasting ensemble. The practice of adding optional ripieno choirs to polychoral psalm settings was widespread in Italy during the time when Schütz studied with Giovanni Gabrieli in Venice; earlier publications giving similar performing directions include Girolamo Giacobbi's *Salmi concertati a due e piu chori* (1609) and Lodorico Viadana's *Salmi a quattro cori per cantare e sonare* (1612). In the instructions printed in the basso continuo partbook of Viadana's psalms, the term 'choro favorito' is used to describe the choir of solo voices which is to be accompanied softly by the organist without *passaggi* or diminutions, or by the organ and chitarrone, giving free reign to the soloists who are to 'sing in the modern style'.

Favre [Faure], **Antoine** (*b* ?Lyons, ?*c*1670; *d* after 1737). French violinist and composer. His father, Durand Favre, was a violinist from Lyons who, with Antoine, was hired as a member of the newly founded Lyons Opéra in 1687. According to the *Supplément aux lyonnais dignes de mémoire* (1757), an unreliable document apparently consulted by Fétis, Antoine Favre followed the singer Françoise Journet when she left Lyons to join the Paris Opéra about 1705. There seems to be no evidence supporting Fétis's claim that Favre joined the Paris Opéra orchestra at this date; nor can references to an unidentified 'Faure' active as a violinist in Paris in the last two decades of the 17th century be linked conclusively with either Antoine or his father. In 1713 Favre is first mentioned as a member of the *petit choeur* of the Opéra orchestra. In 1731 he was granted a six-year privilege which preceded the publication of his two sets of violin sonatas. Only the second of these, a group of six modest sonatas consisting of contrasting dance movements, is extant. In 1737 Favre, still a *Musicien de l'orchestre de l'Opéra de Paris*, composed a divertissement for the one-act comedy *L'heure du berger* by Boizard de Pontault. As there are no further references to Favre's activities after this date, it is

impossible to verify Boisgelon's statement, taken over by Fétis, that Favre died in Lyons in 1747.

MICHELLE FILLION

Favre, Georges (*b* Saintes, Charente-Maritime, 26 July 1905; *d* Paris, 25 April 1993). French musicologist and composer. He studied counterpoint and fugue with André Gédalge (1924–6), conducting with d'Indy (1925–8) and composition with Dukas (1928–32) at the Paris Conservatoire; he also attended the lectures of Pirro (1932–5) and Masson (1932–7) at the Sorbonne, taking the doctorat ès lettres in 1944 with a dissertation on the life and works of Boieldieu. From 1928 to 1944 he was professor of musical education in the Ecoles de la Ville, Paris, and at the Ecole Normale d'Instituteurs, Paris. He was appointed inspector of musical education in the schools of the Département de la Seine in 1944, and from 1956 until his retirement in 1975 was inspector general of public instruction. He published papers on the teaching of music and sol-fa textbooks of great interest to educationists. His musicological research was largely on French music: he wrote an exhaustive study of Boieldieu and edited his piano works; he was a specialist on piano music of the early 19th century and published the correspondence and interesting studies of Dukas. His compositions include dramatic works, works for piano, chamber ensemble and orchestra, and songs, among which are several subtle harmonizations of French folksongs.

Fawaz, Florence. *See* AUSTRAL, FLORENCE.

Fawcett. English family of musicians. Among the descendants of John Fawcett of Tadcaster (*c*1770–1855) at least 36 professional musicians have been traced; though none rose to eminence, one, Verdi Fawcett (*b* 1869), impressed Sir Thomas Beecham greatly as a violinist and helped him in 1907 to found a new touring orchestra. The family developed the colourful habit of naming its sons after famous musicians: besides Verdi there have been Haydn, Schubert, Weber, Rossini and Elgar Fawcett. Many members are still active in the musical profession. The Fawcetts mentioned below were not members of this immediate family, but it is likely that they were more distantly connected with it. Another John Fawcett (1768–1837), a comedian, was related to Edward Loder (*see* LODER, (2)).

(1) **John Fawcett** (i) (*b* Wennington, Lancs., 8 Dec 1789; *d* Bolton, 26 Oct 1867). Composer. He was a shoemaker, like his father, but he gained an early reputation as a psalmodist. He was entirely self-taught. He was choirmaster at St George's [Anglican] Chapel, Kendal, 1806–*c*1817, then director of the choir and band at the Wesleyan Sunday School, Farnworth, Lancs. In 1825 he moved to Bolton, but returned to Farnworth to assist his son John (ii) in about 1835. He published four sets of hymns and anthems (*c*1811–19); two oratorios: *The Promised Land* (London, n.d.) and *Paradise* (London, 1853); and some orchestral pieces for local philharmonic societies. His large-scale works are apt to be overambitious, but his small-scale music is melodious and attractively high-spirited. He was an accomplished performer on the piano, organ and clarinet.

(2) **John Fawcett** (ii) (bap. Ringley, Lancs, 17 Oct 1824; *d* Manchester, 1 July 1857). Organist and composer, son of (1) John Fawcett (i). He was organist of St John's, Farnworth, Lancashire, from 1835 to 1842, and later of Bolton parish church. He entered the RAM in 1845 to study under Sterndale Bennett, and gained the degree of BMus (Oxford) in 1852. His degree exercise, the cantata *Supplication and Thanksgiving*, was published in 1856. He also published a few songs and piano pieces.

(3) **Joshua Fawcett** (bap. Bradford, 16 May 1807; *d* Low Moor, Yorks., 21 Dec 1864). Writer. He was the son of Richard Fawcett (*b* 1778), a Bradford worsted manufacturer. He studied at Trinity College, Cambridge, was ordained in 1830, and in 1833 became perpetual curate of Holy Trinity, Wibsey. Later he was domestic chaplain to Lord Dunsany and from 1860 a canon of Ripon. He wrote on church architecture and related

subjects, and in 1844 he published, at Bradford, *Lyra ecclesiastica*, a collection of church music 'by eminent living composers'. It was dedicated to Queen Adelaide, with a preface by W.H. Havergal, and was influential in bringing music of the cathedral type to Yorkshire churches.

NICHOLAS TEMPERLEY

Fawkyner (*fl c*1480). English composer. A Richard Fawkyner was a Conduct at King's College, Cambridge, from 1482 to 1484, having previously been admitted a Questionist on 23 April 1478 and Inceptor in Arts in 1482 (see A.B. Emden: *A Biographical Register of the University of Cambridge to 1500*, Cambridge, 1963, p.221). He may be the 'Fawkyner' to whom three works are attributed in the Eton Choirbook (*GB-WRec* 178). Only two of these compositions survive, both for five voices: *Gaude virgo salutata*, whose tenor is the fifth antiphon at Lauds on the feast of St Martin (*Martinus Abrahae sinu*), and *Gaude rosa sine spina* (ed. in MB, xi, 1958, nos.31 and 32). A third work, the lost six-voice *Salve regina vas mundicie*, was an early addition to the choirbook and is recorded in the later of its two contemporary indexes.

Fay, Amy [Amelia] **(Muller)** (*b* Bayou Goula, LA, 21 May 1844; *d* Watertown, MA, 28 Feb 1928). American pianist and writer on music. She studied in Berlin with Carl Tausig and Theodor Kullak, and was a pupil of Liszt in Weimar. Following her return to the USA in 1875, she settled in Boston, where she earned a reputation as a major concert pianist. In 1878 she moved to Chicago and there achieved national recognition as a lecturer, music critic and teacher; one of her pupils was John Alden Carpenter. In her public appearances, Fay supplemented her playing with brief discussions of the works on the programme. She founded the Artists' Concert Club and engaged vigorously in the activities of the Amateur Music Club, an organization for women only. She was joined and supported in her commitment to Chicago's musical life by her sister Rose, the second wife of the conductor Theodore Thomas, and by her brother, Charles Norman, one of the founders of the Chicago SO.

In New York, Fay served from 1903 to 1914 as president of the New York Women's Philharmonic Society, an organization that promoted effort and achievement by women in the performance, composition, theory and history of music. Her book *Music Study in Germany* (Chicago, 1880, 2/1896/*R*1979 with new introduction and index) was also published in England and France, and remains an important source on Liszt. She also contributed articles to the musical press concerning the role and proper recognition of women in the world of music, and published a collection of finger exercises (1889).

Among Fay's friends were the pianists Paderewski and Fannie Bloomfield Zeisler, the poet Longfellow, and the composer John Knowles Paine. As a performer and teacher Fay helped to widen opportunities for women in the field of music.

MARGARET WILLIAM McCARTHY

Faya, Aurelio della. *See* DELLA FAYA, AURELIO.

Fayolle, François (Joseph Marie) (*b* Paris, 15 April 1774; *d* Paris, 2 Dec 1852). French writer on music. He first studied mathematics at the Ecole Polytechnique in Paris with Monge. His musical studies consisted of cello lessons with Barny and tuition in singing and harmony with Perne. Fayolle soon took an interest in literature and literary history; he began editing works of minor poets and published some of his own pieces of light and amatory verse. He also made a French translation of the sixth book of the *Aeneid*. Between 1805 and 1809 his *Les quatre saisons du Parnasse* appeared, a 16-volume work containing a number of articles devoted to music and including reviews of works by Le Sueur, Méhul, Spontini and Kreutzer. The *Dictionnaire historique des musiciens*, which he wrote in collaboration with Alexandre Choron, appeared in 1810–11. From 1815 to 1829 Fayolle lived in London, where he acquired a certain notoriety for his publication of courses on French literature. He continued his musical researches at the British Museum, examining a large number of books and manuscripts. He also collaborated in the editing of *The Harmonicon*, for which he wrote musico-literary articles and biographical notices on Boccherini, Tartini, Viotti, Méhul, Cherubini, Zingarelli and others. After his return to Paris in 1830 he contributed entries on musicians to the supplement of Michaud's *Biographie universelle*. He spent his last years in an old people's home and died in poverty, more or less forgotten by his contemporaries.

Fayolle is best known for his compilation of the *Dictionnaire des musiciens*. To write this work, for which Choron supplied virtually nothing but the introduction and a few articles, Fayolle had to rely heavily on the work of the earlier music historians and lexicographers Gerber, Forkel, Burney and La Borde; Fétis, in his *Biographie universelle des musiciens*, accused him of plagiarism. Besides the *Dictionnaire des musiciens* and the articles for Michaud's dictionary, Fayolle wrote two biographical books on violinists, *Notices sur Corelli, Tartini, Gaviniés, Pugnani et Viotti* (1810) and *Paganini et Bériot* (1831). The latter, a disproportionately planned pamphlet of 64 pages, which devotes only a few lines to Bériot, provides a list of the most important European violinists of the 18th and early 19th centuries. In it Fayolle questioned the value of Paganini's purely technical mastery of his instrument. 'Let us beware', he wrote, 'dexterity in itself is not genuine talent. Today the violin is no longer a

science, and the art of playing it is only a manifestation of dexterity.' He also intended to publish a larger *Histoire du violon*, but this project was never realized.

Among the periodicals to which Fayolle contributed are the *Magazin encyclopédique*, *Le Mercure*, *Journal des arts* and *Courrier des spectacles*. Edouard Fétis, in his obituary in the *Revue et gazette musicale* (19 Dec 1852), spoke of two operas of which he seems to have been the author, *Hercule au mont d'Oeta* and *Anacréon à Théon*; no other information about Fayolle's compositions survives. Yet, for historians interested in musical life during the Empire, especially opera, Fayolle furnished much useful and interesting material.

JEAN MONGRÉDIEN

Fayrfax [Fayrefax, Fairfax], **Robert** (*b* Deeping Gate, Lincs., 23 April 1464; *d* ?St Albans, ? 24 Oct 1521). English composer. More music survives by him than by any other English composer of his generation, and some of his music continued to attract interest long after that of his close contemporaries had been forgotten. Although he contributed to most of the musical genres cultivated in England he is particularly important for his cyclic masses.

1. LIFE. Nothing is known of his early career, but it seems likely that he was indebted to the influence of his family's neighbour and landlord, Margaret Beaufort, mother of Henry VII. He was a lay clerk or Gentleman of the Royal Household Chapel by 6 December 1497, when he was granted the chaplaincy of Snodhill Castle, Herefordshire (which he relinquished on 16 November 1498). His name gradually made its way up the list of clerks present at state ceremonies during the reign of Henry VII: he is listed 13th among the clerks at the funeral of Henry's son Edmund (*d* 19 June 1500), ninth among those at the funeral of Henry's wife Elizabeth of York (23 February 1503) and fifth at the funeral of the king himself (9 May 1509). In 1502 he requested a corrody at the monastery of Stanley, Wiltshire; the request was evidently granted, because on 21 February 1513 he relinquished the corrody to his chapel colleague John Fisher.

The accession of Henry VIII seems to have brought Fayrfax more rapid advancement. His name heads the lists of clerks present at Henry's coronation (24 June 1509), at the burial of the infant Prince Henry (27 February 1511, when for the first time he is styled 'M. Doctor Farefax'), and at the Field of the Cloth of Gold (June–July 1520). On 20 June 1509 the new king granted him a lifetime annuity of £9 2s. 6d.; from 1513 onwards he shared this annuity with one Robert Bithsey or Blithsee. On 10 September 1514 he was appointed a Knight of the King's Alms of Windsor, receiving 12d. a day for life. On each New Year's Day from 1516 to 1520 inclusive he gave the king a present and received a generous payment in return: £13 6s. 8d. 'in Reward for a boke'; £20 'for a boke of Antemys'; £20 'for a pricksonge boke'; £20 'for a balet boke lymned'; and £13 6s. 8d. for an unspecified gift. Between 1509 and 1513 he received annual payments for boarding and teaching two choristers of the chapel. Among other payments made to him was one on 3 July 1511 for material for a riding-gown.

Fayrfax graduated MusB at Cambridge in 1501, took the DMus there in 1504 and was incorporated DMus at Oxford in 1511. In 1502 he joined the City Fraternity of St Nicholas, a guild of parish clerks in London to which many professional musicians, including some resident outside London, belonged. His death date is given in a 17th-century sketch of the monumental brass subsequently lost from his tomb in St Albans Abbey. The administration of his estate was granted to his wife on 14 November 1521. The fact of his burial in St Albans Abbey, and compositions by him in honour of St Alban (the *Missa Albanus* and the motet *O Albane Deo grate* or *O Maria Deo grata* associated with it), may imply a connection between him and the abbey. He was evidently in St Albans on 28 March 1502 to receive a payment made there to him by Queen Elizabeth 'for setting an Anthem of oure lady and Saint Elisabeth', probably the motet *Aeternae laudis lilium*. Although his position in the Royal Household Chapel would presumably have prevented him accepting full-time employment in another institution, it is not impossible that he had a more informal role at St Albans involving periodic attendance and the occasional composition of music; the favour in which the abbey was held by the royal family might even have encouraged this.

2. WORKS. 29 compositions by Fayrfax are known to survive, some in an incomplete state; they include six cyclic masses, two *Magnificat* settings, ten votive antiphons, eight part-songs and three textless (probably instrumental) pieces. Several other works, including a *Nunc dimittis*, three votive antiphons and some sequences, are known only from contemporary references. A few of his works can be approximately dated on manuscript or other secondary evidence. His earliest compositions include the *Magnificat regale* and the votive antiphons *Ave lumen gratiae* and *Salve regina*, which were all in the Eton Choirbook (*GB-WRec* 178, edited in MB, x–xii, 1956–61) and hence date from before about 1505. *Aeternae laudis lilium* was probably in existence by 1502 (see above). The *Missa 'Regali ex progenie'* copied for King's College, Cambridge in 1503–4 may have been his; in 1508–9 the college paid for the copying of sequences by him and Cornysh. An inscription in the Lambeth Choirbook (*GB-Llp* 1) states that he wrote the *Missa 'O quam glorifica'* 'for his forme in proceadinge to bee Doctor', which evidently refers to the Cambridge doctorate which he obtained in 1504. A chronology of Fayrfax's later music must rely heavily upon stylistic evidence.

Most of Fayrfax's church music employs the five-voice texture – treble, mean, contratenor, tenor and bass – normal in England during the early Tudor period. However, whereas many of the Eton Choirbook composers habitually give the contratenor and tenor precisely the same tessitura, Fayrfax tended to keep the tenor slightly lower. Like his contemporaries he articulated his music by means of contrasts of metre and texture. Most of his antiphons and mass movements begin in triple metre and change to duple about halfway through; some return to triple metre towards the end. Fully scored sections alternate with passages for fewer voices (usually two or three) which may have been intended for soloists. In some works, such as *Lauda vivi*, he combined musical repetition with rapid changes of vocal scoring – a procedure more

characteristic of the next generation of English composers. His music is rarely as elaborate as that of his contemporaries; even in reduced-voice sections, which Davy, Cornysh and others often treated as opportunities for displays of vocal agility, Fayrfax wrote with restraint (compare his *Magnificat 'O bone Jesu'* with the settings of the same canticle by Turges, Cornysh and Prentice). Yet his music can be rhythmically as complex as that of any composer of his time, not only in the doctoral *Missa 'O quam glorifica'* (which is a demonstration of intellectual virtuosity) but in many other works in which he created and sustained cross-rhythms and syncopations. While he shared the English predilection for a steady harmonic rhythm, his harmonic style often sounds more modern than that of his compatriots. He preferred root movement by 4ths and 5ths, especially at cadences, and had a fondness for textures implicitly motivated by harmony rather than by linear counterpoint; the section of *Maria plena virtute* beginning 'Dixit Jesus dilectionis' is a uniquely powerful example of text-sensitive harmonically conceived homophony.

Fayrfax's handling of imitation is particularly interesting. Like most early Tudor composers he seems to have regarded imitation mainly as a decorative device which could also create short-term continuity; he seldom pursued a point for more than three or four notes or used it in every voice. On the other hand, he occasionally made his imitative writing more audible than usual by leaving space in the texture around it (as in *Aeternae laudis lilium* and *Maria plena virtute*). It is hard to see a consistent pattern of development in his imitative technique. An early work such as *Salve regina*, which shows signs of inexperience in its parallelisms and awkward treatment of dissonance, contains about as much imitation as the thoroughly mature *Maria plena virtute*, while *Aeternae laudis lilium*, which is likely to date from as early as 1502, contains some remarkably advanced examples of imitative writing. If some aspects of Fayrfax's style seem forward-looking, others are decidedly traditional. For example, he shared with his contemporaries and predecessors (at least as far back as Dunstaple) a fondness for architectural schemes dependent on numerical symmetries and proportions. Design based upon number is handled with unusual virtuosity in the *Missa 'O quam glorifica'*; this Mass may originally have utilised an esoteric type of notation considered appropriate in a doctoral exercise. At its best, Fayrfax's music evinces qualities of clarity, balance and directness of utterance which are very uncommon in English music of the time; this is probably why some of his works such as the *Magnificat 'O bone Jesu'* and the votive antiphons *Ave Dei Patris* and *Maria plena virtute* were still being copied almost a hundred years after his death, when most of the music of his generation had long been forgotten. His setting of *Ave Dei Patris* lived on also in another way, in that the young Thomas Tallis based his own setting of the text heavily upon it.

Fayrfax's masses belong to a native tradition extending from Leonel Power, whose *Missa 'Alma redemptoris mater'* probably dates from the early 1420s, to Sheppard, Tye and Tallis in the 1550s. All use head-motives, all but one are based upon a plainchant cantus firmus given to the tenor voice in the fully scored sections, and none includes a Kyrie. The *Missa 'Regali ex progenie'* comes closest to conventional English practice: the cantus firmus appears twice each in the Gloria and Credo, first in triple and then in duple metre, and once each in the Sanctus and Agnus. The *Missa 'O quam glorifica'* is based upon an unusually long cantus firmus which is stated only once in each movement. In complete contrast, the *Missa Albanus* presents a nine-note ostinato cantus firmus 30 times, in inversion, retrograde and retrograde inversion as well as in its original form; the votive antiphon *O Maria Deo grata* (which originally had a text beginning 'O Albane deo grate') is closely related to this mass, sharing its cantus firmus, some other musical material, and certain numerical properties. The *Missa 'O bone Jesu'* differs from Fayrfax's other masses in lacking a cantus firmus; instead it shares musical material with his antiphon *O bone Jesu* (of which only the mean part survives) and also with his *Magnificat 'O bone Jesu'*; the fragmentary state of the antiphon makes it impossible to trace the relationship in detail, but the techniques involved clearly anticipate the later parody mass or 'derived mass'. There appears also to have been a material relationship between the *Missa 'Regali ex progenie'* and the votive antiphon *Gaude flore virginali*, of which only the bass part survives, in that portions of the cantus firmus of the mass can be made to fit above this bass line; Benham has suggested that the *Magnificat regale* also has thematic links with this mass, but these links seem rather tenuous.

In his two *Magnificat* settings Fayrfax provided polyphony only for the even-numbered verses, the others being sung to the appropriate plainchant tone according to standard English practice. the *Magnificat 'O bone Jesu'* is based upon the faburden of the 7th tone, while the *Magnificat regale* is based upon that of the 8th tone; in both settings the faburden is more obvious in the fully scored verses than in those for reduced voices. Faburden also appears in his setting of the hymn *O lux beata trinitas*, quoted in a Scottish treatise of the late 1550s. Apart from *O Maria Deo grata* and *Gaude flore virginali*, which share their cantus firmi with the *Missa Albanus* and the *Missa 'Regali ex progenie'*, Fayrfax's surviving votive antiphons appear to be freely composed; in this he anticipates his immediate successors Taverner, Aston, Ludford and Tallis.

All Fayrfax's partsongs are in duple metre. Most of them are written for three voices in a moderately florid style, with rather more consistent imitation than is usual in his church music, and with careful regard for word-setting. Of the textless pieces, the fragmentary *Ut re mi fa sol la* was apparently a hexachord fantasia, while *Mese tenor* and *Paramese tenor* are puzzle canons.

WORKS

only sources additional to those given in edition are listed

Edition: *Robert Fayrfax: Collected Works*, ed. E.B. Warren, CMM, xvii/1–3 (1959–66) [complete edn except for lost works]

NICHOLAS SANDON

Fayrūz [Ḥaddād, Nuhād] (*b* Beirut, 1934). Lebanese singer. She was the eldest child of Liza Bustānī and Wadīʿ Ḥaddād, a print-shop technician who had moved to Beirut with his family from Ḍbayyah, a village in the Shūf area of central Lebanon. While at high school she was reportedly discovered by Muḥammad Fulayfil, a local composer who was interested in bringing young talent to Lebanon's newly established radio station. Ḥalīm al-Rūmī (*d* 1983), director of the music department at the station, was moved by her voice and introduced her to the aspiring young composer ʿĀṣī Raḥbānī (1923–86). Al-Rūmī is also credited with giving her the professional name Fayrūz ('turquoise'). In 1954 she married ʿĀṣī Raḥbānī and thereafter became artistically associated with him and his brother, Manṣūr Raḥbānī (*b* 1925), two highly prolific and influential composers and lyricists.

In 1957 she was featured in a Raḥbānī musical play presented at the Baalbek International Festivals. Subsequently she starred in about two dozen similar plays with other well-known male counterparts such as Naṣrī Shams al-Dīn and, occasionally, Wadīʿ al-Ṣāfī. Between the late 1950s and the early 1970s she sang hundreds of widely admired songs composed by the Raḥbānīs, whose music included numerous adaptations of Lebanese traditional and popular tunes and incorporated elements from both Arab and European musical traditions. She also performed songs by other composers including the Lebanese Philemon (Filimūn) Wihbah, who wrote some of her best known songs, and the Egyptian Muḥammed Abdel-Wahab. In addition, she recorded hymns, acted in films and appeared in major theatres in the Arab world, Europe and the Americas. Fayrūz possessed an unusual voice with a veiled, velvety timbre combined with a certain head-voice quality, and this contributed to the distinctive and novel character of her songs. Addressing pan-Arab topics and sentiments in some of her songs, she became a celebrated singer, one of the most highly acclaimed artists of the Arab world.

After her separation from her husband around 1979 and the eventual cessation of collaboration between the Raḥbānīs, Fayrūz continued to perform internationally. Many of her more recent songs were composed by her son Ziyād Raḥbānī (*b* 1956), an accomplished pianist and composer whose compositional style combined elements of Lebanese popular music and Western musics, including jazz.

See also RAḤBĀNĪ.

ALI JIHAD RACY

Fazer. Finnish music company. It was founded in 1897 by K.G. Fazer in Helsinki and was at first mainly concerned with importing instruments and sheet music but from its inception also had a considerable publishing interest. In 1918 K.G. Fazer was succeeded by his son Georg Fazer, who substantially increased its scope, particularly in radios, gramophones and records. The company moved to their spacious premises in Alexanterinkatu, later further extended to become one of the largest premises in Europe. In 1925 they opened a concert agency with several branches. After World War II the company developed under Roger Lindberg, grandson of the founder, who was appointed general manager in 1940; it became the agent for leading record companies and instrument makers. The firm was making its own pianos as early as 1935 and founded a piano factory in 1963. Oy Finnlevy Ab, which rapidly developed into the leading record company in Finland, was founded in 1966 (general manager John Eric Westö). The music publishing division has expanded through the incorporation of several art and popular music publishing firms (e.g. R.E. Westerlund in 1967) and by publishing school music books. The leading guitar

factory in Finland, Ab Landola Oy, belonged to Fazer from the 1960s until 1983. In 1971 John Westö became general manager of Musik Fazer. In 1993 the company was acquired by Warner and two years later Warner Chappell Music Finland Oy was established to continue Fazer's publishing activities. It is now the leading music publisher in Finland.

EINARI MARVIA/FABIAN DAHLSTRÖM

Fazioli, Paolo (*b* Rome, 16 July 1944). Italian piano maker. After graduating in mechanical engineering from the University of Rome and taking a piano diploma at the conservatory of Pesaro, he first devoted himself to directing his family's furniture business. In 1978 he assembled a team of acoustic physicists, timber experts and piano makers and players. His aim was to bring about the production in Italy of a new professional grand piano, each one handcrafted individually, produced in small quantities, and having a sound quality that is distinct from pianos made by other leading manufacturers. The new firm, Fazioli Pianoforti, was officially founded in 1981, the year in which Fazioli exhibited the full range of his instruments at the Frankfurt music fair. The public was incredulous and sceptical at first, but success followed rapidly, and today the models F278 and F308 are considered at least the equal of concert pianos produced by the best international firms. The F308 is the largest concert piano available on the world market. These are the first Italian-made grand pianos with their own character and with a worldwide distribution.

Fazioli Pianoforti srl, based at Sacile (60 km north of Venice), comprises a team of 25 technicians and produces only grand pianos, 90% of which are sold outside Italy. Early in 1999 around 850 instruments had been made. Output was around 70 instruments a year, and further growth was planned. Among Fazioli's principal innovations are completely adjustable DUPLEX SCALING (the capo tasto and the two bronze bridges are all independently movable, which affords accurate tuning of each of the three resonating sections of the string, improving each string's overall resonance and boosting the tone) and the addition of a fourth pedal which brings all the hammers closer to the strings, thus permitting a reduction of volume without (unlike the una corda pedal) altering the timbre.

PATRIZIO BARBIERI

Fazzini, Giovanni Battista (*b* Rome, *fl* 1774–99). Italian composer. He was *maestro di cappella* in the Roman churches of S Cecilia, S Margherita and S Apollonia, all in the Trastevere quarter. In 1774 he became an alto in the papal choir, where he remained until at least 1799. He wrote sacred music in the *stile osservato* and in the modern style with instrumental accompaniment. He was an excellent composer in both, according to Baini, but also an insignificant one, according to Fellerer.

Fe. The sharpened form of FAH in TONIC SOL-FA.

Feast of Fools [Festum stultorum; Festum fatuorum]. The term in its widest sense covers four separate days within the octave of Christmas on which special celebrations took place. These were presided over by different grades of clergy, as follows: St Stephen's Day (26 December), deacons; St John the Evangelist's Day (27 December), priests; Holy Innocents' Day (28 December), choirboys, known as the feast of the 'Boy Bishop'; and the Circumcision (1 January), sub-deacons, the 'Feast of Fools' itself. This last was a time of allowed if not approved licence in many churches of medieval Europe. The abuses perpetrated were part of a tradition that can be traced back to ancient pagan New Year celebrations, with sacrifices and jubilation in honour of the god Janus.

The quasi-dramatic ceremonies, or 'revels', connected with the 'Boy Bishop' and the 'Feast of Fools' are described in standard books on MEDIEVAL DRAMA (see particularly Chambers, 1903, and Young, 1933). The 'Feast of Fools' was the occasion on which the celebrated Prose of the Ass (*Orientis partibus*) was sung. At Notre Dame Cathedral in Paris dissolute behaviour had become excessive by the turn of the 13th century, prompting Bishop Odo of Sully to issue an edict closely prescribing the forms of service.

Most notable among surviving sources for the 'Feast of Fools' are *F-SEm* 46A (ed. Villetard) and the Beauvais ceremonies in the 13th-century manuscript *GB-Lbl* Eg.2615 (ed. Arlt). The latter also has the Prose and, in another fascicle, apparently associated with the feast, the *Play of Daniel*; it also contains polyphonic pieces associated with the Nativity season.

JOHN STEVENS/NICKY LOSSEFF

Feather, Leonard (Geoffrey) (*b* London, 13 Sept 1914; *d* Encino, CA, 22 Sept 1994). American writer on jazz, composer and arranger of English birth. He attended St Paul's School and University College, London (1920–32), studied the piano and the clarinet, and taught himself arranging. He produced recordings and wrote compositions for Benny Carter and George Chisholm in London, Feather travelled to America at the onset of war and was the New York correspondant for Down Beat (1940–41) and then publicist for Barney Josephson's two Café Society nightclubs (1941–3); he also broadcast on WNEW. He continued to produce recordings, including the first sessions by Dinah Washington (1943) and Sarah Vaughan (1944), Dizzy Gillespie's 78 r.p.m. album of New 52nd Street Jazz (1946), and sessions involving Louis Armstrong and Duke Ellington, and Armstrong and Jack Teagarden (1947), and he composed Washington's hit songs Evil Gal Blues and Salty Papa Blues (both 1943) and Lionel Hampton's Blowtop Blues (1945). Feather contributed to Metronome from 1943 to 1950 and to Esquire from late 1943 to 1956. In the years 1944

to 1946 he played the central role in the compilation of Esquire's annual jazz poll, which made a substantial step toward acknowledgeing African-American giants of jazz who had been ignored in analogous polls in Down Beat and Metronome; at the same time he became deeply invovled in an ugly critical battle between adherents of the newly emerging style, bop, and fans of traditional jazz, which he then greatly disliked. Later, in partnership with the disc jockey Symphony Sid Torin, he organized a series of bop concerts at Carnegie Hall (1947–9); he also presented weekly jam sessions at the Three Deuces nightclub on 52nd Street.

In 1948 Feather took American citizenship. He helped Shearing to become established in the USA, and the following year, under the pseudonym Billy Moore, he wrote another hit song for Washington, Baby get lost. With Ellington's son he established the record company and label Mercer (1950) and he again worked on radio, broadcasting jazz programs on the Voice of America (1950–52); another of his songs from this period, How blue can you get?, was recorded by Louis Jordan in 1951 and became a hit over a decade later when B. B. King make it a standard in his repertory. Later he wrote Born on a Friday (recorded by Cleo Laine), ballads (such as Signing Off, recorded by Vaughan, Ella Fitzgerald, and André Previn), and jazz compositions (including I Remember Bird, recorded by Cannonball Adderley, Phil Woods, and Sonny Stitt, and Twelve Tone Blues, recorded by Yusef Lateef).

From 1951 to 1986 Feather contributed to Down Beat, supplying countless informative surveys and interviews, and conducting popular "blindfold tests," in which well-known jazz musicians discussed unidentified recordings. His first edition of The Encyclopedia of Jazz was published in 1955; revised in 1960 and then continued in volumes published in 1966 and 1976 (the latter with Ira Gitler as co-author), this three-volume encyclopedia became the standard reference source in the field. In another comprehensive publication. The Book of Jazz: a Guide to the Entire Field (1957, rev. 1965), he surveyed jazz historically and offered essay on instuments, race, improvisation, and other general topics. During this same period he was wrote articles on jazz for Playboy (1957–62).

In 1960 Feather settled in the Los Angeles area, where he became a columnist for the Los Angeles Times, a position he held for the remainder of his life. He produced a German television series on jazz (1965), published anthologies of essays on jazz, two books of humor, a study of Armstrong (written with John Chilton and Max Jones), and an autobiography. He taught at Loyola Marymount University (1972–4), the University of California, Riverside (1973), California State University, Northridge, and UCLA (1987–8), and, in addition to his ongoing work for Melody Maker, Down Beat, and the Los Angeles Times, he was a regular contributor to Contemporary Keyboard and Jazz Tmes. He is best known as an author of scholarly on jazz and as a columnist; because of his eminence as a writer his musical talent is often overlooked, yet it contributed much to his skilful reviews and articles.

FRANKIE NEMKO

Febel, Reinhard (*b* Metzingen, Baden-Württemberg, 3 July 1952). German composer. He studied composition, mathematics and musicology in Tübingen and Stuttgart, and from 1978 to 1982 studied composition with Klaus Huber in Freiburg. In 1979 he received a stipend from the Heinrich Strobel Foundation of SWF. After living in London (1983–8), he became professor of composition and music theory at the Hanover Hochschule für Musik und Theater (1989). In 1997 he was appointed professor of composition at the Salzburg Mozarteum. His honours include the Beethoven Prize of the city of Bonn (1980), a stipend from the Villa Massimo in Rome (1984), and composition prizes from the Boswil composition seminar and the Steinbrenner Foundation (Berlin).

Febel belongs to the generation of composers who were described at the end of the 1970s as neo-Romantics and representatives of 'new simplicity'. He distinguished himself from his contemporaries and their seemingly casual adoption of traditional methods in his 'lucid construction, his sensitive, brilliant yet reserved and cool sensuality, his technical precision and his alert practice of reflection' (H. Lachenmann). These features are mirrored in his new postmodern philosophy of music. His works are intended to be heard as composed with tonal methods but not within tonality. Influenced by Zen Buddhism and modern physics, he conceptualizes his musical material in terms of alternating or overlapping relationships. His aesthetics have followed the transformational rules of an historical understanding that recognizes all events in music history as expressible in composition. Consequently, the concept of *bricolage*, which he discovered in the works of Claude Lévi-Strauss, has become one of his fundamental aesthetic principles.

KLAUS MICHAEL HINZ

Febiarmonici [Febi Armonici]. One or more touring opera companies working in Italy around the middle of the 17th century. The Febiarmonici ('Musicians of Apollo') are first known for a performance of *La finta pazza*, perhaps by Francesco Sacrati, in Piacenza in May 1644. The group consisted of singers (a number from Rome), musicians (perhaps including Benedetto Ferrari) and stage designers. The head of the group is variously noted as Curzio Manara, an engineer, and Giovan Battista Balbi, a dancer and designer. It was modelled on the self-financing touring companies already well established in the spoken theatre and *commedia dell'arte* traditions.

Performances by the Febiarmonici (it is not always clear whether by the same group) are recorded in Genoa (1644), Florence and Lucca (1645), Bologna and Genoa (1647), Ferrara (1648) and Lucca again (1650; involving Antonio Cesti). In early 1650 the company was brought to Naples by the viceroy, Count d'Oñate: *Didone* (Cavalli) was staged in October, and in 1651 the troupe performed *Egisto* (Cavalli), *Il Nerone, ovvero L'incoronazione di Poppea* (Monteverdi; the Naples manuscript doubtless relates to this performance) and *Giasone* (Cavalli). They also gave the first performance of Cavalli's *Veremonda* in December 1652. The Febiarmonici generally performed Venetian operas, sometimes modified to suit Neapolitan tastes, although from 1653 native artists were periodically encouraged (for the repertory, see Bianconi and Walker, 379–87). With the departure of Count d'Oñate in late 1653, the Febiarmonici transferred to the Teatro S Bartolomeo (from April 1654): performances, largely of revised Venetian operas, are recorded through to 1668.

'Febiarmonici' may have become a generic term for opera companies: a separate group used the same title in Milan and Turin, 1647–8. The institution reflects the emergence of important new modes of operatic production fostered by the ostensible shift from 'court' to 'public' opera.

Febvrier, Pierre. *See* FÉVRIER, PIERRE.

Feche, Willem du. *See* DE FESCH, WILLEM.

Fede, Innocenzo (*b* Rome, ?1660; *d* ?Rome, ?1732). Italian composer. His father Antonio Maria (or Pietro Antonio) came to Rome from Pistoia in 1656 to complete his musical education with Antonio Maria Abbatini, then *maestro di cappella* at S Maria Maggiore. There he was reunited with two of his elder brothers, Giuseppe and Francesco Maria (both castratos), who had come to join Abbatini in 1653 and 1655. In 1654 Giuseppe made his name in his teacher's opera *Dal male il bene*, and he soon became one of the best sopranos in Rome. He joined the papal choir on 23 October 1662 and died in Rome on 22 July 1700. Francesco Maria also entered the papal choir, on 6 July 1667; he died suddenly on 1 March 1684. Innocenzo's father appears from time to time in the lists of extra singers recruited for festival days at S Luigi dei Francesi (where he is mentioned in 1664 as being in the service of Cardinal Antonio Barberini) and at S Maria Maggiore (where he is mentioned in 1673 as being from S Agnese in Agone, the church of the Pamphili family in the Piazza Navona). He gave up his musical career to enter the service of the Grand Duke of Tuscany, who made him a count in 1700. Innocenzo's great-uncle Giovanni Battista Fede, an organist, was also in Rome after 1658; he died in 1678.

Innocenzo therefore had all that was necessary for a good start in his career. In 1679 he played the organ at an oratorio performance for the Santissimo Crocefisso. From 1682 he assisted his uncle Giuseppe, then acting *maestro di cappella* at S Giacomo degli Spagnuoli in the absence of Nicolò Stamegna. In 1683 Innocenzo applied for a position as tenor in the papal choir, but was unsuccessful. In July 1684 he was appointed *maestro di cappella* at S Giacomo degli Spagnuoli. Two years later, when the church lost its choir, it was thanks to Giuseppe's connections that Innocenzo was appointed to direct the Catholic choir of King James II of England. He went to London at Christmas 1686, and later followed the English royal family into exile at St Germain-en-Laye, where he became court music master and was also employed to teach Italian to the royal children James and Louise. He stayed at St Germain until 1719, and must have gone back to Italy after that. He stopped drawing the pension granted him by the Stuarts at the end of 1732. Fede's music is in the Italian style of the period, but a distinct French influence can be discerned in his instrumental pieces; his presence in France must have influenced composers who were attracted by Italian music.

JEAN LIONNET

Fedé, Johannes [Sohier, Jean] (*b* Douai, *c*1415; *d* ?Paris, ?1477). French composer. He was vicar of St Amé, Douai, in 1439–40. His name appears in documents of the papal chapel from November 1443 to July 1445 both as 'Jo. Fede alias Sohier' and as 'Joh. Sohier alias Fede'. From 14 July 1445 until April 1446 he was in the chapel of Leonello d'Este, Marquis of Ferrara (which could be when his two sacred pieces were added to the court choirbook *I-MOe* α.X.1.11); and from 30 June to 23 November 1446 he was a *petit vicaire* at Cambrai Cathedral. In 1449–50 he was a chaplain at the Ste Chapelle in Paris, from August 1451 to February 1453 in the private chapel of Charles d'Orléans, and in 1462–3 in that of Queen Marie d'Anjou (at which time he became a canon of Saint Omer). He could well be the 'Jehan Zoihier' named alongside 'Jehan du sart' (surely the composer) as an *echevin* of the Duke of Burgundy in Genappe in two documents of 15 February 1454 (Brussels, Archives Générales du Royaume, Charters of Brabant); and he may be the contratenor named Fede at S Pietro, Rome, in 1466. It was almost certainly Fedé who was paid at the Ste Chapelle in Bourges during the year 1472–3 and at the royal chapel of Louis XI in 1473–4. On 12 January 1472 'Sohier le clerc' became a canon of the Ste Chapelle in Paris, with payments recorded until 1477.

Wright has drawn attention to several apparent relatives at Cambrai Cathedral: Jean Fedé of Douai (1447–55) and Guillaume Fedé of Douai (1452–3) as clerks, and Girard Sohier (1447–8) as a scribe. Some of these may eventually lay claim to certain documents mentioned above.

Fedé is mentioned in at least three lists of prominent musicians among the poetry of the time: S. Greban's *Complainte de la mort de Jacques Milet* (1466), Crétin's *Deploration sur la trepas de Jean Ockeghem* (1497) and Eloy d'Amerval's *Livre de la deablerie* (after 1500). The first cites him alongside Ockeghem, Du Fay and Binchois alone; the others are longer lists and significant only in that they appeared many years after the presumed date of Fede's death. Here and in the sources containing his music he is referred to simply as 'Fedé'. 'Fich' in the poorly copied list of composers in Hothby's *Dialogus* may be the same man, though identity with the composer Tik is possible.

The two *Magnificat* antiphons for the octave and feast of St Dominic are extant in a Ferrarese manuscript of the late 1440s (*I-MOe*; see AH, xxv, 1897, p.241); the discantus paraphrases the chant in both. Gaffurius mentioned the proportional notation of *O lumen* in his *Tractatus practicabilium proportionum*, *c*1482 (*I-Bc* A69, f.19). *Tout a sa dame*, *A la longue* and *Mon cuer et moy* are found only in the Chansonnier Nivelle de La Chaussée (*F-Pn* Rés.Vmc.57), though the texts of the first two are also in *D-Bk* 78B17 (ed. M. Löpelmann, *Die Liederhandschrift des Cardinals de Rohan*, Göttingen, 1923). Since in the Nivelle chansonnier the first two are erased (the only erased pieces in the source after the opening leaves; they can be read from the ultraviolet photographs in Higgins, 1984) and the last is deprived of its lower voices, presumably by the subtraction of the next gathering, it is hard to avoid concluding that the composer had in some way disgraced himself in the eyes of the book's original owner. All three songs must date from the 1450s and are absolutely characteristic of the central-French style in those years. On the other hand, *L'omme banny* survives in many sources and is somewhat different in style. Although it must be from about the same date, it is ascribed to him only in *I-Fn* Magl.XIX.176, while the more plausible ascription to Barbingant in the Mellon Chansonnier (*US-NH*) is corroborated in the writings of Tinctoris, Gaffurius and Giovanni del Lago.

DAVID FALLOWS

Fedele. An Italian musical form. *See also* FOLIA.

Fedele, Ivan (*b* Lecce, 6 May 1953). Italian composer. He studied at the Milan Conservatory with Bruno Canino (piano) and Corghi (composition), taking his diplomas in piano and composition in 1972 and 1981 respectively. He subsequently took Donatoni's postgraduate course in composition at the Accademia di S Cecilia in Rome (1981–2). He first came to international attention in 1981 when his First String Quartet (1980) and *Chiari* for orchestra (1981) were awarded prizes at the Gaudeamus week in Amsterdam. In 1989 he won first prize in the Goffredo Petrassi Competition with *Epos* for orchestra (1989). He has received important commissions from the Orchestra Filarmonica della Scala, the Ensemble Inter-Contemporain, Radio-France and IRCAM. He currently teaches composition at the Como Conservatory and at the CNR in Strasbourg.

His large output includes operas, orchestral, chamber and electro-acoustic pieces and works for radio, all marked by painstaking craftsmanship and solid construction. His ability to assimilate different techniques and to judge carefully the expressive potential in the widest range of 20th-century avant-garde developments, has resulted in an independent, personal language which can answer demands for both experimentation and communication. His attention to rigorous construction of forms and materials does not, however, translate into theoretical abstraction, but demonstrates his desire to place perception before intricacy with the goal of re-establishing a

closer relationship with the listener. His thinking as a composer has been profoundly influenced by his experience of electro-acoustic music: he was in close contact with the genre while still a student when he attended the courses in electronic music given by Paccagnini at the Milan Conservatory (1974–5) and later worked at the RAI Studio di Fonologia and, from the 1990s, at IRCAM. Apart from resulting in a series of important works for instruments and live electronics such as *Richiamo* (1993–4), *Coram Requiem* (1996) and *Donacis ambra* (1997), his grasp of the possibilities that information technology offers for processing sound has also shaped the development of his orchestral writing. A strain of experimentation has invigorated his orchestral sound; for instance, he has brought various schemes for multi-dimensional treatment of the musical material into play.

The essential elements of Fedele's style were already clearly outlined in some of his earliest works, such as the First String Quartet (composed in 1980 and revised in 1990), *Chiari* for orchestra (1981) and *Chord* for ensemble (1986). The title of the latter work alone demonstrates his characteristic tendency to view vertical aspects of music not so much as the result of superimposed linear processes, but more as a point of departure and a primary structural element. In each of the quartet's five movements he develops a musical figure derived from a specific instrumental gesture; he also integrates techniques inherited from the classical tradition with the new performance possibilities introduced by the experiments of the avant garde. *Chiari* requires a particular layout of the instruments on the platform; they are subdivided into two equal, symmetrical groups, and a trio consisting of harp, piano and marimba at the centre. Here, the composer introduced one of the most characteristic aspects of his later work: the idea of the performance space as a geometrically defined area, essential to the correct realization of the score. The specific distribution of sound sources which distinguishes various works of the 1990s such as *Duo en résonance* (1991), *Richiamo* (1993–4) and *Flamen* (1994) is a reflection of a unitary and inclusive concept of acoustic space. This concept involves every element in the musical process, from the structuring of the basic material to the definition of the overall form, in which one finds an intricate play of resonances and virtual mirrors. It is probably in the resultant clarity and consistency of formal design that the communicative power of Fedele's music lies. The search for an intelligible grammatical structure which can produce a perceptible and clearly-defined narrative results in the frequent use of well-established and effective models, such as the distinction between principal and secondary aspects (*Epos* of 1989 and *Donax* of 1992), the definition of opposing poles (*Imaginary Skylines* of 1990–91) or the introduction of formal echoes in the varied repetition of clearly defined and recognizable elements (*Profilo in eco*, 1994–5). On the other hand, ideas relating to resonance are extensively and successfully applied in his many solo concertos, in which the orchestra is used as a huge musical kaleidoscope, conducting a multi-dimensional exploration of the potential inherent in the soloist's gestures, continually multiplying and refracting the musical figures. (*Cahiers de l'IRCAM: Compositeurs d'aujourd'hui*, no.9, 1996 [Fedele issue])

SUSANNA PASTICCI

Fedeli [Saggion, Saggione, Saioni, Savion]. Italian family of composers and performers.

(1) **Carlo Fedeli** (*b* Venice, *c*1622; *d* Venice, 19 Dec 1685). Instrumentalist and composer. He was one of the most important instrumentalists in Venice in the 17th century; his activities as a composer, which came later in life, were secondary. He maintained three careers simultaneously. At S Marco he played bass string instruments from July 1643, and from January 1661 until his death he was leader of the orchestra (*maestro de' concerti*) there. Four of his sons – Alessandro (*b c*1653), Antonio (*fl* 1686–93), (2) Ruggiero and (3) Giuseppe – played under his direction. He was also the leader of a *piffaro* group and in December 1654 he was hired as one of the doge's *piffari*. His third career was at the Ospedale dei Mendicanti, where he succeeded Francesco Bonfante as *maestro di strumenti* in February 1662 and served for a decade.

His chief surviving music is contained in his set of 12 sonatas op.1. They show him to have been somewhat conservative in style, but they also suggest a link between the *sonate concertate* of Dario Castello and the chamber concertos of Vivaldi, whose father served briefly under Fedeli at S Marco (between 1689 and 1693 G.B. Vivaldi held the same post at the Mendicanti as Fedeli). Though the sonatas lack true virtuoso writing, they frequently include a concertante part for cello. They are otherwise characterized by lively fugal movements and echo effects. Most have five movements. Among the most unusual are no.5, an echo sonata for four violins, and no.9, which includes a cello solo over an ostinato bass. Fedeli may have enjoyed the patronage of the Venetian nobleman Marco Morosini, who owned the small Teatro di Cannaregio where Fedeli's two operas were produced (Morosini wrote the librettos for both works). *Don Chisciotte* was elaborately produced with a prologue, an *intermedio* (*Il trionfo di Venere*) and a ballo.

WORKS

Ermelinda (op, M. Morosini), Venice, shortly before 25 Nov 1679, *I-Tn* (82 arias, S/A/T, bc)
Don Chisciotte della Mancia (op, Morosini), Venice, shortly before 3 Feb 1680, lost
Suonate, 2–4 insts, op.1 (Venice, 1685)
1 trio sonata, *A-Wn* E.M.83
1 cant, 1v, bc, *D-Kl* fol.34
1 piece, 1v, bc, in Canzonette per camera, ed. M. Silvani (Bologna, 1670[3])

(2) **Ruggiero Fedeli** (*b* Venice, ?*c*1655; *d* Kassel, Jan 1722). Composer, singer and instrumentalist, active chiefly in Germany, son of (1) Carlo Fedeli. Ruggiero Fedeli played the viola in Venetian theatre orchestras in the mid-1660s and at S Marco, Venice, from January 1669 to January 1674, when he joined the basilica choir as a bass. In April 1677 he was dismissed because of repeated absences; he is known to have worked in Bergamo in 1675.

For the next 30 years he held a long succession of appointments at German courts and theatres, from several of which he was dismissed for disobedience. He sang in operas at Bayreuth (1681) and Dresden (1688) and was hired as a composer at the Berlin court chapel in 1691. By 1695 he had gone to Hanover. In 1700 he was appointed Kapellmeister at Kassel. He worked in Berlin in 1702, Brunswick in 1703, Wolfenbüttel in 1704 and again in Berlin in 1705. In 1708 he was appointed court composer and conductor in Berlin, but in the following year he returned to Kassel as Kapellmeister, remaining there until his death.

His cantatas and arias, which show certain similarities to Legrenzi's vocal style, are characterized by sequential melodies and use ostinato figures. Some of his vocal writing assumes virtuoso proportions. It has been claimed that he approached vocal writing in the Neapolitan manner and that he exerted a discernible influence on Handel and the Hamburg opera style through his opera *Almira*. Like the psalm settings of Benedetto Marcello, Ruggiero's sacred vocal works seem to have been used in both Roman Catholic and Protestant churches. His works survive not only in the northern German cities where he worked but also farther afield, for example in Westminster Abbey, and a few seem to have remained in active use until the end of the 18th century. 24 surviving parts for his Mass in D indicate that it was performed by chorus and soloists accompanied by strings, flutes, oboes, harpsichord and organ.

WORKS

SECULAR

Almira, op, Brunswick, 1703, *D-LÜh*
Voi che sparse, pastoral drama, *SWl*
8 Italian cants., 1v, bc: Avviatemi al mio duole, Che bel soffrir, D'un desprezzato amante, Il mio core, In questi ombrosi valli, Lieta era l'onda, Sovra candido lino, Tutti della sua luce

(3) **Giuseppe Fedeli** [Saggione, Joseph] (*fl* 1680–1733). Composer and instrumentalist, active principally in France, son of (1) Carlo Fedeli. He was hired as a trombonist at S Marco, Venice, in January 1680 and was a member of the instrumentalists' guild in Venice about 1694. His opera *The Temple of Love* was produced at the Haymarket Theatre, London, in March 1706. In 1715 he dedicated his op.1 to the Saxon Prince Friedrich August, although by this time he had settled in Paris, where he acquired some following as a composer of chamber music. He and Montéclair are credited by Corrette with having introduced the contrabass at the Paris Opéra (*c*1701). His *airs* are drinking-songs and love-songs, many with comical or nonsense texts; the solo *airs* have harpsichord accompaniment. Giuseppe was an able imitator of the French ballade of the later 17th century. He was able to set the Arcadian texts which were popular in the French court in the early 18th century with the structural clarity of Italian arias, and to enliven accompaniments with the vigorous walking basses that had been widely used for half a century in his homeland. Because of its simplicity, his music was well received and widely disseminated. Works by him continued to appear in French collections until *c*1755. He was not the monk, Giuseppe, who wrote *Principj di canto fermo* (Cremona, 1722).

WORKS

The Temple of Love (op in one act, Motteux), London, 1706; songs from it (London, 1706)
Sonate, op.1, vn, b (Paris, 1715); sonata in E in *L'école du violon au XVII[e] et XVIII[e] siècles* (Paris, 1905)
Iier recueil d'airs français dans le goût italien, 1–3vv, hpd (Paris, 1728)
IId recueil d'airs français dans le goût italien, 1–3vv, hpd (Paris, 1728)
Troisième recueil d'airs français dans le goût italien (Paris, n.d.)
6 sonates, 2 vc/va/bn (Paris, 1733)
Other vocal works in MSS at *GB-Cfm* and *F-Pn*
Works in anthologies: Meslanges de musique, 3 vols. (Paris, 1727, 1728, 1729); Nouveau recueil de chansons choisies, iv (The Hague, 1729); Concerts parodiques divisez en six suites, iv (Paris, 1732); Le dessert des petits soupers (Paris, *c*1755); Recueil de pièces ... fls, vns, vle (Paris, *c*1755)
According to French copyright records there were further volumes of his music, now lost (Paris, 1715)

(4) **Alessandro Fedeli** (*fl* 1663–1714). Trombonist and son of (1) Carlo. From 1663 he was a member of the Doge's *piffari*. In 1664 he was elected to the orchestra at S. Marco where he assumed his father's responsibilities in 1685 and played the trumpet from 1691. He was still playing in both ensembles in 1714.

(5) **Antonio Fedeli** (*fl* 1686–93). Violinist and son of (1) Carlo. Prior to his father's death he was an unpaid substitute in the S. Marco orchestra. He was fully appointed in 1686.

ELEANOR SELFRIDGE-FIELD

Feder, (Franz) Georg (*b* Bochum, 30 Nov 1927). German musicologist. After studying with Emil Peeters in Bochum (1946–9) and substituting for him as conductor at the Bochum Schauspielhaus (1947–9), he studied musicology from 1949 to 1955 at the universities of Tübingen, Göttingen and Kiel, with philosophy and history as secondary subjects. He took the doctorate in 1955 in Kiel under Blume with a dissertation on arrangements of Bach's vocal music from 1750 to 1950. In 1957 he became assistant to Jens Peter Larsen at the Joseph-Haydn-Institut in Cologne; in 1960 he succeeded Larsen as director of the institute and of the Haydn collected edition which under his directorship published 54 volumes. He also founded and edited (1965–88) the *Haydn-Studien*. He was visiting professor at the City University of New York, Marburg University (1983), the Düsseldorf Musikhochschule (1984–92), Indiana University (1985) and Cologne University (1986–7). He retired from the Haydn-Institut in 1990 and from his academic duties in 1992.

Fédération Internationale des Jeunesses Musicales. Organization founded in 1945 by the JEUNESSES MUSICALES movement.

Federhofer, Hellmut (*b* Graz, 6 Aug 1911). Austrian musicologist. After studying the piano and theory in Graz he attended the Vienna Music Academy, where he studied under Richard Stöhr and took a diploma in conducting in 1936. He then studied privately under Alban Berg, Oswald Jonas and Emil von Sauer. At Vienna University he studied musicology under Orel and Lach, and in 1936 he took the doctorate there with a dissertation on chordal and harmonic structure in early motets of the Trent Codices. In 1937 he became state librarian in the Austrian library service. He completed the *Habilitation* in 1944 at Graz University with a study of musical form. He then taught there as a lecturer and from 1951 as professor of musicology. In 1962 he was appointed director of the musicology institute of Mainz University. As an editor he has been in charge of the series Musik Alter Meister (1949–80) and the Mainzer Studien zur Musikwissenschaft (1967–85), the Fux collected edition (1955–67; from 1986), to which he has contributed several volumes, and *Acta musicologica* (1962–86). He retired from his university post in 1980. He was awarded the Österreichisches Ehrenkreuz für Musikwissenschaft und Kunst in 1959 and was made an honorary member of the Zentralinstitut für Mozartforschung in 1981.

Federhofer ranks as one of the most important musicologists of postwar Austria. In addition to the contributions he has made to music scholarship through his work as an editor, he has written monographs on subjects ranging from early medieval sources to the theories of Schenker. His writings may be grouped into roughly five categories: his early publications on the late Middle Ages,

his writings on the local music history of southern Austria (particularly Graz), his articles on Baroque music treatises, his work on Fux, and his later publications on 20th-century music and music theory (particularly the theories of Schenker and Adorno).

His wife, Renate Federhofer-Königs (*b* Cologne, 4 Jan 1930), studied musicology in Cologne with Fellerer and Hüschen and obtained the doctorate there in 1957 with the dissertation *J. Oridryus und sein Musiktraktat (Düsseldorf 1557)* (Cologne, 1957). She has also published articles in the *Kirchenmusikalisches Jahrbuch* on music theory from the 14th century to the 16th, a book on Wasielewsky's correspondence (Tutzing, 1975), and articles on correspondence sent to Mendelssohn and Schumann.

HANS HEINRICH EGGEBRECHT/R

Federici, Francesco (*b* Rome, ?*c*1635; *d* Rome, after 1691). Italian composer. He sang as a choirboy at S Lorenzo in Damaso in 1649, and later held a benefice there. He was a member of the Congregazione dei Musici di S Cecilia in 1652, and possibly earlier. At a meeting in 1658 he was mentioned as 'Don Federici di San Pietro', indicating that he was then a priest and singer in the Cappella Giulia at S Pietro. 20 years later he was *maestro di cappella* at S Angelo in Corridore, Rome. Most of Federici's oratorios are known only through their librettos, published in Rome; he wrote also a small number of secular vocal works.

WORKS

ORATORIOS

music lost unless otherwise stated

Santa Caterina, 5vv, insts, 1676, 2 arias in Burney
Sacrificium Jephte (S. Mesquita); lib pubd (Rome, 1682)
Jezabel (Mesquita); lib pubd (Rome, 1688)

Mauritius (Mesquita); lib pubd (Rome, 1692)

Doubtful: Santa Christina, solo vv, insts, 1676

OTHER VOCAL

4 cantatas, 1v, bc; madrigal, 3vv; aria, 1v, bc: *A-Wn, F-Pn, GB-Och, I-Bc*

JEAN LIONNET

Federici, Vincenzo (*b* Pesaro, 1764; *d* Milan, 26 Sept 1826). Italian composer. His family intended him to study law, but he also studied the harpsichord. At the age of 16 he went to Livorno and then to London, where he gave music lessons and taught himself composition; a set of sonatas by him was published there in 1786. His first opera, *L'olimpiade*, was staged at Turin in 1789. His first known association with the Italian Opera in London was as *maestro al cembalo* for Francesco Bianchi's *La villanella rapita* (27 February 1790) at the Little Haymarket Theatre, where his own opera *L'usurpator innocente* (a version of Metastasio's *Demofoonte*) was performed 15 times with a cast including the castrato Luigi Marchesi. He was *maestro al cembalo* at the King's Theatre from 1790 until at least 1800. During that time he contributed to pasticcios and to works by other composers.

In 1802 he settled in Milan, where his *Castore e Polluce* was performed at La Scala in 1803 and 1805; it was also staged at Venice, Turin and Naples. He produced an *opera seria* at La Scala or Turin every Carnival except one until 1809; he also wrote occasional works for La Scala (1803–15). From 1808 he taught at the Milan Conservatory, where he became composition master in 1824 and acting director in 1825.

The highly successful opera *Zaira* (1799, Palermo), often attributed to Vincenzo Federici, is probably by Francesco Federici; the authorship of the *azione lirica Pigmalione* (*I-Fc*), by one of the Federicis, remains doubtful.

WORKS

Opere serie: L'olimpiade (3, P. Metastasio), Turin, Regio, 26 Dec 1789, excerpts *D-Dl*; L'usurpator innocente (2, after Metastasio: *Demofoonte*), London, Little Haymarket, 6 April 1790, excerpts (London, *c*1789); Castore e Polluce (2, L. Romanelli), Milan, Scala, Jan 1803, *Mbs, I-Mr, Nc, US-Wc*, duet (Milan, n.d.); Oreste in Tauride (2), Milan, Scala, 27 Jan 1804, *I-Mr**; Sofonisba (3, A. Zanetti and G. Zanetti), Turin, Regio, carn. 1805; Idomeneo (2, Romanelli), Milan, Scala, 31 Jan 1806, *Mr**; La conquista delle Indie orientali (3, G. Boggio), Turin, Regio, carn. 1808, terzetto, *Mc*; Ifigenia in Aulide (2, Romanelli), Milan, La Scala, 28 Jan 1809, *Mc*

Other works: Domine salvum fac, T, 4vv, orch, *Mc*; 6 sonatas, hpd/pf, vn (London, 1786); 2 sinfonie, *Mc*; Occasional cantatas; ballets

Federico [Federici], **Gennaro Antonio** [Gennarantonio, Jennaro-Antonio] (*b* ?Naples, *fl* 1726–43; *d* 1743–4). Italian librettist. A lawyer by profession, he worked in Naples where he wrote prose comedies, librettos for sacred and comic operas and the famous intermezzo *La serva padrona* (1733), set by Pergolesi. Federico's best-known comic opera, *Amor vuol sofferenza* set by Leonardo Leo in 1739, prompted de Brosses to exclaim 'Quelle invention! quelle harmonie! quelle excellente plaisanterie musicale!'. During Federico's career the fashion in Neapolitan comic opera had moved away from a naturalistic representation of lower-class characters, entirely in dialect, and with obvious roots in the *commedia dell'arte*, towards an italianized dialect and an admixture of Italian-speaking non-Neapolitan roles. His critical reputation rests to a large extent on the freshness of his comedy and his skill in the portrayal of character. Napoli Signorelli, for example, wrote of his expression: 'Sempre è vera, sempre graziosa, sempre naturale, e non mai pulcinellesca'.

GRAHAM HARDIE

Fédorov, Vladimir (*b* nr Chernigov, 5/18 Aug 1901; *d* Paris, 9 April 1979). French librarian and musicologist of Russian birth. The son of Michael Fédorov, a politician in the Tsarist regime, he studied in Rostov-na-Donu (1918–19), in Paris (the Sorbonne, 1921–32, and the Conservatoire, 1921–30) and then in Germany (1923–4). He studied the piano with Vasily Zavodsky (1922–6), counterpoint and fugue with André Gédalge (1924–6), composition with Paul Vidal (1923–30) and musicology with André Pirro (1927–33). He was librarian of the Sorbonne Library (1933–9), of the music department of the Bibliothèque Nationale (1946–66) and of the Paris Conservatoire Library (1958–64). In 1951 he founded the IAML, becoming its vice-president (1955–62), president (1962–5) and honorary president (until his death) and editing its journal *Fontes artis musicae* (1954–75). He was the motivating force in the foundation of RISM and was appointed general secretary (1952), then president (1973) of its International Committee. With the help of libraries and museums in Paris and in the provinces he organized several exhibitions devoted to French musicians (Duparc, Debussy, Chasson, Rameau) and published papers on music libraries. He also did valuable research on various topics including Russian music. A notable feature is the international character of his work, both as a librarian and as a musicologist; he was vice-president and then president of the UNESCO International Council of Music (1962–6) and of the IMS (1964–7). He contributed many articles to a variety of encyclopedias, including *MGG1, Enciclopedia dello spettacolo* (1954–62) and *Larousse de la musique* (1957), and wrote numerous pieces for piano and for chamber orchestra, mostly between 1926 and 1930.

CHRISTIANE SPIETH-WEISSENBACHER/JEAN GRIBENSKI

Fedosova, Irina (Andreevna) (*b* Sopronovo, Onega district, 1831; *d* Lisitsino, Onega district 1899). Russian *voplennitsa* (lamenter). She was noted for her mastery of lamentation. She improvised using formulaic structures or models in her laments, which were published in three volumes funeral, wedding and recruiting laments. Her skill in improvising extensive poetic texts of high artistic quality attracted the attention of many distinguished figures of Russian culture. M. Gorky, M. Prishvin and V. Miller wrote about her as a guardian of Russian history. Those familiar with her work included the composers Nikolay Andreyevich Rimsky-Korsakov and Mily Alekseyevich Balakirev, the musicologist V.V. Yastrebtsov and T.I. Filippov, the chairman of the songs committee of the ethnographic department of the Russian Geographical Society. In January 1895 Rimsky-Korsakov recorded five of her performances. During the 1890s she performed many times in St Petersburg, Moscow, Nizhniy Novgorod, Kazan′ and Petrozavodsk. As well as laments, her repertory included Russian epics (*bïlïny*), wedding songs and soldiers' songs. The Russian Academy of Sciences awarded her a silver medal and a diploma. Her texts are used extensively in books on Russian folklore.

Fehr, Joseph Anton (*b* Grönenbach, Allgäu, bap. 18 Dec 1761; *d* Durach, *c*1807). German composer. The son of an official in the princely establishment at Kempten, he studied at the Heiligkreuz monastery in Memmingen and at the University of Dillingen. In 1787 he was admitted to the priesthood and became vicar-choral to the Prince-Abbot of Kempten, where he played the double bass and the cello in the court and chamber ensembles. When Kempten was incorporated into the state of Bavaria, Fehr became priest in charge, and school inspector, at Durach near Kempten. Long before Beethoven, he composed a setting of Schiller's *An die Freude*, published with a set of keyboard dances (Bregenz, 1798); he also published *XII Lieder fürs Klavier gesetzt* (Kempten, 1796) and *Sammlung XII auserlesener Lieder zur angenehmen Unterhaltung fürs Clavier* (Bregenz, 1797). A duet setting of the *Salve regina* also survives (*D-Bsb*), but his *Vesperae de Dominica* setting has disappeared.

ADOLF LAYER

Fehr, Max (*b* Bülach, canton of Zürich, 17 June 1887; *d* Winterthur, 27 April 1963). Swiss musicologist. He studied Romance languages and musicology in Zürich, where he took the doctorate in 1912 with a dissertation on Zeno and his librettos. After a period of study in Italy, Fehr was employed in Zürich (1912–18) and Winterthur (1918–52) as a teacher of French and Italian, writing books on music history in his spare time. From 1917 he was librarian and later president (1923–57) of the Allgemeine Musikgesellschaft, Zürich; as the successor of Hermann Suter, he was also president of the Neue Schweizer Musikgesellschaft, now the Schweizerische Musikforschende Gesellschaft (1919–32). The main emphasis in Fehr's writings was on Swiss music history, particularly that of Zürich and Winterthur; he wrote a standard work on Richard Wagner's years in Switzerland.

JÜRG STENZL

Fehrman, Minny. *See* BREMA, MARIE.

Fei. Italian family of music printers. They were active in the 17th century. In 1615 the first publication by Andrea Fei (*b* c1579; *d* 6 Feb 1650), an edition of Guidetti's *Directorium chori*, appeared at Rome. In 1620 he opened a second house in Bracciano, apparently as publisher to the duke, and quickly put out an edition of Arcadelt's first book of madrigals. Both branches continued during the rest of the printer's life, and both published music sporadically over the next two decades. Between 1640 and 1647 Fei published more music at both addresses, much of it being financed by others, in particular the Roman bookseller G.D. Franzini. Several volumes in a largely conservative output were edited by Florido de Silvestri. In 1657 Andrea's son Giacomo Fei (*b* c1603; *d* 21 April 1682) inherited the firm and retained the Bracciano branch for some years. He seems to have printed mostly music until 1670, when his output declined rapidly. Almost 40 editions survive, concentrating on sacred music by Roman composers such as Francesco Foggia, Bonifatio Gratiani and Domenico Mazzocchi. There are also a few editions of spiritual villanellas (P.P. Sabbatini) and madrigals (Natali), as well as new editions of G.F. Anerio and Palestrina.

It is not certain if Michel'angelo Fei is related to the above. He printed at Orvieto, in partnership with Rinaldo Ruuli during the 1620s. Five musical books appeared before 1626. Ruuli continued to print various titles, including seven of sacred music, until 1639.

STANLEY BOORMAN

Feicht, Hieronim (*b* Mogilno, nr Poznań, 22 Sept 1894; *d* Warsaw, 31 March 1967). Polish musicologist and composer. Ordained priest in 1916, he received his musical education in Kraków and Lwów and studied musicology first with Adolf Chybiński at the University of Lwów (1921–5) and then with Peter Wagner at Freiburg (1927–8). In 1925 he took the doctorate with a dissertation on the sacred works of Pękiel at Lwów University and in 1946 he completed the *Habilitation* at the University of Poznań with a work on Chopin's rondos. He taught theory and history of music at the Kraków Conservatory (1927–30, 1935–9) and was a professor at the State College of Music in Warsaw (1930–32). He was head of the musicology department at the University of Wrocław (1946–52) and rector of the State College of Music at Wrocław (1948–52). From 1952 until his death he was a professor and later head of the music history department at Warsaw University. From 1958 he was also director of the Church Music Institute at the Catholic University of Lublin. He edited the series Wydawnicto Dawnej Muzyki Polskiej from 1952 and Antiquitates Musicae in Polonia from 1960. In his work as a scholar he continued the line initiated by Chybiński and was concerned primarily with the history of Polish music. His intensive studies, many of them pioneering, were carried out mainly on Polish medieval music and the chorale in Poland.

Feichtner, Franz Adam. *See* VEICHTNER, FRANZ ADAM.

Feierlich (Ger.: 'solemn', 'festive'). An expression mark that aptly reflected the mood of much German music in the later 19th century. Siegfried's Funeral March in *Götterdämmerung* is so marked, as are many slow movements, such as those in Bruckner's Second Symphony (*feierlich, etwas bewegt*) and his Sixth (*sehr feierlich*). It need not necessarily designate a slow tempo, merely a certain seriousness.

See also TEMPO AND EXPRESSION MARKS.

□

Feijóo y Montenegro, Benito Jerónimo (*b* Casdemiro, Orense, 8 Oct 1676; *d* Oviedo, 26 Sept 1764). Spanish

essayist. A Benedictine monk, he settled in Oviedo in 1709, teaching theology at the university and later serving as abbot in the monastery of his order. His major works are two series of essays on a wide variety of subjects: *Theatro critico universal* (nine books, 1726–40) and *Cartas eruditas* (five books, 1742–60). In his effort to combat scholasticism, authoritarianism and superstition, and his insistence on reason and verification, he was the leading Spanish representative of the Enlightenment. He was sensitive and knowledgeable about music, though a traditionalist, following the ancients in viewing music as symbolic of the harmony of the universe and capable of powerful moral influence. In his celebrated 'Música de los templos' (*Theatro*, i, no.14) he deplored current Italian fashions in church music, viewing chromaticism, fast tempos, dance and opera styles and use of violins as inimical to the majestic repose ideal for worship. He blamed Durón for first introducing the style, but singled out Literes as a praiseworthy contemporary composer. This work, like many of this others, provoked a fierce polemic. Other musical essays include 'Maravillas de la música' (*Cartas*, i, no.44) and a musical section in 'Resurrección de las artes' (*Theatro*, iv, no.12), both comparing ancient and modern music; 'El deleite de la música' (*Cartas*, iv, no.1), singling out music as the noblest of the arts and the most conducive to virtue; and 'El no sé qué' (*Theatro*, vi, no.12), using musical illustrations to analyse qualities generally considered inexpressible.

ALMONTE HOWELL

Feinberg, Samuil (Yevgen'yevich) (*b* Odessa, 14/26 May 1890; *d* Moscow, 22 Oct 1962). Russian pianist and composer. His parents were of Jewish origin, and in 1894 they moved from Odessa to Moscow. There Feinberg entered the conservatory, where he studied the piano with Gol'denveyzer, graduating in 1911. He also took private composition lessons with Zhilyayev. Over the next few years he started performing as a pianist and continued to compose. Around this time he played to Skryabin, who declared Feinberg's performance of his Fourth Sonata the most convincing he had yet heard. In August 1914 he was sent to the Polish front, but he fell seriously ill and was sent to a military hospital, where he contracted typhus. He returned to Moscow and convalesced there for the rest of World War I. In 1922 he was appointed professor of piano at the Moscow conservatory. He also became a member of the circle which met at Pavel Lamm's flat; musicians he encountered there included Myaskovsky and Anatoly Aleksandrov, both of whom wrote works for him. During the second half of the 1920s he achieved significant success abroad, giving concerts in Italy, Austria and Germany, and taking part in the 1925 ISCM Festival in Venice, where he aroused great interest with his Sixth Sonata. During the 1930s he served on the juries of several international competitions, but his concerts abroad appear to have ceased around the middle of 1929. Despite suffering from heart trouble from 1951 onwards, he performed, recorded and composed up until a few days before his death.

As a pianist, Feinberg was considered the equal of Gol'denveyzer, Sofronitsky, Neuhaus and Ginzburg; the latter two, as well as Feinberg's pupil Viktor Merzhanov and Mikhail Sokolov, are known to have played Feinberg's works during his lifetime. Feinberg held in his memory Bach's *Das wohltemperirte Clavier* (he was the first Russian pianist to play the entire cycle in public), Beethoven's 32 sonatas and most of the output of Chopin, Schumann and Skryabin, whose ten sonatas he often performed over two concerts. Although Prokofiev, whose Third Concerto Feinberg was the first to play in Russia, considered his interpretations too nervous and Romantic in approach, Feinberg's playing was notable for its clarity, quality of legato playing, range of tone and rhythmic subtlety. The obscurity of his compositions, even in his own lifetime, may be traced to his 'deep antipathy to any form of self-advertisement' which he 'stretched to its very limits' (L. Feinberg, 1984). He was a member of the Association for Contemporary Music (ASM) in Moscow in the 1920s and was considered by some of its members to be on the more conservative wing of the organization; but despite the outward lack of a brazenly modernist aesthetic, many of his works contain harmonic, gestural and formal innovations. In early works, such as the First Sonata, he used the middle-period works of Skryabin and, to a lesser extent, certain rhythmic and textural properties of Schumann's piano music as models; but by the Fourth Sonata (1918) he had developed a highly singular style into which he had assimilated much of the prevailing atonal experimentation of the era as well as his considerable contrapuntal technique. The sixth and seventh sonatas are perhaps his finest achievements: while the former employs a vast, mosaic-like structure of cellular motifs all based on the same two intervals, the latter explores linear progressions in textures of considerable complexity. Although his works of the 1920s are tragic in expression, in contrast to the ecstatic nature of his earlier Skryabin-inspired works, both share a virtuoso complexity and an apocalyptic tone. In the mid-1920s he experimented, along with Anatoly Aleksandrov, with Schoenbergian 12-note serialism, but he considered his attempts unsatisfactory. The première of his First Piano Concerto aroused vilification among critics of the proletarian camp. This event caused Feinberg to all but cease performing his works in public. Problems arose for Feinberg in 1936 when his former teacher and close friend Zhilyayev was arrested in the Tukhachevsky affair; both Zhilyayev and Sollertinsky, who was also implicated, died in prison. The fact that Zhilyayev was his editor at the publishers Muzgiz explains why Feinberg's seventh and eighth sonatas were not published until the mid-1970s. It also accounts for the style of the two works, both of which are aesthetically distant from the musical atmosphere of the late 1930s. In later years Feinberg turned, like his teacher and friend Gol'denveyzer, to a quasi-diatonic polyphonic language which, while displaying comparative simplicity on the surface, retains much of the

intellectual rigour that characterizes his best work of the 1920s.

WORKS

3 pf concs.: op.20, ?1931–2 [partly based on Sonata no.3]; op.36, 1944; op.44, 1946–7, rev. 1951

JONATHAN POWELL

Feind, Barthold [Aristobulos Eutropius; Wahrmund] (*b* Hamburg, 1678; *d* Hamburg, 15 Oct 1721). German poet and aesthetician. His father, Barthold Feind, was a teacher of theology at the Johanneum Lateinschule in Hamburg, where his son was a student. Feind studied at the universities in Halle and Wittenberg, and received a law degree. His writings show that he was exceedingly well read with a considerable knowledge of philosophical and physiological works in German and French, and that he was familiar with a wide range of dramatic and poetic literature. Early in his career Feind travelled to France and probably also to Italy. In Hamburg, where he divided his career between law and various kinds of writing, he became entangled in local politics. Particularly through satirical writing in his weekly publication, *Relationes curiosae*, he criticized a powerful local demagogue, Pastor Christian Krumbholtz, who used the pulpit to align a segment of the public against members of the Hamburg Senate. Krumbholtz succeeded in stirring up local agitators who burnt Feind's publication before the city hall. Public pressure eventually forced the Senate to ban Feind from the city. In 1707 he was hanged in effigy, and in 1708 a protesting group invaded the opera house during a performance of Graupner's opera *L'amore ammalato*, with a libretto by Feind, to create considerable havoc and to stop the show. Finally, an imperial commission restored order to the city and in 1709 exonerated Feind and permitted him to return to the city from Stade where he had found employment as tutor to the son of the Swedish Baron von Welligk. Feind, who had developed strong loyalties to the Swedish and wrote favourably on their behalf, was imprisoned by the Danish in 1717 as he was caught up in the Swedish-Danish war while travelling north of Hamburg. By 1719, however, he had returned to Hamburg, where he became a *Vikarius* at the cathedral. An accidental fall led to his death at the age of 43.

Feind must be rated with Postel, Bressand and Hunold as an outstanding writer of librettos for the Hamburg opera in the first decades of the 18th century. He contributed texts for works by both Keiser and Graupner, as well as translating Giacomo Rossi's *Rinaldo* as set by Handel. His librettos demonstrate his outspoken concern that opera must be a distinct artistic genre and not simply spoken drama set to music. Feind's aesthetic and practical ideas about opera dramaturgy appear in *Deutsche Gedichte . . . sammt einer Vorrede . . .und Gedancken von der Opera* (Stade, 1708), an invaluable primary source for the history of opera aesthetics in 18th-century Germany; it also contains five librettos by Feind.

Feind opposed many of the stereotyped Baroque dramatic conventions, especially those found in French opera. He stressed a belief that individual characterization lies at the heart of opera drama. He insisted that dramatic actions of all kinds were required to stir the emotions of the audience, and he defended his frequent recourse to scenes of violence including murder and suicide: 'Etlichen Weichmühtigen kömmt es cruel vor eine Person auf dem Theatro erstochen zu sehen und dennoch sind bey den grausamsten Executionen alle Märkte Gassen und Richt-Plätze voll' ('Some tender-hearted people think it cruel to see a person stabbed on the stage, and yet there are the most horrible executions filling all the market-places, alleyways, and places of execution'). Feind gave one of the clearer contemporary statements about the nature and importance in poetry of the concept of the Affections. His *Deutsche Gedichte* offers a lengthy, pseudo-scientific explanation of the physical nature of emotion current in much of the philosophical writing at the turn of the 18th

century and based in part on Descartes' *Les passions de l'âme* (1649).

In essence Feind believed that individual emotions resulted from Man's four temperaments – the sanguine, choleric, phlegmatic and melancholic – which in turn were affected by the acid–alkaline balance of the bodily fluids. Although the concept strikes one today as naive, the great weight given to these ideas by Feind is proof of the aesthetic concerns in the German Baroque for writing poetry and music with an emotional rationale. Few theorists of the early 18th century stated these ideas in as much detail, and the emotionally intense librettos by Feind are classic examples of the results of this philosophy in early 18th-century German opera.

GEORGE J. BUELOW

Feininger, Laurence [Laurentius, Lorenzo] (**Karl Johann**) (*b* Berlin, 5 April 1909; *d* Campo di Trens, 7 Jan 1976). American musicologist of German descent, active in Italy. Through his father, the painter Lyonel Feininger, he grew up in Germany in an artistic environment and had close contacts among the Bauhaus school. He studied composition and the organ; 11 preludes and fugues for keyboard, composed in 1933–4, were published in 1972. At the University of Heidelberg he studied philosophy with Jaspers and musicology with Besseler, taking the doctorate in 1935 with a dissertation on the early history of the canon. His Jewish family fled Nazi harassment for the USA in 1937, and Feininger (who had been baptized in 1934) moved to Italy, settling in Trent in 1938 and devoting himself to the study of early sources of Catholic church music, especially the 15th-century Trent Codices. He was interned as an enemy alien in 1943–4; after the war he pursued theological studies in Trent and Rome and was ordained priest in 1947. He was a research associate at the Vatican Library and the Pontificio Istituto di Musica Sacra in 1946–9. In 1947, together with Carlo Respighi (though Feininger was the sustaining spirit), he founded the Societas Universalis Sanctae Ceciliae for the purpose of cataloguing and publishing Catholic church music from before 1800; practically all his publications were produced under its auspices. He returned permanently to Trent in 1949 and established the Coro del Concilio to perform and publicize the Roman polychoral repertory of the early 17th century; it toured widely until 1971. From about 1967 his attention was concentrated on studies of the sources of liturgical chant in an effort to preserve them from the effects of the abandonment of the Latin rite by the Second Vatican Council. He died in an automobile crash on the Brenner motorway.

Feininger's legacy of catalogues and editions, the product of a brilliant if wayward musical intelligence, remains important. His extensive library, including many microfilms and unpublished papers, has been established as the Biblioteca Musicale Laurence K.J. Feininger in the Castello del Buonconsiglio, Trent. 15 bound volumes of his transcriptions of 15th- and 16th-century sacred polyphony, containing some 3000 compositions (including nearly all the contents of the Trent Codices) are preserved, 13 at the Pontificio Istituto di Musica Sacra, Rome, the others in the Feininger Library in Trent; one of their notable features, shared with the editions, is a readiness to propose speculative attributions for anonymous works. Many of these suggestions seem fanciful, but some have been vindicated by subsequent scholarship (see Fallows, 1982), and others deserve serious consideration. Feininger's work is likely to stimulate research for some time to come.

JEFFREY DEAN

Feis Atha Cliath, Feis Ceoil, Feis Maitiú. Music festivals held in Dublin; *see* DUBLIN, §8.

Fel, Antoine (*b* Bordeaux, 1694; *d* Bicêtre, 27 June 1771). French singer and composer. He was the son of Henry Fel, an organist, and was well known for his skill in teaching singing. He sang at the Concert Spirituel and at the Paris Opéra as a *basse-taille* or *taille* until about 1753, when he retired with a modest pension. He wrote about a dozen *cantatilles* with instrumental accompaniment and two collections of *Airs et duos tendres et bacchiques* (Paris, *c*1748); his sister Marie Fel and his daughter Marie Antoinette Françoise Fel (*b* 1750–60) were also singers.

MARY CYR

Fel, Marie (*b* Bordeaux, 24 Oct 1713; *d* Chaillot, 2 Feb 1794). French singer. One of the most famous singers of the Académie Royale de Musique, Marie Fel had a long and brilliant career on the operatic stage. She learnt the Italian style of singing from Mme Van Loo, a celebrated Italian singer (daughter of the violinist Somis) who married the painter Carle Vanloo and came to Paris in 1733. She made her début on 29 October 1734 as Venus in the prologue of *Philomèle* by La Coste and at the Concert Spirituel des Tuileries on 1 November in a motet by Mondonville. Her appeal increased rapidly. She performed regularly at the Concerts chez la Reine, small court gatherings where operas being given in Paris were previewed or repeated. As she continued to sing major roles, she also frequently performed *cantatilles*, airs in French or Italian inserted between the acts of an opera. From 1739 she began to assume leading roles and, with the famous *haute-contre* Pierre de Jélyotte, gave performances which charmed every opera audience. Her flexibility and clear articulation particularly suited the technically demanding *ariettes*. F.M. Grimm, in a letter to Raynal (*Mercure de France*, May 1752, p.187), praised her mastery of the Italian style:

> Quand je parle de la façon dont Mlle Fel chante l'italien, je n'ai pas voulu dire qu'elle avait fait je ne sais quelles découvertes, j'ai voulu dire simplement que les étrangers et entre autres mon compatriote M. Hasse, outre une articulation très heureuse et une expression très agréable, lui trouve je ne sais quoi d'original dans son chant, qui sans être précisément le goût de nos voix italiennes, convient très bien au génie de cette musique; et si l'auteur des Remarques demande en quoi consiste cette manière originale, je lui dirai que Mlle Fel la doit à son organe, le plus singulier et le plus égal que je connaisse. C'est avec une voix partout également franche et légère qu'elle parcourt deux gammes et demie; mais la nature qui lui a accordé cette faveur n'en est pas prodigue, et les voix ordinaires sont obligées d'y suppléer par l'art.

In 1757 she appeared with her pupil Sophie Arnould, who replaced her at the Opéra the following year. She continued to sing at the Tuileries, and was applauded for her interpretation of Latin and French motets, especially those of Mondonville. In 1752 she performed the *Salve regina* which J.-J. Rousseau had written for her (*Confessions* (Geneva, 1782), ix: 1756).

Her sensitivity and intelligence brought her many admirers, among them Grimm and the librettist Cahusac. The painter Quentin La Tour called her his 'Céleste'; his pastel of her, displayed at the Salon du Louvre in 1757, has become famous (reproduced by Prod'homme, 1923). During her long career she performed in over a hundred premières and revivals, including major roles in most of Rameau's works:

Castor et Pollux (Amour in 1737, Télaïre in 1754), *Fêtes d'Hébé* (Hébé, 1739, 1747, 1756), *Dardanus* (1739, 1744), *Hippolyte et Aricie* (1742 revival), *Les Indes galantes* (1743), *Fêtes de Polymnie* (1745), *Le temple de la gloire* (1745), *Zaïs* (Zélidie, 1748), *Naïs* (1749), *Platée* (1749), *Zoroastre* (Amélite, 1749 and 1756), *La guirlande* (Zélide, 1751), *Acante et Céphise* (Céphise, 1751), *La naissance d'Osiris* (Pamilie, 1754)

Some of her other roles were in works by Lully, Campra and Mouret (they are listed by Pitou), as well as Chloé in Boismortier's *Daphnis et Chloé* (1747), Aurore in Mondonville's *Titon et l'Aurore* (1753), Colette in Rousseau's *Le devin du village* (1753) and Alcimadure in *Daphnis et Alcimadure*, Mondonville's pastorale in Languedoc dialect.

MARY CYR

Felciano, Richard (James) (*b* Santa Rosa, CA, 7 Dec 1930). American composer. He studied at the San Francisco State College (BA 1952), Mills College (MA 1952), where his teachers included Milhaud, the Paris Conservatoire and the University of Iowa (PhD 1959). He also studied privately with Dallapiccola in Florence (1958–9). After serving as chair of the music department at Lone Mountain College, San Francisco (1959–67), he joined the composition department at the University of California, Berkeley. He has been active at the San Francisco Tape Music Center (1964) and at the National Center for Experiments in Television (1967–71). From 1971 to 1973 he held the position of composer-in-residence for the city of Boston (1971–3), during which he created a 14-channel electronic environment for City Hall and composed *Galactic Rounds*

(1972), an orchestral work using Doppler shifts to explore the time-space continuum. After a residency at IRCAM (1982–3), he founded the University of California's Center for New Music and Audio Technologies, an interdisciplinary facility linking music to cognitive psychology, linguistics, computer science and architecture, disciplines that inform much of his work. His honours include awards from the Italian and French governments, the American Academy of Arts and Letters, and the Fromm, Ford, Guggenheim and Rockefeller foundations.

Felciano's music reflects a fascination with the physical world and the context it provides for its inhabitants. He has introduced electronic sounds into religious liturgy (*Pentecost Sunday*, 1967), used live electronic interaction to mimic ecological processes (*Angels of Turtle Island*, 1972), intermingled Eastern and Western modes (*In Celebration of Golden Rain*, 1977) and mapped the microcosm of psycho-acoustical phenomena (*Shadows*, 1987; *Masks*, 1989). The power of his music, however, lies in its ability to ennoble the intellect through a paradoxically sensuous love of sound and transform technology into a celebration of the human spirit.

WORKS

OPERA

Sir Gawain and the Green Knight (chbr op, R. Fahrner, after anon.), 1964, San Francisco, 3 April 1964

VOCAL

Choral: 4 Poems from the Japanese (trans. K. Rexroth), female vv, 5 hp, perc, 1964; The Captives (T. Merton), SATB, orch, 1965; Te Deum, solo vv, 3 Tr, SATB, mar, pf, org, 1974; The Seasons (Felciano), SATB, 1978; 9 others for vv and various insts

Solo: Lumen (Dante), S, org, 1980; Furies (Felciano), 3 S, 3 fl, 1988; Streaming/Dreaming (Felciano), S, 1994; Vac (Felciano), female v, cl, vn, vc, pf, 1995

INSTRUMENTAL

Orch: Mutations for Orch, 1966; Galactic Rounds, 1972; Orch, 1980; Org Conc., 1986; Camp Songs, 1992; Sym., str, 1993; Overture concertante, cl, orch, 1995

Chbr and solo inst: Evolutions, cl, pf, 1962; Contractions, mobile, ww qnt, 1965; Spectra, fl ens, db, 1967; In Celebration of Golden Rain, gamelan, org, 1977; Dark Landscape, eng hn, 1985; Lontano, hp, pf, 1986; Constellations, multiple brass qnts, hn ens, org, 1987; Shadows, fl, cl, pf, perc, vn, vc, 1987; Masks, fl, tpt, 1989; Palladio, vn, pf, perc, 1989; Primal Balance, fl, db, 1991; Cante jondo, cl, bn, pf, 1993; Str Qt, 1995; 8 others

Kbd: Gravities, pf, 4 hands, 1965; The Tuning of the Sky, carillon, 1978; Berliner Feuerwerksmusik, 3 mobile carillons, 1987; Prelude, pf, 1997; 5 others

ELECTRO-ACOUSTIC AND MULTIMEDIA

With voices: Words of St Peter (Bible: *I Peter ii.1–9*), SATB, org, elec, 1965; Glossolalia (Ps cl), Bar, org, perc, elec, 1967; Pentecost Sunday: Double Alleluia (Ps ciii.30), unison chorus, org, elec, 1967; Sic transit (St Matthew, J.F. Kennedy, M.L. King), vv, org, elec, lighting, 1970; Out of Sight (Felciano), SATB, org, elec, 1971; Signs (R.B. Fuller, Teillard de Chardin, J.-F. Revel, St Luke), SATB, elec, slide projections, 1971; Three-in-One-in-Three (Felciano), antiphonal choruses, org, opt. insts, elec, 1971; The Angels of Turtle Island (Felciano), S, fl, vn, perc, live elec, 1972; Responsory (Lat.), male v, live elec, 1991; 6 others

With insts: Crasis, fl, cl, perc, pf, hp, vn, vc, 1967; Linearity (video), hp, live elec, 1968; Background Music (theatre piece), hp, live elec, 1969; Ekagrata, org, 2 perc, elec, 1972; Chöd, vn, vc, db, 2 perc, pf, live elec, 1975; Alleluia to the Heart of Stone, amp rec, 1984; 6 others

With kbd: God of the Expanding Universe, org, elec, 1971; 3 others

Other: Noösphere II, 1967; The Architect and the Emperor of Assyria (incid music, Arrabal), 1969; 5 others

Recorded interviews: *US-NHoh*

Principal publishers: Belwin-Mills, E.C. Schirmer, Peters, E.B. Marks, World Library, Fallen Leaf Press

Principal record companies: Opus One, Musical Heritage Society, Gothic Records, Albany

HOWARD HERSH

Feld, Jindřich (*b* Prague, 19 Feb 1925). Czech composer. He began his musical education as a violinist and viola player; both his parents were violinists, his father a professor at the Prague Conservatory. Subsequently he studied composition in Prague with Hlobil at the conservatory (1945–8), with Řídký at the Academy of Musical Arts (1948–52) and read musicology, aesthetics and philosophy at Prague University (PhD 1952). From 1972 to 1986 he was professor in composition at the conservatory. Other appointments he has held include teacher of composition and composer-in-residence at the University of Adelaide, visiting lecturer at the University of Indiana, Bloomington (1981, 1984), and other American and European institutions; head of music at Czech Radio (1990–92) and deputy president of the Bohuslav Martinů Society. He has received a number of awards, among them the State Prize (1968) and the first prize at the XVII Concours International de Guitarre (1975, for the Guitar Sonata). Feld's output can be divided into three periods. The first, up until the end of the 1950s, draws on the music of Martinů, Stravinsky and Bartók; examples of this are the Concerto for Orchestra and the Flute Concerto. In the second period (the 1960s) Feld created an individual language by adopting new stimuli, including 12-note writing and aleatorism. Finally, from the 1970s onwards, there is the process of syntheses, a peroid characterized by brilliant technique and even greater individuality.

WORKS

(*selective list*)

Stage: Pošťácká pohádka [The Postman's Tale] (children's op, L. Vokrová, after K. Čapek), 1956

Orch: Conc. for Orch, 1951; Fl Conc., 1954; Vc Conc., 1958; 3 fresky [3 Frescoes], 1963; Sym. no.1, 1967; Dramatická fantasie 'Srpnové dny' [August Days], 1968–9; Sinfonietta, str, 1971; Pf Conc., 1973; Vn Conc., 1977; Evocations, accdn, orch, perc, 1978; Concert Fantasy, fl, str orch, perc, 1980; Sax Conc., 1980; Hp Conc., 1982; Sym. no.2, 1983; Concertino, fl, pf, orch, 1991; Sym. no.3 'fin de siècle', 1994–8

Vocal: 3 Inventions, SATB, 1966; Posměšky na jména [Nonsense Rhymes] (Czech folk poetry, Eng. trans. J. May), SA, ens/pf, 1973; Laus cantus (Feld), S, str qt, 1985; Cosmae chronica boemorum (cant., Cosmas), solo vv, nar, SATB, orch, 1988; Gloria cantus (Latin), SATB, 1988

KAREL MLEJNEK

Feld, Steven (*b* Philadelphia, 20 Aug 1949). American ethnomusicologist. He was educated at Hofstra University (BA 1971), studying with Colin Turnbull, and at Indiana University, where he earned the PhD with a dissertation on sound and sentiment in 1979 under Alan Merriam. From 1980 to 1985 he was professor of communications at Pennsylvania University, after which he became professor of anthropology and music at Texas University, Austin (1985–95). In 1995 he became professor of anthropology at the University of California, Santa Cruz, until 1997 when he joined the same faculty at New York University. He has been the recipient of several honours, including a MacArthur Foundation Fellowship (1991–96), and he was named a fellow of the American Academy of Arts and Sciences in 1994. His areas of research and study include language and music/speech, Papua New Guinea and West Papua, world music/world beat, the politics of music, soundscapes and acoustemology. As a performer (trombone, bass trumpet, bass trombone and euphonium), he has played and recorded since 1970, with the Leadbelly Legacy Band, the Live Action Brass Band, the Tom Guralnick Trio, the New Mexico Jazz Workshop and other small jazz and free improvisation ensembles.

GREGORY F. BARZ

Feldbrill, Victor (*b* Toronto, 4 April 1924). Canadian conductor and violinist. His first studies were in violin, followed by conducting classes with Mazzoleni at the Toronto Conservatory of Music (1942–3), at Tanglewood (1947) and with Monteux in Maine (1949, 1950). From 1942 to 1943 he was conductor of the University of Toronto SO, making his Toronto SO début in 1943. Postwar studies with Howells at the RCM and Read at the RAM in London ensued, leading to his appointment as first violin with the Toronto SO (1949–56) and CBC SO (1952–6). During this period he began working in radio and television, and as a guest conductor with numerous Canadian ensembles. From 1958 to 1968 he was music director of the Winnipeg SO, broadcasting a remarkable performance with Glenn Gould for CBC in 1959. In the 1960s he was active at the Vancouver International Festival, with the National Youth Orchestra of Canada and in the USSR. In 1968 he resumed his relationship with the University of Toronto and worked as resident conductor at the Toronto SO (1973–8) and as director of youth programmes. In the 1970s he began an affiliation with the Banff School of Fine Arts and the Canadian Chamber Orchestra; from 1990 to 1995 he was music director of the Hamilton PO and guest conductor for radio and public orchestras across Canada. He organized the International Composers' Orchestral Workshop and serves as its artistic director. Throughout his career Feldbrill has included at least one Canadian work on every programme; he has given the premières of Harry Somers' opera *Louis Riel* (1967), Violet Archer's Piano Concerto no.1 (1958), Barbara Pentland's Symphony no.4 (1960), André Prévost's *Choréographie* (1975) and many other works. In 1986 he was made an Officer of the Order of Canada.

CHARLES BARBER

Feldbusch, Eric (*b* Grivegnée, Liège, 2 March 1922). Belgian composer and cellist. At the Liège Conservatoire (1934–9) he studied the cello with Rogister and composition with Quinet. He then embarked on a career as a virtuoso cellist and in 1950 he attended Maréchal's Paris masterclasses; he has also played the cello in the Queen Elisabeth of Belgium Trio. In 1963 he was appointed director of the Mons Conservatoire and from 1974 to 1987 he was director of the French section of the Brussels Conservatory. He has been a member of the Belgian Royal Academy since 1977. His compositional ideas were crystallized in 1951 when he discovered the music of Berg and Carter and had a fruitful meeting with Legley. *Shema Israël* draws dramatic effect from the contrast between the tonal theme given to the viola and the atonal commentary played by the other strings.

WORKS

(*selective list*)

Stage: Orestes (op, 3, L. Bourgaux, after Aeschylus), 1969, RTBF, 15 Aug 1969; El diablo cojuelo (ballet), op.49, 1974; incid music and film scores

Orch: 5 pièces brèves, op.17, str, pf, 1957; Shema Israël, op.32, str, 1962; 3 poèmes de Garcia Lorca, op.35 no.2, spkr, orch, 1964; Thrêne pour une enfance foudroyée, op.36, 1965–6; Incantation, op.51, vn, str, 1973; Pointes sèches, op.61, 1977; Itinéraires, op.71, brass, 1982; Dichroïsme II, op.72, 1983; Cheminement, op.76, vn, str, 1985; vc conc, op.80, 1988

Chbr and solo inst: Sonata, vn, vc, op.9 no.1, 1955; Mosaïques, vc, op.24, 1961; 4 sonances, gui, op.69, 1980; pf works

Vocal: Mein Land, op.39, S, orch, 1965; songs; choral pieces

Principal publishers: CeBeDeM, Schott (Brussels), Leduc, Andel

HENRI VANHULST

Feldman, Jill (*b* Los Angeles, 21 April 1952). American soprano. She studied singing privately in San Francisco, and later in Basle, and took a degree in musicology from the University of California at Santa Barbara. She made her American operatic début in 1979 as Music in Monteverdi's *Orfeo*, and the next year made her European début at the Spoleto Festival as Clerio in Cavalli's *Erismena*. In 1984 she sang the title role in a notable revival (concert performance) of Charpentier's *Médée*, directed by William Christie, at the Salle Pleyel, Paris. She has sung throughout Europe, specializing in Baroque roles and touring as a soloist and with ensembles. Her recordings include Rameau's *Anacréon*, Cesti's *Orontea*, Cavalli's *Xerse*, Charpentier's *Médée*, *Actéon*, *Les arts florissants* and *Le malade imaginaire*, and Mozart's *Ascanio in Alba*. Feldman's accomplished technique, her fine sense of drama and a vocal range capable of subtle nuances of colour assist her in projecting an authoritative stage presence. Among her operatic roles that of Medea in Charpentier's opera is outstanding for its vivid characterization and subtle interpretation of the text. Feldman also has a flourishing concert career, and has recorded works ranging from early Italian songs to songs by Cherubini and Meyerbeer.

NICHOLAS ANDERSON

Feldman, Ludovic (*b* Galaţi, 25 May/6 June 1893; *d* Bucharest, 11 Sept 1987). Romanian composer. He studied violin at the Bucharest Conservatory with Robert Klenck (1910–11) and at the Vienna Conservatory with Ondříček (1911–16); he made no formal study of composition until 1941–2, when he took lessons with Jora in Bucharest. After a successful career as first violinist with the Zagreb Opera, the Romanian Opera (1926–40) and the George Enescu PO (1926–53), he produced a number of works with solo violin. His early works were based on folk music; by 1958 he was employing the serial procedures of the Second Viennese School, and seeking to combine them with modal elements. In the later 1960s he began to compose more prolifically, producing music of great spontaneity in a wide diversity of genres. The orchestration is luxuriant, the rhythms are lively and the free forms contain a wealth of strong contrasts, while the roots of the music in folksong are still evident. He received the Enescu Prize (1946), the State Prize (1952) and the prize of the Romanian Academy (1978).

WORKS

VIOREL COSMA

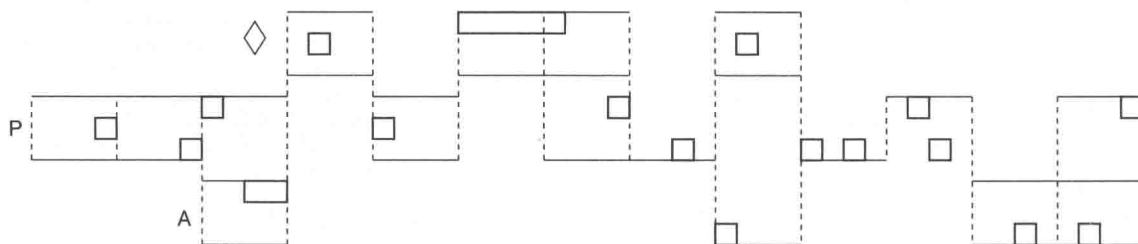
Feldman, Morton (*b* New York, 12 Jan 1926; *d* Buffalo, NY, 3 Sept 1987). American composer. Influenced by abstract painting, his music often employs alternative notational and organizational systems that contribute to a compositional style centred on gestural, timbral and non-metric relationships.

1. Life. He studied composition with Riegger and Wolpe, but especially admired Varèse's music. Early in his career he distanced himself from traditional academic training, earning his living by working in his family's business. Later he served as dean of the New York Studio School (1969–71). A residency in Berlin (1971–2) generated commissions from European orchestras and radio organizations, gaining him wider attention and leading to compositions for larger ensembles. From 1973 until his death, he taught composition as the Edgard Varèse Professor of Music at SUNY, Buffalo.

Feldman's aesthetic crystallized in the early 1950s when he became associated with John Cage, Earle Brown, Christian Wolff and David Tudor. His strongest influence, however, came from New York abstract expressionist painters. Mark Rothko, Jackson Pollock, Franz Kline and especially Philip Guston stimulated Feldman to imagine a sound world unlike any he had ever heard. Throughout his career, he adhered with remarkable consistency to a few tenets learned from them: a dislike of intellectual system and compositional rhetoric; a hostility to past forms of expression; a preference for abstract gestures set in flat 'all-over' planes of time; an obsession with the physical materials of art; a belief in handmade methods; and a trust in instinct. He defended this aesthetic in a number of essays written over the course of his career. Some of these are autobiographical, even nostalgic ('Give My Regards to Eighth Street'), while others involve polemical attacks on system-conscious European composers such as Boulez and Stockhausen ('The Anxiety of Art'). In 'Crippled Symmetry' he wrote straightforwardly about his compositional methods and his inspiration from the visual arts.

2. Works. Feldman found his voice early with *Two Intermissions* (1950), a conventionally notated pair of short, quiet pieces for the piano. Both project isolated, non-systematically chosen tones and chords into what might be called 'open time', musical space in which metrical divisions are absent aurally even though they may exist notationally. Seeking a more complete expulsion of traditional rhetoric, however, he soon began to explore new notational strategies.

His first graphic scores, the five *Projections* (1950–51), use horizontal rows of connected boxes to delineate units of time. In *Projection 1* for solo cello three rows specify either harmonics, plucked (P) or bowed (A) timbres (fig.2). Inside the time boxes Feldman drew smaller squares and rectangles to represent sound events. He suggested the general register of the sounds by setting the squares and rectangles either at the top, middle or bottom of the time box. The sounds' temporal placement was also communicated spatially, based on the square's position from left to right. In *Projections* for other instruments, numbers inside the squares specify chords, corresponding, for example, to the number of pitches to be attacked simultaneously.



1. Morton Feldman

While the graphic scores leave pitch choice to the performer and suggest only approximate durations, they clearly define density, timbre, areas of differing rhythmic activity and the overall shape of the sound. Relatively distinct sections, therefore, do appear in this music. Passages in *Intersection 2* (1951) for the piano are distinguished by thick or thin textures, or by variances in the frequency of events; some passages are hectically diverse, while others maintain a more consistent level of activity. When performed with atonal materials, as Feldman intended, the scores produce abstract fields of quiet, slow-moving events, floating free of metric emphasis and purified of references to the past. After 1953, however, discouraged by a lapse of appreciation by some performers, he abandoned graphic notation as a main technique, returning to it only occasionally in such works as *Atlantis* (1959), *Out of 'Last Pieces'* (1961), *The King of Denmark* (1964) and *In Search of an Orchestration* (1967).

In the later 1950s and during the 1960s Feldman began writing pieces that specified pitch but left duration indeterminate. This method took several forms. The *Piece for Four Pianos* (1957) introduced a technique that can be described as non-synchronous time. The work's one-page score presents a series of atonal chords and a few isolated tones placed on staves without barlines (ex.1). The four pianists read the same part, beginning the piece together but each progressing at their own pace. Feldman described the result as 'reverberations from an identical sound source'. The music divides into segments defined by density, registral position, or the repetition of a single event or small group of events. Its sectional character helps the listener hear the irregular echoes of one player against another.

While Feldman returned repeatedly to this method, in later pieces, such as *Piano Four Hands* (1958), *Durations I–V* (1960–61) and *For Franz Kline* (1962), each performer plays his or her own part. Thus, as Feldman conceived it, 'each instrument [lives] out its own individual life in its own individual sound world'. In many other works of the 1960s (e.g., *Vertical Thoughts*, *DeKooning*, *First Principles*), Feldman exerted greater control over the order and alignment of events while leaving durations indeterminate. The events in *DeKooning*, for example, usually proceed in notationally open time, but dotted

2. Graphic notation of Feldman's 'Projection 1' for solo cello, first system

lines from one event to another specify the desired sequence of events and vertical lines designate simultaneities (ex.2). Interspersed sporadically throughout these scores are short (often one-bar) segments in a conventional metre. Since these almost always present either silence or a single sustained event, however, they do not create conventional rhythmic patterns, but rather show periodic attempts to regulate the space between events.

The various notational strategies of the 1950s and 60s had a minimal effect on the sound of Feldman's music. When he returned to fully conventional notation around 1970, however, there was a slight yet perceptible change. The first works of this period, the first three *Viola in My Life* pieces (1970), introduced a conspicuous new lyricism. Short bursts of viola melody appear amidst the familiar sparse textures and quiet atonal sonorities of the work. Because he had so consistently avoided melody in the past, these bursts sound almost tuneful, even though they remain fragmentary by conventional standards. Frequent use of crescendo and decrescendo, largely absent from both earlier and later compositions, give the music an uncustomary expressivity. In some passages, such as the end of *Viola II*, consonant pitch collections heighten the lyricism.

Rothko Chapel (1971), commissioned as a tribute to the Houston chapel and its painter, who had killed himself the year before, culminated this intense but short-lived lyrical period. The close bond between Feldman and Rothko inspired the composer to build abundant extra-musical references into the piece, some of which he specified. The uncharacteristic sectionalism reflected his physical impression of the chapel, certain passages stood for the chapel paintings and some intervals invoked the atmosphere of a synagogue. The music combines viola lyricism with melodic fragments for soprano and stationary atonal choral chords. The piece concludes with a nostalgic, long-breathed viola melody in E and A minor, written when Feldman was 15.

Most of Feldman's music of the 1970s, however, exhibits his customary abstract language. He considered his *For Frank O'Hara* (1973) typical of his style, with its 'flat' minimally contrasting surface. Yet the music actually falls into relatively discrete sections, distinguished by the position of events in pitch space, use of distinctive timbral combinations and textural variation. Some sections are unified by the repetition of harmonies, which may return literally or in spatially varied forms. Many constructions use all-adjacent pitch classes (or pitch class clusters), a technique favoured by Feldman throughout his career.

Feldman's late style combined the ingredients of his earlier music – atonality, low volume levels, austere textures and open time – with several new elements. First, the size of individual sound events increased slightly. Whereas events in earlier music consisted mainly of single attacks without rhythmic identity and metric context, those in the late music frequently involve brief one- or two-bar gestures. These often appear as separate sound blocks with distinct rhythmic motives, and may consist of melodic fragments, short chord progressions, or single harmonies rendered in broken chords (ex.3).

Second, Feldman embraced minimalist repetition. In his early works he occasionally built long passages with repeated single tones, chords, or short figures (e.g., the conventionally notated *Intermission V* and *Extensions III*, both from 1952). Now, he began using literal as well

Ex.1 Morton Feldman: *Piece for Four Pianos*, second and third systems

as varied repetition. Individual motifs or small groups of gestures repeat consecutively as many as 12 or 13 times. This helped Feldman achieve his goal of disorienting the listener's memory, emphasizing the stationary character of individual gestures and de-emphasizing patterns that might arise from progressions of different gestures. He compared himself to Mondrian in this way, an artist who did not want to paint 'bouquets, but a single flower at a time'.

The use of bigger gestures and constant repetition led to a third important characteristic: the tendency to compose pieces of enormous length. Many of the late works (*Patterns in a Chromatic Field*, *For Bunita Marcus*) run continuously for over an hour, some for four or five (*For Philip Guston*, *String Quartet II*). This reflects Feldman's preoccupation with scale over form and his interest in enveloping environments, in which listeners experience music from 'inside' a composition.

In some late works Feldman returned to the non-synchronous technique he had used since the late 1950s. In *Why Patterns?* (1978), for example, the three players (flute, piano, glockenspiel) move at their own pace through their parts, which divide into fairly distinct segments. Each segment is relatively consistent in its use of material, employing the kind of systematic methods Feldman had long derided. A few of the compositions include aurally undetectable isorhythms and another uses a 12-note serial procedure in combination with an elaborate rotation scheme, producing a long, undifferentiated sequence of whole-tone dyads. Such music reveals a new ironic attitude towards system, in which Feldman conceals highly ordered patterns with banal material. This interest derived in part from his attraction to the woven patterns in Anatolian rugs and to Jasper John's crosshatch paintings, which feature a sly balance of hidden regulation and mundane repetition. Other textile-inspired works include *Crippled Symmetry* (1983), which resembles *Why Patterns?* in its material, instrumentation and non-synchronized score; and *Coptic Light* (1986), Feldman's last orchestral work. The latter piece, inspired by the early Coptic textiles at the Louvre, has an inordinately dense, undulating texture. Its opening passage superimposes over 20 different layers, each repeating a simple pattern.

Other late pieces, using conventional synchronized notation, focus on a single gesture at a time. In many passages the connection between gestures seems random, a product of Feldman's aimless, psycho-automatic mind. But in others, gestures evolve one into another in a manner approaching organic development. The opening

Ex.2 Morton Feldman: *DeKooning*, first system

Ex.3 Morton Feldman: *Crippled Symmetry*, a passage from near the beginning

broken chord of *Triadic Memories*, for example, yields after about four minutes, first to one, then another, broken chord, each of which relates rhythmically and harmonically to the initial event.

These compositions typically alternate, albeit irregularly, between passages that concentrate exclusively on one gesture and those that group together many different ones. In passages of the first kind, Feldman often alters an aspect of a gesture continually, even while keeping most of its elements intact. The harmony and rhythms of the opening gesture of *Triadic Memories* remain constant, for instance, but its sonic character steadily changes as its upper and lower elements gradually exchange registers. In passages of the second kind, Feldman habitually shuffles and re-shuffles the order of gestures. According to the composer, such modular construction allowed him to avoid the occurrence of predictable patterns while preserving the self-contained, inorganic character of his musical gestures.

STEVEN JOHNSON

Feldmann, Fritz (*b* Gottesberg [now Boguszów], Silesia, 18 Oct 1905). German musicologist. He entered the University of Breslau in 1924 and studied musicology under Max Schneider and Anton Schmitz, taking the doctorate in 1931 with a dissertation on the university's Codex 2016. He completed his *Habilitation* in musicology at Breslau in 1937 with a work on music in medieval Silesia. He was acting director of the Hochschulinstitut für Schul- und Kirchenmusik of Breslau University (1939–41), and, after military service (1941–5), he worked as a secondary school teacher in Hamburg (1948–52). He began lecturing at Hamburg University in 1950 and in 1954 he was appointed professor at the Staatliche Musikhochschule, Hamburg. He became editor of the *Musik des Ostens* in 1965 and in 1966 succeeded Wiora as diector of the Herder Institut für Musikgeschichte, which he brought from Kiel to Hamburg; he also headed the Fachgruppe für Musikgeschichte which was attached to the institute.

Feldmann was recognized as an authority on the music of Silesia and eastern Germany. His work concentrated on the sources and texts of music from these regions and the contribution of Silesian music to musical development in Germany until 1945; he also collected a vast amount of material for his planned Silesian music dictionary. His other writings include articles on sources for medieval and Renaissance music, musical rhetoric, number symbolism and Schumann.

HANS HEINRICH EGGEBRECHT

Feldmayr, Johann Georg (*b* Pfaffenhofen an der Ilm, 17 Dec 1756; *d* Hamburg, after 1831). German composer. He received his early musical training at Indersdorf monastery. About 1780 he joined the Hofkapelle of Kraft Ernst, Prince (Fürst) von Oettingen-Wallerstein. Although recruited as a violinist, Feldmayr also played the flute and sang tenor solos in the Wallerstein church, where his wife (née Monica Kekhuter) was the soprano soloist. During his 13 years at Wallerstein, he composed a substantial body of music for various court ensembles. Apart from 22 wind partitas, the bulk of this is vocal music: liturgical settings for the Wallerstein church and numerous arias and cantatas intended to celebrate the births, weddings and namedays of the prince and his family. In 1800 Feldmayr attempted unsuccessfully to find employment at the court of the Duke of Mecklenburg-Schwerin. Two years later he moved to Hamburg, where he remained for the rest of his life.

WORKS

most MSS, including many autographs, in D-HR (for details see Haberkamp)

VOCAL

Liturgical: Requiem, c, 1791; Requiem, E♭; 2 TeD, 1792; Miserere, E♭, 1793; Lit, 1797; Salve regina; Vespers, *D-KZa*; Miserere, E♭, attrib. Seldmayr
Schrecken lagert sich (orat), 1791
Sultan Wampun, oder Die Wünsche (chbr op, 3, A. von Kotzebue), Wallerstein, 1797
Other works: 24 cants.; 2 choruses; 17 arias, 1v, orch, 3 in *D-DO*; duet, S, T, orch

INSTRUMENTAL

2 syms., 1 in *D-BAR*; 4 concs., 1 for fl, op.1 (Offenbach, n.d.), 3 for ob; 4 symphonies concertantes, 1 for ob, bn, 1 for vn, ob, 2 for 2 hn; 2 serenades, one dated 1790; 22 wind partitas, incl. arrs. of other works

STERLING E. MURRAY

Feldmusik (Ger.: 'field music'). A term used for the fanfares, and later other compositions, also known as *Feldstücke*, 'needed in the field at warlike happenings' (Altenburg, 88); alternatively it applied to an ensemble that played such pieces. The term referred originally to the corps of military trumpeters which replaced the drum and fife bands widely used in the Middle Ages.

In 1704 J.P. Krieger published six suites in his collection *Lustige Feld-Music, auf vier blasende oder andere Instrumenta gerichtet*, extending the term to include works for wind groups. As these groups had at first played double-reed instruments, their members were known as *Hautboisten* or *Oboisten*, (*see* HAUTBOIST (i)) even though from early in the 18th century the ensemble often included other types of instrument. The *Feldmusik* were military musicians, but they also performed for court festivities and entertainments, either as a self-contained ensemble or as part of a larger group. These Feldmusik ensembles, especially as used for entertainment, became known in about 1800 as *Harmonien* and their music as HARMONIEMUSIK. *See* BAND (i), §II, 2(i).

Felici, Alessandro (*b* Florence, 21 Nov 1742; *d* Florence, 21 Aug 1772). Italian composer. He studied first with his father, Bartolomeo, then proceeded to advanced studies with Giuseppe Castrucci in Florence (1756–64) and with Gennaro Manna in Naples (1764–5). He became a teacher at his father's school in 1767 where his pupils included the singer Francesco Porri and Luigi Cherubini. He has been confused with the composer Felice Alessandri.

His first work, the *dramma giocoso La serva astuta*, was performed at the Teatro del Cocomero by Giovanni Roffi's Compagnia Toscana. According to the *Gazzetta toscana*, the success of his *Antigono* the following year could not have been greater nor the house fuller. He was chosen to compose a dramatic cantata, *Apollo in Tessaglia*, to inaugurate concerts presented by the Accademia degl'Ingegnosi in 1769. His most successful (and only surviving) opera was *L'amore soldato*, a *dramma giocoso*, given in Venice in 1769 and subsequently in Turin, Parma, Florence, Sassuolo and Leipzig. His dramatic music, by comparison with that of his contemporaries Giovanni Marco and Ferdinando Rutini, Moneta and Neri Bondi,

is highly expressive, offering presentiments of more Romantic styles, especially when portraying melancholy moods.

His instrumental music was probably written for use in the concerts of the Accademia degl'Ingegnosi or for private concerts such as the one he directed in the Casa Zanobi Leoni in Florence (30 June 1771). His four keyboard concertos show a remarkable maturation, which suggests that had he lived longer Felici would have won a secure place among the leading composers of the genre. The A major concerto displays great elegance, expressiveness of style and a thorough comprehension of the concept of the keyboard concerto that was evolving at the time in London and Vienna.

WORKS

music lost unless otherwise stated

OPERAS

dg – *dramma giocoso*
dm – *dramma per musica*

La serva astuta (dg, 3), Florence, Cocomero, 5 May 1768; as La cameriera astuta, Milan, Ducal, aut. 1769

L'amante contrastata (dg, 2, G. Lendenesi), Venice, S Moisè, aut. 1768

Antigono (dm, 3, P. Metastasio), Florence, Pergola, 18 Jan 1769

L'amore soldato (dg, 3, N. Tassi), Venice, S Moisè, aut. 1769, *A-Wn*, *D-Dl*, *H-Bn*, *US-Wc*

Intermezzos to B.-J. Saurin's *Beverley* (tragedia urbana in prosa), ?1769; Florence, Tintori, 6 Jan 1782

La donna di spirito (farsa, M. Bernardini), Rome, Capranica, 13 Feb 1770

2 substitute arias in Sacchini's Alessandro nelle Indie (dm, 3, Metastasio), Livorno, S Sebastiano, carn. 1771, *S-Skma*

Doubtful [cited by Jackman]: La lavandaia, Turin, Carignano, aut. 1770; Ariana e Teseo (dm, P. Pariati), Florence, Pergola, 29 Jan 1772

ROBERT LAMAR WEAVER

Felici, Bartolomeo (*b* Florence, 1695; *d* Florence, 12 June 1776). Italian organist and composer. For the greatest portion of his career he was *maestro di cappella* and organist at S Marco in Florence. He composed one oratorio for S Pier Maggiore in 1739 (*Il prodigioso transito*) and two for performances by the Compagnia ed Ospizio di Gesù, Maria e Giuseppe at S Marco in 1747 (*Isacco*) and 1753 (*Figliuol prodigo*). He was probably a member of that company, since librettos between 1733 and 1741 give him the title of *abate*. It may be presumed that he resigned his clerical membership and married, having a son, Alessandro, in 1742 and after that date being denominated *signore*. He specialized in composing works variously labelled cantata, componimento drammatico and componimento musicale, for occasional use or for the induction of women into holy orders in several churches in Florence (and one in Bologna), and he composed a substantial quantity of liturgical music for two, three or four voices with instruments. His obituary in the *Gazzetta toscana* declared that his sacred music possessed an 'inimitable expression'.

He was a distinguished teacher of counterpoint and the organ. According to Zanetti he founded a school of music with G.M. Casini in 1725, an unlikely date since Casini died in 1719; more probably he studied with Casini. He directed a music school in Florence at least from the 1760s, which numbered among its alumni Alessandro Felici, Cherubini, Sborgi and Panerai. He had a brief association with the Cocomero theatre as the *maestro* for a performance in 1750, but no other theatrical activity has been recorded.

WORKS

performed in Florence unless otherwise stated

ORATORIOS

Il prodigioso transito di S Giuseppe (D.A. Nati), S Pier Maggiore, 1739

Isacco figura del Redentore (P. Metastasio), S Marco, 1747, *I-Tf*

Il figliuol prodigo (C. Pasquini), S Marco, 1753

SACRED CANTATAS

Cantata, 3vv

Componimento musicale ... nel prender l'abito ... Sig.ra M.A. Villani (F. Vanneschi), 1733

Cantata per la sera, 1734

Il transito di S Giuseppe (cant., P.A. Ginori), 3vv, 1737

Componimento musicale nel prender l'abito ... contessa Francesca Barbolani, 1740

Il trionfo della vocazione religiosa contro le lusinghe del mondo, componimento per musica ... in occasione dell'ingresso della ... Sig.ra A.M. Vasoli Piccinini (D. Marchi), 1740; same lib but probably new music for contessa C.M. Pierucci, 1752

Il passaggio alla religione (componimento drammatico, A. Borghesi), 1741

Il trionfo della religione (componimento per musica), 1747

La notte prodigiosa (componimento sacro per musica, C. Tacchi), Bologna, 1759, *GB-Lam*; Or che nate sulla terra, duet, in Latrobe's Selection of Sacred Music, vi (London, 1825)

Figure ombre da banda, A solo, bc, orch, *I-Tf* [licenza attached to Abigaille, a dramatic cantata by N. Valenti]

2 arias, *US-BEm*

ROBERT LAMAR WEAVER

Feliciani, Andrea (*b* Siena; bur. Siena, 24 Dec 1596). Italian composer. He was the leading Sienese musician of his time, succeeding Ascanio Marri as *maestro di cappella* of the cathedral on 1 November 1575 and retaining the position until his death in 1596. Nothing is known of his life before this appointment, although it has been speculated that he was a pupil of Palestrina, and that he may have found employment in a provincial town such as Grosseto.

Under Feliciani's guidance the choir school and cappella of Siena Cathedral grew in size and prestige, the number of singers under his direction increasing from ten in 1575 to 27 in 1596, the year of his death. Both Feliciani's sacred compositions and the music added to the repertory of the capella under his direction reflect the ideas of the Counter-Reformation as exemplified by the works of Ruffo, Palestrina and Victoria. A posthumous tribute to Feliciani, in Banchieri's *Conclusioni nel suono dell'organo* (1609), records the excellence of the cathedral's music on the feast of St Cecilia directed by Feliciani and the organist Francesco Bianciardi.

Feliciani's first works to appear in print were three madrigals published in the *Quinto libro delle muse* (RISM 1575[12]), a collection by predominantly Sienese composers dedicated to the Sienese nobleman Ottavio Saracini. His six-voice madrigal *Ecco l'amata luna*, published in 1586, commemorates the death of Alessandro Piccolomini, Bishop of Patras and Rhodes, in 1579. A note in the cathedral archives records that Feliciani was a fine lutenist, and three fantasias for lute are attributed to him in the Siena Lute Book. His pupils at the cathedral included the composers Bernardino Draghi and Orindio Bartolini.

WORKS

printed works except anthologies published in Venice

Il primo libro de madrigali, 5vv (1579), 3 also in 1575[12]; 1 ed. in Mazzeo, 1 ed. in D'Accone

K. BOSI MONTEATH

Feliciano, Francisco F. (*b* Morong, Rizal, 19 Feb 1941). Filipino composer and conductor. After music tuition from his father Maximiano, a brass band leader, pianist and organist, he studied at the University of the Philippines Conservatory of Music (BM 1965, MMus 1969), the Hochschule der Künste and Kirchenmusikschule, both in Berlin (1977), and Yale University (MMA 1980, DMA 1984). His teachers included Pajaro, Isang Yun, Heinz Werner Zimmermann and Penderecki. His mature works are strongly influenced by Yun, who introduced him to concepts of East Asian music such as the organic character of single tones and the importance of colour. He applied his close study of the instrumentation techniques of contemporary European music in the orchestral works *Fragments* (1976), *Die Verklärung Christi* (1976) and *Variationen über ein Gestalt* (1977). After returning to the Philippines he composed a number of large-scale theatre works, *Yerma* (1982), a ballet, *La loba negra* (1984), a grand opera, and the music dramas *Sikhay sa Kabila ng Palaam* (1993) and *Ashen Wings* (1995). The conductor of the Philippine PO from 1981 to 1988, he has been a guest conductor with orchestras including the Moscow State SO, the Chicago SO and the New Zealand SO. He founded and became president of Samba Likhaan (the Asian School of Music Workshop and the Arts), an institution devoted to Christian liturgical practice through the use of Asian arts. His writings on music include *Four Asian Contemporary Composers: the Influence of Tradition in their Works* (Quezon City, 1983), in which he discusses the music of Chou Wen-chung, Yun, Takemitsu and Maceda.

WORKS

(*selective list*)

Dramatic: Yerma (ballet), 1982; La loba negra (op, 3), 1984; Sikhay sa kabila ng palaam (music drama, L. Puyot), 1993; Ashen Wings (music drama), 1995
Inst: Fragments, orch, 1976; Die Verklärung Christi, orch, 1977; Variationen über ein Gestalt, orch, 1977; Pagdakila sa kordilyera, sym. poem, orch, 1988; Siya kuno, wind qnt, 1991; Voices and Images, sym. orch, 1992
Choral: Transfiguration, chorus, nar, orch, 1983; Misa ng sambayanang Pilipino, chorus, orch, 1996

RAMÓN P. SANTOS

Felis, Stefano (*b* Bari, *c*1550; *d* probably Bari, after 25 Sept 1603). Italian composer and priest. He may have been a pupil of F.A. Baseo at Lecce, since his earliest published work appeared in Baseo's first book of five-voice madrigals (RISM 1573[16]). Three pieces by Felis were included in a collection of three-voice villanellas *alla napolitana* by Barinese composers published in 1574 (1574[5-6]). The *Primo libro de madrigali a sei voci* (1579) describes Felis as *maestro di cappella* to Antonio Puteo, Archbishop of Bari. He held the same position at Bari Cathedral, where he remained from at least 1583 until 1585. G.B. Pace and G.D. Vopa studied with Felis during this period, publishing a madrigal anthology (1585[30]), in which together with two other composers Felis is highly praised for his contribution to the musical life of Bari. Some time after 10 May 1585 he went to Prague, where he again entered the service of Antonio Puteo, recently appointed papal nuncio to the emperor. While in Prague Felis issued his first book of masses, and, as the dedication of his *Sesto libro de madrigali* indicates, became acquainted with Philippe de Monte. He returned to Italy at the end of 1590, and in 1591 was appointed *maestro di cappella* at Naples Cathedral. By 1596 he had returned to his native city, where he held a canonry at Bari Cathedral.

Felis's style ranges from the lighthearted villanella to the contrapuntal complexity of Netherlandish polyphony. Einstein placed him in the circle of musicians surrounding Gesualdo; although it is true that he was well acquainted with the works of the Neapolitan school, his style seems to have little in common with theirs. Much of his music is lost.

WORKS

SACRED

Liber secundus motectorum, 5, 6, 8vv (Venice, 1585[2])

PATRICIA ANN MYERS

Felix, Václav (*b* Prague, 29 March 1928). Czech composer. In 1953 he graduated from the Prague Academy of Musical Arts as a pupil of Bořkovec and Dobiáš; he also studied English and music education at Prague University, graduating in 1952. Thereafter he studied theory with Karel Janeček (ScC 1961, PhD 1966). He was editor of *Hudební rozhledy* (1959–61) and in 1960 was appointed assistant in the music theory department of the Prague Academy and lecturer in 1973. He was dean of the music faculty (1985–90) and deputy chairman of the Union of Czech Composers (1978–89). His attitudes as a composer were formed by his work with student ensembles and by a profound interest in Czech folksong. In addition, his music reflects his wide theoretical knowledge: he has made some use of novel techniques, though these have not been a dominant feature. His subjects are often taken from the world of children or from nature, and contain moral or philosophical messages. His choral compositions are popular among children's choruses and many chamber pieces have been performed widely at home and abroad.

WORKS
(*selective list*)

Stage: Mariana (op, 4, Z. Malý, after J. Kozák), 1982, Brno, 11 April 1985
6 syms: no.1, Mez, orch, 1974; no.2, 1981; no.3, SATB, orch, 1986; no.4, 1987; no.5, chbr orch, 1987; no.6, wind orch, 1990

JIŘÍ MACEK

Félix-Miolan, Marie. *See* CARVALHO, CAROLINE.

Felix namque (Lat.). A plainchant melody used occasionally in vocal compositions up to the 15th century, and more frequently in English organ settings in the 16th century. The offertory *Felix namque es, sacra virgo Maria* was prescribed in medieval liturgies for certain feasts and for votive Masses of the Virgin (although it is not found in the oldest sources), and was retained in post-Tridentine and more recent usage (see, for example, *Graduale Triplex*, p.422, and *GS*, plate r, the latter from the 13th-century manuscript *GB-Ob* Rawl. lit.d.3, f.88*v*). Vocal polyphonic settings of the melody from any period are rare, but there is a two-part setting in the 'insular' section of the St Andrews manuscript (*D-W* Helmst.1099, ff.193*v*, 210*v*) and a fragmentary troped setting in the Worcester Fragments (MSD, ii, 1957, no.4). A third English setting, from the 15th century (*GB-Ob* Douce 381, f.23, incomplete), was long held to be an organ piece (Dart); it is written in score, but the words are underlaid, and it seems more likely to be from a two-part vocal setting.

In England during the first half of the 16th century *Felix namque* was the most often used melody in a repertory of organ settings of OFFERTORY chants, presumably because it was assigned in Salisbury Use to the daily mass of the Blessed Virgin Mary, with a concluding alleluia except between Septuagesima and Easter and on the Vigil of the Assumption. Since the majority of the settings omit the alleluia they were presumably intended for the penitential season. The chief composers of such settings were John Redford and Thomas Preston. A last reflection of this liturgical tradition is seen in two settings by Tallis, which include the intonation (usually omitted) and alleluia; they are very long and are probably not, in their surviving form, liturgical. Examples of English keyboard settings are printed in MB, i (1966), MB, lxvi (1995) (Tallis) and EECM, x (1969).

JOHN CALDWELL

Fellegara, Vittorio (*b* Milan, 4 Nov 1927). Italian composer. He studied composition with Luciano Chailly at the Milan Conservatory, graduating in 1951, while at the same time taking university courses in mathematics and physics. In 1955 and 1956 he attended the Darmstadt summer courses. Between 1956 and 1959 he was secretary to the Accademia Filarmonica in Rome, and from 1960 to the Italian branch of the ISCM; his *Requiem di Madrid* gained him an award at the latter's first international composition competition, in 1959. In 1960 he began to teach harmony, counterpoint, fugue and composition at

the Donizetti Institute in Bergamo, and in 1982 he was appointed artistic director of the Bergamo annual Incontri Europei con la Musica.

His earliest compositions display the influence of neoclassicism, in particular the contrapuntal techniques of Hindemith and Petrassi. Towards the end of the 1950s he felt the need for a broader linguistic base and, without seeking to rebel against tradition, he began to exploit the procedures of 12-note serialism as currently applied in Italy. Working within the post-Webernian avant garde, Fellegara, like Nono in his choral music of the same period, placed special emphasis on structuring and enhancing the expressive power that derived from the tensions latent in a 12-note set. Works such as *Requiem di Madrid* (a setting of a text by García Lorca) and the ballet *Mutazioni* exhibit a charged dramatic atmosphere and strong ideological commitment. Fellegara subsequently allowed a more intimate, lyrical approach to take over, as in his settings of texts by Eluard (*Epitaphe* and *Chanson*) and Leopardi (*Cantata*). At the same time he began to pay greater attention to niceties of form and the refinement of sound patterns, as in *Trauermusik*, *Metamorfosi* and to complex polyphonic construction (*Shakespearian Sonnet*). From the 1980s on, he has devoted greater attention to chamber music, writing a number of works that demonstrate a return to more traditional formal and stylistic models (as in *Herbstmusik: omaggio a Mahler* and *Nuit d'été*) and exploit the expressive and textural possibilities of, for him, new groupings of instruments (such as in *Winterzeit* and *Imaginary Nocturne*).

WORKS
(selective list)

Stage: Mutazioni (ballet, 6 scenes, N. Balestrini), 1962; Milan, La Scala, 1965; Woyzeck (incid music, G. Büchner), 1971; other incid scores; inst arrs. for Weill: *Die Dreigroschenoper*, Milan, Piccolo, 1956

ROBERTA COSTA

Feller. Bohemian family of organ builders. Franz Feller (i) (*b* Königswald [now Libouchec, nr Děčín], 29 April 1787; *d* Königswald1 July 1843) produced musical instruments and sets of pipes from childhood, but it was not until 1817 that he finally took up organ building. In that year he built his first organ, for Peterswald [now Petrovice](one manual, ten stops); others are at Karbitz [now Chabařovice] (1823; two manuals, 14 stops), Schönlinde [now Krásná Lípa] (1827; two manuals, 30 stops), Ossegg [now Osek] monastery (1836–8; two manuals, 34 stops), Komotau [Chomutov], Tetschen [Děčín], and Pirna. Two of his sons, Franz Feller (ii) (*b* 23 March 1815; *d* 8 July 1881) and Josef Feller (*b* 8 March 1818; *d* 15 June 1893), went into partnership until 1881 while a third, Anton Feller (*b* 6 March 1820; *d* 14 March 1891), worked independently. Franz Feller (i) produced more than 35 organs. After 1827 he was influenced by the organs of Gottfried Silbermann in Dresden. Altogether the family produced about 80 instruments. They adhered to the slider chest system and still installed *Rückpositive*. In contrast to the ideas of G.J. Vogler, their specifications continued the traditional methods of organ design. The diapason chorus was sometimes reduced, but to compensate, the number and variety of foundation stops was considerably increased.

HANS KLOTZ/JIŘÍ SEHNAL

Feller, Carlos (*b* Buenos Aires, 30 July 1925). Argentine bass. He studied in Buenos Aires, making his début in 1946 at the Colón, where he sang for a decade. He made his London début in Cimarosa's *Il maestro di cappella* at Sadler's Wells (1958). For Glyndebourne he sang Don

Alfonso and Mozart's Figaro in 1959 and the following year sang Dr Bombasto (*Arlecchino*) at Edinburgh. After appearing in Frankfurt and Brussels, he was engaged at Cologne, where he sang until he was over 70. He made his Metropolitan Opera début as Don Alfonso in 1988. His repertory included Leporello, Mozart's and Rossini's Dr Bartolo, Don Magnifico, Geronimo (*Il matrimonio segreto*), Don Pasquale, Dulcamara, Baculus (*Der Wildschütz*), Nicolai's Falstaff, Lord Tristan (*Martha*) and Varlaam. A superb *basso buffo*, he also sang heavier roles such as Polonius (Szokolay's *Hamlet*), the Doctor (*Wozzeck*), Schigolch (*Lulu*) and Claggart.

ELIZABETH FORBES

Fellerer, Karl Gustav (*b* Freising, 7 July 1902; *d* Munich, 7 Jan 1984). German musicologist. He studied with Sandberger in Munich and with Abert, Wolf, Sachs and Hornbostel in Berlin, receiving the doctorate in 1925 at the University of Munich with a dissertation on the music history of Freising. In 1927 he completed the *Habilitation* at Münster with a work on the influence of Palestrina. He remained at Münster as an external lecturer until 1932, succeeded Peter Wagner at Fribourg in Switzerland in 1932, and then returned to Germany in 1939 to succeed Kroyer at the University of Cologne. Fellerer served as rector of the university in 1967–8 and retired in 1970. In 1958 the Catholic University of Leuven granted him the honorary doctorate. He also received medals of honour from the German government in 1974 and from the Austrian government in 1978.

Fellerer was respected for his far-reaching contributions to scholarship, his influence as a teacher and his organizational leadership. Best known for his work on the history of Catholic church music (Gregorian chant, organ music, music theory, performing practice and contemporary problems), his broader interests embraced the Middle Ages and Renaissance, 19th-century music, music education, amateur music-making, the music history of individual regions and cities and the works of Palestrina, Handel, Mozart and Puccini. He was editor of the journals *Kirchenmusikalisches Jarhrbuch* (1931–76) and *Musica sacra* (1932–7) and oversaw the publication series Freiburger Studien zur Musikwissenschaft, Kölner Beiträge zur Musikforschung, Denkmäler Rheinischer Musik, Beiträge zur Rheinischen Musikgeschichte and the *Mitteilungen der Arbeitsgemeinschaft für Musikgeschichte*. He also founded, edited and contributed to Das Musikwerk. He was active as a scholar up to his death, and his bibliography lists over 500 titles.

Fellerer was one of the driving forces behind the rebuilding of German musicology after World War II, growing out of his ongoing concern for politics. Preoccupied with practical issues early on, his concern for the relationship between music and politics led him to speak in favour of the programme of the Nazi regime, even rationalizing its 1933 campaign against jazz music, and during the war he took a special interest in seeking out Germanic musical traits in countries under German occupation and the respective strengths and weaknesses of Germany's enemies and allies. Thereafter, he invested much energy into enhancing the Cologne musicology department as well as building up all of German musicology after its years of wartime isolation. He was president of the Gesellschaft für Musikforschung (1962–8) and co-founder and president of the Joseph-Haas-Gesellschaft, and he chaired and served on commissions of the Allgemeiner Cäcilien-Verband, the Görresgesellschaft, the Zentralinstitut für Mozartforschung in Salzburg, the Arbeitsgemeinschaft für rheinische Musikgeschichte, Westdeutscher Rundfunk, the Deutsches Historisches Institut in Rome, the Joseph-Haydn-Institut and the IMS.

PAMELA M. POTTER

Fellinger, Imogen (*b* Munich, 9 Sept 1928). German musicologist. She studied musicology from 1948 at Munich University with von Ficker and from 1950 with Gerstenberg at Tübingen University, where she took the doctorate in 1956 with a dissertation on Brahms's use of dynamics. From 1957 to 1962 she was a research assistant for RISM. From 1963 she worked under the auspices of the musicology department of Cologne University on musical bibliography in the 19th century, which she completed at the Staatliches Institut für Musikforschung, Berlin (1970–93). From 1979 she was chairman of the IAML working group on music periodicals and she became a member of the board of trustees of the Johannes-Brahms-Gesellschaft of Austria in 1990. The main aspect of her research apart from Brahms and 19th century music in general is the promulgation and interpretation of archival material relating to 19th-century music.

HANS HEINRICH EGGEBRECHT/JUTTA PUMPE

Fellowes, Edmund H(orace) (*b* Paddington, London, 11 Nov 1870; *d* Windsor, 21 Dec 1951). English editor, scholar and cathedral musician. He showed marked musical gifts at an early age and when he was only seven Joachim offered to take him as a pupil. However, he received a conventional education at Winchester College and Oriel College, Oxford. At Oxford he read theology though he found time to develop his musical interests and remained for a fourth year working towards a music degree. On leaving Oxford he studied for the church and was ordained in 1894. He served for a short time as

assistant curate in Wandsworth, London (1894–7), during which he took the Oxford BMus (1896). After three years as minor canon and precentor of Bristol Cathedral from 1897, he moved in 1900 to St George's Chapel, Windsor Castle, as a minor canon, in which capacity he remained for the rest of his life. In the years between the death of Walter Parratt and the appointment of Walford Davies (1924–7) he was given charge of the choir. He received no other preferment in the church and was never 'Canon' Fellowes as many printed references to him wrongly assume (see W. Shaw, *MT*, xcix, 1958, 142–3). He was made Companion of Honour in 1944, and held honorary doctorates of music from both Oxford (1939) and Cambridge (1950).

Fellowes carried out a voluntary labour of some importance by cataloguing the extensive printed and manuscript material in the music library of St Michael's College, Tenbury Wells, of which he was honorary librarian (1918–48). However, his notable contribution to music was his extensive series of editions of English music of the period 1545–1640 and the critical and historical writings with which he surrounded them. To the numerous series in the list below must be added a considerable number of miscellaneous octavo leaflets, including the main share (61 numbers) of the Tudor Church Music series (1923–37).

Though not alone in his lifetime in working on music of this period, it was Fellowes who caused it to make its chief impact. This was partly because of the notable range of his work, partly also because of his own advocacy of it through lectures, performance and, in the earliest days of the gramophone, recordings. Most of all it was because he designed his editions to be practical: all, except his share of the library edition of Tudor Church Music, were issued in a format for use in performance. At the same time he aimed to produce editions that were to be complete, not mere selections, and firmly based on original sources. This union of scholarship, completeness and practicality was in a small way revolutionary. He shed new light on the idiom of the music and as a direct result the style of performing it changed for the better. His editorial work is seen at its best in the madrigals and the lute-songs, the first series of which (but regrettably not the second) printed the original tablature. It was mainly as a result of his work that a knowledge of this music soon passed into the mainstream of English musical life and thought. The sustained endeavour behind it was characteristic of the man; yet, as his memoirs reveal, he was no narrow specialist or scholarly recluse.

EDITIONS

The English Madrigal School [EMS], i–xxxvi (1913–24, rev. 2/1956–88 by T. Dart and others as The English Madrigalists [EM])
The English School of Lutenist Song Writers [ESLS], i–xxxii, in 2 ser. (1920–32, partly rev. 2/1959–66 by T. Dart as The English Lute-Songs [EL], rev. 3/1959–69 with addl vols.)
with P.C. Buck, A. Ramsbotham and S.T. Warner: Tudor Church Music [TCM], i–x (1922–9, appx 1948/*R* by Fellowes alone)
The Collected Works of William Byrd, i–xx (London, 1937–50, rev. 2/1962–71 by T. Dart, P. Brett and K. Elliott)

WATKINS SHAW/R

Felsenstein, Walter (*b* Vienna, 30 May 1901; *d* Berlin, 8 Oct 1975). Austrian director. He studied acting with Ernst Arndt at the Burgtheater, Vienna (1921–3), made his acting début in Lübeck in 1923 and in 1925 became dramatic adviser and director in Beuthen (now Bytom), Silesia. In 1927 he was appointed chief opera and drama director at the Stadttheater, Basle; from 1929 to 1932 he worked as an actor in Freiburg, where he was also dramatic adviser and director. He became chief director of the Cologne Opera in 1932 and in 1934 took a similar post in Frankfurt; excluded from the Reichstheaterkammer in 1936, he was able to continue working only by special permission. From then on his productions (*Der Zigeunerbaron*, Berlin, 1939; *Falstaff*, *Aachen*, 1941; *Figaro*, Salzburg Festival, 1942) broke away increasingly from conventional 'singers' opera' as he tried out his own method of 'realistic' music theatre. During World War II he worked mainly as a drama director (1938–40 in Zürich, 1940–44 at the Schillertheater, Berlin) until he was enlisted (1944–5).

Immediately after the war Felsenstein directed Offenbach's *La vie parisienne* at the Hebbeltheater, Berlin, conceiving it as a programmatic plea for popular music drama based on the traditions of *opéra comique*. In 1947 he was appointed director of the Komische Oper in East Berlin and was able to develop his concepts consistently and to incorporate them in a long series that subsequently became internationally acclaimed as model productions. He continued to work in the Federal Republic of Germany and abroad, and made operatic and musical films as well as fulfilling assignments in drama teaching. His pupils included Götz Friedrich and Joachim Herz.

To Felsenstein 'realistic music theatre' meant using music to create drama so that the phrase became more than a socialist artistic doctrine. He wrote that music must be exclusively subject to the laws of the theatre, serving solely the dramatic action and its 'historic reality'. Accordingly, all his productions for the Komische Oper aimed to 'make the music and singing on the stage a credible, convincing, authentic and indispensable means of human expression': the singer had to convince the

Walter Felsenstein

audience that his part could be communicated only in song.

Felsenstein and his assistants had a strong sense of authenticity; texts were sometimes thoroughly re-edited in an attempt to reconstruct the original. The result was a dramatically consistent conception of the production which mediated between the composer's intentions and the 'associative ability of a contemporary audience'. Not only was the dramatic situation emphasized, but also the historical, artistic, social and political background.

DIETRICH STEINBECK/R

Felsztyna, Sebastian z. *See* SEBASTIAN Z FELSZTYNA.

Felton, William (*b* Drayton, Shropshire, 1715; *d* Hereford, 6 Dec 1769). English clergyman, organist, harpsichordist and composer. He was the son of George Felton, a clerk, and was educated at Manchester Grammar School and St John's College, Cambridge (BA, 1738; MA, 1743). He married Anna, daughter of the Rev. Egerton Leigh, by whom he had a daughter. Felton was ordained priest by the Bishop of Hereford on 11 August 1742, became a vicar-choral and sub-chanter of the cathedral on 3 February 1743, and minor canon in 1760. In 1769 he was made chaplain to the Princess Augusta, widow of the Prince of Wales, and in the same year he was appointed *custos* of the College of Vicars Choral at Hereford. From 1744 he held various parochial appointments in Herefordshire. He was buried in the Lady Chapel at Hereford Cathedral: the inscription on his gravestone states that he died at the age of 54 and was 'multiplici doctrina eruditus, rerum musicarum peritissimus'.

Felton was a steward at the Three Choirs Festival in Hereford in 1744 and in Gloucester in 1745; and his name is on the list of subscribers to Thomas Chilcot's *Twelve English Songs* (1744). He seems to have enjoyed wide popularity as a performer on the harpsichord and organ. Burney, who considered Felton a better performer than composer, recollected hearing in his youth 'the celebrated Mr Felton' play at Shrewsbury, and wrote in his *History* of his 'neat finger for common divisions and the rapid multiplication of notes'. In his *Account of the Musical Performances ... in Commemoration of Handel* (London, 1785/*R*) he related an anecdote about Felton's endeavours to persuade Handel to subscribe to his op.2 concertos through the violinist Abraham Brown; Handel started up angrily and said: 'A parson make concerto? Why he no make sarmon?'. Handel's name did, however, appear on the subscription list to Felton's op.1 concertos. Felton is chiefly known as a prolific composer of organ and harpsichord concertos; Burney pronounced that he 'produced two concertos out of three sets that were thought worthy of playing in London'. Despite this, Felton's concertos were widely acquired by music society libraries and private collectors, and his music frequently appeared in 18th-century domestic manuscript anthologies (see Harley).

Felton had a natural ability for devising bold, powerful thematic material, but his keyboard skills tempted him to include an excessive amount of passage-work. The 'Andante with variations' of the third concerto in op.1 achieved wide popularity as 'Felton's Gavot' or 'Farewell Manchester' (the latter title probably dating from December 1745, when it was supposedly played as the troops of the Young Pretender left Manchester). It is also said to have been played at the execution, in 1746, of Jemmy Dawson, the Manchester Jacobite, who was a contemporary of Felton's at St John's College, Cambridge (this legend may originate in the fact that a Felton concerto was played at the Manchester subscription concerts, which were notoriously Jacobite, in 1744). In about 1748 the tune was printed as *Fill the Glass*, a song for three voices. Burney said that it appeared in Ciampi's opera *Bertoldo*, produced at Covent Garden in 1762. The tune remained popular until the middle of the 19th century.

WORKS

all published in London

op.	
1	Six Concerto's, org/hpd, insts (1744)
2	Six Concerto's, org/hpd, insts (1747)
–	Fill the glass (Farewell Manchester, or Felton's Gavot), song, 3vv (*c*1748) [adapted from Andante of op.1 no.3]
3	Eight Suits of Easy Lessons, hpd (1752)
4	Six Concerto's, org/hpd, insts (1752)
5	Six Concerto's, org/hpd, insts (*c*1755)
6	Eight Suits of Easy Lessons, hpd (1757)
7	Eight Concerto's, org/hpd, insts (1762)

GERALD GIFFORD

Feltsman, Vladimir (*b* Moscow, 8 Jan 1952). American pianist of Russian birth. The son of Oskar Feltsman, a composer of popular music, he studied at the Moscow Conservatory from 1969 to 1976 with Yakov Fliyer, and in 1971 won first prize at the Marguerite Long-Jacques Thibaud Competition in Paris. His repertory is centred on Bach, Mozart, Beethoven and Brahms, but extends to contemporary music; he has given the first performances of Schnittke's First Sonata (1989) and Karetnikov's Piano Pieces (1990), both of which are dedicated to him. His emigration to the United States in 1987 after eight years of detention in the USSR was highly publicized, and was the subject of a television documentary. His first performance in America was at the White House, and his Carnegie Hall début, in September 1987, was issued as a live recording. Critics have praised the technical authority and colouristic flair of his playing, but have also noted a tendency towards idiosyncratic distortions.

DAVID FANNING

Femelidi, Volodymyr Oleksandrovych (*b* Odessa, 16/29 May 1905; *d* Odessa, 30 Oct 1931). Ukrainian composer. He graduated from the Odessa Institute of Music and Drama in composition (under V.A. Zolotaryov and P. Molchanov) and conducting (under H. Stolyarov). An extremely gifted musician, he was also a good writer and actor. 'He had a very great talent for composing', recollected Shostakovich, 'he composed quickly and very skilfully. For the most part he didn't write sketches but composed directly into score. Soviet music lost an outstanding composer'. His brief, but intense, creative life covered almost all genres and was musically significant. He achieved considerable success with the première of his first symphony, the 'Jubilee', on 6 November 1927 in Odessa – the third movement had to be immediately repeated. In it, certain pertinent characteristics became readily apparent. As many artists of the mid-1920s, Femelidi seemed very much committed to the construction of a new proletarian culture and was enthusiastic about the achievements of the Revolution, which he proceeded to extol in a number of works, such as the opera *Razlom* ('The Break') and the 'Jubilee' Symphony. The music is frequently permeated with impetuous energy and is dominated by song and dance elements. In the case of the symphony, the main thematic material is made up of Russian and Ukrainian song and dance themes, revolutionary hymns – *Vy zhertvoyu pali v boyu* ('You have Sacrificed Yourself in Battle') – and marches – *Smelo, tovarishchi, v nogu* ('Bravely, Comrades'). Although his ethnic roots were Greek and Ukrainian, he essentially was a Russophile and cosmopolitan, relying mostly on Russian models for inspiration. He died before he could complete his second opera, *Tsėzar i Kleopatra*; unfortunately, out of the 19 works he wrote, four are considered lost.

WORKS
(*selective list*)

Dramatic: Razlom [The Break] (heroic op, after B. Lavrenev), 1929; Carmagnole (ballet), 1930; Tsėzar i Kleopatra [Caesar and Cleopatra] (op, after G.B. Shaw), 1931, unfinished
Inst: Pf Conc., 1926; Vn Conc., 1926; Danza Exotica, str qt, 1927; Pf Sonata, 1927; Str Qt, 1927; Sym. no.1 'Jubilee', orch, 1927; Trio, vn, vc, pf, 1927; Sym. no.2 'Classical', orch, 1928
Vocal: Ondine (vocal sym. poem, after V. Zhukovs'ky), 1926; 3 Romances (K. Bal'mont, Gorodets'ky, A.S. Pushkin), S, chbr ens, 1927; Lukomore (poem, Pushkin), 1v, orch, 1927–8; Uprikaznïkh vorot (joke scene, A.K. Tolstoy), S, T, Bar, orch, 1927–8

VIRKO BALEY

Feminine ending [feminine cadence; metacrusis] (Fr. *cadence féminine*; Ger. *weibliche Endung*). The melodic termination of a phrase on a weak beat (ex.1*a*), the weak part of a beat (ex.1*b*), or the weak part of a bar (ex.1*c*). The term derives from prosody, where it describes a rhyme of two syllables of which the second is unstressed (e.g. 'mustard' and 'custard'). The term entered musical theory with Heinrich Christoph Koch's discussion of 'the mechanical rules of melody', that is, of phrase structure, a discussion steeped in the terminology of grammar and rhetoric. For Koch, who used the terms 'overhang' (*Überhang*), 'feminine ending' and 'weak ending' synonymously, the feminine ending was a source of variety in cadential formulae. His examples indicate that it was particularly at home in the melodically elaborate, cadentially saturated *galant* and *empfindsamer* styles, in which feminine endings arise from frequent cadential appoggiaturas and other ornamental cadential figures. Prior to

Ex.1 Examples of feminine endings, from H.C. Koch: 'Von der Beschaffenheit der melodischen Theile', *Versuch einer Anleitung zur Composition*, ii (Leipzig, 1787)

these mid-18th-century instrumental styles, the feminine cadence (not yet so named) would have arisen through the improvised cadential appoggiaturas of vocal recitative.

The feminine cadence was not arbitrarily named. The connotations of (rhythmic) 'weakness', of melodic ornament and elaboration, and of sentiment or expression that attend these later 18th-century uses and definitions, set the new term in the broader context of an emergent discourse on the characteristics of the sexes and related discussions of music's gendered styles, genres and performance techniques (see Head). Recently the term was reappropriated by Susan McClary as a telling instance of assumptions about gender underlying the apparently neutral vocabulary of musical analysis and theory.

MATTHEW HEAD

Feminism. In musicology, music theory and ethnomusicology, the commitment to the well-being of women and to the importance of their creative participation in culture and history has given rise to a body of scholarship dedicated to the understanding of women's roles, experiences and contributions as well as the various ways in which gender as social construct has defined those roles in different cultural settings. Feminist scholarship has also been concerned with the retrieval of women's compositions and the study of their activities as composers, performers and users of music (*see* WOMEN IN MUSIC), and with a critical approach in which the understanding of gender and gender ideology is brought to bear upon the entire musical realm. Specifically, feminist musical scholarship sees music as both product and promulgator of a gendered social order.

1. Development. 2. Feminisms. 3. Postmodernism. 4. Intersections. 5. Activism.

1. DEVELOPMENT. The earlier, or 'women's studies', phase began to emerge in music scholarship in the 1970s as a branch of traditional musicology intended to broaden the discipline's field of vision to include women. Its basic task was to locate forgotten women musicians in the European tradition, to make their works available in publication and recording, and to study their role in music history as currently understood. Such projects soon developed a critical edge, however, as researchers became aware of the ways in which these musicians' experience challenged reigning music-historical paradigms of genre, periodization and performance venue and practice. Patterns of access to musical education and professional 'separate spheres' came into focus, through which existing gender roles and social values were inevitably imprinted upon the musical activities of women. Furthermore, insistent questions arose about the relationship between contemporary musical success and distinction and the grand tradition as transmitted to the late 20th century. These questions in turn led, as they had in other disciplines such as literature and the history of art, to the critical examination of canon formation, concepts of talent and genius, and ruling standards of aesthetic value.

This body of knowledge about women musicians has continued to grow and flourish, and its importance for the feminist goal of a fully representative music scholarship is immeasurable, but its relationship to what may be referred to as feminism proper varies with the degree to which each project makes use of interdisciplinary feminist theory and method. This second phase, using explicitly feminist intellectual tools, appeared in the late 1980s as interdisciplinary reading became common practice among scholars, and developed very rapidly with the help of the enormous body of precedent already available in other humanistic fields. It should not be thought that feminist scholarship took less interest in historical women musicians, but rather that accumulated knowledge about their experience and the parameters of their careers helped to launch a broader-based critique of the social formation of musical practice in general.

Thus feminist musical scholars wish to understand the impact of social context on music-making and, reciprocally, music's role in the process of cultural reproduction or the maintenance (and sometimes the disruption) of core values of its time and place of origin. Feminists argue that ideologies of gender and prevailing relationships between males and females constitute just such core values for most or all human societies. If so, the study of such ideologies and of associated musical practices will be mutually enlightening. This exploration has taken many forms, including the anthropology-influenced study of musical behaviour as well as the analytic or critical investigation of individual musical compositions.

2. FEMINISMS. Although academic feminism is a notably diverse (and in many aspects internally contested) body of thought, feminist theory as it has been represented in music scholarship includes a number of common fundamental tenets. First, it holds that a useful analytic distinction can be made between sex (the biology of male and female) and gender (the social categories of masculine and feminine), the latter demonstrably variable among human communities and therefore socially pliable.

Secondly, feminism argues that in such cultural settings as the modern West where male experience is taken to be universal and normative, a scholarly commitment to the authority and authenticity of female experience can produce startling changes in long-familiar pictures. Otherwise, feminist scholarship argues, ethnographic accounts, historical narratives and critical interpretations alike are limited to only half the relevant data.

Thirdly, it contends that traditional academic and political distinctions between 'public' and 'private', because of women's historical – indeed, mythic – association with the protection and exclusivity of the private sphere, work against the full understanding of women's experience in the social world. The activist slogan 'the personal is political' means to underscore the conviction that the representation of personal achievement or lack thereof in terms of individual personalities and private lives obscures the systemic nature of the gendered framework within which all men and women must operate and from which power and authority derive.

It may be noted that these premises, which underlie feminist scholarship in all disciplines, have the tendency to blur or dissolve subdisciplinary distinctions among ethnomusicology, historical musicology and music theory. Feminist musical work has profited greatly from the resulting cross-fertilization.

All disciplines in which feminism has played a major role manifest a wide variety of schools of feminist thought, and indeed a variety of taxonomies for characterizing them. So-called liberal feminists, for example, formulate equality-based arguments generally in line with the dominant political liberalism of the USA and western Europe. Cultural feminists (sometimes called 'radical') typically make more separatist claims, stressing the importance of uniquely female needs, associations and cultural practices. Lesbian feminists argue that gender cannot be understood to any meaningful degree except in intersection with an analysis of sexuality and its cultural construction. Poststructuralist, psychoanalytic and Marxist feminists use arguments and analytic tools derived respectively from those bodies of thought. Nor are these categories mutually exclusive.

Most persistently debated are the opposed feminist positions that have been taken with regard to 'the difference dilemma', a primarily strategic disagreement about whether the similarities between the sexes, or their differences, should underlie feminist argument. Put differently: since the category 'women' has been so burdened with historical and cultural resonance, as well as unjust laws and unfavourable material conditions, there is intense and continuing discussion of the extent to which it can be recuperated either for the celebration of achievement or for the exploration of women's particular experience. An equally energetic argument asserts that the unitary category 'women' inappropriately obscures differences in race, class and other aspects of social identity which, like gender, distribute power and authority differently within different social contexts.

Within the world of musical scholarship such distinctions have not become very visible, although they may do so as musical feminist theory continues to elaborate. What have been more manifest are disagreements on certain specific issues; for instance, the relative importance of the recovery work of women's studies versus the feminist critique of the canon, or the viability of reading gender ideology – or resistance to it – in individual musical compositions. The interaction of feminist musicology with gay and lesbian (or queer) studies is in the early stages of development and cannot yet be usefully characterized, except to observe that it seems to be generating a theorizing of the body and of eroticism that is receiving support from other scholarship interested in performativity, especially opera studies, and from an upsurge of interest in the materiality of performance.

3. POSTMODERNISM. There is no doubt that academic feminism in its present form could not have taken shape without the advent of POSTMODERNISM, or that body of thought in many quarters elliptically referred to as 'theory'. Along with poststructuralism and deconstruction, this cluster of new scholarly approaches now includes aspects of cultural and postcolonial studies and queer theory, although neither these nor feminism can be entirely identified with postmodernism as such.

All these modes of analysis have many interests and convictions in common. All are centrally concerned with social processes that generate meaning, with the role of differential power relationships in culture, and with modes of representation. They share the conviction that knowledge and interpretation are situated: that is, that social identity structures what is known, how that knowledge is used, and how representations are made and interpreted. Following from these concerns, criticism – understood as a situated act of interpretation – has become a primary mode of understanding within the humanistic disciplines, a trend that has had a particularly interesting effect upon musical scholarship because of that discipline's relative unfamiliarity with the notion of multiple critical readings. At the same time, the conviction that experience differs with cultural situation has similarly profound implications for historiography.

Feminism also shares with postmodern scholarship an intense interest in culture (a term which, however, may be very variously construed) and the ways in which its ideologies may be reproduced or contested through representations such as texts or works of art. This exploration has been a highly visible activity in feminist musicology, for instance in the much debated question whether Classical sonata form encodes an interaction between dominant and subordinate themes that can be taken as a representation of gender interaction, or in studies of the musical representation of women, paradigmatically in opera. Such scholarship furthermore entails a challenge to the traditional understanding of 'absolute music' as being without representational force, an apparent claim of autonomy from the cultural surround which seems unlikely to feminists; it has also been noted, in any event, that the emergence of a music intended to be perceived as abstract and 'absolute' is in itself a phenomenon wholly saturated with cultural meaning.

Postmodern thought brings with it a tendency to cross boundaries which is akin to the feminist refusal of the divide between private and public. In this spirit, perhaps its most powerful contribution has been its radical interdisciplinarity, which has resulted in a synthetic and pandisciplinary body of critical theory. Certainly the foundational assumptions of feminist theory are not intrinsically more relevant to any one academic discipline than to any other, and feminist scholars in music as elsewhere have found them to have explanatory power over many phenomena already observed within the disciplinary purview. By now, indeed, feminist musicologists regard themselves as contributors to a common interpretative undertaking as much as beneficiaries of its earlier achievements.

Despite these commonalities, the degree to which postmodern methods and assumptions are valuable for feminist work is a source of disagreement among different schools of feminist thought, though most agree that its tools should be used with caution. Postmodernism is by definition politically equivocal because of its principled refusal to resolve contradictions; feminism insists upon an unequivocal ethical commitment, notwithstanding a quite variegated politics. Furthermore, postmodernism's positing of an unstable and fragmented subjectivity seems to many to put into question the category 'women' in a way that would disable feminist work, and to make inaccessible the notions of authority and intention that are central to the historical interpretation of women's productivity.

To put the matter another way, many feminist scholars argue that postmodern thought lacks the materialist values needed for social change in the real world, and that feminism's commitment to women, their achievements and their material conditions could only be vitiated through the postmodern deconstruction of subjectivity and agency. Feminist literary critics have observed, for

instance, that the much vaunted 'death of the author' was proclaimed just at the moment that so many female authors were being rediscovered; it seems similarly provocative that the postmodern challenge to formalist musical analysis is arising just when feminists are beginning to explore the musical encoding of gender ideology and putative stylistic differences in women's music.

4. INTERSECTIONS. Although the public media are eager to proclaim 'postfeminism', the death of feminist scholarship does not actually appear imminent; it is surely changing, and will continue to do so as new currents of thought arise. At the moment, feminism is negotiating interactions with other closely related intellectual movements that will without doubt influence its future character.

One such is 'gender studies', an extension of feminist thought that proposes to apply its insights even-handedly to both male and female experience. Some feminists, recognizing the powerful role gender has already played as an analytic concept, welcome this development as a dissemination of the arguments of academic feminism into a wider arena. Others fear that it will prove reactionary in its tendency to blunt feminism's critical edge and to return actual historical women to relative invisibility.

The interactions of sex, gender and sexuality pose especially absorbing theoretical and aesthetic questions now, at least in part because of dominant culture's prevailing representational practice in which only two categories, 'masculine' and 'feminine', are recognized. Feminists and scholars of queer theory (and many are both) often work together in this arena where so many urgent concerns are held in common.

Feminist scholarship is also revising and rethinking its relationship to the study of race, ethnicity and social class. Having spent years constructing a theory of cultural production that illuminates the role of relations of power, feminism, in musicology as elsewhere, has come to recognize the existence of other systems working in concert with the gender system, and engaging in the critical interrogation of its own practices. Especially as both the scholarly and activist components of feminism gradually enlarge their global reach, music scholarship will increasingly deal with familiar issues of cultural relativism and of the relation of gender and sexuality to other forms of social hierarchy.

5. ACTIVISM. In keeping with feminism's commitment to the well-being of women and to its motto that 'the personal is political', musical feminism also includes explicit activism in the various music professions. Many learned societies have established committees or caucuses with the mandate to monitor women's economic status and advancement within the profession. Performers and composers have established organizations for the purpose of promoting women's music, and issue journals and newsletters to foster communication about opportunities and successes. Special performing organizations have come into existence in order to create more opportunities for women composers. Feminist recording companies, reference books and catalogues of available published and recorded music by women, and annual music festivals in various locations celebrate women's music-making and help to disseminate information about it.

RUTH A. SOLIE

Fenaroli, Fedele (*b* Lanciano, Abruzzi, 25 April 1730; *d* Naples, 1 Jan 1818). Italian music educator and composer. His father, Francesco Antonio, the *maestro di cappella* at S Maria del Ponte in Lanciano, taught him the rudiments of music, but then had him study law. After his father's death Fenaroli attended the Conservatorio di S Maria di Loreto in Naples as a student of Francesco Durante and P.A. Gallo. In 1762 he taught at the Conservatorio, deputizing for Antonio Sacchini. In 1763 he became second *maestro di cappella* at the same conservatory, and in 1777 first *maestro*. In 1768, for the birthday of Ferdinand IV, a cantata by him was performed in the Teatro S Carlo. He later played a decisive part in the reorganization of the Neapolitan conservatories; after S Maria di Loreto was joined with the Turchini Conservatory in 1806, Fenaroli, Giovanni Paisiello and Giacomo Tritto were given the task of devising the new curriculum. Fenaroli taught counterpoint at the new conservatory, and with Paisiello and Tritto directed the school until Niccolò Zingarelli took over in 1813. Although suffering from cancer he continued to teach until 5 December 1817, even bringing his students together during vacations at his country home at the foot of Mt Vesuvius. According to Florimo, the composers Cimarosa, Zingarelli, Giuseppe Nicolini and Michele Carafa were among his pupils; he may also have given private instruction to Nicola Manfroce, Saverio Mercadante and Vincenzo Lavigna (see de Napoli, 1930). He was a member of the Reale Società Borbonica and music director in the Associazione dei Cavalieri.

Fenaroli principally composed church music, preferring the strict contrapuntal style, in which he exhibited great ability. Only a few cantatas, stage works and oratorios by him survive. He apparently wrote no orchestral music and only one chamber work, the *Intavolature e sonate per cembalo* (1793). His teaching method was highly regarded throughout Italy; Fétis praised it for its simplicity and clarity and Choron used some of the exercises in his *Principes de composition*. By transmitting the compositional style of his teacher Durante he helped preserve the so-called Neapolitan tradition. His treatises, which were reprinted many times during the 19th century, began to fall out of favour about 1860 with the arrival of more modern teaching methods; yet even as late as 1871 Verdi could write approvingly of the still widespread use of Fenaroli's exercises.

WORKS

MSS at I-MC and Nc unless otherwise stated

Liturgical music, all with insts: 6 masses, 2–5vv; Messa de' defunti, 4vv, 1770; Ky, 5vv, *D-Bsb*; Gl, 5vv; Cr, 2vv; Quoniam, S, 4vv; 3 Dixit, 4–5vv; 2 TeD; Responsorio di S Antonio, 4vv; Laudate pueri; Dixit, *A-Wn*; 2 Miserere, 4vv, org; Qui tollis, 1v; Popule meus, 4vv, org; Ecce lignum, 4vv, org; Ave Maria, 4vv; Stabat mater, 2vv, *I-Nc*, *Nf*; Care puer, S; Lamentations and Lessons for Passiontide, 1v; Lezioni dei morti, S, A, vns; Lezioni de' morti, 1v; Pueri hebraeorum, 4vv; Suscipe me Domine, S; Veni Creator Spiritus, S, A; Veni sponsa Christi, S/4vv; Inno S Michele, 4vv; Pange lingua, *D-Bsb*, *I-Nc*; Tantum ergo, S, A; Genitori, S, A; Christus factus est, *F-Pc*; Cant., 8vv; 2 cants. for S Gennaro, 1763, 1777, both lost; cant. for S Carlo, 1768, lost; 2 cants. for Corpus Domini, lost; In sacra coeli flamma, 1v, *GB-Lbl*; Sò benute le Pacche sicche Don Nicò duet, *Lbl*

Motets, all with insts: Clari fontes, 5vv, 1752; Coeli gaudent, 4vv, 1763; Corda puro, 4vv, 1767; Laetae gentes, 4vv, 1774; Cara tibia grata sono, aria, S, 1780; Cara diva, 1v, vn, ob, 1793; O beata aeterna fiamma, 1v; O divino astro beato, 2vv; O spes divina, S; Eja psalite mortales, 4vv; O gentes festinate, 4vv; Laeto corde, 5vv; In clava coeli, S; Fronte laeta, 4vv; Inter choros, 8vv; Coeli flamma, 4vv; Gaudete jubilate, 4vv; Exultate fideles, aria, S; Vade misera et freme, S; Quid intenta; Mundi pompae fallaces; Nonna, S; Quid ploro, A, hpd; Barbara barbara accede, A, hpd

3 orats, lost: L'arca del Giordano, Lanciano; Abigaille, Lanciano, 1760; La sconfitta degli Assiri, Rome, 1789

2 ops, lost: I due sediarii, Naples, 1759; La disfatta degli Amaleciti, Chieti, 1780

Works for hpd and for vn, hpd

Pedagogical: Regole musicali per i principianti di cembalo nel sonar coi numeri e per i principianti di contrappunto (Naples, 1775); Partimenti ossia Basso numerato (Rome, *c*1800/*R*); Studio del contrappunto (Rome, *c*1800); Solfeggi per soprano, *I-Bc*; Scale e cadenze nelle 3 posizioni, *Mc*

SIEGFRIED GMEINWIESER

Fenby, Eric (William) (*b* Scarborough, 22 April 1906; *d* Scarborough,18 Feb 1997). English writer on music and composer. Largely self-taught, he became organist of Holy Trinity, Scarborough, at the age of 12, and at 16 was articled to Claude Keeton, organist of St Martin's, Scarborough, gaining much practical experience with local choral societies and amateur orchestras. One or two of his youthful works were played by the local spa orchestra, but the crucial years in his life were 1928 to 1934, when he offered his services as amanuensis to the blind and paralysed Delius at Grez-sur-Loing in France. His completion from dictation of such scores as *A Song of Summer* and *Songs of Farewell* is an achievement without parallel in music. He recalled his often harrowing time with Delius, whom he nursed in the weeks up to his death, in the classic book *Delius as I Knew him* (London, 1936/*R*, 2/1966, 3/1981), which was memorably recreated in Ken Russell's 1968 BBC TV film *Song of Summer*. Another personal account of that period was given by Fenby himself in a 1982 television documentary *Song of Farewell*.

After Delius's death he assisted Beecham with the 1935 Covent Garden production of Delius's opera *Koanga*; he was music adviser to Boosey & Hawkes from 1935 to 1939; and after the war he founded and directed the music department of the North Riding Training College,

Scarborough (1948–62). On Beecham's death he was appointed artistic director of the 1962 Bradford Delius Centenary Festival, and that year was created an OBE. From 1964 to 1977 he was professor of composition at the RAM. He provided the film score for Alfred Hitchcock's *Jamaica Inn* (1939) but destroyed almost all his own compositions, including a symphony, a cello concerto and a setting of *The Hound of Heaven*, in the belief that 'only genius matters'. Fenby's only surviving orchestral work is the pastiche overture *Rossini on Ilkla Moor*. In 1968 he served as chairman of the Composers' Guild. For many years, as a uniquely privileged authority on the music of Delius, Fenby travelled widely, lecturing, writing and broadcasting as well as editing, accompanying, conducting and recording the music of Delius, and advising the Delius Trust. He received honorary doctorates from the universities of Jacksonville (Florida), Warwick and Bradford, and honorary fellowships or memberships of the RCM, RAM, Trinity College, London, and the Royal Philharmonic Society, on whose committee he also served.

CHRISTOPHER PALMER/STEPHEN LLOYD

Fender. American firm of electric guitar, amplifier and audio equipment manufacturers. The company takes its name from (Clarence) Leo Fender (*b* Anaheim, CA, 10 Aug 1909; *d* Fullerton, CA, 22 Nov 1994). He built his first acoustic guitar in the 1920s, before studying accounting. In 1939 he set up a radio repair company in Fullerton, California, and in about 1944 he was joined by Clayton Orr ('Doc') Kauffman, a musician who had designed equipment for Rickenbacker. As the K & F Company they began the production of amplifiers and steel guitars, designed for playing across the lap. In 1946 the partnership broke up and Fender soon formed the Fender Electric Instrument Company, based in Fullerton, California. George Fullerton joined the company in 1948. Two years later Fender introduced the world's first commercially produced solid-bodied electric guitar, the Fender Broadcaster (renamed Telecaster in 1951; see illustration). In 1951 the company marketed the Fender Precision Bass, the first ELECTRIC BASS GUITAR.

In 1954 Fender launched the stylish Stratocaster electric guitar, the first solid-body to use three pickups and the first Fender instrument to have the distinctive tremolo arm. Further models were introduced in later years, including the Jazzmaster (1958), the Jazz Bass (1960), a six-string bass (1961), the Jaguar (1962) and the Mustang (1964). By 1964, when Fender's health failed and Randall began negotiations to sell the Fender companies to CBS, the workforce numbered about 600. The sale was completed in January 1965 for $13 million.

Leo Fender regained his health and joined CBS/Fender as a design consultant, working on the Fender-Rhodes electric piano and the Mustang electric bass guitar before he resigned in 1970. He set up CLF Research with Fullerton, which built guitars for Music Man until the late 1970s. In 1979 Fender and Fullerton formed G & L Music Sales to produce their own electric guitars and basses. CBS continued to use the Fender brand, introducing a new management team in 1981. During 1982 Fender Japan was established to make Fender instruments in Japan; the company also began to produce Vintage reissue instruments which sought to replicate classic guitars of the 1950s and 60s. The Squier brand for lower priced Fender instruments was launched in 1983. In 1985 the Fender companies were sold by CBS to a group of investors led by Fender's president, Bill Schultz. Improved American Standard versions of the Stratocaster (1986) and Telecaster (1988) were issued. At the close of the 20th century Fender was one of the most successful brands in the international electric guitar business.

Fender Telecaster, solid-bodied electric guitar, 1952

TONY BACON

Fendt. English family of violin makers of Austrian origin, who worked in London during the first half of the 19th

century. Bernhardt Simon Fendt (*b* Füssen, 11 May 1769; *d* London, 1832) went to Paris at an early age, where he worked for his uncle François Fent. In January 1798 he was employed in London by Thomas Dodd, with whom he remained until about 1809 and for whom – with the elder J.F. LOTT – he made many fine instruments. From 1809 until 1823 he worked for John Betts. He was especially noted for his cellos and double basses, and among his pupils were his children, members of the Lott family, and J.N. Lentz. Fendt had four sons who became violin makers. The eldest, Bernard Simon Fendt (*b* London, 1800; *d* London, 6 March 1852), worked at first with his father at the Betts shop; after 1823 he set up on his own. He was an outstanding workman and is respected for his many fine imitations of the old Italian makers. In September 1832 he entered into partnership with George Purdy under the business name of Purdy and Fendt. Purdy's expertise was in promoting the firm; among various endeavours was the sponsorship of a violin performance competition, held in London in July 1839, the first such event documented in that city.

The other three sons of the elder B.S. Fendt are but little known as makers; two of them died young. Martin Fendt (*b* London, July 1812; *d* London, July 1845) worked for Arthur Betts but made very few instruments. The third son, Jacob (*b* London, *c*1815; *d* London, Oct 1849) studied under his older brother Bernard Simon before entering the employ of William Davis. His instruments are almost never labelled, but he is believed to have made many imitations of Guarneri violins, often recognized by a rather garish red varnish. A fourth brother, Francis, worked for Purdy and Fendt, and by 1856 was working in Liverpool. His work is virtually unknown.

CHARLES BEARE, PHILIP J. KASS

Fénelon, Philippe (*b* Suèvres, Loir-et-Cher, 23 Nov 1952). French composer. Fénelon studied Bulgarian, comparative literature and linguistics at the Ecole des langues orientales, then entered Messiaen's class at the Paris Conservatoire, where he won the composition prize in 1977. He was resident at the Casa Velázquez in Spain (1981–3), before going to Berlin in 1988 on a grant from the Deutscher akademischer Austauschdienst. He has won a number of national and international prizes, including the Prix Stockhausen (1980), the Prix Hervé Dugardin of the SACEM (1984) and the Prix Villa Médicis Hors-les-murs (1991).

Born of a rich and individual cultural outlook, which embraces music, literature and painting, Fénelon's work remains on the fringes of all schools, and he does not hesitate to rethink genres inherited from musical history, such as opera, quartet, concerto and madrigal. The vocal dimension of his instrumental and orchestral scores underlines their fundamentally dramaturgical – if not theatrical – intentions. Since *Salammbô*, Fénelon has developed a style marked by silence and purification, the drifting of an 'almost nothing' in which sung words become gradually more intelligible.

WORKS

(*selective list*)

LAURENT FENEYROU

Feng Zicun (*b* Yangyuan, Hebei province, 17 June 1904; *d* 25 Dec 1987). Chinese *dizi* bamboo flute player. Adept on both the *sihu* four-string fiddle and *dizi* bamboo flute, Feng Zicun supplemented his income as a labourer by working in the evenings as a performing musician accompanying local song and dance entertainment, folk-songs and stilt dances. In the early 1920s he spent four years as a musician in Baotou, Inner Mongolia, where he learnt local *errentai* opera music, a style he was subsequently to introduce to Hebei province.

Following the Communist victory in 1949, Feng – now a locally renowned *dizi* player – was appointed to a full-time post as a performing musician, joining the Central Song and Dance Troupe as *dizi* soloist in Beijing in 1953. In 1964 he took a teaching post at the China Conservatory of Music, also in Beijing.

Feng popularized several *dizi* solos, including *Xi xiangfeng* ('Happy Reunion'), *Wu bangzi* ('Five Clappers') and *Gua hongdeng* ('Hanging Red Lanterns'), contributing much-needed solo instrumental repertory to the new Chinese conservatory curricula in traditional instrumental performance. Feng's style has been characterized as representative of the folk traditions of northern China. His music, much of which consists of solo adaptations of traditional folk ensemble pieces, is typically virtuosic and ebullient in style.

Fenigstein, Victor (*b* Zürich, 19 Dec 1924). Swiss composer and pianist, active in Luxembourg. He studied the violin and the piano (with Emil Frey, Bernhard Rywosch and Edwin Fischer), then at the University of Zürich. He taught at the Luxembourg Conservatoire, 1948–85, but was obliged to give up his career as pianist after 1952 (with the onset of multiple sclerosis). It was after this that he became most active as a composer.

His works include instrumental and vocal chamber music, orchestral music, stage music and educational pieces. Fenigstein is open to many stylistic and technical currents. He considers music as a vehicle for his humanitarian ideas. Despite severe illness he completed the opera *Die heilige Johanna der Schlachthöfe* (1985), *154 Shakespeare-Sonnets* (1986), the chamber opera *Die Mutter des Mörders* (1987) and *Zwölf Lieder zu "Mutter Courage und ihre Töchter"* (1997). In 1986 the first performance of *Die heilige Johanna der Schlachthöfe* was given by the Städtische Buhnen in Augsburg.

WORKS
(*selective list*)

Stage: Die heilige Johanna der Schlachthöfe (SPL, 5, B. Brecht), 1985; Die Mutter des Mörders (op, E.E. Kisch), 1987

Vocal: Et le jour se leva pour lui (cant., P. Elnard), S, A, T, B, chorus, orch, 1968; Seventeen Millions (P. Wei, J. Milton, A Rimbaud), Mez, nar, orch, 1979; 154 Shakespeare-Sonnets, 1v, insts

Orch: Conc., ob/sax, str, 1961; Légende, vc, chbr orch, 1962; Petite Suite des temps jadis, 1966; Etudes concertantes I 'MURATORI', vc, Mez, orch, 1967; Three Events, pf, orch, 1970; 6 Berlockentänze, cl qt, 1980; 3 esquisses, soloists, str, 1974; Passages, tpt, str, 1974; 2 pieces, fl/sax/vn, str, 1978; MARA(IM)PULSE, str, 1978; Danses des Breloques, 1981

LOLL WEBER

Fenis, Rudolf von. *See* RUDOLF VON FENIS-NEUENBURG.

Fenlon, Iain (Alexander) (*b* Prestbury, Cheshire, 26 Oct 1949). British musicologist. He studied music at the universities of Reading (BA 1970), Birmingham (MA 1971) and Cambridge (PhD 1977). In 1973–4 he was an advisory editor for *Grove6*, then, in succession, Hayward Research Fellow at the University of Birmingham (1974–5), a fellow of Villa i Tatti, Florence (1975–6), and research fellow at King's College, Cambridge (1976–83). From 1979 he was also a lecturer at the University of Cambridge and in 1996 was appointed reader in historical musicology. He has taught at Wellesley College, Massachusetts (1978–9), Harvard University (1984–5), the British School in Rome (1985), the Centre de Musique Ancienne, Geneva (1988–9), and the École Normale Supérieure, Paris (1998–9). He was awarded the Dent Medal in 1984 and elected Fellow of the Society of Antiquaries in 1989. He has also held visiting fellowships at All Souls College, Oxford (1991–2), and New College, Oxford (1992), and is Honorary Keeper of the Music at the Fitzwilliam Museum, Cambridge. He is editor of *Cambridge Studies in Medieval and Renaissance Music* (1992–) and on the editorial boards of *Early Music History* (founding editor, 1981), Opera Omnia di Andrea Gabrieli (1987) and Opera Omnia di Luca Marenzio (1997).

Fenlon's principal area of study is the history of music from about 1450 to 1650, particularly in Italy. His monograph on music in 16th-century Mantua studies the effects of the patronage of the Gonzaga family on the development and reform of liturgical music and on the new secular arts of spectacle; his discussion is supported by an edition of significant works. With James Haar he has published a key study of the emergence of the Italian madrigal, which establishes the importance of its Florentine origins. Most of his writings explore how the history of music is organically and dynamically related to the history of society. He has also produced catalogues of collections of early music in Birmingham and (with Valerie Rumbold) Cambridge.

ROSEMARY WILLIAMSON

Fennell, Frederick (*b* Cleveland, 2 July 1914). American conductor and teacher. He attended the Eastman School (BM 1937, and MM 1939). Appointed to the faculty of Eastman, he conducted the school's several ensembles (1939–62), and in 1952 formed the Eastman Wind Ensemble. This had 45 members, and its programmes differed from those of the full symphonic bands in that they included chamber compositions to be performed by only part of the ensemble as well as works played by the entire group. Fennell's pioneering series of 22 commercial recordings for Mercury brought about a reconsideration of the wind medium and established performance and literature models for the more than 20,000 wind ensembles that were subsequently established in American schools. In 1965 Fennell became conductor-in-residence at the University of Miami, where he remained until 1980. He appeared as a guest conductor with the Cleveland Orchestra, the Minneapolis SO, the LSO and the Boston Pops Orchestra, and was appointed principal guest conductor of the Interlochen Arts Academy. In 1977 he made the first American digital recording of a large ensemble (for Telarc) with the Cleveland Symphonic Winds. He was conductor of the Kosei Wind Orchestra of Tokyo from 1984 to 1995, when he became its conductor laureate.

Fennell has edited many works for band, and his writings include *Time and the Winds* (1954), *The Drummer's Heritage* (1956), *The Wind Ensemble* (1988) and a series of essays published in *The Instrumentalist* under the heading 'Basic Band Repertory'. He is the recipient of many awards, and was honoured in Japan with the naming of the Frederick Fennell Hall in Kofu.

RAOUL F. CAMUS

Fennelly, Brian (*b* Kingston, NY, 14 Aug 1937). American composer. He studied at Yale University (1963–8; MusM, PhD) with Mel Powell, Donald Martino, Allen Forte, George Perle, Gunther Schuller and others. From 1968 to 1997 he taught at New York University. His honours include grants from the Martha Baird Rockefeller Fund (1975, 1979, 1980), a Guggenheim Fellowship (1980–81) and a lifetime achievement award from the American Academy and Institute of Arts and Letters (1997). He has written both 12-note works (Wind Quintet, 1967; *Tesserae II*, 1972) and freely atonal compositions (*Locking Horns*, 1993; *Skyscapes*, 1995) and has shown an increasing interest in instrumental virtuosity (the series of *Tesserae* for solo instruments, 1971–81). His music often unites rhythmically complex surfaces with dramatic, expressive gestures. Many of his later works (after 1982) involve harmonic fields derived from serial manipulation, as in the various Thoreau-related compositions for orchestra.

EDWARD MURRAY

Fenton, George [Howe, George (Richard)] (*b* Bromley, 19 Oct 1949). English composer. His early career as a freelance guitarist was superseded by full-time composition in the mid-1970s, when he began producing theatre and television scores; the latter have included music for plays by Alan Bennett, for wildlife documentaries by David Attenborough and signature tunes for BBC news bulletins. His film work increased after the success of his score for Richard Attenborough's *Gandhi* in 1981, since when he has divided his time between the UK and Hollywood, working with directors as diverse as Attenborough, Stephen Frears, Nicholas Hytner, Neil Jordan, Ken Loach and Harold Ramis. He has taught at the National Film School, London, and at the RCM, where he is visiting professor. He has received four British Academy of Film and Television awards and five nominations for Academy Awards.

Fenton's unusual versatility has allowed him to switch between mainstream Hollywood styles and more adventurous idioms with ease. The evocative electronic soundscapes of *The Company of Wolves* (1984) and BBC documentaries co-exist with full orchestral scores ranging from an elaborate Impressionism to poignant simplicity, and sometimes coloured by unorthodox instrumentation, as in the original use of viols and sackbuts in *The Crucible* (1996). His studies of traditional music facilitated a synthesis of Western techniques with Indian textures in both *Gandhi* (scored in collaboration with Ravi Shankar) and *The Jewel in the Crown*, while African music was celebrated in *Cry Freedom* (co-composed by Jonas Gwangwa). Elsewhere, Fenton has made effective use of folksong, jazz, rock, classical and Baroque elements in appropriate contexts.

WORKS
(*selective list*)

Film scores: Gandhi (dir. R. Attenborough), 1981; The Company of Wolves (dir. N. Jordan), 1984; Clockwise (dir. C. Morahan), 1985; 84 Charing Cross Road (dir. D. Jones), 1986; Cry Freedom (dir. Attenborough), 1987; The Dressmaker (dir. J. O'Brien), 1987; White Mischief (dir. M. Radford), 1987; Dangerous Liaisons (dir. S. Frears), 1988; A Handful of Dust (dir. C. Sturridge), 1988; High Spirits (dir. Jordan), 1988; We're No

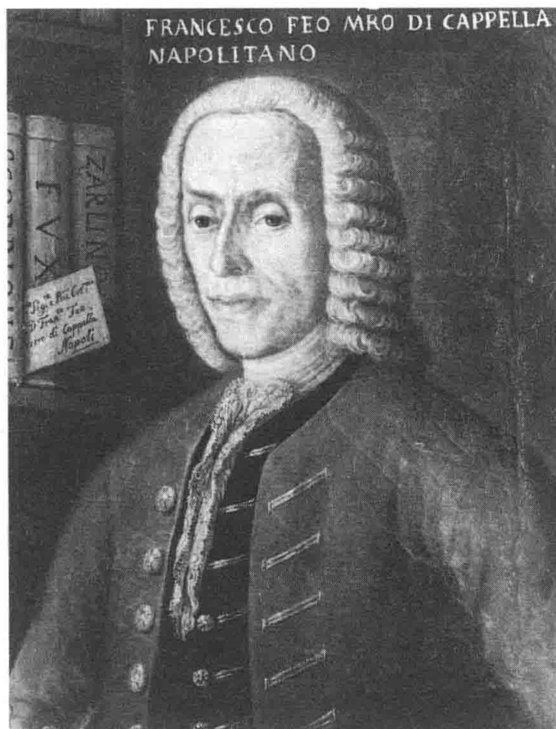
MERVYN COOKE

Feo, Francesco (*b* Naples, 1691; *d* Naples, 28 Jan 1761). Italian composer and teacher. According to Burney, he was 'one of the greatest Neapolitan masters of his time'.

1. LIFE. Feo received his musical training at the Conservatorio di S Maria della Pietà dei Turchini at Naples, which he entered on 3 September 1704; among his fellow students were Leonardo Leo and Giuseppe de Majo, who later married Feo's niece, Teresa Manna. He first studied with the *secondo maestro*, Andrea Basso, and after 1705 also with Nicola Fago, the then newly appointed *primo maestro*. According to some 19th-century sources, Feo is said to have left the conservatory about 1708 to study counterpoint with G.O. Pitoni in Rome. This claim has not been substantiated, and it is now believed that he remained at the Turchini until 1712.



On 18 January 1713 he presented to the Neapolitan public his first opera, *L'amor tirannico, ossia Zenobia*, and during the carnival season in 1714 *Il martirio di S Caterina*, a *dramma sacro*. In the following years he began to gain recognition with noteworthy works for local churches (*Missa defunctorum*, 1718) and contributed recitatives, arias and comic scenes to Neapolitan performances of operas by other composers. In 1719 he composed *La forza della virtù*, a *commedia per musica*, followed by the *opera seria Teuzzone* in 1720. Feo's first true success, however, appears to have been the *opera seria Siface, re di Numidia*, performed at the Teatro S Bartolomeo in May 1723 by, among others, Marianna Bugarelli and the castrato Nicolini. The libretto for *Siface*, based on an older one by Domenico David, was the first attempt at a *dramma per musica* by the then 25-year-old Metastasio who had just settled in Naples.

Feo's growing reputation as a church composer and the success of his opera *Siface* led in July 1723 to his appointment as a *maestro* of the Conservatorio di S Onofrio a Capuana, where he joined Ignazio Prota and succeeded Nicola Grillo. During his 16 years of service there he became known as one of the most distinguished Neapolitan teachers of his generation. Among his students at S Onofrio were Nicola Sabatino, Nicolò Jommelli and his own nephew Gennaro Manna. In 1739 he left S Onofrio (where Leonardo Leo assumed his position) to become *primo maestro* of the Conservatorio dei Poveri di Gesù Cristo, succeeding Francesco Durante who had resigned. Feo served the institution until 1743, assisted first by Alfonso Caggi and then by Girolamo Abos. One of his pupils there was Giacomo Insanguine, 'detto Monopoli'.

Between 1723 and 1743 Feo composed the bulk of his oratorios, many sacred cantatas and much church music. His most successful oratorio was *S Francesco di Sales Apostolo del Chablais* (1734), which over a period of 20 years continued to be performed in various Italian cities. For the stage, particularly for theatres in Rome and Turin, he wrote six additional *opere serie* and several intermezzos. For Madrid he composed the serenatas *Oreste* and *Polinice* (both 1738), and for the Congregation of the Fathers of the Cross in Prague, the oratorio *La distruzione dell'esercito dei Cananei con la morte di Sisara* (1739). His last opera, *Arsace*, was given at Turin for the reopening of the Teatro Regio on 26 December 1740 (for illustration *see* TURIN). His last oratorio, *La Ruth*, was performed at Rome in 1743. Thereafter he yielded the dramatic field to the younger generation of composers represented by Latilla, Jommelli, Terradellas, Girolamo Abos and Manna.

When the Poveri di Gesù Cristo was abolished in 1743 and converted into a seminary, Feo retired from public teaching, but remained active as a composer of sacred music. He continued to serve various Neapolitan churches, among them the Annunziata, where he had been appointed *maestro di cappella* in 1726. During his last years he relinquished most of his obligations to Manna. His last dated composition in autograph is a *Quoniam tu solus* of 1760 for tenor and strings. Through the singer A.M. Bernacchi of Bologna, Feo established contact in 1749 with Padre Martini, to whose collection he contributed a portrait of himself: it shows a wistful, aging Feo, with the theoretical treatises of Zarlino, Fux and Scorpione at his side (see illustration).

2. WORKS. When Feo embarked on his career as a composer, the operatic scene at Naples was still dominated by Alessandro Scarlatti, though Mancini, Domenico Sarro and Nicola Porpora were successful new contenders for public favour. Feo's first opera, *L'amor tirannico* (1713), reflects the situation: he adopted some of Scarlatti's formal and orchestral mannerisms, such as the use of a solo violin in the sinfonia and a divided orchestra with specific instrumentation for aria accompaniments, but his compositional approach shows greater affinity with that of Sarro. Ten years later, with *Siface*, Feo's style was more assured, and he helped usher in a new phase of Neapolitan opera, in which he pursued a middle ground between the genial, popular Leonardo Vinci and the conservative but inventive Leo. In his mature operas, the arias have characteristic opening statements and mellifluous but never overtly virtuoso vocal lines with homophonic

Francesco Feo: portrait by an unknown artist, c1750 (Museo Civico Bibliografico Musicale, Bologna)

accompaniments in which the violins duplicate much of the vocal part. The main parts of the da capo arias are guided by the modulatory principle of sonata forms. By 1740 they frequently articulate the beginning of the secondary tonal area with a brief contrasting statement in a minor key (see 'Non hai difesa', *Arsace*, Act 1). The middle sections are usually brief and motivically linked with the main part, providing contrast primarily through key change and reduced accompaniment. The arias are mostly accompanied by strings only, or with oboes and violins in unison; those scored for horns, oboes and strings provide the chief contrast. Occasionally wind instruments are treated independently to set momentary dynamic or tutti accents (for example in 'Cederai superbo ingrato', *Andromaca*, Act 3). His comic scenes and intermezzos capture the essentials of a straightforward but effective *buffo* style, especially in the bass roles and duets. However, *La forza della virtù*, performed in January 1719, is his only known contribution to the Neapolitan *commedia per musica*, a field which Vinci entered in the same year and quickly dominated with a series of successful works.

Feo's church music, which in volume outweighs his secular output, includes all the then current genres: masses, vespers, psalms and hymn settings, sacred cantatas and dialogues, lessons, lamentations for Holy Week, Passions, litanies, oratorios and sacred dramas. He continued, expanded and brought up to date trends in the music of his teacher Fago. His Kyrie-Gloria masses (often labelled only 'Gloria') are broadly conceived, multi-movement structures in which the choral numbers frame and balance the solos. He favoured double chorus, solo quartet with ripieno chorus, or five-part textures, and a majestic, slow opening to the Kyrie. The Credo, Sanctus and Agnus Dei are independent of the Kyrie-Gloria mass, and usually in *stile breve*. Feo proved himself well-versed in the craft of counterpoint and his masses include 'Kyrie', 'Christe' and 'Amen' fugues, often in *stile antico*. However, unlike Durante, he did not write *a cappella* works in imitation of Palestrina; rather he preferred homophonic and quasi-polyphonic settings with orchestral accompaniment. His extended choral numbers with concertante solo and tutti passages are delineated by clearcut modulatory schemes of concerto-ritornello or concerto-sonata design, which may contain melodically contrasting sections. In allegro movements, the final tonic is often confirmed by emphatic repetitions of dominant–tonic cadences (as in his Mass in D, 1747).

Feo's style is characterized by a reliance on formulae and by forward-looking features: there are the short, immediately repeated second phrases, the standard harmonic progressions during opening bars, Lombardic (or Scotch snap) rhythms, chains of 3rds and *galant* triplets, slower harmonic rhythm, balanced and symmetrical phrase groups, and structures based on sonata principles. Not all his works maintain the same level of quality and inspiration, yet even when stereotyped his music cannot be denied its individual character. His *Passio secundum Joannem* of 1744, surviving in two autograph versions, exhibits a masterly blend of the then traditional and new expressive dramatic means, and may be considered the finest contribution to the Passion genre in Italy after Alessandro Scarlatti. In 1791 Reichardt, on the basis of a few examples, heralded Feo as 'one of the greatest of all composers of church music in Italy' and worthy to stand alongside Bach and Handel. Though in his zealous admiration for the older masters Reichardt somewhat exaggerated his evaluation, Feo must be recognized as the most significant Neapolitan composer of church music next to Leo and Durante, and the best of his works deserve Burney's praise for their 'fire, invention, and force in the melody and expression in the words'. His *galant*stylistic tendencies found sympathetic response and continuation particularly in the works of Nicola Sabatino, Manna and the young Gianfrancesco de Majo.

WORKS

DRAMATIC

music lost unless otherwise stated

L'amor tirannico, ossia Zenobia (dramma per musica, 2, D. Lalli), with the buffo scenes Pincone e Rubina, Naples, S Bartolomeo, 18 Jan 1713, *I-Nc*; as Radamisto (P. de Fleuris, after Lalli), Innsbruck, 1716

La forza della virtù (commedia per musica, F.A. Tullio), Naples, Fiorentini, 22 Jan 1719, lib *Bu*

Teuzzone (dramma, 3, A. Zeno), with the int Dalinda e Balbo, Naples, S Bartolomeo, 20 Jan 1720, duet *Rc*

Siface, re di Numidia (dramma, 3, P. Metastasio, after D. David: *La forza della virtù*), with the int Morano e Rosina (not by Metastasio), Naples, S Bartolomeo, 13 May 1723, *Nc*, arias *D-MÜs*

Don Chisciotte della Mancha e Coriandolo speciale (int), Rome, Seminario Romano, carn. 1726, lib *I-Fc*, *Vgc*

Ipermestra (os, 3, A. Salvi), Rome, Alibert, Jan 1728, arias in *D-Bsb*, *I-Rc*, *Mc*; sinfonia *D-MÜs*

Arianna [Arianna e Teseo] (os, 3, P. Pariati), Turin, Regio, carn. 1728, arias in *A-Wn*, *F-Pc*, *GB-Lbl*

Il Tamese [Arsilda regina di Ponto] (os, 3, Lalli), with the int Il vedovo (Senpronio e Arrighetta), Naples, S Bartolomeo, wint. 1729, aria *Lbl*; separate perf. of Il vedovo, Treviso, aut. 1733, lib *Lbl*

Andromaca (os, 3, Zeno), Rome, Valle, 5 Feb 1730, *Lbl* (IOB, xxxi, 1977), *US-Wc*, arias *GB-Lbl*

L'Issipile (os, 3, Metastasio), Turin, Regio, 1733 [allegedly not perf.]; Lucca, Pantera, aut. 1735, *I-Nf* (Act 1 only)

Oreste (serenata), 5vv, Madrid, Palacio Buèn Retiro, 20 Jan 1738, *Nf*[for the birthday of Carlos III]
Polinice (serenata), 5vv, insts, Madrid, Casa del Principe della Rocca, 19 June 1738, *Nf* (inc.) [for the wedding celebrations of Carlos III and Maria Amalia of Saxony]
Arsace (os, 3, Salvi), Turin, Regio, 26 Dec 1740, *Mc*, *Nf** (Act 2), *US-Wc* [according to Fétis this opera, or a version of it, was perf. Rome, Valle, 1731]
Arias, buffo scenes (Corrado e Lauretta) and ints for M.A. Ziani: Il duello d'amore e di vendetta (pasticcio), Naples, S Bartolomeo, 19 Nov 1715; arias and buffo scenes (Vespetta e Nesso) for G.M. Orlandini: Lucio Papirio, Naples, 1717 [according to Strohm the op was probably F. Gasparini: Lucio Papirio, Rome, 1714]; int for L. Leo: Il castello d'Atlante, Naples, 1734
Arias and duets from ops and ints: *A-Wn*, *B-Bc*, *D-Bsb*, *W*, *GB-Lbl*, *I-Bc*, *Mc*, *Nc*, *Rsc*, *Vc*
Sinfonia, G, 3 movts, 2 fl, 2 ob, 2 hn, bn, str, bc, *D-Dl*

ORATORIOS, SACRED DRAMAS

Santa Elena nell'invenzione della SS Croce, Benevento, ?1710, lib *I-Bu*

HANNS-BERTOLD DIETZ

Feo, Ser (*fl* Florence, second half of the 14th century). Italian composer. Two ballatas by him survive: the two-voice *Già molte volte, Amore* (*I-Fn* Pan.26) and the three-voice *Omè, al cor dolente* (*F-Pn* it.568; both ed. in CMM, viii/5, 1964, and in PMFC, x, 1977). A third ballata possibly by him is the three-voice *Dè, belle donne di virtù* (also in *Pn* 568; ed. in PMFC, xi, 1978): Corsi, contrary to Schrade's opinion (see commentary, PMFC, iv, 1958/*R*, p.27), was inclined to identify Feo (interpreted as 'F.co') with Landini, but this is highly unlikely in view of the modest quality of the music alone. In Florence in 1360 a Francesco di Feo is referred to as a member of the fraternity of S Zanobi – a penitential fraternity which sang *laude*. Ser Feo may have been his son.

KURT VON FISCHER

Fer, Philibert Jambe de. *See* JAMBE DE FER, PHILIBERT.

Feradini, Antonio. *See* FERRADINI, ANTONIO.

Feragut, Beltrame [Beltrandus de Vignone; Beltramus de Francia, Bertrandus Feraguti, Ferracuti, etc.] (*fl* 1415–49). French composer, active principally in Italy. The earliest references, to a 'Beltramus de Francia cantor', are from payment documents of 1415 and 1416, from the chapel accounts of Pandolfo III Malatesta da Fano while he was captain of Brescia (Atlas, pp.62–8). From 1 July 1425 to May 1430 'D. dompnus Beltrandus de Vignone [Avignon], musichus' was on the payroll of Milan Cathedral. He was called 'dominus' until 1428, and from 1429 to 1430 'presbiter'. Sartori interpreted the title 'musichus' as *maestro di cappella*. The departure (apparently voluntary) of 'Frater Beltramus de Ferragutis' left the cathedral without a *tenorista* (yielding another musical designation).

Planchart reports a 'Bertrandus Feraguti', called 'clericus', in a papal document in the Register of Supplications for 1427–8; this man was at that time a monk of the monastery of S Michele at Medicina near Bologna, but had formerly been a member of the Augustinian 'eremitani' living in Ferrara, presumably preceding his 1425 appearance in Milan (Lockwood). On 14 January 1431 King Charles VII of France permitted Niccolò d'Este of Ferrara to quarter his arms with the French, an honour apparently referred to in the text of the motet *Francorum nobilitati* in which 'B. Feragut' supplicates to join a prince's service. A 'Beltrandus' was paid with other singers of the marquis in Ferrara on 1 July 1431 and 'Bertrandus' on 19 August, though these candidates lack the corroboration of a surname (Peverada, p.5; Lockwood, p.35).

The motet *Excelsa civitas Vincencia* was written for or after the inauguration of Francesco Malipiero as Bishop of Vicenza in 1433, and is preserved with his name in *GB-Ob* Can.misc.213. In *I-Bc* Q15 the name appears over a deletion of the name of the previous bishop, Pietro Emiliani, which gave rise to the hypothesis (Pirro, Gallo and Mantese, Lockwood) that the motet was first written for Emiliani in 1409 and recycled for his successor; but in fact the earlier bishop's name was itself written over the erased name of Malipiero (Bent). The music better suits the later date, with its treble-dominated style, fermata chords and octave-leap contratenor cadences. There therefore seems to be no basis for constructing an earlier phase of the composer's career in Vicenza around 1409.

A payment of 9 December 1438 to 'Frater Beltramus', of the Order of St Augustine, shows that he was recruited

with other singers from Ferrara for the recently rededicated Florence Cathedral, but he is absent from the next surviving list of 1445 (D'Accone). The appelation 'Frater' helps to corroborate his identity with the Augustinian of 1427–8, as does the ascription in *I-PAas* of his sole rondeau to 'Fr B. Ferracuti'. 'Bertran Feragut' appears in 1449 as a chaplain at the court of René d'Anjou, ex-King of Sicily, at Aix, but he is no longer listed in July 1450.

Feragut's compositions are predominantly preserved in Veneto manuscripts: the Gloria and two Credos are already in the oldest layer of *I-Bc* Q15 (early 1420s); others were copied in the early 1430s. The Gloria-Credo pair unique to *I-Bc* Q15 alternates duets in major prolation and imperfect tempus with trios in minor prolation (marked 'unus' and 'chorus'). The single Credo likewise alternates mensuration but not scoring; *I-Bu* 2216 transmits it in two parts only. All his other compositions are in *tempus perfectum*. The hymn *Lucis creator* is common in Italian usage but not in French. Along with an addition by Lymburgia, it supplements Du Fay's hymn cycle, setting odd-numbered verses to the same music above a 'Tenor au faulz bourdon'. The *Magnificat* sets even-numbered strophes, each different, with 'Tenor au faulx bordon', representing the newest trend of the manuscript. The original version in *I-Bc* Q15 corresponds to that of *I-TRmp* 90 (ff.377*v*–8; not included in Reaney's edition), but light ornamentation and variant cadences have been added in *I-Bc* Q15, perhaps even by the composer, requiring adjustments to the strict fauxbourdon. Both of the motets are single-texted in song-like treble-dominated style with tenor and contratenor, though several of his non-fauxbourdon works show some influence of the post-Ciconia Italian motet style, using triplets and hocketing rhythmic canons.

MARGARET BENT

Ferand, Ernest T(homas) (*b* Budapest, 5 March 1887; *d* Basle, 29 May 1972). American musicologist and music educationist of Hungarian birth. After early study of the piano and violin, he took a diploma in composition at the National Hungarian Royal Academy of Music (1911). He remained in Budapest as a teacher at the Fodor Conservatory of Music (1912–19), studied with Jaques-Dalcroze at his school in Hellerau, near Dresden (1913–14), and attended the University of Budapest, studying music history, philosophy and psychology. Besides serving as a music critic for several German and Hungarian newspapers, he contributed articles to music periodicals, played in a symphony orchestra, and was a guest producer at the Royal Hungarian Opera. From 1920 he directed the Dalcroze school at Hellerau, teaching theory, ear training, rhythm and music history. In 1925 he moved with the school to Schloss Laxenburg, near Vienna. Being interested in modern dance, he served as conductor for the Hellerau-Laxenburg Dance Group and collaborated in the production of classical Greek dramas in several ancient theatres and temples in Italy. From 1933 he studied musicology and psychology at the University of Vienna, where he took the doctorate in 1937 with a dissertation on the history of improvisation. He emigrated to the USA in 1938, and began to teach at the New School for Social Research in New York in 1939; he retired to Basle in 1965.

Ferand's earliest publications reflect his interest in music education, rhythmic training and dance. His major work, *Die Improvisation in der Musik* (1938), was followed 20 years later by a valuable anthology of examples of improvisation, containing 39 pieces in multiple versions to illustrate the roles of composer and performer in ornamentation and elaboration. Ferand also published many related articles, notable for their philological, philosophical and psychological insights.

RAMONA H. MATTHEWS

Ferandiere [Fernandiere, Ferrandiere], **Fernando** (*b* *c*1740; *d* *c*1816). Spanish composer, violinist and guitarist. From 1752 to 1759 he studied at the Colegio Seminario de Músicos in Zamora and was appointed violinist at the cathedrals of Mondoñedo (1761) and Oviedo (1763). In 1769 he obtained the post of second violinist at Málaga Cathedral where, according to his treatise *Prontuario músico para el instrumentista de violín y cantor* (Málaga, 1771), he also taught music and composed for the theatre. He later became first violinist at the Teatro Español and Teatro Francés in Cádiz. In 1779 he moved to Madrid, where he continued teaching music and composing for the theatre and published his second treatise, *Arte de tocar la guitarra española por música* (Madrid, 1799/*R* with Eng. trans. and transcrs., London, 1977; 2/1816). This treatise contains a catalogue of his guitar works. 233 compositions are listed, including 40 trios for guitar, violin and bass, six concertos for guitar with large orchestra, six sacred adagios for quartet, a Theme and Variations and the composition *Obra instrumental titulada 'El ensayo de la Naturaleza', explicada en tres quartetos de guitarra, violín, flauta y fagót*. Almost all these works have been lost.

Ferandiere was a significant figure in Spanish music. His *Prontuario* provides interesting details of the art of violin playing and singing in late 18th-century Spain, while his *Arte* is an important manifesto on the future role of the guitar at a crucial moment of transition in the instrument. The small number of his surviving works includes sacred, dramatic and instrumental music, especially for the guitar. His sacred and dramatic works in particular display a balanced mix of formal Italian influence with more popular Hispanic elements.

ALFREDO VICENT

Ferandini, Giovanni Battista. *See* FERRANDINI, GIOVANNI BATTISTA.

Ferber, Albert (*b* Lucerne, 29 March 1911; *d* London, 11 Jan 1987). Swiss pianist. He studied with Hirt in Berne, Leimer and Gieseking in Hanover, Ching in London and Marguerite Long in Paris. He toured extensively and played with most major orchestras. His recital programmes were often enterprising, including many comparatively unfamiliar works from both past and present – Balakirev's Sonata, for instance. It became apparent early that his cool yet sensitive approach was particularly suited to French music, particularly Fauré and Debussy, in which he specialized and was at his best. Among his recordings are the complete piano works of Debussy and a representative selection from Fauré. Ferber settled in England shortly before World War II, and was highly regarded as a teacher.

FRANK DAWES

Ferchault, Guy (*b* Mer, Loir-et-Cher, 16 Aug 1904; *d* Paris, 14 Nov 1980). French musicologist. He studied at the Sorbonne from 1935 with Charles Lalo, Pirro and Masson and took the Diplôme d'Etudes Supérieures in philosophy in 1942. He was co-editor with Robert Bernard of the journal *L'information musicale* (1940–44). He was professor of the history of music at the Versailles Conservatoire (1943–67), and also gave lectures in the provinces and at the Sorbonne. In his musicological research he dealt with many subjects, concentrating on music drama (particularly Wagner's) and taking a largely aesthetic approach. Among his shorter works are contributions to *La musique des origines à nos jours* (Paris, 1946) and *La musique: les hommes, les instrments, le oeuvres* (Paris, 1965), both edited by Norbert Dufourcq, and J. Porte's *Encyclopédie des musiques sacrées* (ii–iii, Paris, 1969-70) as well as articles in numerous journals.

CHRISTIANE SPIETH-WEISSENBACHER/JEAN GRIBENSKI

Ferdinand III (*b* Graz, 13 July 1608; *d* Vienna, 2 April 1657). Austrian emperor, patron of music and composer. He was the son of Ferdinand II and became Roman king in 1636 and Holy Roman Emperor in 1637; he was succeeded by his son Leopold I. He was not only, like his father, an enthusiastic patron of music but an admired and respected composer too. His teacher was GIOVANNI VALENTINI (i), with whom he continued to have close personal ties until Valentini's death. Under Ferdinand II (who became emperor in 1619) the long-established Netherlandish influence on the music of the Viennese Hofkapelle had come to an abrupt end. From then on the Italians set the tone, and besides Valentini such prominent Italian composers as Bertali and Sances held important posts there for many years. Several Italian composers wrote operas for Vienna during the reign of Ferdinand III, and Monteverdi's eighth book of madrigals (1638) is perhaps the most notable of the numerous publications dedicated to him. Ferdinand played an active part in the preparation of the great court festivities, especially stage works of various kinds, which were produced with the utmost magnificence in Vienna and elsewhere in his Habsburg domains; one such notable occasion was the wedding of his daughter Maria Anna to Philip IV of Spain at Brussels in 1650, when Gioseffo Zamponi's *Ulisse all'isola di Circe* was given. Distinguished German composers such as Froberger and Ebner – the latter a particular favourite – also worked in his court. During the last years of his life Ferdinand founded a literary academy on the Italian model in Vienna.

Ferdinand's own allegorical *Drama musicum* (in *A-Wn*; extracts ed. in Adler, ii) was highly praised by Athanasius Kircher, who declared (*Musurgia universalis*, 1650) that Ferdinand had 'no equal among sovereigns'. Some secular pieces, including settings of Italian texts, and a number of sacred works by him survive. The latter include two masses, four motets, ten hymns, litanies, a *Stabat mater* and a *Miserere* (all in manuscripts in *A-Wn*, except for an eight-part mass, which is in *A-KR*; an Italian madrigal ed. in Adler, ii, and *Miserere*, *Litaniae Lauretanae* and a hymn ed. in Adler, i. A further 11 sacred works are in the Ratsbücherei, Lüneburg (*D-Lr* KN 28). Ferdinand's music shows the influence of Valentini, but at its best, for example in the *Miserere*, it shows too that he was a composer of some individuality and imagination, with a sure technique.

JOSEF-HORST LEDERER

Ferdinand of Aragon, King of Spain. *See under* CATHOLIC MONARCHS.

Fere, Vladimir Georgiyevich (*b* Kamïshin, Volgograd province, 20 May 1902; *d* Moscow, 2 September 1971). Russian composer and teacher. He graduated from the Moscow Conservatory in 1930, having studied composition with Myaskovsky and the piano with Gol′denveyzer. From 1934 Fere taught at the Moscow Conservatory (he was made professor in 1962). His pupils included M. Abdrayev, Abdïlas Maldïbayev and Ziyadullo Shakhidi. From 1945 he lived in Moscow.

In 1925 he was a founder member of Prokoll (Productive Collective of student composers of the Moscow Conservatory), and from 1930 to 1934 he was an editor for the Radio Committee and Muzgiz. In 1934 he served in the Red Army in the Far East and later became the artistic director of the Kirghiz Philharmonia (1936–44). He is considered to be one of the founders of Kirghiz professional music. Along with Maldïbayev and V.A. Vlasov he composed the first works written for the musical stage in Kirghizstan, including the operas *Aychurek (Lunnaya krasavitsa)* [Aychurek (The Moon Beauty)] (1939); *Manas* (based on themes from national epic poetry, 1947; *Toktogul* (dedicated to the famous *akïn* Toktogul Satïlganov, a performer on the *komuz*, and one of the initiators of Kirghiz literature, 1958); and the ballets: *Kacheli* [The Swing] (1943) and *Vesna v Ala-Too* [Spring in Ala-Too] (1955, both of them jointly with Vlasov). In collaboration with Maldïbayev and Vlasov, he also wrote the music for the state national anthem of the Kirghiz SSR (1946).

WORKS

ALLA VLADIMIROVNA GRIGOR'YEVA

Ferencsik, János (*b* Budapest, 18 Jan 1907; *d* Budapest, 12 June 1984). Hungarian conductor. He studied composition with Lajtha and conducting with Fleischer at the Budapest National Conservatory, and joined the State Opera there as répétiteur in 1927, becoming conductor in 1930. His career was based entirely at Budapest, apart from brief spells as musical assistant at the Bayreuth Festival (1930–31) and guest conductor with the Vienna Staatsoper (1948–50 and 1964). In 1953 he was appointed general musical director at the Budapest Opera and chief conductor of the Hungarian National PO. His British début was with the LPO in April 1957, and at the 1963 Edinburgh Festival he conducted a triple bill of Bartók's stage works by the Hungarian State Opera and Ballet at the King's Theatre. He first appeared in the USA in 1962, and was a frequent guest at the Salzburg and Vienna festivals. Besides his wide reputation as a dynamic conductor of Hungarian music, he was a reliable and unpretentious exponent of a wide standard repertory, much of which he recorded with Hungarian, and some with Danish and British, orchestras. A professor at the Franz Liszt Academy, Budapest, he twice received Hungary's highest musical award, the Kossuth Prize, in 1951 and 1961.

□

Ferenczy, Oto (*b* Brezovica nad Torysou, 30 March 1921). Slovak composer. He studied philosophy and musicology at Bratislava University, taking the doctorate there in 1945 with a dissertation on the experience and perception of music. As a composer he was self-taught. After working in the Bratislava University Library (1945–51), he taught theory and aesthetics at the Academy of Music and Dramatic Art (VŠMU), where he became dean (1953–5) of the music faculty and eventually overall rector (1962–6) of the Academy; he was appointed professor in 1965. He was twice chairman of the Slovak Composers' Union, and in 1983 he was awarded the title National Artist.

With his critical acumen and knowledge of new European music, Ferenczy was an influential figure in Slovak music after World War II. As early as 1946 he published a critique of Alexander Moyzes' generation of composers on their orientation towards the aesthetics of the Czech composers Novák and Suk. As a teacher and publicist, he focussed on the music of Bartók, Stravinsky, Hindemith, the Second Viennese School and Messiaen. Ferenczy's own compositions are influenced largely by Stravinsky and Bartók, though he also developed an individual language characterized by formal precision, elegance, humour and an intellectual approach. *Hudba pre štyri sláčikové nástroje* ('Music for Four String Instruments') – a prizewinning work at the 1948 Bartók international competition – was the first of his pieces to employ not only a technique of Bartók's (working with tonal material consisting of 2nds and 3rds) but also his intense form of expression. His playful oscillation between restrained lyricism and humour, as in the Serenade, or even the grotesque (e.g. *Capriccio*, 1957) is less pronounced in later works and ends with the intropsective vocal work *Tri poézie Stepana Ščipačeva* ('Three Poems by Stepan Shchipachev', 1973).

WORKS

(*selective list*)

Op. Nevšedná humoreska [An Unusual Humoresque] (1, Ferenczy, after K. Goetz), 1966–7; Košice, 25 Oct 1969

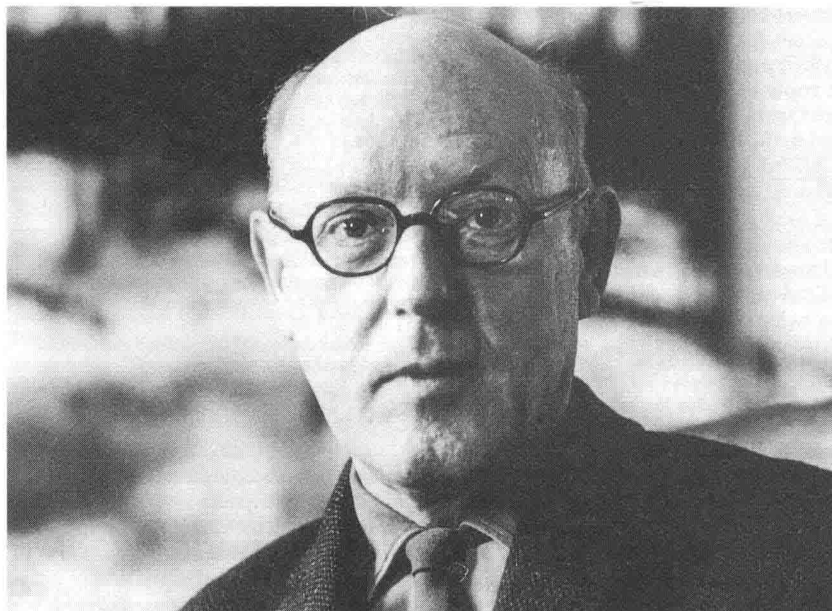
VLADIMÍR ZVARA

Fergusio, Giovanni Battista (*b* Savigliano, Piedmont; *fl* 1612; *d* Sardinia). Italian composer. He also held the degree of Doctor of Law. The title-page of his only publication describes him as a musician to the house of Savoy. In the following year, 1613, Serafino Patta of Pavia dedicated a motet to him. His *Motetti e dialoghi per*



concertar (Venice, 1612) is a comprehensive compendium of liturgical music for one to nine voices and continuo, in a mixture of new and not so new styles. The small-scale pieces are more forward-looking: they display the characteristic florid lines and varied rhythms and harmonies of the concertato style. The bass line is fairly lively, which is not true of the recitative style of other church composers such as Alessandro Grandi (i), but there is no feeling for melodic development, and ornaments are not used to shape the melodic line. However, *Plorans et lacrimans*, for three voices, opens with some striking slow suspensions. The larger pieces in the collection are more transitional in style: in the six-part *Omnis terra* short passages for two voices, again lacking in melodic polish, alternate with imitative polyphonic tuttis – rather than solid chordal ones – in a 16th-century manner. One of the dialogues of the title is an interesting seven-part Christmas piece, *Gloria in altissimis*, in which the shepherds and angels are represented by separate blocks of voices. In his preface Fergusio illuminates the contemporary treatment of separated choirs when he remarks that each choir may be united or separated according to the players available and the possibilities of the church. (J. Roche: *North Italian Church Music in the Age of Monteverdi*, Oxford, 1984)

JEROME ROCHE

Ferguson, Howard (*b* Belfast, 21 Oct 1908; *d* Cambridge, 1 Nov 1999). Irish composer, musicologist and pianist. When he was 13, his playing and general musicianship so impressed the pianist Harold Samuel that he offered to take over the boy's musical education. Ferguson's family agreed and sent him to London for a general education at Westminster School followed, in 1925, by a period at the RCM where he studied composition with R.O. Morris and Vaughan Williams, and conducting with Sargent; private piano study with Samuel continued. Ferguson first drew serious attention as a composer with his Violin Sonata no.1, performed in October 1932 at the Wigmore Hall by Menges and Samuel. The favourable impression was soon confirmed by the Octet, first performed at the Grotrian Hall in November 1933, and the Two Ballads for baritone and orchestra, heard at the Three Choirs Festival (Gloucester) in 1935. His composing career continued steadily thereafter, and though his output was modest, each new work made a decisive impression. After completing two extended choral works for the Gloucester meetings of the Three Choirs Festival, *Amore langueo* (1956) and *The Dream of the Rood* (1959), he decided that he had said all he wished to say as a composer and courageously determined to write no more.

Ferguson then turned his attention to musicological work, in particular the editing of keyboard music. His insights as a composer, his practical experience as a recitalist and his impeccable craftsmanship equipped him well for such work. His anthologies of early keyboard music thus combine scholarship with common sense and loving enthusiasm, and they have been welcomed by both amateurs and professionals, as has his book *Keyboard Interpretation* (London, 1975). Ferguson enjoyed an equally successful career as a recitalist, for broadcasts as well as in the concert hall. His main work in this field was in duet partnerships with Denis Matthews (piano) and Yfrah Neaman (violin) which involved extended tours in many parts of the world. He was assistant to Myra Hess in the organization of the notable and influential series of daily wartime concerts at the National Gallery in London. Ferguson taught composition at the RAM (1948–63) and numbered among his pupils a surprisingly wide variety of distinguished composers. He received an honorary MusD from the Queen's University, Belfast, in 1959.

In his original works Ferguson wrote in a variety of forms, miniature and extended, with equal success. Modest though his output was, it involved very few miscalculations and no outright failures. His style was basically diatonic, combining great lyrical warmth with firmness and clarity of construction. Traditional forms and procedures served his needs and he handled them with a genuine sense of vitality. His harmony is largely Romantic and conservative, although certain works (the song cycle *Discovery*, for example) explore more astringent ground. His melodies are direct and uncompromisingly Romantic, and though his love of Romantic harmony

Howard Ferguson

inevitably produces rather thick textures, his music seldom sounds cluttered. The total impression is, rather, of economy and clarity of expression.

Almost any of Ferguson's extended works may be taken as typical of his style, for having found a very confident manner in his 20s he remained faithful to it, and later works show only marginal changes. The Octet is a case in point. Cast in four fairly short movements, its formal structures are based on Classical models: a sonata form for the first movement, a scherzo in a rondo pattern for the second, a lyrical ternary form for the slow movement, and for the finale a species of sonata form that is free enough to admit extended reference to the main theme of the first movement. Indeed, cyclic unity is the clue to the entire work, for all its thematic material is closely related. The underlying Classical forms are thus blurred by a sense of continual rhapsodic evolution from a single thematic source. Careful disposition of the instruments ensures that a relatively complex texture sounds light and airy, and since it is derived almost wholly from the main thematic material (presented often in fragmented form) each instrument plays its part in the process of freely evolving thematic argument. The parallel with Walton is striking, and Ferguson shows something of the same nervous rhythmic energy which serves to offset the bittersweet mood that lies at the root of the style they share.

WORKS

op.	
–	5 Irish Folktunes, vc/va, pf, 1927
1	2 Ballads, Bar, orch, 1928–32
2	Sonata no.1, vn, pf, 1931
3	3 Medieval Carols, 1v, pf, 1932–3

MICHAEL HURD

Fergus-Thompson, Gordon (*b* Leeds, 9 March 1952). English pianist. He studied at the RNCM (1968–73) with Gordon Green, and privately with Peter Katin, John Ogdon, Alexis Weissenberg and György Cziffra. He made his Wigmore Hall début in 1976 and was awarded a Calouste Gulbenkian Fellowship in 1978. Fergus-Thompson has made a reputation in contemporary works, giving the first performances of William Mathias's Second Sonata in 1979 and Christopher Headington's Piano Concerto in 1993, and is a noted specialist in the French and Russian repertories. His recordings include the complete piano works of Debussy and Ravel, Rachmaninoff's sonatas and *Etudes-tableaux* and an eight-disc set of Skryabin's complete piano music.

BRYCE MORRISON

Feria (from Lat. *feriae*: 'festivals', 'holidays'). In Roman antiquity the word denoted a holy day, and by the 3rd century at the latest had become a liturgical term for a weekday on which no feast falls. The practice of numbering the days of the week after Sunday as Feria II (Monday) to Feria VII (Saturday, which also retained its Hebrew name Sabbato) may have arisen as a Christian attempt to eliminate a nomenclature based on the names of heathen gods. Isolated polyphonic masses without Gloria and Credo are entitled 'De feria', among them examples by Antoine de Févin and Palestrina.

RICHARD SHERR

Ferianto, Djaduk [Jaduk] (*b* Yogyakarta, Java, 1964). Indonesian composer, brother of the composer Otok Sidarta. A son of the choreographer Bagong Kusudiardjo, he was active as a dancer by the age of six. As well as studying fine art in the Indonesian Arts Institute in Yogyakarta, Ferianto made an intensive study of gamelan music. He gained much compositional experience creating music for dance for his father. In 1994 he co-founded the experimental music and poetry group Kyai Kanjeng with Emha Ainun Najib, a popular poet, intellectual and Islamic figure. In the group Ferianto brought together diatonically-tuned gamelan instruments with Western instruments including the violin, keyboards and percussion. The influence of Najib as leader and speaker gave Ferianto's compositions within Kyai Kanjeng a distinctly Islamic flavour. After leaving the group in 1995 he formed Kua-Etnika, a group with the same instrumental concept, for which he has written increasingly mature works. He

regularly appears with Kua-Etnika and the arranger Aminoto Kosim on a popular TV programme accompanying Indonesian pop singers. He is also well known for his compositions for music theatre. In Indonesian music he acts as a mediator between the worlds of experimental, gamelan and pop music.

FRANKI RADEN

Ferini, Giovanni Battista. *See* FERRINI, GIOVANNI BATTISTA.

Ferlendis, Giuseppe (*b* Bergamo, 1755; *d* Lisbon, 1810). Italian oboist and composer. By the age of 20 he was already a celebrated player and he toured Italy in 1776–7 together with one of his brothers (probably Pietro). On 1 April 1777 he joined Archbishop Colloredo's orchestra in Salzburg, where he became close to Michael Haydn and the Mozarts. During summer 1777 Wolfgang composed for him the Oboe Concerto K271*k*. Leopold wrote to his son that he was 'a favourite in the orchestra' and that he had learnt much from the Italian oboist Carlo Besozzi, who visited Salzburg in May 1778. On 30 July 1778 Ferlendis left the archbishop's service, and from July 1779 played the english horn at the Teatro Carignano in Turin. By 1780 he had settled in Venice, where he was often employed as first oboist of the S Samuele, S Benedetto and La Fenice theatres, and occasionally performed elsewhere in northern Italy. In 1795 he was in London, where he performed his own concertos for oboe and english horn during Haydn's last season and became the lover of the famous soprano Brigida Banti, whom he accompanied on a few occasions. One commentator on his English performances noted that he possessed 'astonishing fine command of the instrument, but degenerated into mere foolish trick'. Haydn himself found Ferlendis a 'mediocre' player. After his stay in England he went back to Venice, again performing throughout the whole region. In 1801 he moved with his wife Anna, daughter Giuseppa and son Alessandro to Lisbon, where he was employed first at the royal chapel and from 1804 at the Real Cámara. His employment there is recorded until the beginning of 1810, and later the same year his wife is described as a widow. (Some unsubstantiated sources stated that he died in 1802 or 1833.)

Ferlendis specialized in performance on the english horn, and many sources consider him to be responsible for improvements to the instrument. Several composers, including Michael Haydn, Alessio Prati and Angelo Tarchi, wrote solo or obbligato english horn parts for him. His own compositions (surviving mainly in *I-Gl*) reveal an idiomatic feeling for wind instruments, but in spite of their elegance of manner they are of limited musical interest.

The Ferlendis family included many other musicians. As most of them were oboists, they are often confused with one another. Giuseppe's father Franco was a violin and cello teacher, and three of his children by his first wife, Leonilda Sitelli, were musicians: Josepha Antonia Hyacitha (*b* Salzburg, 16 April 1777; *d* after 1810), a soprano; Angelo (*b* Brescia, 1780; *d* after 1823), an oboist who worked in St Petersburg from 1801; and Alessandro (*b* Venice, 1783; *d* after 1826), also an oboist. The latter married the contralto Camilla Barberi in Lisbon and toured with her throughout Europe from 1803 to 1817. Referring to Alessandro's concert at La Scala, Milan, on 13 September 1816, Spohr wrote in his autobiography that 'it is impossible to imagine a worse tone than this *professor di oboa*. In Germany he would most certainly have been hissed off; here, of necessity, he was applauded'. Giuseppe's brother Pietro (*b* Bergamo, 2 Sept 1748; *d* Padua, 4 April 1836) replaced Matteo Bissoli as principal oboist of the S Antonio *cappella* in Padua in 23 May 1780, a position he held until his retirement in 1829. Pietro's sons Gerardo (*b* 1770; *d* Trieste, 21 Jan 1802), Faustino (*b* Brescia, 10 July 1771; *d* Padua, 29 Dec 1855) and Antonio (*fl* Padua, Trieste, Venice, 1796–1826) were also professional oboists.

ALFREDO BERNARDINI

Fermata (It.: 'pause'). The sign of the corona or point surmounted by a semicircle showing the end of a phrase or indicating the prolongation of a note or a rest beyond its usual value. 'Fermata' came into American usage during the 19th century; H.W. Pilkington, in *A Musical Dictionary* (Boston, 1812), still gave only 'pause', but both fermata and PAUSE are now used for this sign. *See also* ORGAN POINT.

Fermoselle, Juan de. *See* ENCINA, JUAN DEL.

Fernandes, António (*b* Souzel, nr Évora, ?*c*1595; *d* after 1680). Portuguese theorist. After studying with Duarte Lobo, to whom he dedicated the treatise by which he is remembered, he became a priest and vicar-choral at S Catarina de Monte Sinai, Lisbon. He may have been the António Fernandes who in 1642 belonged to King João IV's Vila Viçosa chapel choir and who, when he became eager to increase his income, alternated between singing and conducting (see *P-La* 51–VIII–5, f.70). His *Arte de musica de canto dorgam, e canto cham & proporções* (Lisbon, 1626), consisting of 131 quarto leaves, is the first music treatise in Portuguese, the first of a long line that later stretches from Frouvo to Luís Álvares Pinto's *Arte de solfejar* (1761). To honour his mentor an engraving of the Lobo family arms adorns Fernandes's frontispiece, and Lobo's picture surmounts a genealogical music tree variously inserted in the extant examples of his treatise. Following a tradition as old as Boethius he began by dividing music into 'animatica' and 'organica', the first being subdivided into 'mundana' and 'humana', the second into natural and artificial instruments. Well read in Zarlino – or at least as much of him as Cerone took over – he made no pretence at originality but instead intelligently and lucidly summarized his predecessors, always with an eye to the needs of a practising choir director: thus he first discussed polyphony, then plainsong, and only at the end such more academic topics as proportions and the genera. According to the 1649 catalogue of João IV's library (p.118), he also wrote, in 1634, an unpublished speculative treatise dealing with musical secrets, *Especulação de segredos de Musica*. Barbosa Machado, whose version of this title is *Explicação dos segredos da Musica*, also claimed that the library bequeathed by Francisco de Valhadolid in 1700 contained three other unpublished works by Fernandes: *Arte da musica de canto de orgaõ composta por hum modo muito*

differente do costumado por hum velho de 85. annos dezejoso de evitar o ocio ('Treatise on polyphony, written along very different lines from the usual, by an old man of 85 eager to avoid idleness'); *Theorica do manicordio, e sua explicaçaõ*; and a *Mappa universal* illustrating the whole science of music, with 'demonstraçoens mathematicas'.

ROBERT STEVENSON

Fernandes, Armando José (*b* Lisbon, 26 July 1906; *d* Lisbon, 3 May 1983). Portuguese composer and pianist. He studied at the Lisbon Conservatory with Colaço and Varela Cid (piano) and with Freitas Branco (theory) and Costa Ferreira (composition); his studies were continued in Paris with Boulanger, Dukas, Roger-Ducasse and Cortot. Soon his activities as a composer and teacher prevailed over his career as a pianist. He accepted a teaching post at the Academia de Amadores de Música in Lisbon (1940) and joined the music studies department of the national broacasting station, under whose auspices most of his works were written. In 1944 he received the Moreira de Sá Prize for composition and in 1946 the Círculo de Cultura Musical prize. He was a lecturer in counterpoint at the Lisbon Conservatory, 1953–76. His music reveals his introspective temperament, which made him prefer the chamber medium and classical forms. His musical language is rather conservative but he used some chromaticism and, occasionally, popular themes.

JOSÉ CARLOS PICOTO/ADRIANA LATINO

Fernandes, Gaspar (*b c*1570; *d* Puebla, Mexico, before 18 Sept 1629). Central American composer and organist of Portuguese birth. In 1590 he was earning two salaries at Évora Cathedral: 3000 réis as a singer and a further 2000 presumably for playing the organ. On 16 July 1599 a priest of this name was engaged as organist of Guatemala Cathedral (at what is now Antigua) at an annual salary of 200 gold pesos; soon afterwards he was also named *maestro de capilla*, and his salary was doubled. In 1602 he copied six masses that remained in use at the cathedral until the 1760s. He left Guatemala on 12 July 1606. On 15 September 1606 he was named *maestro de capilla* of Puebla Cathedral at a yearly salary of 500 pesos, with a further 100 pesos for boarding and teaching the choirboys and 300 pesos for playing the organ. He relinquished his responsibility for the choirboys on 18 September 1608, but on 8 July 1616 he was again charged with teaching them polyphony. Because he and his choir provided unauthorized music for a funeral, he was dismissed from the cathedral on 14 July 1618, but he was reinstated a month later. His heavy duties finally told on his health, and on 8 June 1621 the chapter noted that musical discipline had deteriorated. On 11 October 1622 they engaged Juan Gutiérrez de Padilla to assist him and the two men worked together for the next seven years. An autograph manuscript (now at Oaxaca Cathedral), consisting mainly of the chanzonetas and villancicos that Fernandes composed for Puebla Cathedral between 1609 and 1620, is the largest surviving collection of 17th-century secular music in the New World. His *Elegit eum Dominus* is the earliest known Latin secular work by a New World composer; it celebrated the entry of the 13th Mexican viceroy into Puebla in 1612.

WORKS

2 masses, 3, 5vv (inc.); Magnificat, 4vv; 8 Benedicamus Domino, 4vv; hymn: Guatemala City Cathedral; Oaxaca Cathedral, Mexico (autograph)

Over 250 festal chanzonetas and villancicos (Sp., Port., Tlaxcalan, Negro-dialect texts), org tientos, Lat. secular work, 5vv, 1612, Oaxaca Cathedral, Mexico (autograph); 1 guineo ed. in Stevenson (1968); 1 Lat., 11 vernacular works ed. R. Stevenson, *Latin American Colonial Music Anthology* (Washington DC, 1975)

ROBERT STEVENSON

Fernández, Agustín (*b* Cochabamba, 10 March 1958). Bolivian composer. He received his first musical training in his native city, and was a child performer on the charango at the age of 11. After graduating (1978) from the Catholic University, La Paz, where he studied composition with Alberto Villalpando, he had private tuition with Takeshi Iida in Utsunomiya, Japan (1980–81); in Tokyo he studied composition with Ifukube (1981–3) and violin with Tekeshi Kobayashi (1980–83). He received an MMus from the University of Liverpool (1985) and a PhD in composition from City University (1990); his tutors were Douglas Young and Simon Emmerson. From 1977 to 1980 Fernádez taught the violin, the viola, harmony and composition at the National Conservatory in La Paz and was a violinist and then principal viola in the National SO. From 1990 to 1994 he was composer-in-residence at Queen's University, Belfast, and chairman of the Sonorities Festival. Subsequently he was a lecturer in composition at Dartington College of Arts; and in 1995 he became lecturer in composition at the University of Newcastle.

Fernández's compositions were first performed when he was 16; the following year his *Rhapsody* for orchestra won him a Bolivian national prize. Among his commissions are *Teoponte*, an electro-acoustic music-theatre piece written for the 1988 London International Opera

Festival, and the chamber opera *The Wheel*, for the Royal Opera House's Garden Venture, 1993. In 1990 he returned to the charango to compose *Wounded Angel* for charango and tape. His earliest works (now mostly withdrawn) are characterized by experimentation with material drawn from folk sources, while during the period prior to Belfast, the folk elements became more diluted as a result of the use of various methods of pitch and rhythmic organization. Since 1990 Fernández has abandoned conscious references to Bolivian sources altogether, concentrating on issues of large-scale continuity such as the exploration of discrete types of energies, for example in the image of flight in the chamber orchestral *Peregrine* (1996). His finely wrought music displays great clarity of design and texture, and an ingratiating variety of moods.

WORKS

JOEL SACHS

Fernández, Diego (*d* 1551). Spanish composer. He is probably to be identified with Diego Fernández de Córdoba, *maestro de capilla* of Málaga Cathedral from 11 August 1507 until his death in 1551, although the name is a common one and no clear proof of identity has been found. It is suggestive, nonetheless, that he would have been at Málaga at the same time that Juan de Encina held a canonry there (1508–19), which might account for the inclusion of two songs by him in the Cancionero Musical de Palacio (*E-Mp* 1335).

His villancico *Tres moricas m'enamoran* (ed. in MME, v, 1947, no.25) is a reworking of the previous song, *Tres morillas m'enamoran* (no.24), which Ribera believed to be of Arabic origin. It is marked 'alio modo' in the source and is an example of the courtly adaptation of a song of popular origin. The four-voice *De ser mal casada* (no.197) is in the relatively unusual quintuple metre which, together with the song's narrow melodic range, would suggest that it, too, had roots in the popular tradition.

ISABEL POPE/TESS KNIGHTON

Fernández, Eduardo (*b* Montevideo, 28 July 1952). Uruguayan guitarist. He began learning the guitar at the age of seven with Raúl Sanchez and later studied with Guido Santórsola and Abel Carlevaro. His first recitals were in duo with his brother in 1963 but in 1971 he began to pursue a solo career. He has won many international prizes including the Andrés Segovia Competition in Palma de Mallorca (1975). In 1977 he made his New York début, and subsequently toured extensively. He gave the first performance of Herbert Chappell's *Caribbean Concerto* at the Queen Elizabeth Hall, London, in 1991. Fernández has recorded a wide range of guitar music, from transcriptions of keyboard works by Scarlatti and Rameau to the avant garde. He has established an international reputation as an expressive, scrupulous musician, with a technique of effortless virtuosity, yet refined and searching in his fidelity to the musical text.

GRAHAM WADE

Fernández, Francisco (*b* Asturias, 1766; *d* Asturias, 14 Feb 1852). Spanish piano maker. He settled in Madrid before 1789; by 1799 he had established a piano workshop at Corredera de San Pablo 20, where he competed with the court piano maker, Francisco Flórez. In 1804 Fernández moved to the Calle del Barquillo. On 14 March 1806 he was named honorary maker to the Royal Chamber of Carlos IV; the post came into effect on 8 December 1816. Between 1814 and 1828 his workshop was situated at Calle San Fernando 5 (now Calle Libertad). In 1835 his post was brought to an end by Queen María Cristina, and he returned to his native village in Asturias, where he set up a new workshop and lived on a limited income until his death.

Fernández made and repaired pianos for the royal household and for some members of the nobility, such as the Duchess of Benavente, but he mostly made affordable instruments for domestic use. A keen advocate of the social and scientific ideology of the Enlightenment, he took an interest in the Spanish piano-making industry and, to alleviate the expense of importing instruments, proposed two projects: one being to create an indigenous school of piano making, the other to collect and study the best quality woods from various parts of Spain in order to use them for making instruments. In spite of receiving official support, the projects were never fully realized, although he did have several pupils at the school, the best-known being Julián Lacabra.

Fernández was awarded gold medals at the Spanish Industry Exhibitions of 1827 and 1828. He also invented a special tuning device, the 'chromameter', which he publicly announced in 1831. Several pianos with his signature have been preserved. The oldest, dating from about 1800 (now in a private collection, Madrid), is a square piano based on Zumpe's models with a compass of five octaves (F'–f'''). Another two instruments of the same pattern, one dated 1807, are preserved in separate

private collections, also in Madrid. At the Palacio Real (Madrid) there is an upright piano from 1805 in the shape of a bookcase, and a grand piano attributed to Fernández or to his workshop. Another square piano is preserved in the Palacio Real, El Escorial. It dates from 1827 and has a special mechanism in which the hammers strike the strings from above; a full soundboard covers the entire mechanism. The 1828 square piano at the Museu de la Música, Barcelona, with a compass of six octaves (*F′–f″″*), has a built-in device for tuning, consisting of a single string plucked by a plectrum, with a sliding bridge over a scale.

CRISTINA BORDAS

Fernández, Frank (*b* Mayarí, 16 March 1944). Cuban pianist, teacher and composer. He began studying music with his mother while still a child. In 1962 he entered the Amadeo Roldán Conservatory, specializing in piano and choral conducting. He twice won the National Competition for Choral Works (1963, 1964) and in 1966 won the Competition for Performers of the Union of Cuban Writers and Artists, which enabled him to undertake further piano studies in Moscow with Victor Merzhanov. On his return he began his career as soloist, playing in the various concert halls of the country.

For Berlin Radio he has made recordings of works by Beethoven and Schumann, and for the Madrid recording company Fonomusic recordings of works by Bach and Chopin. He has given concerts throughout Europe, Russia, East Asia, and Central and South America. As a professor at the Havana Instituto Superior de Arte his students have included Jorge Luis Prats, Victor Rodríguez and Leonel Morales. His compositions are characterized by a distinctly romantic tendency, with broad, expressive melodies and transparent orchestration.

ALBERTO ALÈN PÉREZ

Fernández (Hidalgo), Gutierre (*b* ?Talavera de la Reina, *c*1547; *d* La Plata [now Sucre], Bolivia, 11 June 1623). South American composer of Spanish birth. Around 1567 he was under the tutelage of Juan Navarro and involved in the musical activities of churches in Salamanca and Alcala de Henares. After Navarro's dismissal from his post at Salamanca Cathedral in 1574, Fernández Hidalgo also left, becoming *maestro de capilla* of the collegiate church of S María in Talavera de la Reina, where he remained until his departure to America in late 1583. In May 1584 he became *maestro de capilla* at the cathedral in Santafe (now Bogotá). He also assumed the post of rector of the Tridentine seminary of S Luis, replacing (not without contention) the local *maestro de capilla*, Gonzalo García Zorro who, according to Fernández Hidalgo, was a passable bass ignorant of all but elementary counterpoint and the rudiments of polyphony. On his arrival Fernández Hidalgo was already an accomplished musician; he soon obtained from the Bishop of Santafe an order requiring the young seminarians to sing in the cathedral every day under his demanding direction. On 20 January 1586 the entire student body fled, causing a serious scandal which had repercussions in Spain. He was succeeded as *maestro de capilla* by his pupil Alonso Garzón de Tahuste.

Fernández Hidalgo accepted an appointment at Quito, which resembled the one at Santafe in that he was again expected to act both as *maestro de capilla* of the cathedral and as priest of the Amerindian parish of S Blas. Again he was succeeded as *maestro de capilla* by a pupil, Hernando de la Parra Cisernos. In 1591 Fernández Hidalgo was employed as *maestro de capilla* of Lima Cathedral and as music master of the Encarnación convent. The following year he became *maestro de capilla* of Cuzco Cathedral, with an annual salary of 500 pesos; he was to conduct the choir, give daily public lessons in plainsong, polyphony and counterpoint to all designated members of the cathedral staff and compose 'the customary villancicos, motets and other festival music'. In 1593 the chapter suggested that senior cathedral musicians should supplement their salaries with parish work; this so irritated Fernández Hidalgo that on 12 July he offered to resign. The alarmed chapter thereupon voted to raise their contribution to his salary from 300 to 400 pesos.

He remained in Cuzco until 1597, when his name is first recorded in the accounts of La Plata Cathedral where, as *maestro de capilla*, he was paid 600 pesos a year; he was also the priest in charge of the church of S Lazaro in La Plata. He returned to Cuzco some time around October 1608, returning to La Plata in December 1612; he remained there until his death.

On 22 January 1607 Fernández Hidalgo signed an agreement with Diego de Torres, the Jesuit provincial of Paraguay returning to Europe, by the terms of which Torres agreed to oversee the printing of his collected compositions in Spain or France. Five volumes were proposed: masses, *Magnificat* settings, hymns *en fabordón*, music of the Office for Holy Week and motets. The churches in which Fernández Hidalgo served were to receive copies (two of each volume for the cathedrals of La Plata and Cuzco, and one of each for those of Santafe, Quito and the Encarnación convent at Lima), and a certain number were to go to the Jesuit Province of Paraguay. It is not known if the project, for which the composer would have paid 1500 pesos for 50 copies of each volume, was ever carried out, but his works survive only in manuscript form. In 1608 the Audiencia of Charcas recommended him to Philip III for a prebend,

without success; he renewed his application in 1613 with the help of a merchant friend, Juan López de Arguincano.

Fernández Hidalgo's music reflects the main trends of Spanish musical style of the second half of the 16th century. Certainly a follower of Morales and Navarro, his surviving works, for vespers, are closest in style to those of Torrentes. His music shares the serenity of Guerrero's *Liber vesperarum* (1584) and, although not an obtrusively learned composer, Fernández Hidalgo occasionally employed canonic writing, as in his four-voice *Magnificat quarti toni*.

ROBERT STEVENSON/EGBERTO BERMUDEZ

Fernandez, Oscar Lorenzo (*b* Rio de Janeiro, 4 Nov 1897; *d* Rio de Janeiro, 27 Aug 1948). Brazilian composer of Spanish descent. After theory and piano lessons with João Otaviano, he studied harmony with Nascimento, the piano with Oswald and counterpoint and fugue with Braga at the Instituto Nacional de Música. On Nascimento's death in 1924 he was appointed professor of harmony at the institute, and during the early 1920s he took part in the foundation and activities of the Sociedade de Cultura Musical. He founded the short-lived review *Illustração musical* in 1930, and in 1936 the Conservatório Brasiliero de Música, which he directed until his death. He was also active as an orchestral conductor.

Fernandez's first works, dating from 1918–22, are in the main Romantic and Impressionist piano pieces and solo songs, but with the *Trio brasileiro* (1924) and the *Canção sertaneja* (1924) he turned towards musical nationalism, combined with new techniques. In the cyclically formed Trio the themes have a clear mestizo folk character. The period 1922–38 was his most creative, seeing the composition of such characteristic works as the *Suite sinfônica*, the Amerindian tone poem *Imbapara*, *Reisado do pastoreio* and the opera *Malazarte*, all based on traditional Brazilian music. The *Suite sinfônica* takes material from two Bahia folksongs and from a nationally known lullaby; *Imbapara* uses melodies collected by Roquete Pinto from the Parecis Indians of Mato Grosso, as well as authentic percussion instruments. For *Reisado do pastoreio* Fernandez looked to the *caboclo* and Afro-Brazilian traditions, though without direct quotation; the finale, 'Batuque', became a standard item of the Brazilian orchestral repertory. *Malazarte* is specially important in the history of Brazilian opera in that it is clearly a nationalist work, both in subject matter and in musical content; it is considered the first successful Brazilian opera of this sort. The story is based on Iberian-Brazilian folklore and the music relies on popular themes. The characters, who depict specific Brazilian ethnic and cultural traits, are associated with particular folk or popular genres (the choral numbers are all based on folksongs), though without falling into musical exoticism. The last section of the orchestral suite from the opera, also called 'Batuque', won great popularity. Fernandez's songs, the majority of them rooted in native music, are widely held to be his most important achievement.

GERARD BÉHAGUE

Fernández (de Castilleja), Pedro (*b* Castilleja de la Cuesta, nr Seville, *c*1480; *d* Seville, 5 March 1574). Spanish composer. He was appointed *maestro de capilla* at Seville Cathedral on 13 August 1514, succeeding Pedro de Escobar. Fernández held the position for the remainder of his life, but during the last 25 years of his tenure most of his duties were carried out by Francisco Guerrero. In the prologue to his *Viage de Herusalem*, Guerrero labelled the older man 'el maestro de los maestros de España', because he had taught many fine composers, possibly including Cristóbal de Morales and Rodrigo de Ceballos.

Although he was not prolific, Fernández's works are competent; stylistically they are similar to those by other composers active in Spain between 1500 and 1530 such as Juan de Anchieta. Fernandez's *Salve regina* is one of the most important in Spain before those by Morales. Knighton (1983) proposed that the Sanctus and *Alleluia: Nativitas tua* attributed to him were in fact composed by Pedro Hernández de Tordesillas, but they may simply be earlier works by Fernández de Castilleja. The two freely-composed motets *Dispersit dedit pauperibus* and *Heu mihi, domine* are very different from the *Salve regina*

because they employ imitative writing throughout: they may have been composed later in Fernandez's life, if they are indeed by him.

WORKS

all edited in Wagstaff (1990)

Sanctus, 4vv,
Alleluia: Nativitas tua, 3vv; Circumdederunt me, 4vv; Deo dicamus 4vv; O gloriosa domina, 4vv; Regem cui omnia, 4vv; Salve regina, 4vv; Dispersit dedit pauperibus, 4vv [doubtful]; Heu mihi, domine, 5vv [doubtful]
Villancico, 4vv

Fernández Arbós, Enrique. *See* ARBÓS, ENRIQUE FERNÁNDEZ.

Fernández Caballero, Manuel. *See* CABALLERO, MANUEL FERNÁNDEZ.

Fernández de Heute, Diego. *See* HUETE, DIEGO FERNÁNDEZ DE.

Fernández de la Cuesta (y González de Prado), Ismael (*b* Neila, Province of Burgos, 11 Dec 1939). Spanish musicologist and choral conductor. While an intern at the Benedictine monastery of Santo Domingo de Silos he was head boy chorister. From 1958 to 1962 he studied at the Solesmes abbey, where his teachers included Dom Joseph Gajard. On returning to Silos he was appointed director of the monastic choir, which had a triumphal début in Madrid in 1972. In 1973–4 he studied the Mozarabic codices in the British Library and translated Salinas's epochal treatise into Spanish. He resumed secular status in 1975, and in the summer of 1978, after numerous teaching appointments, joined the faculty of the Real Conservatorio Superior de Música at Madrid and in 1983 rose to tenured professor of Gregorian chant. He became a member of the three-person editorial board of the *Diccionario de la música española e hispanoamericana* in 1988.

Elected president of the Spanish Musicological Society in 1984, Fernández de la Cuesta edited, with the help of his pupil Alfonso de Vicente, the entire proceedings of the 15th meeting of the IMS hosted in Spain in 1992. He continued in 1996 to lead a touring Gregorian choir in the United States and Australia, and between 1992 and 1997 received a succession of the highest national and international recognitions for his books, articles, editions and recordings.

ROBERT STEVENSON

Fernández Palero, Francisco (*b* Guadalajara; *d* Granada, 26 Sept 1597). Spanish composer and organist, erroneously referred to in some sources as Francisco Pérez Palero. He served for 40 years as organist of the royal chapel at Granada. His advice was frequently sought as an organ expert and as a judge of candidates for musical posts at Granada and elsewhere; but his intrigues against the choirmaster Ambrosio Cotes, resulting in a bitter legal wrangle in 1591, show his character in an unfavourable light. He was almost certainly the composer of the 14 pieces ascribed to 'Palero' in the first Spanish keyboard tablature, *Libro de cifra nueva* (Alcalá, 1557; edn, MME, ii, 1944), compiled by Luis Venegas de Henestrosa; one of the pieces bears his full name. All except one tiento are elaborations (glosas) on borrowed material, including Gregorian hymns, Spanish *romance* melodies, mass movements by Josquin, motets by 'Jachet', Verdelot and Mouton and a chanson by Crecquillon. The monophonic material is treated in cantus firmus technique, the polyphonic material either in tiento style (with free imitation on initial motifs) or as embellished transcriptions. Fernández Palero's textures are filled with lively quaver movement, at times skilfully handled but often harsh and seemingly aimless.

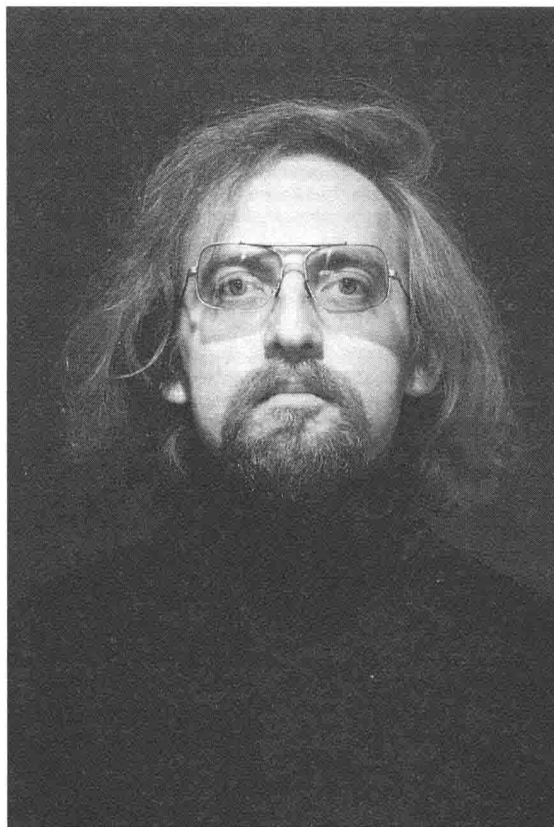
ALMONTE HOWELL



Fernandi, Eugenio (*b* nr Turin, 1922; *d* New Jersey, 15 Aug 1991). Italian tenor. He studied in Turin with Pertile, then at the opera school of La Scala, where he began his career in small parts. He then progressed to major roles in the Italian regions before achieving success at the Metropolitan in his début there as Pinkerton in 1958; thereafter, until 1962, he was admired as Edgardo (to Callas's Lucia), Don Carlos, Faust, Rodolfo (*La bohème*), Radames, Enzo Grimaldi (*La Gioconda*) and the Italian Singer (*Der Rosenkavalier*). He sang to acclaim at the Vienna Staatsoper from 1958 and took the title role in *Don Carlos* at the Salzburg Festival (1958, 1960) under Karajan. Walter Legge asked him to sing Calaf in Callas's 1957 recording of *Turandot* and he also recorded, in 1959, the Verdi Requiem under Serafin. His singing on disc reveals a ringing yet plangent tenor and a fine sense of phrasing.

ALAN BLYTH

Fernandiere, Fernando. *See* FERANDIERE, FERNANDO.

Ferneyhough, Brian (*b* Coventry, 16 Jan 1943). English composer.

1. Life. 2. Works. 3. Composition techniques.

1. Brian Ferneyhough, 1982

1. LIFE. His first formal studies were at the Birmingham School of Music (1961–3); a Prokofiev-like Sonatina for three clarinets, now withdrawn, dates from this period. From 1966 to 1967 he studied at the RAM, where his teachers included Lennox Berkeley; he became musical director of the Academy's New Music Club, and founded and conducted the Arradon Ensemble, which specialized in contemporary music. During this time he produced his first characteristic works, one of which, the *Sonatas* for string quartet, was awarded third prize at the 1968 Gaudeamus Music Week (in the next two years, prizes also went to *Epicycle* and the *Missa brevis*). In the same year a Mendelssohn Scholarship enabled him to study with Ton de Leeuw at the Amsterdam Conservatory; the next year he gained a City of Basle stipend to study with Klaus Huber at the Musikakademie, where he stayed until 1971. In 1973 he was awarded a scholarship to work at the Heinrich Strobel Stiftung of South West German Radio; in that year he also took up a teaching post at the Staatliche Hochschule für Musik in Freiburg (where Huber was the senior composition professor), which he retained until 1986.

The mid-1970s brought a marked rise in Ferneyhough's continental reputation. In 1974, two earlier works – *Cassandra's Dream Song* and the *Missa brevis* – were first performed at the Royan Festival. The following year saw premières of two major pieces: *Time and Motion Study III* (at Donaueschingen) and *Transit* (at Royan); a gramophone record of the latter piece was subsequently awarded a Koussevitzky Prize. From that point he became widely regarded as one of the most significant European composers of his generation. From 1976 to 1996 he was a regular lecturer at the Darmstadt summer courses, where he was co-ordinator of the composition class from 1984 to 1994. In 1986–7 he was principal composition teacher at the Royal Conservatory in the Hague; in 1987 he moved to the USA after being appointed professor of composition at the University of California, San Diego. Still much in demand internationally as a teacher, he began directing the annual composition course at the Fondation Royaumont in 1990, also teaching in the Cursus Informatique at IRCAM, Paris. He was made Chevalier de l'Ordre des Arts et des Lettres in 1984, was awarded the Royal Philharmonic Society Prize in 1995, and was elected to the Akademie der Künste, Berlin in 1996.

2. WORKS. Despite various periods of institutional study, Ferneyhough is essentially self-taught. The compositional methods of the early compositions such as *Coloratura* and the Sonata for two pianos, were extrapolated from personal study of works by Webern, Boulez and Stockhausen. In the case of the two last, Ferneyhough's response was to the surface and ethos of works such as Boulez's Second Sonata and Stockhausen's *Klavierstücke I–IV*; he had no more than a general awareness of the technical methods they involved. Their underlying high modernist, transcendentalist aesthetic nonetheless remaned a cornerstone of his work. From the *Sonatas* for string quartet, many of Ferneyhough's pieces are extremely ambitious, both in their aims and their dimensions. The *Sonatas* set out to demonstrate the

possibility of extending the intensity of Webern's 'miniaturist' style to a sequence of 20 movements lasting 45 minutes, employing a deliberately non-climactic, discursive structure, which Ferneyhough compares to a walk through a wood. The subsequent *Epicycle* for 20 strings, the first of several works to embrace 'cosmological' models, seeks to collapse this kind of structure through superimposition.

The various references to medieval and Renaissance thinking in Ferneyhough's early works (for example, in *Epicycle, Firecycle Beta* and *Transit*), and certain aspects of their formal layout, are reminiscent of Huber's work in the 1960s. However it would be wrong to infer from this that Ferneyhough shared his teacher's mystical inclinations; rather, he refers to such ideas as 'complete, in principle dismountable thought systems, well adapted to comparisons or contrast with parallel unfolding musical processes' (Boros and Toop, eds., 89). The compositions relating to them are conceived not as illustrations, but as often partly sceptical investigations of propositions; an external sign of this is the use of 'logical positivist' numbering (I.1.i., I.1.ii, I.2.i. etc.) to delineate the sections in *Transit*, and subsequently in *Unity Capsule*, the *Time and Motion Study* trilogy and *Funérailles II*.

Some of the works composed around 1970 include indeterminate elements, either in relation to form (*Cassandra's Dream Song*) or the musical material (*Sieben Sterne*). However, this was a relatively ephemeral occurrence in Ferneyhough's output, with the last significant examples occurring in certain passages of *Transit*; and by the mid-1970s, 'justified imprecision' had gained a different focus. Ferneyhough's earlier music had sometimes been criticized for what was perceived to be its extreme difficulty. In *Unity Capsule* and the *Time and Motion Study*pieces, the investigation of performer capacity became a primary compositional and aesthetic focus. These pieces call for total corporeal involvement in the realization of tasks which lie on the boundaries of possibility, both physically and mentally: in *Time and Motion Study II* for cello and live electronics, the soloist not only executes a very demanding solo part calling for unusual independence of left and right hand, but also operates two foot-pedals and, at times, vocalizes. Here, as later, the composer's attitude to technology is extremely equivocal; the electronic equipment offers both the enlargement and enslavement of human capacities.

Though these compositions represent an extreme of difficulty, subsequent ones have consistently made enormous demands of their performers – there are no easy Ferneyhough pieces, nor even moderately difficult ones. However, the typically dense and intricate textures of his music – which have led some commentators to categorize it as 'maximalist' or 'complexist' – do not arise from a fascination with virtuosity *per se*, but reflects the transcendentalist concerns which have always been a central factor in his work. These are particularly apparent in those pieces which set out from visual imagery. The first of these was the orchestral *La terre est un homme*, inspired in part by a painting by Roberto Matta, but perhaps even more by a dream of a desert landscape in which each grain of sand seemed to have a tangible weight: it led to a utopian concept of the orchestra as an intricate network of, in this case, 101 complex individual parts. This quasi-alchemical 'conjunction of opposites' recurs as a central motivation in the solo piano piece *Lemma–Icon–Epigram*, whose extra-musical sources also include Andrea Alciato and Walter Benjamin. However, such sources never have illustrative or programmatic outcomes: they inspire new approaches to musical form, and the handling of compositional materials.

A visual trigger also underlies Ferneyhough's major work of the 1980s – the *Carceri d'invenzione* cycle, inspired by the dungeon etchings of Piranesi, and specifically by their impossible architectures and the way in which 'lines of force' seem to extend beyond the boundaries of the picture. The unusual layout of the cycle is characteristic of Ferneyhough's 'problematizing' of musical form. There are seven pieces: three for various large chamber ensembles *(Carceri d'invenzione I-III)*, three for solo instruments, and a song cycle for soprano and four instruments (*Etudes transcendantales*). The flute is a linking presence throughout, descending in register from the opening *Superscriptio* for solo piccolo, through the flute concerto *Carceri d'invenzione II* to the concluding *Mnemosyne* for bass flute and tape, on which there are a further eight bass flute tracks.

Since the early 1980s, a recurrent theme in Ferneyhough's work has been a dialectical wrestling with tradition, and particularly with the legacy of Austro-German music from Beethoven to the Second Viennese School. In later chamber works, such as the Third and Fourth String Quartets and the String Trio, this has involved various investigations of multi-movement forms. The use of a soprano in the Fourth Quartet signals a direct engagement with ideas stemming from Schoenberg's Second String Quartet, not in terms of a stylistic homage, but as a frankly sceptical reinvestigation of music's 'speech-like' qualities, and the possibility of establishing meaningful relationships between words and music (already raised as an issue in the *Etudes transcendantales*, and subsequently pursued in *On Stellar Magnitudes*). Another major group of works initiated in the late 1980s is a series for various solo instruments and chamber ensemble: *La chute d'Icare*, *Terrain*, *Allgebrah*and *Incipits*. Each of these explores a different kind of relationship between soloist and ensemble: at the start of *La chute*, for instance, the ensemble echoes the solo clarinet's material, while in *Terrain* the solo violin's material is utterly distinct from that of the ensemble.

3. Composition techniques. Though the compositional procedures of Ferneyhough's work have their origins in European serialism of the 1950s and early 1960s, his aims and practice have become very different. He attaches no importance to systems in themselves, preferring to describe the numerous algorithmic devices used in his work as 'grids' – not just as constraints, but as a sort of transcendental obstacle course through which musical invention has to squeeze its way in a similar manner to the late works of J.S. Bach. The notoriously complex rhythms of the later pieces, with their nested layers of irrational values (fig.2) often arise from a complex system of regular pulsations which are transformed and filtered, for instance by systematic removal or tying-over of individual pulses. The pitch structures rarely use 12-note materials (*Superscriptio* is an exception) but do involve quasi-serial procedures such as the interlocking of different set forms (e.g. *Lemma–Icon–Epigram*; see Toop, 1990). Microtones, which make a momentary first appearance in *Epicycle*, become a constant presence in later works, both as inflections and

2. Nested irrationals in the violin part of Ferneyhough's 'Terrain', bar 167 (London: Peters Edition, 1992)

as discrete steps in quarter-tone or, much more rarely, eighth-tone scales; semitonal sets or harmonic fields may also be compressed into microtonal ones. These procedures do not constitute a consistent method; they are reconsidered and redefined from one work to the next, and in recent years Ferneyhough has made use of a computer program (Patchwork) to expand and refine them.

Another important feature is the use of 'texture types': characteristic combinations of gesture and timbre whose capacity for significant transformation gives them much the same function as themes and motifs might have in articulating formal structures. The cello part at the beginning of Song 2 from *Etudes transcendantales* presents five 'texture types': tremolandos alternating low glissandos and harmonics; glissandos with left hand pizzicato; microtonal snap pizzicatos; *espressivo* single notes; 'motifs' combining triple stops, microtones and harmonics. The many 'extended techniques' found in Ferneyhough's virtuoso instrumental writing are usually allied with such texture types; in contrast to that of composers like Globokar or Lachenmann, Ferneyhough's use of such techniques nearly always retain some audible pitch element, however fleeting. His formal procedures are harder to categorize. However, a recurrent feature is the use of two or more contrasted or innately contradictory elements – a plot and sub-plot, so to speak – which engage in a process of mutual transformation or erosion. A clear example of this is the String Trio, in which a series of initially rather marginal 'interventions' comes to dominate the latter part of the work, largely undermining its notional four-movement structure.

RICHARD TOOP

Fernflöte (Ger.). *See under* ORGAN STOP.

Fernström, John (Axel) (*b* Ichang, China, 6 Dec 1897; *d* Lund, 19 Oct 1961). Swedish composer, conductor and teacher. He spent his first ten years at his father's missionary station in China and then studied the violin at the Malmö Conservatory (1913–15). Fernström played in the Helsingborg SO (1916–39), acting as manager from 1932. His violin studies were continued with Max Schlüter in Copenhagen (1917–21, 1923–4) and with Barmas in Berlin (1921–2); he studied composition with Peder Gram in Copenhagen (1923–30) and in 1930 at the Sondershausen Conservatory, where he also took lessons in conducting. He was conductor for Malmö radio (1939–41), and from 1948 until his death he was director of music in Lund and conductor of the Lund Orchestral Society. A stimulating teacher, he directed the Lund Conservatory and in 1951 founded the Nordic Youth Orchestra. In 1953 he was elected to the Swedish Royal Academy of Music whose medal he won in 1954. Fernström characterized his style as tending toward a 'fusion of an impressionistically coloured harmony with classical formal principles'. His cautious adoption of newer techniques brought him to the boundaries of atonality in the late works, but most of his music is tonal. A typical example is the serenade *Den kapriciöse trubaduren*, seemingly light in manner. His best works are the last two symphonies and the late quartets. The Symphony no.11 has the subtitle 'Utan mask' ('Unmasked') which Fernström also gave to a large self-portrait in oils; both works attempt to express the implications of the title. Fernström also completed the orchestration of Ture Rangström's last opera *Gilgamesj* (first performed in 1952).

HANS ÅSTRAND

Feroci, Francesco (*b* S Giovanni Valdarno, 16 April 1673; *d* Florence, 25 Nov 1750). Italian organist and composer. He was a priest. In 1688 he became a pupil of G.M. Casini in Florence, studying theory and composition as well as the organ and the harpsichord. From 1697 to 1701 he was organist and composer in various Florentine and Tuscan churches. In 1702 he became assistant to the school of his own teacher, Casini, and also began to deputize for him with increasing frequency at Florence Cathedral. On 11 March 1719, after Casini's death, he obtained the post of chief organist there. In 1744 he became ill and so his pupil Bonaventura Matucci began to assist him with his cathedral duties. The theorbo player Domenico Palafuti and F.M. Veracini were also among his pupils. Feroci was also a poet and apparently wrote verse parodies, but none have survived. Fabbri distinguished stylistically between Feroci's vocal and instrumental music: in the former Feroci followed Casini's use of a wide range of technical devices and harmonic ingenuity to expressive ends, but in the organ works the use of harmony is altogether simpler and greater emphasis is assigned to melody.

Feroci's nephew Giuseppi (*b* S Giovanni Valdarno, 24 Aug 1729; *d* Castiglion Fiorentino, 5 April 1793) was also one of his pupils, and like his uncle was priest, organist and composer, becoming *maestro di cappella* and organist at the collegiate church of S Giuliano at Castiglion Fiorentino. The libretto of a sacred cantata, *Il trionfo di David nella disfatta di Golia* (M. Salvemini), set by Giuseppi Feroci is extant (in *I-Fm*). This may be the work heard by Burney at Figline Valdarno in 1770. A misreading of Burney led Eitner to confuse uncle and nephew.

FABIO BISOGNI (with LUISELLA MOLINA)

Ferrabosco. Family of Italian and English musicians. Members of this Bolognese family (fig.1) were well known in Italy during the 16th century, and in England during the 16th and 17th centuries. The earliest record of the family shows Domenico, son of Pietro or Petruccio, styled Ferrabosco, to have been in 1460 in the service of the magnificent house of Bentivoglio which then ruled Bologna. Domenico's son Cecchino was baptized on 7 September 1460. These early Ferraboscos (not known to be musicians) were highly regarded in the Bentivoglio court, and Cecchino's two sons Annibale and Alessandro, baptized on 27 September 1487 and 1 October 1491 respectively, were sponsored by and named after the ruler's own sons. In 1473 the Commune of Bologna gave Domenico a house, possibly via Zamboni 38, near the university and Bentivoglio Palace. Annibale's four sons, Domenico Maria, Lodovico (a canon and precentor of the collegiate church of S Petronio in Bologna), Girolamo and Filippo were probably born there.

(1) **Domenico Maria Ferrabosco** [Ferabosco] (*b* Bologna, 14 Feb 1513; *d* Bologna, Feb 1574). Italian composer and singer. On 19 November 1540 the Senate of Bologna recognized his musical skill by granting him a salary for life for being responsible for the public performances of the palace musicians. He was also a singer at S Petronio. About this time he married Giulia, daughter of Guido Novelli dall'Arpa of Ferrara; the wife of Count Alfonso Contrari of that city provided the dowry. The eldest of their eight sons was named Alfonso, probably after the count.

In 1546 Domenico became *magister puerorum* in the Cappella Giulia in Rome, but soon returned to Bologna where, on account of his merits and straitened family

1. Ferrabosco family tree

circumstances, the Senate appointed him on 29 August 1547 *Regulator et scriba campionis creditorum Montis portarum*, a non-musical post. In 1548 he was made *maestro di cappella* at S Petronio, whereupon the Senate exempted him and his children from all taxes in Bologna. Nevertheless he went again to Rome. He was appointed a singer in the papal chapel on 27 November 1550, and took up the post in April 1551. He and Palestrina were colleagues there, but on 30 July 1555 they were both retired on pension by the new pope (Paul IV) because they were married. After this it is known that he became *maestro di cappella* at S Lorenzo in Damaso, Rome, perhaps only for a short time. It is also known that he was in Paris in the late 1550s and early 1560s (Kerman). On 23 December 1570 Domenico Maria caused the Senate of Bologna to grant and transfer immediately after his death the office of *Regulator et scriba*to (2) Alfonso Ferrabosco (i). His will, dated 22 June 1573, suggests that he was in comfortable circumstances and mentions four sons.

Domenico Maria's principal compositions are in his first and only book of madrigals, published by Gardane in Venice in 1542 and dedicated to Guidobaldo II, Duke of Urbino. They show him to be a composer of potential in the early period of the Italian madrigal characterized by Verdelot, Festa and Arcadelt; there is some contrasting of homophonic and polyphonic passages, as well as interpretation of the literary detail of the texts, including a response to the rhythm. The majority of these texts are anonymous but their style favours that of the increasingly popular love lyrics of Petrarch, who, with Ariosto and Bembo, has been identified in the remainder.

Several other madrigals and four motets appeared (some published) in the mid-16th century, and a few were subsequently arranged for the lute, cittern and keyboard and also appeared in German organ tablature. In particular, one madrigal, *Io mi son giovinetta*, achieved great popularity: Palestrina used it as a model for two parody masses. No fewer than 46 printed anthologies and at least 16 manuscript sources between 1542 and 1546 reproduce the madrigal, and two manuscripts provide contrafacta, one in German and the other in English. The periodic publication of this ballata from Boccaccio's *Decamerono* ver such a long period and its ascription to (2) Alfonso Ferrabosco (i) in *Gemma musicalis* (Nuremberg, 1588[21]) were partly responsible for the confusion by earlier writers between the various members of the family.

Girolamo, a younger brother of Domenico Maria, is scarcely referred to in documents in Bologna, and is known only by one enigmatic composition, a 'Toccata di Roma', for organ. Livi thought he might have gone to England and perhaps accompanied his son (2) Alfonso Ferrabosco (i) on his first visit.

(2) Alfonso Ferrabosco (i) (*b* Bologna, bap. 18 Jan 1543; *d* Bologna, 12 Aug 1588). Italian composer, eldest son of (1) Domenico Maria Ferrabosco. He served Queen Elizabeth I as a courtier between 1562 and 1578, and for musicians in post-Reformation England he came to personify the more serious side of Italian musical art.

1. Life. In 1552, as a means of subsidizing the Ferrabosco family, the Bologna Senate gave to the nine-year-old Alfonso the sinecure of supervising the issue of immigration permits (*Soprastante all'ufficio delle bollette per la presentazione dei forestieri*). He probably spent some time in Rome, where his father worked, in the early 1550s, but after the exclusion of married singers from the Cappella Sistina in 1555 it seems that the family went to France (Kerman, 1994), where Alfonso and two of his brothers were taken under the powerful patronage of Charles de Guise, Cardinal of Lorraine. By 1558 the performances of the boys, singing *à l'antique* to their own accompaniment, were being celebrated by poets of the Pléiade. Ronsard, in his *Hymne de Charles, Cardinal de Lorraine*, wrote of the pleasure to be had:

> Et du geste, & du son, & de la voix ensemble
> Que ton Ferabosco sur trois lyres assemble,
> Quand les trois Apollons chantant divinement,
> Et mariant la lyre à la voix doucement.

The 'trois Pharabosques Italiens' probably took part in the wedding festivities of the dauphin and Mary Queen of Scots, in April 1558, and of Princess Elisabeth and Felipe II of Spain in June 1559. They were also assigned roles in Du Bellay's *Epithalame* for the wedding of Marguerite, sister of King Henri II, to Duke Emanuele Filiberto of Savoy in July 1559; an epithalamium by Etienne Jodelle for the same occasion seems to single out Alfonso as an expert chorister.

By 1562 Alfonso was in England: on 28 March he was paid £20 as 'one of the Q[ueen's] Music[i]ons', and from 15 March he received an annuity of 100 marks (£66 13s 4d), but this ceased on 29 September 1563 because he returned to Italy. On his father's recommendation he was taken into the service of Cardinal Farnese in Rome (although it is unclear whether this was Alessandro, the more senior of the two Farnese cardinals, or Ranuccio, who in April 1564 was appointed Bishop of Bologna). In any case it seems that by June 1564 Alfonso was keen to return to England, but the cardinal was reluctant to release him, so it was decided that he should leave the country secretly. Before the end of the year he had resumed his place at the English court and his annuity was restored.

Alfonso's services at the court were evidently highly valued, for his annual pension was raised to £100 from midsummer 1567 and guaranteed for life, on the condition that he remain in England unless permitted to travel abroad (B.M. Ward: 'Alphonso Ferrabosco', *Review of English Studies*, viii, 1932, pp.201–2; cf *AshbeeR*, vi, 19). Later documents refer to him as a groom of the Privy Chamber. In 1569 he left the country for Italy, ostensibly to attend to his affairs in Bologna, having signed a bond (endorsed by Sir William Cecil, Secretary of State) promising to return and not to leave the queen's service. In June 1569 he reported to Cecil from Paris that he had entrusted some business to one of his brothers with whom he was travelling to Italy, and that he had been robbed of his possessions, but that he planned to depart within three days. By October he was in Bologna, and he was still there a year later. His stay coincided with a low point in relations between England and the papacy, and on 28 September 1570 he wrote to Cecil explaining that departure without a licence would expose his family to punishment by the Inquisition. Nevertheless he did leave, apparently without licence, and by midsummer 1571 was in London, where he personally collected his annuity.

In June 1572 he took a leading part in a masque given before the queen and the French ambassador at Whitehall to celebrate the Treaty of Blois. In October 1574 he sought permission to return to Bologna, following his father's death, for he feared that the Inquisition would seize his inheritance. He may have travelled as far as France, but Domenico Maria's estate was settled in Alfonso's absence. In November 1575, in his capacity as a groom of the Privy Chamber, he met a diplomatic mission from Venice and conveyed messages of goodwill from the queen; its members reported to the Venetian senate that he enjoyed 'great favour with her Majesty on account of his being an excellent musician' (Charteris, 1984, p.14). For some reason, however, his annuity was halved to £50 from midsummer 1576.

On 23 September 1577 Ferrabosco complained to the Earl of Sussex that he had recently found himself excluded from the privileged access to the queen's apartments to which his position normally entitled him. The cause of his disgrace was apparently a report that he had attended Mass at the residence of the French ambassador. Writing shortly afterwards to William Cecil (now Lord Burghley) he admitted meeting the ambassador, but insisted that his visits were not secret and that his motives had been misconstrued. A fortnight later it was whispered that he had robbed and murdered a youth in the service of Sir

Philip Sidney, a charge that he vehemently repudiated. Eventually, in December, Sidney himself interceded on behalf of the 'poore stranger musicien', bringing a reassuring response: the queen was prepared to accept his innocence, and he would shortly be able to return to court. He remained despondent, however, complaining that his reputation had been sullied both in England and abroad.

Ferrabosco married Susanna Symons (daughter of one Balthasar de Simonibus of Antwerp) at St Botolph Aldgate on 2 May 1578. Shortly afterwards the couple left England, having placed two young children, (5) Alfonso Ferrabosco (ii) and a daughter, in the care of Gomer van Awsterwyke (or Gommar van Oostrewijck), a musician from Antwerp who had joined the queen's flute consort several years earlier, and his wife. This was a family of good Protestant credentials, and it is likely that Ferrabosco was obliged to leave the children behind as hostages against his return. By 23 June he was in Paris as a musician in the entourage of Cardinal Louis de Guise. His arrival in Paris was reported by the papal nuncio, Anselmo Dandino. Ferrabosco had told Dandino because of his mother's death the queen had given him leave of absence to visit Bologna, but that despite his reinstatement at her court he had decided not to return to London. He had declared his adherence to the Catholic faith, his secret attendances at confession and at Mass in London, and his desire to obtain the Church's pardon. Nevertheless, Dandino was unconvinced: he suspected Ferrabosco of being a spy for the English, and arranged to have him watched.

On 30 September 1578 Ferrabosco set out for Italy, leaving Susanna in the care of his brother Anfione, who was a musician to the French king. Soon after arriving he was imprisoned in Rome by the order of the Pope on the grounds of apostasy and defection. Despite indications over the following year that he might soon be freed (including his wife's arrival in Italy), it was not until February 1580 that he was freed on parole, with permission to go to Bologna (Mateer, 1996, p.31).

Sometime between September 1580 and August 1581 Ferrabosco entered the service of Carlo Emanuele I, Duke of Savoy. During the same period Alfonso and Susanna had a son, named Carlo Emanuele after the duke. The earliest recorded payment to Alfonso from the ducal treasury seems to be for his livery allowance from January 1582; subsequent court documents refer to him as 'nostro musico e gentilhuomo di bocca' ('our musician and gentleman-in-waiting'). On 5 February 1582 he wrote to Queen Elizabeth from Turin asking for a just settlement of his financial affairs and thanking her for her compassion towards his son Alfonso (ii). Further letters to Lord Burghley and Sir Francis Walsingham later that year were concerned mainly with unresolved financial and legal matters.

At the beginning of 1585 he accompanied the Duke of Savoy to Spain for the duke's wedding on 11 March in Zaragoza Cathedral, where Alfonso seems to have made a favourable impression on the master of the Spanish royal chapel, George de La Hèle; the court returned to Turin in June. Between October and the following February diplomatic efforts were made to return Alfonso (ii) to his father, but the queen was not persuaded. On 6 March 1586 the duke recognized Ferrabosco's good and faithful service by converting his annual allowance into a life pension, to be continued for the lifetime of either Carlo Emanuele ('his legitimate and natural son') or of Alfonso ('his first-born').

In 1587 two books of five-part madrigals by him were published. The first, dated 25 May, was dedicated to the Duke of Savoy; the second, dated 4 September, was dedicated to the duchess. In the following year, in company with such composers as Ingegneri, Luzzaschi and Marenzio, he contributed to *L'amorosa Ero*, a collection of madrigals based on a poem ('Ero così dicea') by Count Marc'Antonio Martinengo of Villachiara. Between 1585 and 1588 he completed a literary work, the *Historia d'Altimauro*, again dedicating the two parts to the duke and duchess respectively; the manuscript was badly damaged in a fire in 1904, but a fragment survives in Turin (*I-Tn*). Ferrabosco died during a visit to Bologna, aged 45, and is buried there in the church of S Isaia. His widow Susanna received a pension of 200 scudi from 1588 to 1596, and his brother Anfione was appointed *musico ordinario* at the Savoy court in his place.

Ferrabosco's career brought him into proximity with powerful figures on both sides of the religious divide during the Counter-Reformation. Elizabeth I prized him for his diplomatic as well as his musical skills, went to exceptional lengths to retain his allegiance and, in an effort to obtain his release from prison in 1580, even persuaded Catherine de'Medici to intercede with the pope on his behalf; he enjoyed the protection of the Guise family and, in later years, the Duke of Savoy, and he kept his links with his native Bologna throughout his life. The inference that he was a secret agent, perhaps even a double agent, relies largely on circumstantial evidence, apart from Dandino's assertion that Elizabeth made 'much use of him for spying and scheming' ('se ne serve assai per spiare et ordire qualche cosa'). The interest that William Cecil – whom he called his 'Prottettore' – took in his foreign trips suggests that he may have been used as a courier and gatherer of intelligence for the English government. It would not be surprising if the authorities in Bologna or Paris, in their turn, had tried to reap advantage from his position at Elizabeth's court, although nothing suggests that his friends and patrons in England regarded his decampment and reconciliation with the Roman Catholic church as perfidious, or considered him a traitor. Like others in similar positions, Ferrabosco was faced with conflicts of affection, loyalty and conscience, towards his family, the queen and his faith.

Apart from a few anthologies that included pieces by him, no publications of Ferrabosco's music appeared before 1587. Consequently his work was not well known on the Continent, but in England he was held in high regard. A Latin poem by Sir Ferdinando Heybourne (Ferdinand Richardson) in the 1575 *Cantiones* of Tallis and Byrd hails him as 'Alfonso, phoenix of our age, creator of songs to which Apollo might lay claim' ('Temporis Alphonsum nostri Phaenica creare / Carmina, quae Phoebus vendicet esse sua'). John Baldwin, in verses in praise of music's 'fam[o]us men' (*GB-Lbl* R.M.24.d.2), awarded him pride of place among foreign composers; Morley extolled him as 'a great musition, famous and admired for his works amongst the best' (*A Plaine and Easie Introduction*, 1597).

Ferrabosco's reputation as a singer and instrumentalist never reattained the height of his teenage stardom in France. It seems reasonable to assume that he played the

lute (and probably the bandora too). However, unlike his compatriot Antonio Conti he was never regarded as one of the queen's lutenists, and little is written about him as an adult performer, perhaps because of the private nature of his performances.

2. WORKS.

(i) Sacred vocal music. Ferrabosco's Latin sacred music comprises several dozen motets and four sequences of the Lamentations of Jeremiah, but no masses. Most of it survives solely in manuscripts of English provenance, but a few items were printed in German anthologies, one of which (RISM 1583[2]) includes a motet not found in English sources, *O lux beata Trinitas*, perhaps owing to the presence of his cousin Costantino in Nuremberg, where the collection was printed. None of the manuscripts is autograph. Among the most interesting are the so-called Tregian score-books (*GB-Lbl* Eg.3665 and *US-NYp* Drexel 4302), which between them contain more of these pieces than any other source.

By the time he returned to England in 1564 Ferrabosco must have been equipped with a resourceful and fluent contrapuntal technique, no doubt partly learned from study with his father and partly from experience as a singer in France and Italy. Between then and the beginning of 1572 there are signs of a mutually beneficial exchange of ideas between him and Robert Parsons (i), as seen in the five-part *Da pacem*, Ferrabosco's only cantus firmus motet, which resembles the cantus firmus pieces of Parsons in the way that the plainchant enters last, as if just another voice in the imitative fabric. *Credo quod redemptor* is related to Parsons's setting of the same text; if Ferrabosco's was the earlier of the two, as has usually been assumed, there could be no more striking tribute to the young Italian than Parsons's use of the sonorous imitative counterpoint of its opening bars as a model.

Lassus's early motets furnished Ferrabosco with ideas for several settings of the same or similar texts. *In monte Oliveti* is related to Lassus's setting (published 1568), employing the same unusual clef combination and the same mode, and Ferrabosco also alluded to, or parodied, the first ten bars of Lassus's piece at the opening of his work, as well as echoing the way in which subsequent phrases of the text are treated. Neither uses a cantus firmus. Although Ferrabosco's motet is impressively sombre and contemplative, Lassus has the edge in rhetorical directness and cogency. Ferrabosco's *Nuntium vobis fero* is also closely modelled on Lassus's setting of the same stanzas, showing a type of treatment not previously found in England (where hymns were usually sung in *alternatim* settings).

Ferrabosco's similar setting of another hymn, *Ecce jam noctis*, was the model for Byrd's *Siderum rector*, which shares the same Sapphic verse form and employs the same crotchet movement and *note nere* notation; while Byrd's *O lux beata Trinitas* echoes Ferrabosco's more complex *Aurora diem nuntiat*. The competitive but friendly relationship between these two composers is underlined by Morley's description of their 'vertuous contention in love betwixt themselves made upon the plainsong of Miserere'. The outcome of this 'contention' was 80 canons two-in-one – 40 by each composer – on the *Miserere* cantus firmus. Thomas East planned to publish these for the use of singers, with a lute intabulation, under the title *Medulla Musicke*; the book was registered with the Stationers' Company in 1603, but no copy of it, nor any manuscript of the canons, appears to have survived. Henry Peacham, in *The Compleat Gentleman*, mentioned the 'friendly aemulation' between these two musicians, and Kerman (1962, 1966 and 1981) has noted further instances in Byrd's music where the older composer had clearly benefited from the stimulus of contact with the much-travelled Italian and his up-to-date motet writing.

To judge from surviving sources, Ferrabosco's Latin sacred music was sung in England as devotional chamber music in households both Catholic and non-Catholic. Though some texts were drawn from the Office he seems to have scrupulously avoided any that refer to the Virgin Mary or to a saint (Kerman, 1993). His settings of respond texts are not tailored to responsorial performance, and few if any pieces can have been intended for liturgical use. Motets with psalm texts predominate, the largest in scale being *Benedic anima mea Domino*, a setting of Psalm civ in 11 sections. Its overall design is remarkable, inasmuch as it progresses in effect from G minor (transposed Dorian) to G major (Mixolydian), and its seventh part ('Posuisti tenebras') uses a tonal palette covering the hexachordal spectrum from E♭ as *fa* to E♯ as *mi*. Another large-scale work, for up to seven voices in six sections, was *Inclina Domine aurem tuam* (Ps lxxxvi); only three of its sections survive with voices intact, though a fourth is restorable from a lute intabulation (see below). Sombre psalm texts such as *Ad Dominum cum tribularer* (Ps cxx), *Afflictus sum* (Ps xxxviii), *Tribulationem et dolorem inveni* (Ps cxvi) and *Exaudi Deus orationem meam* (Ps lv) inspired some of Ferrabosco's most effective pieces; the last, though undated, could be read as a personal outcry at the censures the composer had to face in 1577.

As with the other sacred music, it seems likely that the four Lamentations sequences were not intended for ritual use. This is indicated by the texts: three out of the four sequences use verses freely selected from the Lamentations of Jeremiah, presented in the traditional manner; only the gravely eloquent C65 has as its text a shortened version of the first *lectio* appointed for Maundy Thursday. No use appears to be made of the *tonus lamentationum*. In two sequences (C65, C66) Ferrabosco employed low voice ranges that exactly match those of Tallis's first set of Lamentations.

His only securely attributed English sacred work, *O remember not our old sins*, is on a penitential psalm text from the Book of Common Prayer, and is in a largely syllabic, imitative style. It may have been sung in Elizabeth's Chapel Royal, though the only surviving manuscript sources (*GB-Och* Mus.56–60 and *US-NYp* Drexel 4302) are secular anthologies.

(ii) Secular vocal music. The influence of continental composers predominates in Ferrabosco's secular works. His French songs owe much to Lassus: three of the texts, *Las, voulez vous*, *Le rossignol* and *Susanne un jour* had already been set by Lassus, and the last of these is in a long line of settings of Guéroult's *chanson spirituelle* that derive from and pay homage to Didier Lupi's setting. Ferrabosco's setting of this and *Le rossignol* were published in English translations in Yonge's *Musica transalpina* (1588) along with Lassus's versions; Byrd reciprocated with his own settings in *Songs of Sundrie Natures* (1589). Ferrabosco's *Auprès de vous* was published by Le Roy & Ballard (1572[2]); perhaps it was a product of his stay in Paris in 1569. One further chanson

by Ferrabosco, a presumed six-voice setting of *Sur la rousée fault aller*, survives without text as one of the 'solfainge songes' in *GB-Lbl* Add.31390, and with the title 'Sur la rossee' in *GB-Cfm* 734.

Apart from his two books of *Madrigali a cinque* of 1587, his contribution to *L'amorosa Ero* and a couple of items that found their way into continental anthologies, Ferrabosco's madrigals survive almost exclusively in sources of English origin, either in manuscript or in posthumous prints such as *Musica transalpina* (1588, 1597) and Morley's *Madrigals to Five Voyces* (1598). As these English sources were all compiled after Ferrabosco left England they give little clue to when the madrigals were actually composed. Nevertheless, as Kerman's studies have shown, the six-part madrigals form a homogeneous group – earnest and academic in their literary taste, rather Roman in their well-crafted polyphony – and probably date from the 1560s or early 1570s. *Vergine bella*, a huge setting of Petrarch's 11-stanza canzone, was perhaps a product of his sojourn in Bologna in 1569–70: a madrigal cycle addressed to the Virgin Mary is unlikely to have been sung in Elizabethan England. As well as Petrarch sonnets there are settings of poems by Sannazaro, Bembo and Ariosto. In *Grave pene in amor*, which draws its text from Ariosto's *Orlando furioso*, a recurring melody is sung by two trebles, in order to suggest the traditional recitation tones of Italian epic verse. A similarly high-minded approach characterizes the five-part madrigals of his English period.

The two books of 1587 marked a new phase in Ferrabosco's madrigal production. Although there are references to his earlier 'English' works, such as five-part settings of three texts that he had previously set for six voices, the collections are lent a more up-to-date flavour by the inclusion of three settings of madrigal texts by Tasso. While Ferrabosco's style remained aloof from the rhetorical directness and affective power that composers such as Wert and Marenzio brought to Tasso's poetry, the craftsmanship is nonetheless deft, expressive and contrapuntally accomplished.

In England Ferrabosco continued to be esteemed as a madrigalist even after his death, and many printed collections and manuscripts contain English versions of his works, on occasion (as in *GB-Lbl* Eg.2009–12) with completely new texts rather than translations of the Italian. They were also taken up by English viol players, as is shown by manuscripts such as *US-SM* EL 25 A 46–51. His influence left its mark on as fine a madrigalist as Wilbye, whose *Lady, your words doe spight mee* was carefully patterned on *Donna, se voi m'odiate* (rendered in *Musica transalpina* as 'Lady, if you so spight mee'). Dowland, too, paid his respects: his song *I saw my Lady weepe* echoes Alfonso's *Vidi pianger madonna*, one of the songs that, even as late as 1622, Henry Peacham considered to be unsurpassed 'for sweetnesse of Aire, or depth of judgement'.

It is doubtful whether Ferrabosco ever composed a madrigal to English words. The one possible candidate is *The wine that I so dearly got*, for five voices, in the second book of *Musica transalpina*; the music fits the verses well, but these could well be a translation from a lost Italian original. The piece also appears in a contrafactum, 'The nymphs that in the groves do sport', whose text was presumably provided by Edward Paston. It seems certain, however, that Ferrabosco did make at least one contribution to the repertory of English moralizing consort songs, *What is the cause why truth doth purchase foes*. Unfortunately only its vocal line and a single viol part survive.

Ferrabosco's two Latin secular songs both seem to strike a personal note: in *Virgo per incertus casus* the elegiac couplets refer to an ill fate preventing a desired return to England, while in *Musica laeta* (probably composed in 1578) the poet-musician bids a fond farewell to a patron before departing for his native land.

(iii) Instrumental music. Ferrabosco's instrumental music survives chiefly in sources of English provenance, though a few lute pieces also appear in Besard's *Thesaurus harmonicus* (Cologne, 1603) and German manuscripts. His fantasias for lute and for bandora – an instrument whose invention coincided with his arrival in England, and to which he seems to have taken enthusiastically – must have contributed significantly to the naturalizing of this Renaissance genre in England. Some (such as C212) are predominantly contrapuntal; others are freely improvisatory (e.g. C198); and there are examples of florid passage-work (as in C200, which appeared in Robert Dowland's *Varietie of Lute-Lessons*). Two keyboard fantasias survive, one of which is a short score of an otherwise incompletely surviving work for four viols; and the other contains some toccata-like writing, concluding with a galliard-like section.

The *Ut re mi fa sol la* pieces are probably a legacy of Ferrabosco's activity as a teacher. One of them (C218) found its way into Baldwin's Commonplace Book and into partbooks belonging to Edward Paston, and also circulated as an intabulation for lute. There is no cantus firmus, but the scales of the gamut's 'hard' and 'natural' hexachords are worked into every strand of counterpoint. The duo for two trebles perhaps also had a didactic origin.

There is no clearer indication of Ferrabosco's willingness to embrace distinctively English genres than his three five-part In Nomines. They show parallels with works of Byrd; in particular, C223 is related in style and substance to Byrd's In Nomine a 5 no.3. Neighbour considers Ferrabosco's to be the earlier of the two, but they must have been written within a short time of one another, perhaps not long after Ferrabosco's arrival in 1562. At some stage Ferrabosco's piece was revised, and perhaps fitted with sacred words, for in *US-NH* Filmer 1 it bears the incipit 'Exaudi vocem meam'. C221 is more assured and adventurous, and achieved considerable fame, to judge from the number of surviving sources. There are again parallels with Byrd, this time with In Nomine a 5 no.4. Ferrabosco's other In Nomine is unusually spirited, being written in lilting triple rhythm.

Although Ferrabosco used the plainchant *Miserere mihi Domine* as a cantus firmus for canons, his *Miserere* for lute, C210, has nothing to do with that chant. It is in fact a hitherto unnoticed intabulation of the second part of his setting of *Inclina Domine aurem tuam* (Ps lxxxvi), of which only the alto part otherwise survives.

The pavans present a variety of approaches to this dance form. The five-part pavan C220 almost certainly belonged to the repertory of Elizabethan court dancing, while a more abstract and intimate type of dance music is represented by his lute or bandora pavans, with their surprisingly irregular strain-lengths and varied repeats. C226, for mixed consort, is very likely an arrangement of

a pavan for wind instruments by Augustine Bassano: lute and keyboard versions of the pieces are entitled 'Augusti[ne's] Pavan' and 'Pavana Bassano' respectively. In Matthew Holmes's partbooks (*GB-Cu*) the mixed consort setting is entitled 'Alfonsoes Paven', but Ferrabosco is not otherwise known to have written for an ensemble that had its heyday after he left England, and the supposition that he was responsible for it cannot be confirmed. In Ferrabosco's setting of the *Spanish Pavan* one lute plays an exhilarating series of six divisions on the dance's traditional melody while another supplies its ground bass and harmony. This sole surviving lute duet by him suggests that the 'treble' and 'ground' duets of John Johnson may, like so many other aspects of Elizabethan music, have owed their style partly to 'Master Alfonso's' guidance.

184–5 Hor vedi, Amor (2p. Tu sei pregion) (Petrarch), 6vv, C viii, 50

158 Interdette speranze (Sannazaro), 6vv, C vii, 24

131 Io son ferito, 5vv, C vi, 22

178–9 Io vo piangendo (2p. Sì che, s'io vissi) (Petrarch), 6vv, C viii, 14

182–3 Lasso me, ch'ad un tempo (2p. Cerco fermar il sol') (Bembo), 6vv, C viii, 38

174–5 Mentre ch'il cor (2p. Quel foco è morto) (Petrarch), 6vv, C vii, 138

89–94 Mentre ti fui si grato (2p. Mentre ti fui sì cara; 3p. Hor pien d'alto desio; 4p. Hor un laccio; 5p. Lasso donque che sia; 6p. Ben chè senza mentire) (L. Alamanni), 5vv, 1587a, C iv, 6 [Eng. version of 4p. as 'Say sweet Phyllis', 1598[15], C iv, 98]

126 Nel più fiorito aprile, 5vv, 1587b, C v, 84 [Eng. versions as 'In flower of April springing', 1597[24], C v, 126; and 'Farewell, all fancies feigned', C v, 137]

135–6 Non ardo et son nel foco (2p. Foco è'l mio cor), 5vv, C vi, 45 [Eng. version as 'O love, thy fire exceedeth', 2p. 'My heart is fire', C vi, appx, 170]

123 Non è lasso martire (F. Spira), 5vv, 1587b, C v, 72 [Eng. version as 'In love where is denying', C v, 116]

186 Non è lasso martire (Spira), 6vv, C viii, 58

106 Non fingo, 5vv, 1587a, C iv, 82 [Eng. version as 'The shepherds of fields and mountains', C iv, 162]

138 Non ha tante, 5vv, C vi, 58 [Eng. version as 'O spiteful love', C vi, appx, 179]

118 Non mi fuggir, ben mio, 5vv, 1587b, C v, 48 [Eng. version as 'Among the roses sleeping', C v, 135]

105 O crude pene mie, 5vv, 1587a, C iv, 76 [Eng. version as 'Who trusts to fortune's smiling', C iv, 155]

98 O dolcissimo bacio, 5vv, 1587a, C iv, 40 [Eng. version as 'O sweet kisse', 1588[29], C iv, 119]

192 Ogni loco m'attrista (Petrarch), 6vv, C viii, 96

97 Perle, rubini et ostro, 5vv, 1587a, C iv, 37 [Eng. version as 'Rubies and pearls and treasure', 1588[29], C iv, 115]

127–30 Poi chè lasso m'è tolto (2p. Ch'io sento ad hora; 3p. Come solea; 4p. Ove le luci giro) (P. Gradinicio), 4–5vv, C vi, 1

121 Poi ch'io non posso, 5vv, 1587b; C v, 64

197 Quando la bella, 6vv, inc., C viii, 132

102 Quant'io son infelice, 5vv, 1587a, C iv, 63

177 Quel sempre acerbo (Petrarch), 6vv, C viii, 6

193 Questi ch'inditio fan (Ariosto), 6vv, C viii, 107 [Eng. version as 'These that bee certaine signes', 1588[29], C viii, appx, 137]

116–17 Scoprirò l'ardor mio (2p. Se voi sete il mio sol), 5vv, 1587b, C v, 39

159–60 Se lungi dal mio sol (2p. Sola voi no'l sentite) (A.F. Rinieri), 6vv, C vii, 31 [Eng. version as 'So farre from my delight', 2p. 'She onely doth not feele it', 1588[29], C vii, appx, 152]

88 Se pur è ver che l'alma, 5vv, 1587a, C iv, 1 [Eng. version as 'Penelope ever was praised', C iv, 92]

176 Se pur è ver che l'alma, 6vv, C viii, 1

124–5 Solo e pensoso (2p. Sì ch'io mi cred'homai) (Petrarch), 5vv, 1587b, C v, 77 [Eng. version as 'You that do stand', C v, text on p.xviii; and of 2p. as 'I think that if the hills', 1598[15], C v, 122]

146–51 Standomi un giorno (2p. Indi per alto mar; 3p. In un boschetto novo; 4p. Chiara fontana; 5p. Una strania phenice; 6p. Al fin vid'io) (Petrarch), 5vv, C vi, 104

134 Tu dolce anima mia, 5vv, C vi, 41 [also arr. lute, 1584[12]; Eng. version as 'In fountain clear as crystal', C vi, appx, 166]

180–81 Valle che dei lamenti (2p. Ben riconosco in lei) (Petrarch), 6vv, C viii, 28

163–73 Vergine bella (2p. Vergine saggia; 3p. Vergine pura; 4p. Vergine santa; 5p. Vergine sol'al mondo; 6p. Vergine chiara; 7p. Vergine, quante lagrime; 8p. Vergine, tale è terra; 9p. Vergine in cui hò tutta mia speranza; 10p. Vergine humana; 11p. Il dì s'appressa) (Petrarch), 6vv, C vii, 54

132–3 Vidi pianger madonna (2p. Come dal ciel) (A. Lionardi), 5vv, C vi, 30 [Eng. version as 'I saw my lady weeping', 2p. 'Like as from heaven', 1588[29], C vi, appx, 153]

100 Voi volete ch'io moia (G. Parabosco), 5vv, 1587a, C iv, 50 [Eng. version as 'What thing more rare than beauty', C iv, 130]

187 Voi volete ch'io moia (Parabosco), 6vv, 1601[5], 1605[9], C viii, 66

95–6 Vorrei lagnarmi a pieno (2p. S'io taccio) (Tasso), 5vv, 1587a, C iv, 28 [Eng. version as 'I languish to complain me', 2p. 'If silent', 1598[15], C iv, 104; also as 'Upon a stage of silver', 2p. as 'O Richard, cruel tyrant', C iv, texts on p.xx]

119 Zefiro torna (Petrarch), 5vv, 1587b, C v, 54 [Eng. versions as 'Zephirus brings the time', 1597[24], C v, 105; and as 'Love is a pleasure', C v, 136]

86 The wine that I so dearly got, 5vv, 1597[24], C iii, 41 [Eng. text presumably replaces lost It. original; also adapted as c85 'The nymphs that in the groves do sport', C iii, 35]

CHANSONS

81 Aupres de vous, 5vv, C iii, 12 [Eng. version as 'Fair Phillida', C iii, 48]

82 Las, voulez vous, 5vv, C iii, 17 [Eng. version as 'How shall he sing', C iii, 52]

83 Le rossignol plaisant et gratieux, 5vv, C iii, 22 [Eng. version as 'The nightingale', 1588[29], C iii, 57]

224 Sur la rousee fault aller, 6vv, C ix, 154 [sources give text incipit only, attrib. 'Alfoncius': cf Charteris, 1987; see also Instrumental works, below]

84 Susanne un jour (G. Guéroult), 5vv, C iii, 28 [Eng. version as 'Susanna fair', 1588[29], C iii, 64]

LATIN SECULAR SONGS

79 Musica laeta, 5vv, C iii, 1

80 Virgo per incertos casus, 6vv, C iii, 7

CONSORT SONGS

87 What is the cause why truth doth purchase foes, 1v, 4 viols, inc., C iii, 47

INSTRUMENTAL

lute

198–202 5 fantasias, C ix, nos.1–5, N [c199 also in version for bandora]

— Fantasia, inc.; *GB-Omc* 265 (ascribed 'Alphoso'; see Craig-McFeely, 1993)

203–7 5 pavans, C ix, nos.6–10, N [c206 found in two versions, in different keys, and also in version for bandora]

215 The Spanish Pavan, 2 lutes, C ix, no.*9c*; N

208–9 2 galliards, C ix, nos.11–12; N

210 Miserere, C ix, no.13; N [intabulation of 2p. of Inclina Domine aurem tuam]

218 Ut re mi fa sol la, C ix, no.21*b*; N [intabulation of consort work]

D12 Ultimi miei sospiri, C ix, appx, 185; N [intabulation of Verdelot madrigal, ascribed 'AFerabosco' in *D-Hs* M B/2768]

211 Untitled piece, C ix, no.14; N

— Untitled piece, *GB-Lbl* Hirsch M 1353, f.68*v* [anon. intabulation of Benedic anima mea Domino]

bandora

199 Fantasia, C ix; N [also in version for lute; ascribed 'Alfonso' in *GB-Lbl* Add.31392 and to 'Ri Ali' (i.e. Richard Alison) in *Cu* Dd.2.11]

212–14 3 fantasias, C ix; N [c214 found in two versions, in different keys]

206 Pavan, C ix; N [also in 2 versions for lute]

keyboard

219 Fantasia, C ix; also ed. in MB, lv (1989), no.56 [score of 4-part consort work, perhaps for org acc.]

227 Fantasia, C ix; also ed. in MB, lxvi (1995), no.31

bowed strings

219 Fantasia a 4, inc., C ix, no.22*b*; also ed. in MB, xlv (1988), no.127 [all except tr reconstructed from kbd score]
225 [Fantasia] di sei bassi, 6 b [?viols], C ix, no.28; also ed. in MB, xliv (1979), no.68
220 Pavan a 5, C ix, no.130; also ed. in MB, xlv (1988), no.130
221–3 3 In Nomines a 5, C ix, nos.24–6; also ed. in MB, xliv (1979), nos.48–50
216 Duo, 2 tr, C ix, no.19; also ed. in MB, xlv (1988), no.115
224 Sur la rousée, 6 viols, C ix, no.27; also ed. in MB, xlv (1988), no.192 [textless chanson; see above]
217 [Ut re mi fa sol la], 2 tr, t, C ix, no.20 [compositional sketch]
218 Ut re me fa sol la, tr, 2 t, C ix, no.21a; also ed. in MB, xliv (1979), no.2 [also in version for lute]

DOUBTFUL OR MISATTRIBUTED WORKS

D1–2 Salva me, Domine (2p. Christe redemptor), 6vv [textless; ascribed 'alfonso' by Baldwin in *GB-Lbl* R.M.24.d.2]
D3 Sponsus amat sponsum, 5vv, inc. [ascription changed from 'Alfons' to 'Byrd' in McGhie partbook (private collection); Kerman (1981) doubts both ascriptions. Ascribed to Byrd in *Lbl* Add.32377; anon. in *Ob* Mus.Sch.E.423]
S3 O praise our Lord, ye saints above, 5vv; ed. C. Monson, *The Byrd Edition*, xi (1983), no.21 [ascribed 'Alphonso' in *Lbl* Add.18936–9; and to Byrd in *Lbl* Add.17797 and *Lbl* Add.31992]
D4 Le belle, 5vv [textless except for incipit; ascribed 'Alphonso' in *Lbl* Add.18936–9]
D5–6 Phyllis a herdmaid dainty (2p. This Thyrsis said, lamenting), 5vv [1p. ascribed to 'Alphonso' in *Lbl* Add.18936–9]
226 Pavan, mixed consort, inc., C ix, no.29; N [entitled 'Alfonsoes Paven' in *Cu* Dd.3.18, 14.24, 5.20 and 5.21; also found in lute and kbd versions attrib. Augustine Bassano; authenticity also questionable on dating grounds, but accepted by North and Charteris]
— Pavan, bandora, *Cu* Dd.2.11 (2 versions) [versions of c226, possibly by Ferrabosco (see Nordstrom)]
D7–11 3 passamezzos; Gagliarda del passo e mezzo, La battaglia, lute; N [ascribed 'Alfonsus de ferabosco' in *D-W* Guelf.18.8.Aug.2°, but doubtful on grounds of style (North, Charteris)]

LOST WORKS

— 40 canons '2 partes in one upon the playne songe "Miserere"' (Morley, *A Plaine and Easie Introduction*, 1597, p.115) [scheduled for publication in *Medulla: Musicke sucked out of the sappe of ... Master William Byrd ... and Master Alphonso Feraboseo* (see Stationers' Register, 15 Oct 1603)]

(3) Costantino Ferrabosco (*b* ? after 1550; *d* after 1596). Italian composer, almost certainly a brother of (4) Matthia Ferrabosco, but his name is absent from the baptismal rolls of Bologna. He had settled at Nuremberg in the service of the Emperor Rudolf II by 1590 when, in his only known publication (the *Canzonette a quatro voci*, Nuremberg, 1590), he is described as 'Constantino Ferrabosco Bolognese, Musico di S.M. Caesarea'. In the prefatory matter he referred to this as his fourth book. He returned to Italy, where in 1591 he was appointed *maestro di cappella* at Ancona Cathedral; in 1596 he apparently took up the same post in Fermo, and in 1597 was elected *maestro di cappella* in Ascoli Piceno. (G. Livi: 'The Ferrabosco Family', *MA*, iv, 1912–13, pp.121–42; *DBI*)

(4) Matthia Ferrabosco (*b* Bologna, bap. 16 July 1550; *d* Graz, bur. 23 Feb 1616). Italian singer and composer, almost certainly a brother of (3) Costantino Ferrabosco. His father was Ercole Ferrabosco. On 1 September 1581 he became a member of the court chapel of Archduke Karl at Graz; he served there in one capacity or another for 35 years. He came to the court as an alto singer, but his duties after 1588 also included that of teacher of the choirboys. Three of the latter, Cividino, Jelich and Simonetti, were to achieve some renown as musicians.

On the death of the archduke in July 1590, the chapel was much reduced, but Matthia was retained, and was engaged by Karl's widow to teach her sons Maximilian and Leopold. In 1603 Matthia was made *Undter-Capelmaister*, and Pietro Bianco his superior attested to his 'pious, upright, industrious, and artistically accomplished service'. He travelled with the chapel when it went to Regensburg and Vienna. Among his duties was the purchasing of instruments; in this capacity he bought from Nuremberg in 1607 ten trombones and 12 trumpets, and also bought music from Venice. Upon the death of Bianco in 1611, he became an administrative officer, but the post of Kapellmeister was left vacant for three years; it was eventually awarded to the (much younger) Giovanni Priuli. After Matthia's death, his widow Catharina successfully petitioned Archduke Ferdinand for a settlement in recognition of her husband's long service, and received the generous sum of 600 florins; this was followed in the next year by the 77 florins still outstanding for her husband's instruction of the choirboys and repair of instruments.

There is no record of Matthia as a composer of sacred music; his extant works comprise two villanellas in L. Torti's *Il secondo libro delle canzoni a tre voci* (Venice, 1584[10]) and 22 canzonettas in *Canzonette a quatro voci* (Venice, 1585; two are included in DTÖ, xc, 1954). It is clear that he was no innovator. The two villanellas are in the standard *AABCC* form, and are basically homophonic with syllabic declamation. The *Canzonette*, constituting a logical development of the villanella style, show heightened polyphonic interest and convincing attempts at madrigalian word-painting. Adrian Denss chose nine of the canzonettas to appear in his *Florilegium* (1594[19]), but a 'Gagliarda Ferabosci' in the same collection (f.77) cannot reliably be assigned to Matthia.

(5) **Alfonso Ferrabosco (ii)** (*b* Greenwich, *c*1575; bur. Greenwich, 11 March 1628). English composer and viol player of Italian descent, eldest and illegitimate son of (2) Alfonso Ferrabosco (i). He was arguably the most accomplished, innovative and influential composer of chamber music for viols, and of songs for court masques, of his generation in England.

1. Life. According to Anthony Wood (*GB-Ob* Wood D.19(4)) he was born in Greenwich, where he lived for much of his life. His mother was probably Susanna Symons, whom his father later married. When his parents left England soon after their wedding they left him and his infant sister in the guardianship of Gomer van Awsterwyke (or Gommar van Oostrewijk), a member of the queen's flute consort. In 1582 Alfonso (i) asked for his children to be brought to Italy, but the queen ordered their guardian not to let them go, and they remained in his charge until he died in 1592.

Shortly after Awsterwyke's death, Elizabeth granted the young Alfonso an annuity of £26 13s 4d as 'musitian for the violles', and he continued to receive this until 1601, but it appears that he took little part in court music during those years. Sometime before 30 April 1602 he petitioned Sir Robert Cecil for a reasonable stipend and something to pay his debts, and as a result was appointed to a court place with retrospective effect from 24 June 1601, at a salary of £50.

From Christmas 1604 he received a second court salary of £50 as an extraordinary groom of the Privy Chamber, as he was teaching music to the young Prince Henry; he also bought viols for the prince's use. That same Christmas saw the first of his collaborations with the poet Ben Jonson and the designer Inigo Jones on a masque for the Stuart court, *The Masque of Blackness*, given on 6 January 1605 with Queen Anne as the principal masquer. His music for the following year's Twelfth Night masque, *Hymenaei*, elicited warm praise from Jonson, and Alfonso seems to have been engaged to write songs for Jonson's play *Volpone*, acted at the Globe in 1606. He was a regular contributor of vocal music for court masques. In 1609 John Browne published two books of Ferrabosco's music, each representing a significant aspect of his creative work. The first, *Ayres*, contains songs and dialogues with lute and bass viol (fig.2), including settings of poems by Donne and Campion and solo songs for Jonson's masques. The second, *Lessons for 1. 2. and 3. Viols*, is devoted to pieces for lyra viol.

When Henry became Prince of Wales in 1610, Ferrabosco was not one of the musicians appointed to his household, but continued to serve in the King's Privy Chamber, a position that he kept after the prince's death

2. *'Deere when to thee' from Alfonso Ferrabosco (ii)'s 'Ayres' (London: Thomas Snodham, 1609)*

in 1612. Surprisingly, he seems not to have been involved in the prince's funeral; but following Prince Charles's creation as Prince of Wales Alfonso's name headed the list of musicians appointed to serve him. Outside the royal family his patrons may have included Philip Herbert, Earl of Montgomery (later Earl of Pembroke), and Edward Seymour, Earl of Hertford.

Despite an 11-year gap after 1611 in Ferrabosco's known collaborations with Jonson, there seems to be no evidence to suggest that they had quarrelled, as some (e.g. Chan) have supposed. Nevertheless a change can be detected from around 1615 in the way that Jonson expected his masques to be treated musically (Walls). In the Twelfth Night masque for 1617, *The Vision of Delight*, and in *Lovers made Men*, a private masque given the following month, an apparently novel feature was verse 'sung (after the Italian manner) Stylo recitativo'. Nicholas Lanier (ii) was the composer for *Lovers made Men*, and when Ferrabosco's name next appears in connection with a masque it is as Lanier's collaborator in the *Masque of Augurs* (1622).

Meanwhile Ferrabosco remained prominent as a string player at court; he was listed in 1624 at the head of a group of four 'Musicians for the Violls', and he was responsible for purchasing instruments in 1623 and 1627, including 'lyras'. It is not clear whether these were 'lyras' of the recently invented sort, with sympathetic strings, but Ferrabosco probably did play on such instruments. The viol player André Maugars, visiting England as one of Queen Henrietta Maria's musicians (1625–7), declared that he heard no player of 'la Lyre' in Italy who was fit to be compared with the great 'Farabosco d'Angleterre' (Thoinan).

By 1617 Ferrabosco's annual salary at court had risen to £140, but he continued to incur debts. A dozen years or more earlier he had married Ellen Lanier; but his financial difficulties may have resulted less from having to feed a growing family than from a rash business venture upon which he embarked with his brother-in-law Innocent Lanier, one of the king's flautists. Along with Captain Hugh Lydiard, a merchant seaman, they were granted rights to dredge the Thames and to sell sand and gravel taken from the river-bed, to levy a penny per ton on imports to and exports from the port of London, and to collect fines imposed for causing annoyance on the river. In 1625, having sold his share in the patent of this badly managed venture, Ferrabosco seems to have withdrawn from the partnership. In January 1626 he was preparing to travel 'beyonde the seas', though his purpose is unknown.

In July 1626, following Coprario's death, he was granted a fourth court post, that of 'composer of musicke in ordinary' to the king, which added another £40 a year to his income. He died in 1628 and was buried on 11 March at the church of St Alfege, Greenwich. His four court posts were granted to two of his sons, Alfonso (iii) and Henry; (6) John Ferrabosco was also a musician, and two of his daughters married musicians: Elizabeth married George Bunckley, and Katherine married EDWARD COLEMAN and was herself well known as a singer. (For further details of Henry and Alfonso (iii) see *BDECM*.)

2. WORKS. Vocal music was an important element in Jonson's masques, and Ferrabosco's surviving masque songs give but a partial view of his contributions. It is disappointing that we do not have a single chorus by him, as some of the most impressive moments must have been choral. Likewise all the more elaborate songs are lost. Only two solo songs out of at least seven numbers (including choruses and duets) from *Oberon, the Faery Prince* (1611) have come down to us; and all his music for the *Masque of Augurs* (1622) is lost.

For the surviving masque songs imagination is needed to gauge their original effect in performance. The singers were chosen for their ability to project their voices loudly, supported by a dozen lutes, in the banqueting house at Whitehall, and there is evidence that they embellished the melodies ('Why stayes the bridegroome' is an example of a song that is found in a florid version in one manuscript). The style of the masque songs matches their function. So 'If all the ages of the earth' is proclamatory in character, using simple, bold, diatonic harmonies in support of a vocal line that, while skilfully shaped, is unusually disjunct. This style is carried even further in 'Gentle knights' and 'How neere to good is what is faire': both songs have a wide tessitura and incorporate such features as scalic runs traversing an octave or more, and phrases that leap a 12th in two bounds.

Of his other songs, *Sing wee then heroyque grace* approaches most closely the masque style; it was probably intended for a festivity or entertainment in honour of King James, with two trebles and a tenor each singing a section. Elsewhere, in *Like hermit poore* or the setting of Donne's *So, so, leave off this last lamenting kisse*, the rhetorical manner is tempered with intimacy of expression. *Unconstant love* is reminiscent of the consort song tradition, with its delicately contrapuntal lute accompaniment and mainly syllabic word-setting. In a lighter vein is *Young and simple though I am*, a strophic setting of verses by Campion. The dialogues, which typically take the form of conversations between a nymph and a lovelorn shepherd, are noteworthy for being among the earliest such pieces composed in England, and it is in these that the new declamatory style is most clearly in evidence.

Though Ferrabosco may never have visited Italy, he took a close interest in recent Italian music. His *madrigalette* for four high voices, which probably date from shortly before the turn of the century, resemble the *Canzonette* of Felice Anerio (Venice, 1586). Ferrabosco took some of his texts from Anerio's book, others from collections of Italian songs published between 1570 and 1593. His lute-song *O eyes, O mortall starres* probably originated as a setting of Guarini's *Occhi, stelle mortali*; in one manuscript the Italian as well as the English words are underlaid. The Italian monodies in *GB-Ob* Tenbury 1018 seem to be the earliest such pieces by an English composer that have come down to us. Three are settings of dramatic texts from Guarini's *Il pastor fido*, in which Ferrabosco emulated the rhetorical declamation of Caccini's solo madrigals; in particular, *O crudel Amarilli* stands out for its dignity, clarity of structure and expressive force.

For the Latin sacred music the so-called Tregian scorebooks *US-NYp* Drexel 4302 and *GB-Lbl* Eg.3665 are a principal source. These works may have circulated among English Catholics, although there is no evidence that Ferrabosco was ever accused of recusancy himself. His main reason for writing them was perhaps to honour Alfonso (i)'s memory and acquire mastery in a field in which he had excelled. Alfonso (ii) set some of the same motet texts as his father (*Laboravi in gemitu meo*;

Tribulationem et dolorem inveni) and took as the main model for his Lamentations Alfonso (i)'s setting c65. Possibly a particular commemoration lies behind a motet with so unusual a coupling of texts as the antiphon *Ubi duo vel tres congregati fuerint* and the burial respond *Libera me, Domine*. The Lamentations were probably never sung liturgically; however, they would have been an emotive reminder of the Tenebrae service for Catholic sympathizers.

The verse anthem *Have ye no regard, all ye that pass by* – also a Lamentations text, but in this case destined for Anglican use – was in the repertory of Charles I's Chapel Royal and several cathedrals. Ferrabosco also contributed three devotional songs to Sir William Leighton's *Teares or Lamentacions of a Sorrowful Soule* (1614). One of these skilfully worked miniatures, *In thee, O Lord, I put my trust*, is set for four treble voices, an unusual combination that he had used in some of his early canzonettas.

Ferrabosco's reputation as a composer rests above all on his consort music. One of his achievements was to develop an idiomatic style of imitative counterpoint suited to viols. Limber, agile subjects and division figuration help to give the music its distinctive character. By continuing boldly in his father's footsteps and treating the In Nomine as an exhilarating genre of string chamber music, he helped to keep this English tradition alive well into the 17th century. A fondness for architectural symmetry and harmonic schemes is apparent in the remarkable 'In Nomine through all parts', in which the plainchant melody, rather than being played in breves by a single viol, is given in different rhythms and different transpositions to each of the six instruments. Another symmetrically planned work is the bipartite *Ut re mi fa sol la*, based on a cantus firmus of extraordinary audacity which results in no fewer than seven enharmonic modulations: in the *prima pars* the treble viol plays a series of eight ascending hexachords, each pitched a semitone higher than the preceding one; in the *secunda pars* the same eight hexachords are heard descending and in reverse order. Ferrabosco may have intended the work as a viol player's riposte to an *Ut re mi fa sol la* for keyboard by Bull; the four-part version probably came first, and was revised before being expanded into the five-part version (which, despite Lowinsky's preference for the authorship of Alfonso Dalla Viola, seems certain to be by Alfonso (ii); see Field, 1999).

As in the cantus firmus pieces, Ferrabosco demonstrated an architectonic approach to tonal and thematic organization in his fantasias, in contrast to the madrigalian style favoured by some of his English contemporaries. He was one of the first composers in England to unify a fantasia by concentrating on a single point, to crown a design by bringing back subjects heard earlier, and to make strategic use of augmentation or diminution. Many of his fantasias consist of two large sections, a form that allowed scope for extended fugal treatment of subjects as well as thematic or modal contrast. His work was to have a strong influence on younger composers, including Jenkins and William Lawes. Some of his most serious and contemplative chamber music may be found in his pavans. They include the beautiful Dovehouse Pavan, one manuscript of which is in the youthful hand of William Lawes (*GB-Lbl* Add.40657–61). Lawes used keyboard reductions of Alfonso's C major pavan (VdGS 2) and an alman in the same key (VdGS 1) as the basis for variations for two division bass viols and organ (MB, xxi, 1963, no.6). Ferrabosco's Pavan on Four Notes was used as the model for a pavan by Daniel Farrant; Ben Jonson wrote his *Hymne to God the Father* ('Heare me O God') to fit its treble, thus transforming it into a consort song, in which form it was already being copied into manuscripts between 1610 and 1620.

Ferrabosco appears to have been the author of two virtuoso arrangements for division viol of Palestrina's *Vestiva i colli* – their title, 'Sound out my voyce', comes from the English adaptation of the madrigal printed in *Musica transalpina* (1588) – which show a sure grasp of the style of diminution or *passaggio* playing associated in Italy with the viola bastarda (Holman, 1993; Otterstedt, 1998). No divisions on grounds by Ferrabosco are extant, but a book of 'Pavans, Fantasies, Grownds, &c with Devisions upon them' by 'Alfonso Ferabasco' and others was in the Duke of Newcastle's library in 1636 (Hulse).

According to Playford's *Musicks Recreation on the Viol, Lyra-Way* (2/1661 and subsequent editions) Ferrabosco, Daniel Farrant and John Coprario were the first to write lessons in tablature so as to facilitate the use of different tunings, and featuring chord playing. Whether or not Playford was right to assign priority to these men, Ferrabosco's *Lessons* is the earliest book devoted exclusively to music for lyra viol. What is more, some of these pieces had been in circulation for long enough to be misattributed to others, as we learn from the composer's preface. Three tunings are used: the 'old lyra way' (if the top string is tuned to *g*′: *g*′–*d*′–*b*♭–*f*–*B*♭–*F*), 'Alfonso way' (*g*′–*d*′–*a*–*d*–*A*–*D*) and 'eights' or 'octave way' (*g*′–*d*′–*g*–*d*–*G*–*D*). Most of the solos are dance pairs, consisting of a pavan, alman or galliard coupled with a coranto that is usually derived fairly closely from it. Though some of the pavans and almans originated as consort pieces (critical comparison suggests that the consort versions generally came first), the corantos all appear to have been specifically composed for the lyra viol and no consort versions of them survive. In the section devoted to duos, the relationship between an alman or galliard and its coranto is much looser, because the coranto is always an arrangement of one that had originally been paired with a different dance for a single viol. Transcriptions for three lyra viols of a four-part fantasia and a five-part pavan add weight to the collection. But it is from the lyra solos that we can perhaps best form an impression of Ferrabosco's artistry on an instrument which, in his hands, seemed like the Jacobean equivalent of Orpheus's lyre.

(6) John Ferrabosco (*b* Greenwich, bap. 9 Oct 1626; *d* Ely, bur. 15 Oct 1682). English organist and composer, youngest son of (5) Alfonso Ferrabosco (ii). During the Civil War he seems to have served as a musician to Charles I: he was paid £5 on 30 July 1646 and and a further £4 on 26 April 1649, three months after the king's execution. In 1662 he became organist and master of the choristers of Ely Cathedral. One of his early tasks was to copy new music books for the choir, for which he was paid £10 in June 1663; two organ-books and a tenor partbook mainly in his hand survive (*GB-Cu* Ely 1, 4, 28). He was also reimbursed by the Chapter in connection with 'several music meetings' between 1663 and 1665. His full anthem *The king shall rejoice* was probably composed for Charles II's visit to Ely Cathedral in 1669 (Spink). In that year Ferrabosco relinquished his duties as master of the choristers; he continued as the cathedral organist, but is said to have lost his sight towards the end of his life. The MusB was conferred on him by the University of Cambridge in 1671, at the king's request. On 28 June 1679 he married Anne Burton at Trinity Church, Ely.

Ferrabosco was an assiduous and practical composer for the restored Church of England liturgy, if not a strikingly imaginative one. Much of his music has come down to us in a defective state because of the loss of partbooks. 18th-century scores exist of some of his services, however, and the fully written-out autograph organ parts of his verse anthems reveal much about their texts (invariably from the Psalms), scoring (boy soloists were evidently being used at Ely by the mid-1660s) and style (generally conservative). Ferrabosco supplied the repertory with services for Morning and Evening Prayer and Holy Communion in a wide choice of keys, using the old device of the head-motif to give an effect of unity between canticles. The full service in C, of which only the tenor part survives, was unusual in being almost entirely in triple time. His communion services customarily comprise the Sanctus (which at Ely seems to have been sung immediately after the opening collect), responses to the Ten Commandments, doxology before the Gospel ('Glory be to thee, O Lord'), and Creed. The Burial Service, a comprehensive liturgical setting that begins with the sentences sung 'upon meeting the Corps entering in Procession' and ends with the anthem 'sung at the Grave', is a work of simple and sombre dignity.

Ferradini [Feradini, Ferrandini], **Antonio** (*b* Naples, ?1718; *d* Prague, 1779). Italian composer. Fétis suggested 1718 as his birthdate. His earliest works are sacred pieces dating from 1739, and the oratorio *Giuseppe riconosciuto* (Naples, 1745). In 1751–2 he composed operas for the north Italian cities of Lugo and Sinigaglia, and contributed to a pasticcio produced at Forlì. Between 1757 and 1760 his operas were produced at more important centres in north central Italy and in Madrid. At Parma in Carnival 1757 he produced his only comic opera, to a libretto by Goldoni, *Il festino*, which is of historical interest as it was written during Goldoni's stay in Parma. According to his memoirs, Goldoni was satisfied with Ferradini's setting. Gerber rated him highly as a composer for both church and theatre and claims his *Stabat mater* was performed at the Crusaders' church (St František) in Prague in 1780 and 1781 (text published as *Compatimento pietoso dei figli al duolo della madre*, Prague, 1781). Gerber's assertion that Ferradini spent 30 years in Prague is doubtful (his operas were still being produced in Italy in the late 1750s), but he was probably there by 1763 when his setting of *Giuseppe riconosciuto* was performed.

Ferradini's compositions are sometimes confused with those of the better-known Giovanni Battista Ferrandini, as some works bear only a surname. For example, the arias attributed to him in the pasticcio *La finta frascatana* are most likely the work of Ferrandini, as are four cantatas and five arias attributed to Ferradini by Eitner.

DENNIS LIBBY, JAMES L. JACKMAN/REBECCA GREEN

Ferrandiere, Fernando. *See* FERANDIERE, FERNANDO.

Ferrandini [Ferandini], **Giovanni Battista** [Johann Baptist, Zaneto] (*b* Venice, *c*1710; *d* Munich, 25 Sept 1791). Italian composer. He was a pupil of Antonio Biffi at the Conservatorio dei Mendicanti in Venice and went to Munich as a boy. On 15 May 1722 he found a position as oboist with Duke Ferdinand in Bavaria. He was appointed, probably in 1723, to the elector's court musicians, although he remained in the duke's service until 1726. Stefano Ferrandini, possibly his brother, worked with him from 1 January 1723 until 1745, also as a court oboist. From 1 April 1732 Ferrandini was chamber composer to Elector Karl Albrecht; on 1 July 1737 (having two years previously dropped his baptismal name Zaneto in favour of Giovanni Battista) he was made 'kurfürstlicher Rat' and director of chamber music. In the

same year Le Cène published his *VI sonate a flauto traversière a basso* op.1 in Amsterdam, which were later followed by *VI sonate a flauto traverso o oboe, o violino, basso continuo* op.2, published in Paris by Boivin and Le Clerc.

The new Residenztheater in Munich, built by Cuvilliés, was opened in 1753 with a production of Ferrandini's *opera seria*, *Catone in Utica*. At the end of the same year Ferrandini travelled to Italy to engage new singers for the court. In 1755 he was granted the title of Truchsess (Lord High Steward to the elector), along with a pension, and was allowed to move to Padua for reasons of health; however, he continued to compose operas for the court. Leopold and Wolfgang Mozart visited him in Padua in March 1771, with the young Mozart performing before him on the harpsichord. His pension was reduced in 1778, and around 1790 he returned, briefly, to Munich.

Ferrandini was highly regarded as an opera composer in Munich, and his works were also favourably received in performances elsewhere. His operas, originating in the Venetian tradition, do not show the lightness of the Neapolitan, and reflect the return from French to Italian musical taste at the Munich court. He also wrote instrumental works, a *Fastenmeditation*, *Prima ad caelum via per innocentiam*, for the Congregatio Latina Major in Munich (1738) and numerous arias, many to texts by Metastasio. Among his pupils were the Elector Maximilian III Joseph, his sister Maria Antonia Walpurgis and the tenor Anton Raaff. His daughter Maria Anne Elisabeth was a singer who, among other roles, represented Tamiris in Bernasconi's *Semiramide* at Munich in 1765.

ROBERT MÜNSTER

Ferrani [Zanazzio], **Cesira** (*b* Turin, 8 May 1863; *d* Pollone, nr Biella, 4 May 1943). Italian soprano. She studied with Antonietta Fricci in Turin, where she made her début in 1887 as Micaëla and later sang Gilda. After singing in Venice and Genoa, where she took part in the first performance of Mascagni's *Le maschere* (1891), she created the title role in Puccini's *Manon Lescaut* at Turin (1893), repeating the role in Buenos Aires, Rome and other cities. She sang Suzel (*L'amico Fritz*) at Monte Carlo (1895), then created Mimì in *La bohème* at Turin (1896). At La Scala she sang Mélisande in the first Milan performance of *Pelléas et Mélisande* with Toscanini (1908). Her repertory included Juliet, Massenet's Sapho and Charlotte, Amelia (*Simon Boccanegra*), Elisabeth (*Tannhäuser*), Elsa and Eva (*Die Meistersinger*). She retired from the stage after a final appearance as Mélisande (Rome, 1909), a role in which she was much admired, and devoted herself to teaching in her native city, opening her salon to the intellectuals of Turin.

At the same time as Gemma Bellincioni, the first Santuzza, was established a model of the dramatic soprano entirely in the grip of passion, Ferrari succeeded in asserting her aristocratic style, emphasizing polished singing over sheer volume. While this made her the Puccini soprano *par excellence*, it inevitably precluded her from singing Tosca.

Her voice is preserved on a series of discs recorded by the Gramophone and Typewriter Company in Milan in 1903.

ELIZABETH FORBES/MARCO BEGHELLI

Ferrara. City in the Emilia region of northern Italy. The history of music there divides into two periods, corresponding to its political and cultural history. From 1240 to 1598 the city was under the continuous political rule of the Este family and was the centre of a small but politically important marquisate, later a duchy, that at its height included Modena, Reggio nell'Emilia, Rovigo and the Polesine; after 1598, when the Estensi lost the city to the papacy and transferred to Modena, Ferrara's musical activity lost its autonomous importance but continued to flourish.

At the beginning of the 11th century Guido of Arezzo was educated and began his teaching and theoretical writing in the nearby Benedictine abbey of Pomposa, a traditional centre for plainsong instruction which continued to the 16th century. In the 15th century the court of Ferrara experienced a remarkable rise to the status of an internationally important musical centre. The chief impetus was the patronage of four successive members of the Este family, who ruled during this period: Niccolò III, Leonello, Borso and Ercole I.

During the reign of Niccolò III (1393–1441) the first musicians were engaged at court on a regular basis. Beginning in the 1420s Niccolò employed several trumpeters, three 'pifferi' (wind players), a certain Leonardo dal Chitarino (1424) and a Niccolò Tedesco *cantore*, defined in one source as *cantor suavissimus et pulsator eximius* (active there *c*1436–62). Niccolò Tedesco may

1. *'Triumph of Venus', upper register of the 'Allegory of April' ('Taurus'): fresco by Francesco del Cossa, c1468–70 (Salone dei Mesi, Palazzo Schifanoia, Ferrara); musicians with lutes and recorders can be seen on the right*

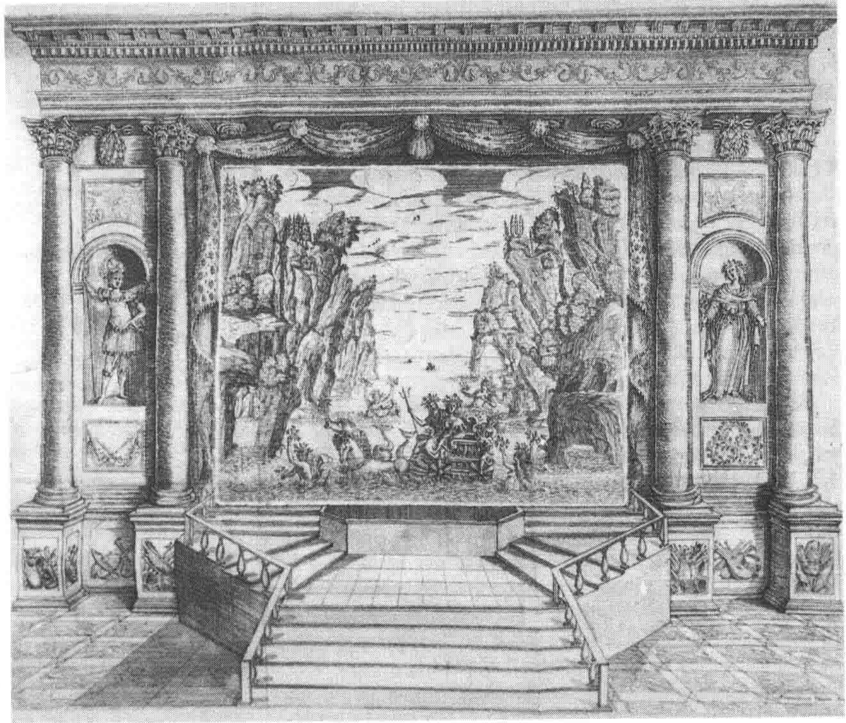
be the Nicolaus Krombsdorfer who worked for the Habsburg Duke Sigismund from 1463. In 1429 the celebrated humanist Guarino of Verona was brought to Ferrara, and his presence may be partly responsible for a more active cultivation of music at court, as it certainly was for the arts and letters. In 1433 a *libro de canto* was copied for the young Leonello, son of Niccolò III and pupil of Guarino, and in 1437 a volume of *regole de canto* was made for his use. Du Fay, who wrote a ballade for Niccolò III, may have visited the court in 1433; he certainly did so in 1437. No doubt the convocation that year of an ecumenical council provided further impetus to the gathering of musicians there.

With Leonello d'Este, despite the brevity of his reign as marquis (1441–50), the great flowering of Ferrarese art and literature really began, and music too received powerful stimulus. Leonello founded a court *cappella* 'in the royal manner' and brought in singers from abroad to staff it. From four singers in 1436 he increased the *cappella* to at least ten in 1450, including, at various times, Johannes Fede, Niccolò Tedesco, Giovanni de Leodio, Andrea da l'Organo and Zoanne de Monte. Musicians both native and foreign were present not only at the court but also at Ferrara Cathedral and at the university, which had been founded in 1395 and revived under Leonello. At the cathedral the organists had included the composer Bartolomeo da Bologna (1405–27) and were later to include the theorist Ugolino of Orvieto (to 1457) and Benedetto Camelli da Pistoia (1458). The presence at the university of a group of English students was specially noteworthy at that time (see Scott, 1972) and may well be closely related to the large representation of English composers in two important musical manuscripts from Ferrara of this decade (*P-Pm* 714, see Pirrotta, 1970; *I-MOe* α.X.1.11, see Hamm and Scott, 1972). Scott has even conjectured that Ferrara may have been a meeting place for Du Fay and Leonel Power in 1438 or 1439.

Under Borso d'Este (1450–71), who became Duke of Modena in 1452 and the first Duke of Ferrara in 1471, the former corps of singers was all but suppressed at court in favour of instrumentalists, led by the famous Pietrobono del Chitarino, one of the most celebrated lutenist-singers of his time. Pietrobono was praised in extravagant terms by Cornazano and the humanist writers Beroaldo, Battista Guarino and Paolo Cortese, and also by Tinctoris. Borso was better known for his patronage of art, which included the splendid frescoes of the Palazzo Schifanoia in Ferrara (containing representations of musical instruments and domestic life at court; fig.1) and illuminated manuscripts from local workshops that later produced music manuscripts.

Ercole I d'Este (Duke of Ferrara, 1471–1505) can be counted the greatest Ferrarese cultural patron of the 15th century, and of all Italian princes of the era perhaps the most keenly interested in music. Early in his reign he established a court *cappella*, called in singers from abroad and made a special effort to create something new by founding a double choir, one of men and one of boys from Germany, which lasted until 1482. An early appointment was that of Johannes Martini, who remained a leading figure in the chapel from 1472 until his death in 1497 and was the music teacher of Isabella, later Duchess of Mantua. While maintaining and even increasing the staff of instrumentalists left from Borso's reign, Ercole added still more singers to his *cappella*. To attract and hold these musicians he obtained benefices for them and negotiated with each succeeding pope the right to confer such benefices on as many as 20 of his singers. By further offering good salaries, houses in Ferrara and special favours, he was able to obtain excellent singers and maintain a large and balanced *cappella*. Among its better-known members, besides Martini, were Jean Japart (1477–9), Jachetto da Marvilla and Johannes Ghiselin (1491–3). In 1487–8 Obrecht visited the court and was nearly engaged, but Pope Innocent VIII turned down a benefice for him at Ferrara, evidently wanting him for the papal chapel. Ercole's lavish patronage is further shown by his decision to engage Josquin at 200 ducats when he was urged to engage Isaac who would come for 120 (see

Lockwood, 1971); Josquin was in the duke's service in 1503–4 and was replaced in 1504 by Obrecht, who was there until his death in 1505. Josquin's *Missa 'Hercules dux Ferrariae'* drew on the vowels of Ercole's formal name for its basic musical subject, and was thus a special kind of musical tribute.



The two eldest sons of Ercole, Duke Alfonso I and Cardinal Ippolito I, were both important patrons. Alfonso (reigned 1505–34) maintained the ducal *cappella*, though on a smaller scale than before, negotiating benefices as Ercole I had done. After the death of Obrecht he secured Antoine Brumel as *maestro di cappella*. Cardinal Ippolito I (1479–1520), whose ecclesiastical empire included holdings in Hungary, Milan, Ferrara and elsewhere, was particularly fond of secular and instrumental music. In 1516 he employed 12 musicians while the ducal *cappella* had ten. The cardinal's musicians included the young Adrian Willaert (who was in his service by at least mid-1515 and went to Hungary with him in 1517) along with Jusquino Cantore (not Desprez, it seems, but perhaps the Josquin Doro who was later in the papal chapel), as well as a number of instrumentalists. Still other important musical activity in Ferrara at this period took place under the tutelage of Alfonso's little-known brother, Sigismondo (1480–1524), and Alfonso's wife, the famous Lucrezia Borgia. The trend was towards writing, copying and procuring secular music rather than sacred, though many of the manuscripts known from this time contain motets. The leading figures of the period from 1515 to 1534 are Willaert (who went to Venice in 1527), Zoanne Michiele (a copyist and singer), Maistre Jhan (later an important motet composer), Simon Ferrarese and the members of the Dalla Viola family, especially the young Alfonso, later an important madrigalist. In 1515 Alfonso I was directly in touch with Jean Mouton at Milan (then in the retinue of François I) and during the next several years sought his music through emissaries in France. Ferrara was specially important as a conduit for the importation of French music into Italy, and was musically on a level of patronage equal to that of the French and papal courts. This tendency was fortified by the marriage of Alfonso's son and successor, Ercole II, to Princess Renée of France in 1528.

Under Ercole II (1534–59) the chief musicians were Maistre Jhan, Alfonso dalla Viola and Cipriano de Rore (*maestro di cappella*, 1546–59). Ercole II continued the important tradition of court theatre that had been begun by Ercole I in 1486 and continued under Alfonso, for whose wedding to Lucrezia Borgia in 1502 Tromboncino composed a 'musicha mantuana' (probably a frottola) for a performance of a Plautus play, one of the first examples of music used as *intermedi*. Music between the acts or at the end of such plays as G.B. Giraldi Cintio's *Orbecche* (music by Alfonso dalla Viola) and *Egle* (music by Alfonso del Cornetto) was written by these court musicians between 1541 and 1567. Another form of spectacle which took shape in Ferrara about the middle of the century was a sort of musical play which introduced a tourney. In Ferrara Vicentino, who was in the service of Ercole II's brother Cardinal Ippolito II, invented his *arcicembalo* and finished his treatise (1555), in which he calls himself 'musico del Cardinale Ippolito II'.

With Alfonso II (1559–97) the last great flowering of music in Ferrara took place. He was the patron and the dedicatee of the *Musica nova* (1559) of Willaert, who had never lost touch with Ferrara. The most famous of Alfonso's own musicians were Luzzasco Luzzaschi, Francesco dalla Viola, Lodovico Agostini, Paolo Isnardi and, as a frequent visitor from Mantua, Giaches de Wert. The performances given at court as part of its *musica secreta* by various singers became particularly well known in the later 16th century. The presence of Luzzaschi (Frescobaldi's teacher) implies not only the increased importance of instrumental music but the development of expressive monody alongside a flourishing tradition of madrigals written for performance by virtuosos (see *NewcombMF*). The wealth of musical activity in Ferrara and in the Estense dominion towards the end of the century is emblematically testified to by the collection of madrigals *Giardino de' musici ferraresi* (Venice, 1591), in which 21 composers resident in Ferrara are represented. An important political event with strong musical implications was the marriage of Leonora d'Este, Alfonso II's niece, to Gesualdo in 1594. The wedding festivities, described in Bottrigari's *La mascara*, included a *favola boscareccia, I fidi amanti*, composed specially for the occasion by Ercole Pasquini. The late 16th-century adaptation of music to theatre in Ferrara, above all in the pastoral dramas of Guarini and Tasso, significantly foreshadows the rise of opera at Florence a few years later.

With the removal of the Estensi to Modena in 1598 and the annexation of Ferrara to the Papal State, the city did not fall into cultural decline; it became instead an important centre for the origin and growth of theatre and instrumental music. The Accademia degli Intrepidi (to whom Monteverdi dedicated his fourth book of madrigals, 1603) provided entertainment in two theatres: the Teatro della Sala Grande (or Grande di Corte, built 1610) and the Teatro degli Intrepidi (or Teatro di S Lorenzo, built 1604–5). Both were designed by the Ferrarese architect G.B. Aleotti and organized according to the same plan as that of buildings for tourneys: a series of large boxes superimposed in three or four rows in the shape of a horseshoe, where the lower rows were reserved for the nobility and the upper for foreign visitors and the bourgeoisie. This organization, exactly reflecting the structure of the society attending the performances, anticipates that of the modern opera house. Both theatres were used for court celebrations and spectacles, which consisted primarily of tourneys and spoken dramas with musical intermezzos; one of the most important performances at the Teatro della Sala Grande was that of Michelangelo Rossi's *Andromeda* (to a text by Ascanio Pio di Savoia) in 1638 for the wedding of Cornelio Bentivoglio and Costanza Sforza (fig.2). Important scenic innovations also took place in Ferrara, mainly the work of Alfonso Rivarola (Il Chenda); he invented the various machines for the movements on the stage and for the changes of scenery. Through Marquis Enzo Bentivoglio, a nobleman who held important diplomatic offices at the courts of Mantua, Turin, Parma and Rome, the Ferrarese theatrical inventions spread through Italy; thus Aleotti and Rivarola built a large court theatre in Parma in 1618, the Teatro Farnese, the oldest surviving theatre with a mobile stage, based on Ferrarese models. Pio Enea degli Obizzi, a Paduan nobleman who had strong theatrical interests, acquired the Teatro degli Intrepidi, renamed it after his family, and had performed there, among other works, *Le palme d'amore* (1650, music by A. Mattioli), *Calisto ingannata* (1651) and *Endimione* (1655, music by G. Tricarico); the theatre was rebuilt in 1660 (fig.3) but

3. Interior of the Teatro Obizzi, Ferrara, after its reconstruction in 1660: engraving

was burnt down in 1679. The Teatro della Sala Grande burnt down in 1660. Equally important during the 17th century in Ferrara was the Teatro Bonacossi, built in 1662; notable performances there included Legrenzi's *Achille in Sciro* (1663) and *Zenobia e Radamisto* (1665), Bassani's *Alarico re de' Goti* (1685) and Fortunato Chelleri's *La caccia in Etolia* (1715; the libretto by Valeriana was set by Handel in 1736 as *Atalanta*). The tradition of a musical play as a prologue for a tourney continued in the 17th century with *Gli sforzi del desiderio* (text by Francesco Berni, music by Mattioli, 1652) for the arrival in Ferrara of Anna de' Medici, wife of the Emperor Ferdinand III of Austria, and with *Oritia* (text by Passarelli, music by Mattioli, 1655) to celebrate the brief visit of Queen Christina of Sweden.

Academies with devotional aims fostered the growth of instrumental music, much of which, however, took place outside Ferrara: the Accademia della Morte, founded in 1592, had among its organists Luzzaschi, Ercole Pasquini and Frescobaldi, and among its *maestri di cappella* Ippolito Fiorini (1594), Giulio Belli (1597), Alessandro Grandi (from 1597 and probably until at least 1610), Maurizio Cazzati (between 1640 and 1654, perhaps not continuously), Biagio Marini (1652–3) and Luigi Battiferri (1653–7 and 1660–62), who for a time was also *maestro di cappella* of the other devotional academy, the Accademia dello Spirito Santo. Indeed the shift from the position of organist to *maestro di cappella*, from one institution to the other and to the *cappella* of the cathedral was common in the second half of the century; thus G.B. Mazzaferrata, formerly organist of the Accademia della Morte, became its *maestro di cappella* by 1668 and was later *maestro* at the cathedral. G.B. Bassani also followed this pattern; further, when he was *maestro di cappella* at the cathedral in 1710, he wrote a series of settings of the Proper for the major feasts of the liturgical year, still in the archives of Ferrara Cathedral. G.B. Legrenzi was *maestro di cappella* at the Accademia dello Spirito Santo (1656–65), and during this period, like many other composers active in Ferrara after him, he also wrote for the theatre.

During the 18th century, opera in Ferrara was mounted mainly by touring companies, subject to the approval of the papal legate; a lively account of the various difficulties involved can be gathered from the only surviving letters of Vivaldi, which deal with performances of his operas in Ferrara by his company (see Cavicchi, 1967). Significantly these letters come from the Bentivoglio archive, showing this aristocratic Ferrarese family's continuing interest in opera. The Teatro Nazionale (now Teatro Comunale) was opened on 2 September 1798 with M.A. Portugal's *Gli Orazi e i Curiazi*; among the operas to have their first performances there was Rossini's *Ciro in Babilonia* (1812). The theatre was closed from 1945 to 1964, and reopened only after substantial renovation; it now operates under the auspices of the Associazione Teatri Emilia Romagna, a regional circuit for touring companies.

Public teaching of music began in 1740 with the founding of the Scuola di Musica; it was continued during the 19th century largely through the activity of Antonio Mazzolani (1819–1900), who founded a choral society, the Adofili dell'Alleanza (later named Orfeonica), mainly to extend music education to the working class. The city-supported Liceo Musicale G. Frescobaldi was founded in 1869 and recognized by the state in 1939; it is now a conservatory.

The Società del Quartetto in Ferrara was founded in 1898 for the performance of chamber music. Concert activity is entrusted to the Amici della Musica, an association that organizes chamber music performances at the conservatory.

LEWIS LOCKWOOD/MURRAY STEIB

Ferrara, Franco (*b* Palermo, 4 July 1911; *d* Florence, 6 Sept 1985). Italian conductor and teacher. After studying the piano, the violin, the organ and composition at the conservatories of Palermo and Bologna, he made his conducting début in Florence in 1938, and quickly acquired a reputation as one of the outstanding talents of his generation. But his career was cut short by a nervous illness, and he devoted himself to teaching, giving celebrated courses at the Accademia di S Cecilia in Rome and, from 1966, at the Accademia Musicale Chigiana in Siena. Among his students were Riccardo Chailly, Edo de Waart and Andrew Davis.

RICHARD WIGMORE

Ferrarese [Ferraresi, Ferrarese del Bene], **Adriana** [Andreanna, Andriana] (*b* Valvasan o [now Friuli], bap. 19 Sept 1759; *d* after 1803). Italian soprano. As a student at the Ospedale dei Mendicanti in Venice from 1778 to 1782 she sang in oratorio. She has long been identified with a Francesca Gabrielli, '*detta* la Ferrarese', whom Burney heard at the Ospedaletto in Venice in 1770; Gerber may have been the first to assume that Burney's Gabrielli and Adriana Ferrarese were one and the same, but no solid evidence links them. She eloped with Luigi del Bene in December 1782, appeared in a serious opera in Livorno during autumn 1784 and Livorno before arriving in London in 1785. During her two years there she sang initially in serious opera and then, because she was overshadowed in that genre by Mara, in comic, where she was assigned the serious roles. By autumn 1786 she was back in Italy, where she sang exclusively in *opera seria*.

Ferrarese made her Vienna début on 13 October 1788 as Diana in Martín y Soler's *L'arbore di Diana*, in which she sang two substitute arias; the *Rapport von Wien* remarked: 'connoisseurs of music claim that in living memory no such voice has sounded within Vienna's walls. One pities only that the acting of this artist did not come up to her singing'. She went on to sing Eurilla in Salieri's *La cifra* (1789) and her most famous role, Mozart's Fiordiligi (26 January 1790). Her tenure of 30 months coincided with the peak of Lorenzo da Ponte's influence; she was dismissed with Da Ponte, with whom she was romantically involved, in early 1791, and continued her career, in serious opera, throughout Italy until the turn of the century.

Music written for Ferrarese tends to emphasize *fioriture*, *cantar di sbalzo* (large leaps) and the low end of her range. Adaptations of existing music for revivals and new music written for her tend to enhance the serious style at the expense of the comic, but her success with the Viennese suggests that she could also interact effectively with comic characters in recitative and ensembles. Nonetheless, her strength lay in her purely vocal abilities, which Weigl (*Il pazzo per forza*) and Salieri (*La cifra*) in particular exploited in the music they wrote for her. Her singing won much praise, notably from Count Karl Zinzendorf, who wrote that 'La Ferrarese chanta à merveille' (27 February 1789). The casting of Ferrarese as Susanna for the 1789 revival of *Le nozze di Figaro* met with only qualified enthusiasm from Mozart, who wrote that 'the little aria [K577] I have made for Ferrarese I believe will please, if she is capable of singing it in an artless manner, which I very much doubt' (19 August 1789); he also composed a large-scale rondò, K579, to replace 'Deh, vieni, non tardar'. As Fiordiligi in *Così fan tutte* her vain temperament and formidable vocal resources were exploited to perfection by Da Ponte and Mozart, creating a rigid *seria* character who is the object of comic intrigue.

Ferrarese, Paolo [Paolo da Ferrara] (*fl* 1565). Italian composer. He published one book of music, the *Passiones, Lamentationes* (Venice, 1565). The printing contract for this book survives and provides rare insight into the production and distribution of printed music during the Renaissance. The contract was drawn up between the printer, Girolamo Scotto, and the agent of the Benedictine monastery of S Giorgio Maggiore, Venice, where Paolo was a monk. The many details enumerated in the document include the rate of production (no less than one sheet per day) and the number of books to be produced (500). Copies of the book were offered for sale at the Frankfurt book fair within a few months of the printing.

Ferrari, Antonio. *See* FERRARO, ANTONIO.

Ferrari [Ferrari 'dalla Tiorba'; Ferrari 'della Tiorba'], **Benedetto** (*b* Reggio nell'Emilia, probably in 1603 or 1604; *d* Modena, 22 Oct 1681). Italian librettist, composer, instrumentalist, impresario and poet. Together with Francesco Manelli he established the tradition of public operatic performances at Venice.

1. LIFE. Most biographers have followed Tiraboschi in giving Ferrari's date of birth as about 1597. Tiraboschi deduced this date from his reading of the *libri camerali* of Modena, in which Ferrari is recorded as having died in 1681 at the age of 84. He supported his conclusion with the (groundless) conjecture that a portrait with the inscription 'aetatis ann. XXXX' which appeared in the 1644 edition of *L'Andromeda* might have been reproduced from the first (1637) edition of the libretto. An earlier portrait does survive, in the first edition of the *favola la maga fulminata* (1638), in which Ferrari's age is given as 34; both inscriptions thus suggest a birthdate of 1603 or 1604, and this seems to be confirmed by the earliest evidence of Ferrari's career as a musician. Between 1617 and 1618 he was a member of the choir of the Collegio Germanico, Rome. The few references to him in the college archives for these years suggest that he was still a choirboy, since they record payments made to the rector of the college for clothing him and paying for his journeys to Parma (and once for rescuing his father from prison). By 17 July 1618 he had left the choir, and from 1 January 1619 until 31 March 1623 he was employed as a musician at the Farnese court at Parma. He may also have revisited his native town at this period: a 'Benedetto da Parma' was listed among the singers at Reggio nell'Emilia Cathedral in 1618 and 1620. The course of Ferrari's career between 1623 and 1637 is uncertain, though he seems to have been known at the Modenese court. On 8 August 1623 he wrote from the home of his uncle, the governor of Sestola, near Lucca, to Alfonso d'Este, enclosing examples of his compositions for two and five voices (lost); ten years later he dedicated his first book of *Musiche varie* to Duke Francesco I d'Este.

Between 1637 and 1644 Ferrari was active mainly in Venice, working both as librettist and composer to produce a steady stream of operas for the new commercial theatres. His *Andromeda*, set to music by Manelli and staged in 1637 at the Teatro S Cassiano, was in fact the earliest Venetian opera to which the paying public was admitted and it was staged, according to the libretto, largely at the performers' expense. For this production he also acted as impresario and played the theorbo in the orchestra. The success of *Andromeda* prompted Manelli and Ferrari to collaborate again in 1638 to produce the opera *La maga fulminata*. After this their partnership lapsed, at least as far as Venice was concerned. In 1640 and 1641, however, they were both active in a touring company which presented Venetian opera at Bologna: Ferrari's virtuosity as a theorbo player was again noted in 1640, when he played in the Bolognese revival of Manelli's *Delia*; and in 1641 *La maga fulminata* and *Il pastor regio*, an opera with both text and music by Ferrari, were performed at Bologna. Little is known for certain of Ferrari's career between 1644 and 1651, though it has been suggested that he was employed at Modena during these years. Certainly he wrote the ballet *La vittoria d'Imeneo* for performance there in 1648. His presence is also noted at other centres. He seems to have been responsible for productions at Genoa in 1645 of *Delia* and of Cavalli's *Egisto*, and at Milan in 1646 of *Delia* and *Il pastor regio*. His *Il pastor regio* and *Armida* were revived at Piacenza on 15 April and 22 and 26 May 1646, respectively, and the same city saw a production of his setting of *Egisto* on 22 January 1651 (Bianconi and Walker). In 1651 he travelled to Vienna to serve the Emperor Ferdinand III as instrumentalist and director of court festivities. He arrived there on 12 November 1651, having broken his journey at Innsbruck where he was given gifts by Archduke Ferdinand Karl (see letter of 18 November 1651 in *I-La*). His *L'inganno d'Amore*, set to music by Antonio Bertali and given before the imperial electors at the Diet of Regensburg in 1653, effectively marked the introduction of Italian opera into imperial court circles. He returned from Vienna to Modena after 31 March 1653 and, according to Tiraboschi, was appointed court choirmaster there on 1 September 1653. At Modena his *Andromeda* was revived for the opening of the Teatro della Speltà in 1656. Apart from renewing his contact with the court at Parma in 1660, he remained at Modena until July 1662, when he was dismissed for economic reasons. He spent the next 12 years in his home city of Reggio nell'Emilia. When, in 1674, Duke Francesco II d'Este succeeded to the duchy and began the process of reconstituting the musical establishment at Modena, Ferrari was not immediately given his former position. On his behalf the court archivist Lodovico Tagliavini sent the duke a long and interesting petition (transcribed by Tiraboschi) in which he refuted charges that Ferrari was a dull, old-fashioned composer and gave an account of his career and achievements. In addition to Ferrari's theorbo playing Tagliavini drew attention to his skill in performing accompaniments on the spinet. Ferrari was reinstated on 1 December 1674 and served as choirmaster, jointly with Giuseppe Paini, until his death. He was buried in the church of the Paradiso in Modena.

2. WORKS. The first three librettos that Ferrari wrote for the new Venetian public opera houses do not differ fundamentally from earlier, particularly Roman, models, though there is little provision for arias in the text of *Andromeda* and only a few strophic arias in *La maga fulminata*. The story of *Andromeda* was drawn from Greek mythology, while *La maga fulminata* and *Armida* followed in the tradition of the chivalric epic, the latter being based on Tasso's *Gerusalemme liberata*. In his treatment of these subjects Ferrari allowed opportunities for elaborate stage effects such as the killing of a sea monster in *Andromeda* and conjuration in *La maga fulminata*. At the same time, however, the action was devised to allow for economy through the doubling of roles, as the cast lists for the first two operas show. These early librettos contain few of the subplots, intrigues and comic scenes that were to characterize librettos by Badoaro and Busenello and indeed later works by Ferrari himself. In *La maga fulminata*, however, he did introduce

the figure of a comic governess, Scarabea (a male role), who was to prove the prototype for many similar characters in later Venetian opera and who was in fact borrowed directly (and with humorous acknowledgement) by Giulio Strozzi for his *Delia* (1639, set by Manelli). Among Ferrari's later Venetian operas *Il pastor regio* (written for the modestly-sized Teatro S Moisè, Venice, 1640; revived at Bologna in 1641) is of particular interest. In his preface to the Venetian libretto he evaluated his own work, saying that he considered himself a good musician rather than a poet and that as such he knew how to write the sort of poetry that was appropriate for musical setting. The Bolognese version of the libretto (reproduced in Della Corte) included, as its final duet, the text 'Pur ti miro, pur ti godo', a version of which also appears, perhaps with Ferrari's music, as the final duet in the surviving manuscripts of *L'incoronazione di Poppea* (1643) by Monteverdi and possibly Sacrati, and (text only) of Filiberto Laurenzi's *carro musicale Il trionfo della fatica* (1647). Ferrari appears to have written fewer dramatic works after his departure from Venice. One further opera, or perhaps two, can, however, be added to the usual canon. The first is mentioned by Ferrari himself in a letter dated 3 April 1650 (in *I-La*), sent from Piacenza to a nobleman at Lucca. He wrote: 'Enone, which you have received from Bologna, was a bad Enone for me, since that gentleman who put me to the drudgery of writing the music made no recognition of this in words, which cost nothing'. This opera may be identified as *Enone abbandonata*, the libretto of which was published at Bologna in 1651 without mention of librettist or composer. The letter is found with others addressed to Ottavio Orsucci, a setting of whose poem *Questi pungenti spine* Ferrari had published in 1637. The date of the letter should probably be read as 1651, since Ferrari also mentioned in it his forthcoming visit to Vienna and discussed the bad reports he had received of the music of 'Allessandro' (sic), recently performed at Venice; the rest of the letter makes it clear that this was Cesti's *Alessandro vincitor di se stesso*, performed at Venice in 1651. The second new attribution is an opera mentioned in the chronicle of Benedetto Boselli, who noted a performance of *Egisto* (to a libretto originally set by Cavalli) given at Piacenza on 22 January 1651, with music by Ferrari. The libretto for this performance survives, but does not give the composer's name.

Ferrari's three books of *Musiche varie* include many settings of his own texts. Most of the songs in the 1633 book, madrigals and arias alike, are composites of recitative and smooth, triple-time aria-like writing, as may be seen in *Già più volte tremante* (ed. in Leopold), but it also includes two sets of strophic variations in an old-fashioned arioso style. The later madrigal setting *Udite amanti* (1641) also contains much florid writing. Although a piece such as the triple-time aria *Eccovi il cor, o bella* (1637) shows that Ferrari was capable of writing attractive melodies, he seems to have been more at ease composing affective recitative, as in his setting of Busenello's *Cielo sia con tua pace* and the fine strophic recitative and aria *Amanti, io son ferito* (both 1637). His two later books also include an extended dialogue setting, *Amor, io ti consiglio* (1637), and sets of variations over ostinato basses: *Questi pungenti spine* (1637) on a major form of the so-called passacaglia bass and *Voglio di vita uscir* (1637) and *Amanti, io vi sò dire* (1641) on the chaconne bass. According to Crowther (1992) Ferrari's oratorio *Sansone* (1680) is an effective drama, modest in scale, set in a mid-17th-century style which must have seemed rather old-fashioned in 1680.

WORKS

Edition: B. Ferrari: Poesie drammatiche (Milan, 1644, 2/1659) [F]

Il Sansone (orat, G.B. Giardini), 1680, *I-MOe*, Modena, Oratorio di S Carlo Rotondo

OPERAS

first performed in Venice unless otherwise stated

L'Armida (dramma, Ferrari, after T. Tasso: *La Gerusalemme liberata*), SS Giovanni e Paolo, 1639, lib in F

Il pastor regio (dramma, Ferrari), S Moisè, lib ded. 23 Jan 1640, in F

La ninfa avara (favola boschereccia, Ferrari), S Moisè, 1641, lib in F; perf. with Proserpina rapita (int, Ferrari)

La finta savia [parts of Act 3] (dramma, G. Strozzi), SS Giovanni e Paolo, lib ded. 1 Jan 1643; collab. 3 or ?5 others

Il prencipe giardiniero (dramma, Ferrari), SS Giovanni e Paolo, lib ded. 30 Dec 1643, in F

Egisto (G.B. Faustini), Piacenza, 22 Jan 1651

Enone abbandonata (dramma), ?Bologna, 1651, lib ded. 9 Feb 1651

Gli amori di Alessandro Magno, e di Rossane (dramma, G.A. Cicognini), Bologna, 1656

L'Erosilda (drama, C. Vigarani), Modena, Nuovo, 1658, lib ded. 28 Feb 1658

Other dramatic works: La vittoria d'Imeneo (ballet, Ferrari), Modena, 1648, lib (Modena, 1648) [for marriage of Francesco I d'Este to Vittoria Farnese], lost; Dafne in alloro (Ferrari), Vienna, 12 Feb 1652 [introduction to a ballet]; Le ali d'Amore (F. Berni), Parma, ducal garden, 1660 [introduction to a ballet, for marriage of Ranuccio II Farnese to Margherita Violante of Savoy]; La gara degli elementi (Berni), Parma 1660 [introduction to a combattimento a cavallo, for marriage of Rannucio II Farnese to Margherita Violante of Savoy]

Librettos for other composers: L'Andromeda (dramma), F. Manelli, 1637; La maga fulminata (favola), Manelli, 1638; L'inganno d'Amore (drama), A. Bertali, 1653 (Manelli, 1664, as La Licasta)

VOCAL CHAMBER MUSIC

Musiche varie, 1v, bc (Venice, 1633); ed. in ISS, v (1986)

Musiche varie, libro secondo, 1v, bc (Venice, 1637); 1 piece ed. H. Riemann, *Kantaten-Frühling*, i (Leipzig, 1909), and 2 ed. in Riemann: *Handbuch* (1912)

Musiche e poesie varie, libro terzo, 1v, bc (Venice, 1641)

All 3 vols. ed. in Archivium musicum, xxii: La cantata barocca (Florence, 1985)

WRITINGS

Poesie drammatiche (Milan, 1644, 2/1659) [incl. libs of Andromeda, La maga fulminata, La ninfa avara, Il principe giardiniero, Armida and Il pastor regio]

Poesie (Piacenza, 1651)

Letters, in *I-La, MOs*

JOHN WHENHAM

Ferrari, Carlotta (*b* Lodi, 27 Jan 1837; *d* Bologna, 23 Nov 1907). Italian composer and poet. She studied composition at the Milan Conservatory with Alberto Mazzucato. She lived mostly in Bologna, teaching the piano and singing. Her appreciable literary gifts are exemplified by her patriotic and dramatic poetry; she provided the librettos for her own operas and the texts of her songs. Benevolent critics referred to her as 'the Italian Sappho' (Dall'Ongaro) or 'a Bellini in skirts' (Sanelli) for her polished verses and the fluency of her melodies. Ferrari collected her poetic and prose works in four volumes, *Versi e prose* (Bologna, 1878–82), which testify to a wide range of interests (e.g. the poem *In morte di Felice Romani* and the four-act drama *Il vicario di Wakefield* from Goldsmith's novel). The third volume contains the librettos of her three operas. The style and format of Ferrari's musical works adhere to the conventions of the mid-19th century.

WORKS

OPERAS

all librettos by Ferrari

Ugo (dramma lirico, 4), Milan, Teatro di S Radegonda, 5 July 1857
Sofia (dramma lirico, 3), Lodi, Teatro Sociale, March 1866; rev. as Callista
Eleonora d'Arborea (dramma lirico, 4), Cagliari, Teatro Civico, March 1871

MATTEO SANSONE

Ferrari, Domenico (*b* Piacenza, 1722; *d* Paris, 1780). Italian violinist and composer. He was considered one of Tartini's best Italian pupils. After completing his studies, he settled in Cremona. In 1749 he made his début at the imperial court in Vienna, where he gained recognition as a violin virtuoso. He accepted a position at the Württemberg court in Stuttgart in 1753, appearing as soloist with Nardini, and during the next year he performed with great success at the Concert Spirituel in Paris. Some time after 1754 he visited Stuttgart again, after which he returned to Paris where he remained for the rest of his life.

Ferrari composed only instrumental works, of which the most important are the violin sonatas with continuo. While his consistent use of a figured bass in these sonatas is characteristic of the Baroque, his treatment of form, melody and harmony associates him more closely with the emerging Classical style, and he invariably used a Classical three-movement cycle. The binary scheme of the fast movements generally approximates to sonata form, though a fully conceived development section is scarcely apparent. The tonal planes are broader than in comparable Baroque sonatas, and the harmonic vocabulary consistently simple. He replaced the older style of running bass with a slowly moving bass line; similarly, instead of continuous motivic expansion he used short, well-defined melodic phrases articulated by numerous rests and cadences. Though his use of harmonics is historically important as one of the earliest applications of this technique, they occur in only one sonata (op.1 no.5), and in his other sonatas the technical demands are less than those of his older contemporaries.

Ferrari's brother Carlo Ferrari (*b* Piacenza, ?1710–30; *d* Parma, ?1780–89) was a noted cello virtuoso who by 1765 was associated with the ducal chapel in Parma. He also composed numerous instrumental works of which several were published in Paris.

WORKS

6 trio sonatas, 2 vn/fl, bc (London, 1757) [nos. 1,3–4,6 by Campioni]
36 sonatas, vn, b, opp.1–6 (Paris, 1758–62; facs. of op.1 in ECCS, v (1991))
6 Sonatas or Duets, 2 vn, op.2 (London, *c*1765) [nos.1–2 by Nardini]
6 sonate, vn, hpd/vc, op.2 (Amsterdam, *c*1766–74) [attrib. uncertain]
Concerto, vn, str, *A-Wgm*
Sonata, fl, b, frag., *D-KA*
Spurious: sonata, fl, vn, va, b, *KA*; 6 romances (Paris, n.d.), 6 nouvelles romances (Paris, n.d.), by G.G. Ferrari; Fr. and It. songs, *US-BEm*

VIRGINIA D. KOCK

Ferrari, Francesco (*b* Cremona, *c*1617; *d* ?Fano, in or after 1677). Italian composer. From December 1636 to August 1645 he was *maestro di cappella* of Fano Cathedral, resigning to become *maestro di cappella* at Senigallia, where he was also chamber musician to Cardinal Cesare Facchinetti. From 1656 to 7 August 1658 and from April 1660 until October 1677 he was again *maestro* at Fano. On 16 December 1659 he was elected to the Accademia degli Scomposti there and was still a member in 1672; as its 'moderator della musica' he composed canzonettas, madrigals and short dramatic works. In 1665 he turned down an offer from Parma, but in 1672 ('aged 55') he

competed unsuccessfully for the post of *maestro di cappella* of S Petronio, Bologna. His application lists previous employment in Ravenna, Senigallia, Ancona, Loreto and Rome (S Lorenzo in Damaso), and service to cardinals Costaguti and Vidman. He lists his accomplishments as a keyboard player, tenor and composer (for 'church, chamber and theatre'), and mentions an opera in production at Città di Castello. He may have written an oratorio, *S Nicolò*, for the Oratorio dei Filippini, Rome. According to Eitner he died about 1683.

WORKS

L'amorosa libertà (dramma per musica, C. Barbetta), Senigallia, 10 Feb 1647, music lost
I due Coralbi (dramma per musica, C. Amadio), S Angelo in Vado, nr Fano, Comunale, 5 Sept 1671, music lost
?S Nicolò (orat, C. Massei and C.A. Stelluti), Rome, Chiesa Nuova, 1674, music lost
Motetti a voce sola (Bologna, 1674)
6 canzonette, S, gui, *I-Mc* (according to Eitner)
?3 cants. or arias, *Bc*
Canzonetta, S, bc, 1662, *MOe*

THOMAS WALKER/JENNIFER WILLIAMS BROWN

Ferrari [née Colombari de Montègre], **Gabrielle** [Gabriella] (*b* Paris, 14 Sept ?1851; *d* Paris, 4 July 1921). Italian-French composer and pianist. She first received musical training in Italy, studying the piano and composition at the conservatories in Milan and Naples, where her teachers included Paolo Serrao. After her marriage to Francesco Ferrari, Italian correspondent for *Le Figaro*, she continued her studies in Paris with Alfred Apel and Théodore Dubois. She also received encouragement from François Leborne and from Charles Gounod, after whose death she studied at the Leipzig Conservatory. Returning to Paris, she dedicated herself to composition from about 1895. She was already well known as a pianist specializing in Bach, Beethoven, Chopin, Liszt, Mendelssohn and contemporary Russian works.

Ferrari was inevitably drawn to piano and song composition: the career of her more famous colleague, Cécile Chaminade, followed a similar path, which was probably the most acceptable for a woman in later 19th-century France. However, like Augusta Holmès, Ferrari also regularly composed for larger forces; indeed, she is exceptional among female composers of her time for having written eight operas, five of which were performed in Paris. Her greatest operatic success was a reprise of her *drame lyrique Le Cobzar* (expanded after its Monte Carlo première to two acts) at the Paris Opéra on 30 March 1912; it was only the second work by a woman to be performed at that theatre in the early Third Republic (Holmès's *La montagne noire* was the first in 1895).

The difference between the reception of *La montagne noire* and that of *Le Cobzar* suggests a change in attitude towards women as composers of opera in early 20th-century France. Although both Holmès and Ferrari were accused of lacking technical skill and dramatic power, *Le Cobzar* was much more warmly received than *La montagne noire*, and even favourably linked with the emergence of a feminist movement in France (a movement that, in other musical contexts, was viewed as invidious). The opera is a tale of love, jealousy and murder in a contemporary Romanian village, and Ferrari draws on her previous experiences in pseudo-authentic musical exoticism (see especially her piano accompaniments to Spanish melodies, *Chansons espagnoles*) as well as her interest in *verismo*. *Le Cobzar* was, indeed, so 'authentic' that the costumes for the Opéra production were imported from Romania; musically, Ferrari employs modal mixture and melismatic vocal writing to create her own version of Romanian folk music. The lengthy ballet sequence at the end of Act 1 is a surprising glance back to an older style of French exotic opera; the close of *Le Cobzar*, with the hero's hallucination of his fate as a convict in the Siberian salt mines, is dramatically original and more in keeping with the opera's generally forward-looking structure and musical fabric.

KAREN HENSON

Ferrari, Giacomo Gotifredo [Gotifredo Jacopo] (*b* Rovereto, bap. 2 April 1763; *d* London, Dec 1842). Italian composer and theorist. The son of a silk merchant, he was intended for the family business but showed great musical talent from an early age. He studied singing and the harpsichord with Marcolla and Borsaro in Verona while at school, composition with Marianus Stecher in the monastery of Marienberg (now Monte Maria), where he had gone to perfect his German, and, before the age of 20, had learnt to play the flute, oboe, violin, viola and double bass. After his father's death in 1784 he decided to pursue a musical career. He accompanied Prince

Lichtenstein to Rome and then to Naples, where he was befriended by Paisiello, but the composition lessons he had hoped for amounted to only four hours in five weeks. On the advice of Thomas Attwood he studied counterpoint with Gaetano Latilla. Later, from Vienna, Attwood sent him copies of Mozart's 'Haydn' quartets; Ferrari grew to esteem Mozart more highly than any other composer.

Ferrari's opera *Le pescatrici* was composed in Naples in 1786 but not performed. In 1787 he went to Paris where he played accompaniments for the queen, taught singing and was *maestro al cembalo* to the new Théâtre de Monsieur in the Tuileries. In that capacity he wrote additional music for Bianchi's *La villanella rapita* and for Sarti's *Fra i due litiganti* in 1789. In 1791 he composed two operas for the Théâtre Montansier, *Les événements imprévus* (to a libretto by T. D'Hèle earlier set by Grétry) and *Isabelle de Salisburi* (libretto by P.F.N. Fabre d'Eglantine), a collaboration with Bernardo Mengozzi. In Paris he also published vocal collections and some piano sonatas.

In April 1792 Ferrari moved to London, where he met Haydn and Clementi and quickly became a leading singing teacher, with the Princess of Wales among his pupils. On 14 May 1799 his one-act opera *I due svizzeri* was successfully performed; this was followed by *Il Rinaldo d'Asti* (1801), *L'eroina di Raab* (1814), a vehicle for Catalani, and *Lo sbaglio fortunato* (1817).

In 1799 Ferrari visited Vienna, purchasing the scores of Mozart's operas, and in 1803 visited Paris. On 28 October 1804 he married the pianist Victoire Henry. From 1809 to 1812 he was almost totally blind, but recovered and in 1815 went on another long journey to Italy, with Thomas Broadwood. In the 1820s he was for a time in Edinburgh as a teacher. His son Adolfo Angelico Gotifredo Ferrari (1807–70), a pupil of Crivelli, taught singing at the Royal Academy. Adolfo's wife, Johanna Thomson, and his daughter Sophia were also singers.

Ferrari's books on singing and music theory are of interest, but the highly entertaining *Aneddotti* (dedicated to George IV) are more important, as they contain much historical information and – in contrast with many similar works – are generally reliable. Besides his operas, Ferrari's works include two ballets performed in London, two piano concertos, about 20 sonatas for piano and violin or flute, 12 solo piano sonatas, sonatas and sonatinas for harp and violin and for harp and piano, trios, caprices and various piano arrangements. His vocal music includes a *Complainte de la reine de France* (1793) – he was a pronounced anti-revolutionary – and six Italian ariettas written for Catalani (1810).

ALFRED LOEWENBERG/PETER PLATT/GEORGE BIDDLECOMBE

Ferrari, Giovanni (*b* Pisa; *fl* 1627–8). Italian composer. He was *maestro di cappella* of Livorno Cathedral at the time of his two known publications: *Il primo libro de motetti* for four to six voices and organ, op.1 (Venice, 1627), and *Il primo libro de madrigali* for two to four voices and continuo, op.2 (Venice, 1628).

□

Ferrari, Girolamo [Mondondone, Girolamo da] (*b* ?Mondondone, ?*c*1600; *d* after 1664). Italian composer. In 1624 he was working at Vimercate, from 1641 until the end of 1644 he was *maestro di cappella* of Novara Cathedral and in 1664 was a Minorite at S Francesco, Voghera. All his known music dates from early and late in his life. As well as *Missa, psalmi et polytoni* for five voices and organ, op.1 (Venice, 1624), four secular and two sacred pieces date from his early years. They were printed in publications of Giovanni Ghizzolo (*RISM* 1618[6], 1623[12] and 1624[5]) and in anthologies (*RISM* 1624[11], 1645[1], 1649[1] and 1653[1]). Since Ghizzolo is represented in the first anthology, he was probably a friend of his; moreover, the uncle to whom he dedicated his op.1 was also the dedicatee of a song in Ghizzolo's op.6. Two sets of psalms date from some 40 years on: for four voices and organ, op.2 (Venice, 1663), and a five-part set, ... *pieni, e brevi, per li vesperi di tutte le solennità dell'anno* op.3 (Milan, 1664).

NIGEL FORTUNE/R

Ferrari, Luc (*b* Paris, 5 Feb 1929). French composer. He studied at the Ecole Normale de Musique (1948–50) with Cortot (piano) and Honegger (composition), before attending Messiaen's classes at the Paris Conservatoire (1953–4). He joined the Groupe de Musique Concrète in 1958. He collaborated with Schaeffer in setting up the Groupe de Recherches Musicales in 1958–9, and was briefly its director (1959–60). He has taught in Cologne and Stockholm and at the Pantin Conservatoire. In 1982 he founded the association La Muse en Circuit, of which he was chairman until 1994.

Since the 1960s Luc Ferrari has shown allegiance to no one compositional system or aesthetic position. Drawn chiefly to the fields of *musique concrète* and electroacoustics, he has sought, since *Hétérozygote* (1963–4), to leave the studio for 'the street', and to incorporate within his composition expressions of society as a whole. This direct concern with places, contexts and social situations has inspired a large number of works, some preoccupied with narrative (*Histoire du plaisir et de la désolation*, 1979–81), some with repetition – not unrelated to that of the American minimalists – and some with montage, broadcast music, or allusions to popular music styles. He has also explored text composition, and various aspects of music-theatre and multimedia work. His compositions are shot through with reflections on the body and references to psychoanalysis; in short, as the composer has remarked, with 'all that is human in humanity, in its fragile proliferation, its drama and its comedy'.

PIERRE MICHEL

Ferrari, Massimo (*b* Montecchio, Lombardy; *fl* 1653–8). Italian composer and organist. He was a minorite whose only known employment was as organist and *maestro di cappella* of Noventa di Piave, Lombardy. Two volumes of music by him survive: *Salmi di compieta concertati*, for three voices and continuo, op.1 (Venice, 1653), including a four-part *Nunc dimittis*; and *Letanie della Madonna concertate*, for four voices and continuo, op.2 (Venice, 1658).

□

Ferrario, Carlo (*b* Milan, 8 Sept 1833; *d* Milan, 12 May 1907). Italian scene painter and stage designer. He went to the Accademia di Belli Arti di Brera in Milan in 1852, and joined La Scala the following year as assistant to F. Peroni. From 1859 he taught stagecraft at the academy and, later, courses in the landscape department. At La Scala he designed the premières of Boito's *Mefistofele* (1868), Ponchielli's *La Gioconda* (1876) and Gomes's *Maria Tudor* (1879), as well as new scenes of operas already in the repertory, including *Norma* and *Mosè in Egitto*. After falling out with the La Scala management in 1881, he worked for the Teatro Carcano (where he had painted a curtain in 1872). Without assistance, he created all the scenes there, a stunning achievement that led to commissions from other major theatres, notably the Argentina in Rome (for whom he had designed Gomes's *Salvator Rosa* in 1878) and the S Carlo in Naples, with which he had a long association.

Set design by Carlo Ferrario for Act 2 scene i (an inn at Hornachuelos) of the first production of the revised version of Verdi's 'La forza del destino', La Scala, Milan, 27 February 1869 (private collection)

Ferrario accepted Verdi's call to return to La Scala in 1887 to design *Otello*, and was subsequently appointed art director (1889) and director of scene painting (1890). He also supervised the replacement of the stage machinery. He was Verdi's preferred designer and created the first sets for *Falstaff* and a new *Rigoletto* (both 1893). He also designed La Scala's first *Meistersinger* (1899). The most influential Italian scenic artist in the second half of the 19th century, Ferrario continued an unbroken tradition that had begun with the Bibiena family. His style evolved over more than 40 years, adapting to changes in taste and musical form. Although he was regarded as a champion of realism, a strong romanticism pervades his work. He consistently achieved a harmony between what the audience saw on stage and what they heard in the orchestra. His scenic realizations for Verdi are the foundation of the Verdi tradition, and his ideas were carried on by a number of his students and disciples, including Vittorio Rota, Antonio Rovescali and Mario Salas. His sketches are found in the La Scala Museum, the Brera academy, the Ricordi archives and private collections.

DAVID J. HOUGH

Ferrario [De Ferraris], **Paolo Agostino** (*b* Codogno, Lombardy; *fl* 1578–1607). Italian composer. He was a Servite monk. He is known by two publications: the four-voice *Psalmi omnes qui ad vesperas per totum annum decantantur* (Venice, 1578), and *Letanie della Madonna* (Venice, 1607). The title-page of the *Letanie* suggests that he was then connected with the Santa Casa, Loreto. It contains litanies for four, five, six and eight voices, six motets for two voices and a setting of the *Salve regina*, all with a part for basso continuo.

□

Ferrari Trecate, Luigi (*b* Alessandria, Piedmont, 25 Aug 1884; *d* Rome, 17 April 1964). Italian composer and organist. He studied under Mascagni in Pesaro, and from 1929 to 1955 he was director of the Parma Conservatory. His slight, ingratiating talent found its best expression in music for children, ranging from small piano pieces and choruses to operas: the most successful were *Ciottolino* (which initially ran for 70 performances when presented by the famous puppet theatre, the Teatro dei Piccoli di Podrecca) and *Ghirlino*. These deft little stage pieces, pervaded by the simple, fresh spirit of nursery rhymes and seasoned with 'modernisms' that never go beyond mild postwar Ravel (as, for example, in the 'movimento di Fox' intermezzo from *Ghirlino*), deserved their success. The more ambitious later operas, *L'orso re* and *La capanna dello zio Tom*, stretched his gifts beyond their natural limit.

WORKS
(*selective list*)

Ops: Ciottolino (fiaba musicale, 3 scenes, G. Forzano), Rome, Piccoli di Podrecca, Palazzo Odescalchi (Sala Verdi), 8 Feb 1922; La bella e il mostro (3, F. JOHN C.G. WATERHOUSE

Ferraro [Ferrari], **Antonio** (*b* Polizzi Generosa, nr Cefalù, Sicily; *fl* 1613–23). Italian composer and organist. A Carmelite friar, he was in the monastery of Termini Imerese near Palermo in 1613, and organist of his monastery at Catania at the time of his first publication in 1617. He may have been related to Giuseppe Ferraro, also a priest at Catania. Antonio Ferraro's *Sacrae cantiones … liber primus* (Rome, 1617) consists of 32 concertato motets, for one to four voices, all with continuo. They are modest, short-breathed pieces similar to those of Malerba but markedly superior in expressive melodic invention: witness the attractive dialogue *Aperi mihi* for soprano and bass to words from the *Song of Songs*, and the trio *O beate Gandolphe*, an invocation to the protector of Ferraro's birthplace in the style of an affective concertato madrigal. Ferraro published a further book of motets, *Ghirlanda di sacri fiori: secondo libro degli ecclesiastici conserti* (Palermo, 1623), which is lost.

PAOLO EMILIO CARAPEZZA/GIUSEPPE COLLISANI

Ferraro [Ferrari], **Giuseppe** (*b* Polizzi Generosa, Cefalù, Sicily; *fl* 1614–52). Italian composer, pupil of MICHELE MALERBA, and possibly related to ANTONIO FERRARO. He was *maestro di cappella* of St Paul's Cathedral, Mdina, Malta, from 1638 to 1652. Malerba published a motet by him for two voices and continuo in his *Sacrarum cantionum . . . liber primus* (Venice, 1614).

□

Ferras, Christian (*b* Le Touquet, 17 June 1933; *d* Paris, 14 Sept 1982). French violinist. He studied at the Nice Conservatoire (with Bistesi) and the Paris Conservatoire (with Calvet), making his début in Paris at the age of 13 and later working with Enescu. In 1948 he won the Scheveningen International Competition and also the Prix Long-Thibaud. He quickly established an international reputation and throughout the 1950s and 60s made

numerous tours of Europe and the USA, being particularly well received in eastern Europe. Although his reputation was originally based on outstanding interpretations of the classical violin concertos, especially those of Beethoven, Mendelssohn and Tchaikovsky, he was also a fine ambassador for French music, and in 1964 made a commanding recording of Berg's Concerto. That work was especially suited to his playing, which combined tonal beauty with intensity of feeling and power. He also recorded sonatas in a duo with Pierre Barbizet. He owned two Stradivari violins, the 'Président' dated 1721 and the 'Minaloto' of 1728.

LESLIE EAST

Ferrata, Giuseppe (*b* Gradoli, nr Rome, 1 Jan 1865; *d* New Orleans, 28 March 1928). American pianist and composer of Italian birth. At the age of 14 he enrolled at the Accademia di S Cecilia in Rome, where he studied piano with Sgambati and Liszt. He achieved some renown as both a pianist and a composer in Italy before emigrating to the USA in 1892. After holding a series of teaching posts in Maryland, South Carolina, Georgia and Pennsylvania, he became in 1909 the first professor of piano and composition at Sophie Newcomb College, New Orleans, where he remained until his death. Ferrata established a notable reputation in the USA by winning composition prizes in the Music Teachers' National Association Competition (1897), the Sonzogno Opera Competition of Milan (1903), and the Art Society of Pittsburgh Competition (1908). His success prompted periodic visits to Italy to promote his compositions, especially the operas *Akrimane* and *Il fuoriuscito*. Although he failed to secure either performances or publication of the operas, he was knighted by Vittorio Emanuele III in 1908 and in 1914.

Ferrata's advocates in the USA included Victor Herbert, who orchestrated two movements of his *Italian Spring Melodies* and conducted their première in 1905. Stokowski included performances of the orchestrations on his 1936 North American tour with the Philadelphia Orchestra. The song *Night and the Curtains Drawn* and the *Messe solenelle* were also popular and received numerous performances throughout the USA. Both works demonstrate a keen lyricism and a pervading chromaticism that were essential to his compositional style. He incorporated bitonal elements and some jazz idioms in his compositions after 1917, but few of these were published. Most of his publications were released by J. Fischer & Bro. of New York between 1901 and 1920.

WORKS

EDWARD EANES

Ferrazzi, Giovanni Battista (*fl* 1652). Italian lawyer, composer and poet. He was a musical amateur and was possibly resident in Mantua. His sole surviving publication, *Arie, et parole . . . libro primo* op.1 (Venice, 1652), comprises settings for solo voice and continuo of his own texts. The book consists largely of attractive strophic arias, though it also contains two madrigals, *Note che in neri* and *Muse che fatte*. (*EitnerQ*; *SchmitzG*)

JOHN WHENHAM

Ferreira, Manuel (*b* Madrid; *d* ?Madrid, 1797). Spanish composer. From 1737 he was a guitar accompanist with several Madrid theatre companies; by 1745 he was first musician in the company directed by José Parra, where he apparently remained until his retirement in 1780. Ferreira's theatre works may be regarded as among the precursors of the *tonadilla*; in the latter part of his life he was one of the first to write in that genre. His extant works include the *opera seria*, *El mayor triunfo de la mayor guerra* (*E-Mn*), and music for numerous plays and comic interludes (*Mm*).

JOSÉ LÓPEZ-CALO

Ferreira Veiga, José Augusto da, Visconde do Arneiro. *See* VEIGA, JOSÉ AUGUSTO FERREIRA.

Ferrer (i Bargalló), Dom **Anselm** [Josep] (*b* Capellades, Barcelona, 16 April 1882; *d* Montserrat, 26 April 1969). Spanish teacher and composer. He was a member of the Escolanía of Montserrat under Guzmán (1892–8) and had composition lessons with Boezzi and Letaccioli in Rome (1907) and with de Nardis in Naples (1910). In 1911 he returned to the Escolanía as director, in which post he remained until 1933. He enlarged the institution, reformed its teaching, created an extensive library, broadened the repertory to include 16th-century polyphony, increased the choir and instituted composition competitions. His compositions, almost all sacred, include a *Missa abbatialis* and a *Missa solemnis 'cum jubilo'*, a set of Lamentations, a *Te Deum*, hymns, motets and other works. Following Pope Pius X's precepts regarding music for the church, his compositions are majestic, polyphonic settings for choir and organ in which the music stresses the meaning of the text. Ferrer was also a prolific writer

on philosophy, theology, liturgy and music, most of his essays being published in *Revista montserratina* and *Vida cristiana*.

A. MENÉNDEZ ALEYXANDRE/ANTONI PIZÀ

Ferrer, Guillermo (*fl* Madrid, *c*1776–91). Spanish composer. In 1783, while organist at the Descalzas Reales convent in Madrid, he was commissioned by the ninth Duque de Hijar to compose seven adagios. These were to be played in the darkened Madrid church of the Santo Spiritu on Good Friday, between noon and 3 p.m., after each pulpit commentary on the Seven Last Words of Christ. A history of the Seven Last Words devotion, citing the powerful effect of Ferrer's adagios, was published in Madrid in January 1786. Haydn's orchestral *Seven Last Words* followed suit, and was probably first performed in Vienna on 26 March 1787.

In 1787 Ferrer was harpsichordist for an Italian opera troupe playing at Madrid in the Teatro de los Caños del Peral. On 10 March 1790 a sinfonia by him was played at the Teatro del Príncipe. In 1791 he was *maestro* for Jacobo Fitzjames Stuart, sixth Conde de Liria, to whom he dedicated that year an *Aria d'Acheronte con vvs., oboe, viole, fagotti, corni è basso*. His surviving works at the Madrid Municipal Library consist of incidental music for two plays (*Incendio y tempestad*, *La ventura con el sueño*), a *sainete* (*La oposición de los tres sacristanes*) and two *tonadillas* (*Ay corazón mio*, *El petimetre embustero y la petimetra burlada*). His piquant *sainete* depicts three rival composers of villancicos, each differently accompanied. His stylistic flexibility permitted his turning at will from a languishing Italian aria to a brisk *tonadilla* in which an actress imitates a cat's mewing (*El remedo del gato*, *c*1776).

ROBERT STEVENSON

Ferrer [Mateuet], **Mateo** (*b* Barcelona, 25 Feb 1788; *d* Barcelona, 4 Jan 1864). Spanish organist, conductor and composer. He studied music under Francisco Queralt and Carlos Baguer and was appointed organist of Barcelona Cathedral in 1808, also becoming *maestro de capilla* there in 1830. In 1827 he replaced Ramón Carnicer as orchestra leader at the Teatro de la S Cruz, and thus held for over 30 years three of the most important musical positions in Barcelona. He was considered by his contemporaries the most notable organist in Spain, especially for the boldness and inventiveness of his improvising and the clarity and imagination of his registrations. He was a man of profound musical learning and one of the best contrapuntists in his time. He turned his house into a sort of conservatory, where the young musicians of Barcelona, including Saldoni and Vilanova, came for free instruction in piano, organ and composition. His death was marked by a period of official mourning, and he was given a magnificent funeral, at which a Requiem Mass, composed by Saldoni, Manent, Rovira and others, was performed by more than 300 singers and instrumentalists in the church of S María del Mar.

He composed many works for both church and theatre, of which a *Salve regina* for four voices and instruments (1806, in *E-Bc*) survives. He also wrote a cantata for soloists, chorus and orchestra, *Crece, crece arbolillo* (MS, *Bc*), and a piano sonata (1814) which was published in the first volume of J. Nin's *Seize sonates anciennes d'auteurs espagnols* (Paris, 1925). Some of his manuscripts are preserved in the archive of the Marian Sanctuary of Aránzazu.

GUY BOURLIGUEUX

Ferrer, Pedro (*fl* mid-16th century). Spanish priest and music theorist. He published an *Intonario general para todas las iglesias de España* (Zaragoza, 1548), which, he assured the reader, he wrote bearing in mind the revision of the missal ordered by Don Fernando of Aragon, Archbishop of Zaragoza, as well as the reforms carried out in other dioceses and the opinions of qualified people. In the introduction he referred to the archbishop's wish to rid chant of the various abuses that had been committed, and he lamented the lack of unity of style in the playing and singing of church music. He established interesting norms in notation, in plainchant allowing the following note forms: the oblique ligature, various other ligatures, the long, the *brevis* and the *semibrevis*. In the case of the first four, he insisted that he was merely stating what already existed; *semibreves* he admitted as melodic ornaments, though with a different function in certain hymns. The *Intonario* is a valuable liturgical collection and achieved widespread dissemination throughout Spain. His work is discussed further in F.J. León Tello: *Estudios de historia de la teoría musical* (Madrid, 1962/*R*).

F.J. LEÓN TELLO

Ferrer, Santiago (*b* Cervera del Maestre, Castellón, 10 Aug 1762; *d* El Escorial, 21 Aug 1824). Spanish composer. He was a pupil of Antonio Soler, who on 15 February 1779 sponsored his entry into the Hieronymite order of S Lorenzo el Real de El Escorial and whom he succeeded as director of the chapel there, a post he held for 36 years. Many of Soler's works survive in copies by Ferrer (*E-E*). His own numerous compositions (in *E-E*) include masses, Lamentations, lessons for the dead, litanies, vespers, responsories, hymns, psalms, sequences and 62 villancicos for the Nativity. The villancico *Soy pastorcilla*, for solo soprano, two violins and continuo, demonstrates Ferrer's fluent adoption of the Italianate style, especially in its opening siciliana. Texts for several of his Matins settings were printed by the monastery between 1798 and 1817,

a step apparently taken for no other Escorial villancico composer.

PAUL R. LAIRD

Ferrero, Lorenzo (*b* Turin, 17 Nov 1951). Italian composer. He was initially self-taught as a musician, but went on to study with Massimo Bruni and Enore Zaffiri. He became interested in new technology for sound production and in the 1970s worked at the experimental studio for electronic music in Bourges (1972–3) and the Musik-Dia-Licht-Film Galerie in Munich. In 1974 he graduated from Turin University with a thesis on Cage. Since 1980 he has been artistic director of numerous Italian institutions such as the Puccini Festival at Torre del Lago (1980–84), the Unione Musicale in Turin (1983–7) and the Verona Arena (1991–4). He made his debut as a composer in the mid-1970s with works including *Ellipse III* (1974), *Sieglied* (1975) and *Le néant où l'on ne peut arriver* (1975) in which there are already signs of revolt against the severe sound of the avant-garde idiom. Subsequently this tendency took over as his main musical direction. With the opera *Marilyn* (1980) he found in the fundamentally composite form of music theatre an ideal setting for his eclectic, post-modern artistic view. Ferrero, together with his contemporary Tutino and others embodied the so-called neo-romantic movement in Italy, which throughout the 1980s stood in opposition to the musical avantgarde. After *Marilyn*, his approach was characterized by the juxtaposition of different genres and idioms, the contamination of the traditional forms of art music by popular music, and a play of theatrical and musical conventions from the past. Eclecticism, neo-tonal language and stylistic variability, aimed at restoring the communication with the audience which, according to the neo-romantics, modern art had destroyed, set the course of his subsequent work. These trends have dominated his operatic music, and can be seen in the anti-modernist satire of his comic opera *Mare nostro* (1985) and through subsequent works including *Nascita di Orfeo* (1996). The casual use of the past and a modernized version of it is to be found in numerous instrumental and vocal works, such as *Canzoni d'amore* (1985), on texts by Metastasio, reworked and de-archaicized by Marco Ravasini, or in the Beethovenian *Adagio cantabile* of 1977 (based on the Piano Sonata, op.13). On the other hand, an extensive group of works such as *My Blues* (1982), *My Rag* (1983), *My Rock* (1985) and *Parodia* (1990) directly demonstrate his absorption of rock and non-art music styles.

RAFFAELE POZZI

Ferretti, Giovanni (*b c*1540; *d* after 1609). Italian composer. He may have been born in Venice or, in view of his early career, in Ancona, but there is no documentary evidence of this. He is first recorded as *maestro di cappella* at Ancona Cathedral from 1575, and he may have been there as late as 1579; he was at the Sanata Casa, Loreto, from July 1580 to July 1582. After serving as *maestro* at Gemona from October 1586 to December 1588, and at Cividale del Friuli in 1589 he returned to the Santa Casa as *maestro* from October 1596 to October 1603. The inclusion of a piece by him in a predominantly Roman collection (RISM 1609[17]) suggests that he was then living in Rome, and his Roman contacts seem to have been strong from the late 1560s. The second book of *canzoni alla napolitana* (1569) is dedicated to a nobleman from nearby Macerata and the 1575 volume of canzoni to Giacomo Boncompagni, to whom Palestrina subsequently dedicated his first madrigal book (1581). Moreover, Ferretti was one of the contributors to the collection compiled in 1586 in honour of Giovanni de' Bardi's bride (1586[7]).

Ferretti's most successful and influential works were his early *napolitane*, which enjoyed a popularity north of the Alps rivalled perhaps only by Marenzio's lighter pieces and Gastoldi's five-voice ballettos; they were being reprinted there as late as 1634. Despite the titles of his seven books, few of the pieces are true villanellas except in form; most are arrangements of earlier three-voice Neapolitan canzoni in which the traditional style of these models is fused with madrigalian influences. And not all of his texts are Neapolitan: *Quae pars est o Selí Selamelèch* (from the *Primo libro delle canzoni a sei voci*), celebrating the Battle of Lepanto (1571), contains an attack on the Sultan in Dalmatian-Venetian dialect. The poem, which is characteristic of much that had appeared in the wake of the victory, had circulated earlier in poetic pamphlets printed in Venice. In the earlier books the musical

characteristics of the villanella are still often evident (the intertwined motifs and affective endings of pieces such as *Del crud'amor* from the second book, ed. in *EinsteinIM*, are untypical) but the later pieces, and especially those from the second six-voice book, are disciplined by the tone and rhetoric of the serious madrigal. Of all his collections this one is the closest to the style of the madrigal (significantly it is the only one that does not include the qualifying 'alla napolitana' on the title-page); of its 21 pieces, three are genuine madrigals (setting longer and more serious poems than those of the traditional canzoni), one is a mascherata and another a dialogue. The latter, *Su, su, su non più dormir*, is an obscene text which Ferretti treats in a mock-serious manner. In its polyphonic resource, textural contrasts and use of representational devices this piece is already indicative of the interdependence of the light and the serious styles, an important feature of the 1580s and particularly of the work of Giuseppe Caimo and Girolamo Conversi. By then the stylistic differences between *canzoni* and madrigals had all but disappeared.

Ferretti's *napolitane*, particularly the early books, were reprinted and admired in Antwerp, Nuremberg and especially England. If, as Kerman has suggested, the crucial influence of Morley on the English madrigal is in effect the influence of the classic Italian canzonet style, then it is one in which Ferretti's pieces, together with Orazio Vecchi's, are the most important elements. Morley readily acknowledged his debt to the musical and textual models of Ferretti, 'who as it should seeme hath imploied most of all his study that way'.

IAIN FENLON

Ferretti, Jacopo (*b* Rome, 16 July 1784; *d* Rome, 7 March 1852). Italian librettist. He was born into a cultured middle-class Roman family, and his father introduced him to literature and music. In particular, he was led to appreciate the elegance and clarity of Metastasio, and he began writing verse at an early age. He became fluent in Latin, Greek, French and English, and translated many French plays into Italian.

In 1814 he took up an appointment in the tobacco monopoly, which he held until 1845 (scarcely a suitable environment for an asthmatic whose health was never robust). Six years later he married Teresa Terziani, a fine musician and singer, and their house became a meeting-place for visiting poets and musicians. He was an open-hearted and generous man who remained on the most friendly terms with the composers he worked with; Donizetti, in particular, became a firm friend and they corresponded regularly, often in verse of a jocular and witty nature, until 1836.

Ferretti turned his hand to any and every form of literary output – odes for funerals, weddings and other occasions; sonnets; love letters; necrologia; and speeches of welcome (including one for Verdi) – and was in constant demand. He is best remembered for his 70 librettos, over three-quarters of them written for Rome, in collaboration with such composers as Carafa, Coccia, Coppola, Donizetti, Grazioli, P.C. Guglielmi, Mercadante, Pacini, the brothers Ricci, and Zingarelli. His first great success was *La Cenerentola* for Rossini (1817), but his later collaboration with the same composer (*Matilde di Shabran*, 1821) was rather less successful. He wrote five texts for Donizetti: *L'ajo nell'imbarazzo* (1824) and *Il furioso nell'isola di S Domingo* (1833) brought out the best in him, in witty verse and sympathetic characterization. Some of his most successful librettos came from the mid-1830s, particularly *La casa disabitata* (Lauro Rossi, 1834), *Eran due or sono tre* (Luigi Ricci, 1834) and *La pazza per amore* (Pietro Coppola, 1835).

His best work was in light-hearted genres, and he was a master of quick-moving, sparkling verse; in the writing of shorter, five-syllable lines (*quinari*) he was unsurpassed. His serious librettos were, on the whole, less successful, and not so tightly organized, but even his least satisfactory betray a sure-footed theatricality. He was held in great respect by other librettists, and received the rare accolade of a warmly complimentary notice from Felice Romani for the text of *La pazza per amore*. The versatility and spontaneity of his writing mark him out as one of the very few true poets of the Italian romantic opera.

JOHN BLACK

Ferretti, Paolo M(aria) (*b* Subiaco, Rome province, 3 Dec 1866; *d* Bologna, 23 May 1938). Italian scholar and teacher of Gregorian chant. He took his vows as a Benedictine monk at Subiaco on 12 March 1884 and was ordained priest on 20 December 1890; from 1900 to 1919 he was abbot of the monastery of S Giovanni Evangelista, Parma. In 1922 he was appointed director of the Scuola Pontificia (from 1931 the Pontificio Istituto di Musica Sacra) in Rome. Up to his death he taught every aspect of the study and practice of Gregorian chant there. He took up a subtle and prudent stance on the controversy over rhythm; in his writings, however, he seemed gradually to incline towards Mocquereau's views. His chief work is in the first volume of the *Estetica gregoriana* (1934); he was engaged on a second volume at the time of his death.

EUGÈNE CARDINE

Ferreyra, Beatriz (*b* Córdoba, Argentina, 21 June 1937). Argentine composer. Her early musical studies included piano lessons with Celia Bronstein in Buenos Aires (1950–56). As a composer she was largely self-taught, although she spent a year in Paris (1962–3), studying harmony and musical analysis with Nadia Boulanger, and then went on to study electronic and electro-acoustic music with Edgardo Cantón at the RAI sound studio in Milan. She was a member of Pierre Schaeffer's Groupe de Recherches Musicales (1964–70), and participated in the creation of Schaeffer's 'Solfège de l'objet sonore' recordings. She attended courses given by Ligeti and Earle Brown at the 1967 Darmstadt summer school and was a collaborator on Bernard and François Baschets' *structures sonores*; she has also undertaken research in both music therapy and ethnomusicology. In 1969–70 she conducted seminars at the Paris Conservatoire in music and audio-visual techniques and in 1975 worked at Dartmouth College, Hanover, New Hampshire, on their digital computer system; she has otherwise lived in France and devoted herself entirely to composition. In her music Ferreyra demonstrates an intuitive handling of sound materials – electronic, *concrète* or instrumental – and a freedom of approach to form. Her most representative works are *Siesta blanca*, *Petit poucet magazine* (awarded at the Concours International de Création Radiophonique 'Phonurgia Nova', 1986), *Mirage contemplatif* and *Souffle d'un petit Dieu distrait*, all for tape.

MARIE NOËLLE MASSON

Ferri, Baldassare [Baldassarre] (*b* Perugia, 9 Dec 1610; *d* Perugia, 18 Nov 1680). Italian soprano castrato. He sang at Orvieto Cathedral (1623–4) before going to Rome to study with Vincenzo Ugolini of Perugia, *maestro* of the Cappella Giulia. In 1625 Prince (later King) Władisław IV of Poland heard him sing in Rome and took him to the Warsaw court, where he took part in performances of *drammi per musica*. He was in Perugia between 1637 and 1639, when he sang sacred works by G.F. Marcorelli, and again in 1651. In 1643 he was honoured for his singing in Venice, by being made a Knight of St Mark and in 1654 he visited Stockholm. Leaving Poland in 1655, Ferri went to Vienna, to the court of Ferdinand III and of his successor Leopold I, who heaped honours on him; in a portrait of the time he is called 'Baldassarre of Perugia, King of Musicians'. In March 1664 he performed in an oratorio in Perugia together with G.A. Angelini, and in Holy Week of the same year he sang in S Apollinare, Rome, in the presence of Queen Christina of Sweden. He was in London in 1669–70. In 1675 (or 1680) he retired to Perugia where he worked principally at the church of S Filippo Neri. He was praised by his contemporaries, as the 'Phoenix of Swans and of Singers', for his vocal gifts and outstanding musical intelligence.

GALLIANO CILIBERTI

Ferri, Lambert (*fl* *c*1250–1300). French trouvère. He is known to have been a clerk of the Benedictine monastery of St Léonard (Pas-de-Calais) in 1268, and in 1282 was mentioned as canon and deacon of the same monastery. He seems to have been popular as a partner in jeux-partis, of which 27 examples are extant; his partners included Jehan Bretel, Jehan le Cuvelier d'Arras, Jehan de Grieviler, Jehan de Marli, Phelipot Verdiere, Robert Casnois and Robert de La Pierre. 11 songs survive with music of which seven are jeux-partis and one, *Aïmans fins*, is a Marian song in the form of a *serventois*. The jeux-partis survive in the single manuscript tradition represented by *F-AS* 657 (facs., ed. A. Jeanroy, Paris, 1925), *I-Rvat* Reg.lat.1490 and *I-Sc* H.X.36. Two of these, *Biaus Phelipot* and *Jehan Bretel, par raison*, have a different melody in each of their sources, a phenomenon not uncommon in this manuscript tradition. The song *J'ai tant d'amours*shares its melody and form with an anonymous song that has the same first line (R.2054); it is not known which is the contrafactum.

IAN R. PARKER

Ferrier, Kathleen (Mary) (*b* Higher Walton, Lancs., 22 April 1912; *d* London, 8 Oct 1953). English contralto. She intended to become a pianist and it was only in 1937, after winning the contralto class at the Carlisle Festival, that she considered a career as a singer and studied with J.E. Hutchinson and then Roy Henderson. During the war years, touring the provinces and singing with the Bach Choir in London, she established herself among England's leading concert artists. She made her stage début as Lucretia in the first performance of Britten's *The Rape of Lucretia* at Glyndebourne in 1946, and the following year sang Gluck's Orpheus there. These remained her only operatic roles.

Ferrier soon became known in Europe and the USA. Her appearances in *Das Lied von der Erde* at the Edinburgh Festival in 1947 and at Salzburg in 1949 were specially notable, and her recording of the work with Bruno Walter (and Julius Patzak) remains a classic. She also gave lieder recitals in Edinburgh and London with Walter as her partner. Though she did not always manage the degree of nuance appropriate to lieder, Walter wrote that 'No summit of solemnity was inaccessible to her, and it was particularly music of spiritual meaning that seemed her most personal domain'. She also had a close artistic relationship with Barbirolli, and her performances as the Angel in *The Dream of Gerontius* under him were peculiarly radiant. Covent Garden staged Gluck's *Orfeo* for her in February 1953 with Barbirolli as conductor. She could sing only two of the four scheduled performances before illness forced her to yield; these were her last public appearances (see illustration).

Kathleen Ferrier as Orpheus in Gluck's 'Orfeo ed Euridice', Covent Garden, London, 1953

Ferrier's warm, ample and beautiful voice was firm through all its range. She used it with increasing expressiveness, overcoming a certain inflexibility. She was at her greatest in music calling for 'classical dignity' (Cardus's phrase for her style), breadth, nobility and deep emotional commitment: she was an ideal interpreter of Elgar, a very good one of Bach, Handel, Gluck and Mahler, as her recordings show. A winning (and quite un-solemn) personality, she often delighted her audiences by closing her recitals with a Northumbrian folksong, sung with a characteristic lilt.

Bliss's scena *The Enchantress* and the alto part of Britten's Second Canticle were composed for Ferrier. Scholarships are awarded annually in her memory by the Royal Philharmonic Society.

ALAN BLYTH

Ferrier, Michel (*b* Cahors; *fl* mid-16th century). French composer. He published *Quarante et neuf psalmes de David* (Lyons, 1559), which are three-voice settings, using the traditional Huguenot melodies, of Marot's translations. The selfconscious limitation evident in the use of Marot's original corpus of translations only, along with a *Nunc dimittis* and the Ten Commandments (in contrast to the fuller Psalter already underway in the work of some other Protestant composers), suggests that Ferrier and his printers sought to appeal to a diverse audience, including readers only peripherally affected by Protestant liturgical changes. This is also indicated by the style of the settings, which are not restricted to simple harmonization, but instead are imitative and full of polyphonic animation. The volume was printed by Robert Granjon (using the *civilité* types that characterize much of his printing), and a second edition was issued in 1568 by Du Chemin.

PAUL-ANDRÉ GAILLARD/RICHARD FREEDMAN

Ferrini, Giovanni (*b* ?1699; *d* Florence, 1758). Italian harpsichord maker. He was an assistant of Cristofori in Florence and worked with him until his death in 1732. Only two signed instruments by Ferrini have survived: a bentside spinet of 1731 and a combination harpsichord-piano of 1745. Much of the work in Cristofori's signed instruments (1720–26) appears to have been executed by Ferrini and Ferrini's combination instrument is probably also a Cristofori design. Documentary evidence suggests that Ferrini continued the production of pianofortes,

although none by him has yet been identified. Some other surviving harpsichords may have been made by Ferrini, but the close similarity of his work to that of the Cristofori workshop makes it difficult to determine the origin of these instruments.

DENZIL WRAIGHT

Ferrini [Ferini], **Giovanni Battista** (*b* ?Rome, *c*1600; *d* Oct 1674). Italian organist, harpsichordist and composer. His father was Antonio Ferrini. He served as organist at S Luigi dei Francesi, Rome, from 1619 to 1623, and at the Chiesa Nuova from 1628 to at least 1653. For the remainder of his career he performed frequently at S Luigi, S Maria Maggiore, the Oratorio del Crocifisso, the Oratorio di S Marcello and other Roman establishments, along with leading virtuosos including Frescobaldi, Fabrizio Fontana, Cesti, Colista, Pasqualini and Vittori. His speciality was continuo playing; Pitoni referred to him as 'detto della spinetta' in the *Guida armonica* (*c*1695), and he is similarly described (e.g. 'Giobatta della Spinetta') in various payment records. He was buried in the Chiesa Nuova.

A manuscript (*I-Rvat* Vat. Mus. 569) contains 12 pieces by him, including two toccatas, a bold *tastata*, a *trombetta*, sets of variations on popular tunes and basses, and miscellaneous dances, one of which is actually a balletto from the 1637 edition of Frescobaldi's *Toccate e partite . . . libro primo*. Partial concordances with other manuscripts in the Vatican and one in Christ Church, Oxford, suggest that his music was widely circulated. Stylistic considerations suggest he composed at least one other toccata (*Rvat* Chigi Q IV 24) and some dance pieces (Chigi Q IV 28). He may have composed the four second-rate instrumental pieces by 'Bapt. Ferini' in the British Library; indeed, the fragments supplied by Pitoni in the *Guida armonica* indicate he wrote instrumental dance music. Kircher's association of Ferrini with the *stile melismatico* of the arietta and villanella implies he composed vocal music, though this cannot be substantiated.

WORKS

12 pieces, kbd, 1661–3, *GB-Och*, *I-Rvat*

Toccata, kbd, *Rvat*, doubtful
10 dance pieces, kbd, *Rvat*, doubtful
4 pieces, vn, lute, spinet, org, *GB-Lbl*, doubtful, by 'Bapt. Ferini'

LEWIS REECE BARATZ

Ferris, Richard Montgomery (*b* New York, 19 March 1818; *d* New York, 6 Dec 1858). American organ builder. He was apprenticed to Henry Erben and was soon working as a pipemaker and installer. He opened his own workshop in 1841, and from 1845 to 1849 worked in partnership with William H. Davis (1816–88). Afterwards he built under his own name until 1857. In 1851 he advertised organ pipes for sale to the trade. Ferris suffered a stroke in 1857 and turned over the management of the business to his half-brother, Levi Underwood Stuart (1827–1904), who continued it under the name of Ferris & Stuart until 1860, after which time Stuart worked under his own name in collaboration with his four brothers. Ferris's organs were well designed and made, and he was one of the first in New York to introduce some of the more Romantic unison stops. Significant instruments include those built for Calvary Church, New York (1847), All Souls Church, New York (1856), and St Mary's Church, Norfolk, Virginia (1868), but the firm also made several chamber organs.

BARBARA OWEN

Ferro, Gabriele (*b* Pescara, 15 Nov 1937). Italian conductor. Born into a musical family (his father was the composer Pietro Ferro), he studied the piano, composition (with Petrassi) and conducting (with Franco Ferrara) at the Conservatorio di S Cecilia in Rome, and won the RAI Young Conductors' Competition in 1964. In 1967 he founded the Bari SO, of which he was principal conductor. Invited by Abbado, he began conducting the symphony concerts of the orchestra of La Scala, Milan, in 1974. Alongside his position as musical director of the Palermo SO, he has held the posts of chief conductor of the RAI SO (1988–90) and Generalmusikdirektor at the Stuttgart Opera (1992–7). He has made many guest appearances, conducting *L'italiana in Algeri* in Chicago (1987), Verdi's *Attila* at the Vienna Staatsoper (1990–91) and *L'elisir d'amore* at Los Angeles (1996), and has directed rarely performed works by Gluck, Cherubini, Rossini and Mercadante at the Settimana Musicale Senese. Ferro has conducted the Italian premières of operas by Berio, Busoni, Braun, Morton Feldman, Milko Keleman, Maderna, Nono and others, as well as the world premières of Gerard Grisey's *Les espaces acoustiques* (1981) and Flavio Testi's *Cori di Santiago* (1976). His recordings include genial, idiomatic accounts of *Don Pasquale* and *L'italiana in Algeri* and the first ever recording of Zemlinsky's *Lyrische Symphonie*.

RENATO MEUCCI

Ferro, Giulio (*b* Urbino; *d* after 1594). Italian composer and priest. His name is first recorded at the end of 1575, when there was provisional correspondence concerning his service as a chorister at Urbino Cathedral. He eventually took over from Marco Giuliano as *maestro di cappella*, probably in December 1576. In 1581 Lienhart Meldert took over as *maestro*. Ferro's only known work, *Il primo libro de madrigali a cinque voci* (Venice, 1594[12]), is dedicated to Clemente Bartoli, a nobleman from Urbino, and contains 22 madrigals, one of which, *Non è questa*, is by Pier Matteo Ferro, who was probably a relative. The texts are by Tasso, Caro, Guarini, Spiro and Giraldi Cinzio, and the collection contains one six-voice madrigal *La bella pargoletta*. Some of the works are stylistically akin to spiritual madrigals, and in some cases the division

of the text divides the madrigal in to distinct *spirituale* and *amorosi* parts. It is possible that some of the works were inspired by the techniques of Cipriano de Rore, and two of the works use texts also set by Rore.

PIER PAOLO SCATTOLIN

Ferro, Marco Antonio (*d* Vienna, 1662). Italian composer and lutenist. A Knight of the Golden Spur, he was a lutenist in the Hofkapelle, Vienna, from 1642 to 1652 and from 1 October 1658 to 1662. As a composer he is known only by *Sonate a due, tre, & quattro* op.1 (Venice, 1649). This comprises 12 sonatas for varying combinations of string instruments, including two works for four violas. Alternative scorings include the use of two cornetts, bassoon, trombone and theorbo. Each sonata consists of a single movement in four or five sections, which tend to be alternating homophonic adagios and fugal allegros somewhat in the manner of Massimiliano Neri's op.1 (1644). The sonatas are conservative for their date.

NONA PYRON

Ferro, Vincenzo (*b* early 16th century). Italian composer. He is represented by 15 madrigals in some nine anthologies and collections published between 1549 and 1582. They include settings for three and four voices under the regular *alla breve* mensuration (¢) or, in the case of madrigals *a note nere*, under the mensuration sign C, also known as *misura breve* (among the latter are three in the third and one in the 'true third' books of this type, RISM 1549[30] and 1549[31] respectively; ed. in CMM, lxxiii/3–4, 1980).

DON HARRÁN

Ferroud, Pierre-Octave (*b* Chasselay, nr Lyons, 6 Jan 1900; *d* Debrecen, 17 Aug 1937). French composer. He studied natural sciences at the University of Lyons and the organ with Edouard Commette. From 1920 to 1922 he studied with Guy Ropartz in Strasbourg; after returning to Lyons he became a pupil and confidant of Florent Schmitt. He took an active part in the musical life of the city, notably through the Salon d'Automne Lyonnais, which he founded for the performance of new music. In 1923 he moved to Paris where he was largely responsible for the establishment of Le Triton, a society which gave a remarkable series of concerts (1932–9) of contemporary music, including works by Bartók, Dallapiccola, Hindemith, Honegger, Janáček, Martinů, Milhaud, Poulenc, Prokofiev, Schoenberg and Stravinsky; it soon established itself as an important forum for young French composers. Ferroud also worked as a music critic for the journals *Musique et théâtre* and *Chantecler*. His death in a car crash deeply affected his friend Poulenc, who was moved to compose the *Litanies à la Vierge noire* as a memorial.

For the Ballets Suédois, he arranged some Swedish folk tunes for the score of Jean Börlin's *Le porcher* (1924). *Foules*, an orchestral work depicting the rapid movement of a city crowd, was first performed on 21 March 1926 and again a few weeks later at the ISCM Festival in Zürich. With Ravel, Milhaud, Poulenc, Roussel and others, he collaborated on the charming ballet *L'éventail de Jeanne* (1927); his only opera, *Chiurgie* (a comic tale about a toothache, based on a story by Chekhov), was first performed in Monte Carlo the following year. Ferroud's last stage work was the ballet *Jeunesse*, a collaboration with André Coeuroy and Serge Lifar, given its première at the Paris Opéra in 1933. His musical style was sometimes astringent, sometimes lyrical, but usually with a strong contrapuntal sense and a liking for bold harmonies. He was influenced in particular by Bartók. His most important orchestral work was the Symphony in A, first performed by Monteux with the Orchestre Symphonique de Paris on 8 March 1931.

WORKS
(*selective list*)

STAGE

Le porcher (ballet, J. Börlin, after H.C. Andersen), 1924, Paris, Champs-Elysées, 19 Nov 1924

Fertőd. Hungarian village. It is the site of the ESZTERHÁZA palace.

Fes (Ger.). F♭. *See* PITCH NOMENCLATURE.

Fesca, Alexander (Ernst) (*b* Karlsruhe, 22 May 1820; *d* Brunswick, 22 Feb 1849). German pianist and composer, son of Friedrich Fesca. He had his earliest piano instruction from his father, and gave his first public performance at the age of 11 in Karlsruhe. When he was 14 he went to Berlin, where he entered the Royal Academy of the Arts, and studied composition and harmony with Rungenhagen and A.W. Bach, instrumentation with Schneider and the piano with Taubert. In 1838 he returned to Karlsruhe, where his first opera, *Mariette*, was performed. He began his first concert tour as a piano virtuoso in autumn 1839. His second opera was performed at Karlsruhe in 1841, and in the same year he became chamber virtuoso to Prince Carl Egon von Fürstenberg. Through his concert tours Fesca gained a reputation as a talented pianist. He was a prolific composer of songs, chamber and piano music which often lack originality. His best works include the Piano Sextet op.8, though he

is remembered chiefly for his songs. His operatic style was influenced by Lortzing and Marschner.

WORKS

for a complete list of published works, see Pazdírek

Ops: Mariette, 1838; Die Franzosen in Spanien, Karlsruhe, 1841; Der Troubadour, Brunswick, 1847; Ulrich von Hutten, inc., perf. Karlsruhe, 1849

Other vocal: collections of Fr. and Ger. songs; other solo songs in various languages

GAYNOR G. JONES

Fesca, Friedrich Ernst (*b* Magdeburg, 15 Feb 1789; *d* Karlsruhe, 24 May 1826). German composer and violinist. He was the son of Marianne Podleska, a singer and former student of Hiller, and Johann Peter August Fesca, a civil servant and amateur musician. He showed early musical talent and had violin lessons with the theatre musician Lohse and studied theory with J.F.L. Zachariä and composition with F.A. Pitterlin in Magdeburg. In 1805 he went to Leipzig to study composition with A.E. Müller and to serve as solo violinist in the Gewandhaus Orchestra. In February 1806 he became chamber musician in the Duke of Oldenburg's chapel. Early in 1808 he joined the celebrated court chapel of Jérôme Bonaparte, who resided as King of Westphalia in Kassel. There he wrote the first of his string quartets and symphonies (which were published later), whose performances achieved considerable success. At the same time his public performances became less frequent because of a serious lung disease. After the dissolution of the court at Westphalia in 1813 Fesca was engaged as first violinist at the chapel of the Grand Duke of Baden at Karlsruhe. Before he took up this appointment in April 1814 he visited his brother in Vienna, where he sold his first compositions to the publisher Mechetti. In the years until 1821, when his health faded rapidly, Fesca was a central figure in the musical life of Karlsruhe.

Fesca's reputation as a composer was based primarily on his string quartets and quintets. Between 1816 and 1826 he was the most frequently reviewed composer in this genre in the *Allgemeine musikalische Zeitung*, and his works were highly regarded by Spohr, Nägeli and Rochlitz, among others. Weber based his ideas on progressive contemporary chamber music on Fesca's quartets, since they combined the detailed accompaniment figuration and complex thematic development of the Classical string quartet with the harmonic richness and virtuosity demanded at that time. Also characteristic is his gentle and amiable style, though the quartets opp.7, 12 and 14 display the more extrovert manner of the *quatuor concertant*. Besides the chamber works, Fesca's sacred vocal music also gained critical acclaim. A.B. Marx (1827) ranked Fesca alongside Beethoven as a composer of distinctly personal church music, while Rochlitz (1818) noted that Fesca's setting of Psalm ix was such as a 'contemporary Handel' might have given to his *Utrecht Jubilate*. Fesca's operas and symphonies show features of early Romantic style, while at the same time revealing his admiration for Mozart.

MARKUS FREI-HAUENSCHILD

Fescennini [fescennina, fescennini versus, fiscennia carmina]. Ribald or taunting songs or dialogues sung especially at weddings, festivals or processions. The *fescennini* are doubtless related to the Greek *epithalamion* and HYMENAIOS. In Aristophanes' *Peace* (1329–57), an elaborate *hymenaios* exhibits an antiphonal structure and a considerable amount of innuendo and erotic word play. The term, which came to be applied to scurrilous verse in general, is derived either from the name of the town Fescennium in Etruria or from the phallus (*fascinum*) carried in processions to ward off evil. Horace (*Epistles*, ii.1.139–50) described these as having grown from the rustic taunts improvised in alternating verse by the farmers, their families and slaves at harvest celebrations; he thought these were the origin of later Roman drama (cf Livy, vii.2.7; Virgil, *Georgics*, ii.385ff). Examples of

the type of verse may be found in GAIUS VALERIUS CATULLUS (61.126–55) and Horace (*Satires*, i.5.51–70). St John Chrysostom specifically and sharply criticized the music, dancing, singing and torchlight processions still associated in his day with weddings.

Festa, Costanzo (*b* *c*1485–90; *d* Rome, 10 April 1545). Italian composer and singer, for many years (1517–45) a prominent member of the Cappella Sistina in Rome. His birthplace, like that of his putative kinsman Sebastiano Festa, may have been in Piedmont, somewhere near Turin; in a papal breve of November 1517 he is referred to as a cleric (he apparently never became a priest) in the diocese of Turin.

The earliest notice of Festa as a composer is the attribution to him of a motet, *Quis dabit oculis*, written (as was a motet on the same text by Mouton) to commemorate the death (9 January 1514) of Anne of Brittany, Queen of France. Speculation that Festa may have spent some time studying in France (Lowinsky, 1968) remains unproved. The discovery that he visited Ferrara early in March, 1514, bringing with him several motets, tells us both that he could not have lingered in France and that he was by this time a recognized composer; the presence of *Quis dabit* in *I-Bc* Q19, a manuscript compiled in northern Italy *c*1516–19, suggests that this motet could have been among those brought by the composer to Ferrara.

At some point between 1510 and 1517 (probably the last few years in this period) Festa lived on the island of Ischia, in the bay of Naples; he was employed as a music teacher for Rodrigo and Alfonso d'Avalos, members of a powerful Neapolitan princely family. A document recording this engagement refers to Festa as 'musico celebrato'. In 1517 he joined the papal chapel in Rome; from this period come a group of motets in the Medici codex (*I-Fl* 666), including *Super flumina Babylonis* with its tenor on a requiem chant, a lament for an unspecified person (there is no proof that it was written for the death of Louis XII in 1515).

During his long tenure in the Cappella Sistina Festa wrote a good deal of liturgical music (masses and mass movements, a cycle of *Magnificat* settings, a set of Lamentations, a celebrated set of hymns), a number of motets, and a quantity of madrigals. Individual motets and madrigals appeared in print, and Festa apparently contemplated, in the late 1530s, publication of all or most of his music; in 1536 he asked Filippo Strozzi for information about a Venetian printer who could publish his music, and two years later he received a Venetian privilege to print his 'Messe motettj madrigali, basse, contraponti, lamentation, et qualunque'. The single volume to appear was a book of madrigals (1538; two partbooks extant) probably issued in Rome. Otherwise the only music printed under his name was a set of three-voice madrigals (1537; 1543, a popular edition often reprinted). A device, perhaps a personal one of the composer, which appears in the madrigal book is also found in *I-Rvat* C.S.20, a manuscript devoted entirely to Festa's sacred music and perhaps prepared (1539–40) with a view to publication (Brauner, 1982).

Some of Festa's music, in addition to the motets mentioned above, may be dated with some precision. Two motets in *I-Rvat* C.S.46, the eight-voice *Inviolata, integra et casta Maria* and a *Regina caeli*, were copied into that manuscript between about 1515 and 1519 (Dean, 1984). From the same period come five motets (and possibly a *Fors seulement* mentioned by Aaron in 1519) copied into *I-Bc* Q19. The motet *Gaude virgo*, perhaps partially extant in manuscripts in Casale Monferrato and Rome (Crawford, 1975; Silbiger, 1977), is mentioned by Aaron in 1525. In 1528 Festa sent several *canti* (madrigals) to Filippo Strozzi, to whom he owed money and who was godfather to the composer's infant son. Strozzi, a Florentine often in Rome on political and financial business, had more texts, written by him or by his brother Lorenzo, set to music by Festa in 1531; and in 1536 still more madrigals, including a 'cancione del cald'arost', were sent by the composer to Strozzi (Agee, 1985). The manuscript *I-Rv* S¹35–40, copied *c*1530–32, contains five Festa motets. There is mention in 1533 of a madrigal to a text by Michelangelo (now lost); and in 1536, following a visit of Charles V to Rome, Festa wrote a motet (lost) on the emperor's device *Plus ultra* (Jeppesen, 1962).

Festa's dealings with Filippo Strozzi, his motets in the Vallicelliana manuscript, his setting of a madrigal, *Sacra pianta da quell'arbor*, in honour of a Florentine notable (?Alessandro de' Medici, see Einstein, 1949), and his contribution to the Medici wedding music of 1539 all suggest connections with Florence; but there is nothing to support the claim that he was Tuscan or ever lived in Florence. His service to two Medici popes, Leo X and Clement VII, is sufficient to explain the connection. Cosimo Bartoli, Florentine patriot and close observer of music, mentions Festa with approval but places him only in Rome in his *Ragionamenti accademici* (published in 1567 but written some 15 years earlier).

Three of Festa's four extant masses are preserved in Roman manuscripts, close to the papal chapel and presumably written for that institution. None of the four have titles (these are supplied by Main, CMM, xxv, 1962–78). The *Missa carminum* or *diversorum tenorum* uses five 15th-century chansons (*L'homme armé*, *J'ay pris amours*, *Petite camusette*, *Adieu mes amours*, and *De tous biens pleine*); this suggests a bow to tradition or perhaps evidence of a student work. A Marian mass survives, written in the Roman tradition made famous by Josquin's *Missa de beata virgine*; a mass parodying an Isaac Gloria, and one based on *Se congie pris*, an Odhecaton chanson. Festa wrote a good deal of liturgical

polyphony for the papal chapel, including a complete *Magnificat* cycle (each one set for all verses, in the Roman tradition), a set of Lamentations, a litany, and four Benedicamus Domino settings; all are in serviceable but far from perfunctory style, and must have seen much use. None were published in his lifetime (the Magnificat settings were printed in 1554, the litany in 1583). The most celebrated of his sacred compositions was a set of vesper hymns, copied in a Cappella Sistina manuscript in 1539 and widely disseminated; they may have replaced Du Fay's hymns in daily use at the papal chapel. Some 60 motets survive, for three to eight voices, and ranging in style from simple to quite elaborate, making use of canons and separately texted tenors. Festa's contrapuntal technique has been praised (see Main, *Grove6*; Jeppesen, 1962); the motets certainly show competence although a certain dryness and stiffness is evident in some of the more ambitious settings.

Festa appears not to have written any chansons – a surprising lacunae if he really did live for a time in France. He was active as a madrigalist, and from an early period in its history; only Verdelot and two composers in Leo X's service, Bernardo Pisano and Sebastiano Festa, composed madrigals before him, and this dating may be deceptive since the dates of composition are largely unknown for Festa's madrigals; a reasonably safe assumption is that they were all written between *c*1525 and 1540. The print *Delli madrigali a tre voci* (RISM 1537[7]), of which only the bass partbook survives, contains 13 pieces attributed to 'Constantius festa' along with a number of anonymous ones ascribed to him in later prints. Given the fact that Festa was looking for a Venetian printer in 1536, this book, printed by Ottaviano Scotto from woodcuts by Antico, may represent the first (and only) volume of a projected series. After an odd publication of 1541 which although called the *Primo libro a tre* of Festa actually contains only one piece by the composer, Gardane issued a *Vero primo libro* in 1543, printing many of the pieces from the 1537 book while adding a number of new ones, not all reliably the work of Festa; this volume enjoyed lasting success, with five subsequent printings. Meanwhile Festa had printed a *Libro primo . . . di Constantio Festa* (1538) of four-, five- and six-voice madrigals, presumably starting a new series; of this only two partbooks survive. That more volumes were contemplated is strongly suggested by the existence of a manuscript partbook (*I-PEc* 3314) containing 19 madrigals of which the first 17 are ascribed to 'Constantius Festa'; many of these are known from manuscript and print concordances to be Festa's work. The contents and especially the presence of ascriptions, unusual in manuscripts of the period, support the idea that this partbook was copied from a (lost) print or represents a volume whose publication was planned but never carried out (Fenlon and Haar, 1988).

Festa wrote about 100 madrigals; as with Arcadelt there are problems with conflicting attributions. His three-voice works, graceful and unassuming, were clearly popular; the four-voice madrigals share the idiom established by Verdelot and contribute substantially to the genre, though perhaps without the skill and variety displayed by Arcadelt. The multi-voice madrigals, like some of Verdelot's, show a certain hesitancy of technique in the face of what Willaert and Rore were soon to produce.

Festa's 'contraponti' and 'basse' long remained a mystery and were assumed to be lost; but Jeppesen signalled the existence of a manuscript (*I-Bc* C36) containing 'Cento cinquantasette contrapunti sopra del canto fermo intitolato la Base di Cons. Festa' ascribed to G.M. Nanino and dated 1602. It has now been shown (Agee, 1985) that only the last portion of this work is by Nanino; the rest is Festa's long-lost 'contraponti'.

Festa has long been regarded as the first native Italian to join the ranks of distinguished northern polyphonists active in Italy in the early 16th century. Now that the work of Marchetto Cara, an older contemporary of Gasparo de Albertis, perhaps an exact one, and of Francesco Layolle and Bernardo Pisano, slightly younger ones, has become better known, this no longer seems appropriate; but in his position at the papal chapel Festa did achieve an eminence unusual for Italian musicians before the mid-16th century.

WORKS

Editions: *Costanzo Festa: Opera omnia*, ed. A. Main and A. Seay, CMM xxv (1962–79) [M]

Costanzo Festa: Hymni per totum annum, ed. G. Haydon, Monumenta polyphoniae italicae, iii (1958) [H]

MASSES, MASS MOVEMENTS

Missa carminum (also known as the Missa diversorum tenorum), 4vv, M i (on secular tunes; attrib. De Silva in 1521[1])

Missa de domina nostra, 4vv, M i (on plainchant from Cr IV, Masses IX, XVII)

Missa 'Et in terra pax', 4vv, M i (on Gl which is attrib. Isaac in MS; lacks Cr)

Missa 'Se congie pris', 5vv, M i (c.f. popular song)

Credo 'Solemnitas', 5vv, M i (c.f. ant now known as Nativitas gloriosae virginis Mariae)

4 Benedicamus Domino, 4vv, M i (2 on Mass IV, 2 on Mass IX)

MAGNIFICAT, LAMENTATIONS

8 Magnificat (tones I–VIII), 4vv, M ii (all verses polyphonic)

4 Magnificat (tones, I, III, VI, VIII), 4vv, M ii (all verses polyphonic)

2 Sicut locutus est (tones III, VI), 2vv, M ii (presumably frags. of otherwise unknown settings)

8 Lamentations for Holy Week, 4–7vv, M vi

MOTETS

Alma Redemptoris mater, 4vv, M iii

Alma Redemptoris mater, 6vv, M iv

Angelus ad pastores, 4vv, M v

Ave nobilissima creatura, 5vv, M iii

Ave regina (i), ?3vv, M v (?lacks 1v)

Ave regina (ii), ?3vv, M v (?lacks 1v)

Ave regina, 6vv, M iv

Ave virgo gratiosa, ?3vv, M v (?lacks 1v)

Ave virgo immaculata, 4vv, M iii

Congratulamini mihi omnes, 4vv, M v

Da pacem, 4vv, M v

Deduc me Domine, 4vv, M iii

Deus qui beatum, 4vv, M iii

Deus venerunt gentes, 5vv, M iii (probably intended as protest against the sack of Rome, 1527)

Dominator caelorum, 5vv, M v (c.f. Da pacem; also attrib. Conseil)

Domine non secundum, 6vv, M iv

Ecce advenit dominator, 6vv, M iv (c.f. Christus vincit)

Ecce Deus salvator meus, 4vv, M iii

Ecce iste venit, 6vv, M iv (c.f. Magnificat, tone I)

Elisabeth beatissima, 4vv, M v

Exaltabo te, 6vv, M iv (c.f. Canticle of Zachary and part of Cum iucunditate)

Factus est repente, 4vv, M iii

Felix Anna, 4vv, M v

Florentia, 5vv, M v (c.f. part of Lamentation formula)

Gaude felix ecclesia, 6vv, M v (c.f. Virgo Dei genetrix; anon. in source, attrib. Festa by Llorens)

Inclytae sanctae virginis Catharinae, 5vv, M iii (c.f. Veni sponsa Christi)

In illo tempore, 5vv, M v (c.f. part of Ave maris stella)

Inviolata, integra et casta Maria, 8vv, M iv
Jesu Nazarene, 5vv, M v (c.f. v.1 of Vexilla Regis)
Laetemur omnes, 6vv, M iv
Libera me Domine, 4vv, M iv
Litaniae, 8vv (2 choirs) (Munich, 1583), M vi (text corresponds in part to Litany of Loreto)
Lumen ad revelationem gentium, 4–5vv, M iv (alternatim setting with Nunc dimittis)
Maria virgo praescripta, 5vv (c.f. Angeli, archangeli; only 3vv survive)
Miserere, 4–5vv, M v (alternatim setting; attrib. doubtful: given in G. Baini, *Memorie storico-critiche della vita e delle opere di . . . Palestrina*, Rome, 1828/*R*, but none appears now in this 17th-century MS, presumably because of careless trimming)
Nunc dimittis, 4vv, M v
O altitudo divitiarum, 6vv, M v (c.f. Da pacem; anon. in source, attrib. Festa by Llorens)
O lux et decus, 5vv, M iii (c.f. O beate Jacobe)
O pulcherrima virgo, 4vv, M v
Pater noster, 6vv, M iv (on plainsong, with c.f. Ave Maria . . . benedicta tu)
Petrus apostolus, 4vv, M v
Quam pulchra es, 4vv, M v (also later, defective version without A)
Quasi stella matutina, 4vv, M iii
Quis dabit oculis, 4vv, M v (lament for Anne of Brittany, *d* 1514; pubd by Ott, Nuremberg, 1538, with text changed for death of Maximilian I and attrib. Senfl)
Regem archangelorum, 4vv, M v
Regem regum Dominum, 4vv, M v
3 Regina caeli, 4vv, M iii
Regina caeli (i), 5vv, M iv
Regina caeli (ii), 5vv, M v
Regina caeli, 6vv, M iv
Regina caeli, 7vv, M iv
Sancta Maria succurre, ?3vv, M v (?lacks 1v)
Sancto disponente spiritu, 5vv, M iii (c.f. Quia vidisti me)
Sub tuum praesidium, 4vv, M iii
Super flumina Babylonis, 5vv, M v (c.f. part of Dies irae; lament)
Surge amica mea, ?3vv, M v (?lacks 1v)
Te Deum, 4vv, M iv (also in 2 later versions of doubtful authenticity)
Tribus miraculis, 6vv, M v
Video in hac crucis ara, 4vv, M iii
Vidi speciosam, 6vv, M iii (c.f. Assumpta est Maria)
Virgo Maria, 4vv, M iii

VESPER HYMNS

all 4vv, I-Rvat; ed. in H

Ad caenam agni providi; Audi benigne conditor; Aurea luce et decore roseo; Aures ad nostras Deitatis preces; Ave maris stella; 2 Christe redemptor omnium; Conditor alme siderum; 2 Deus tuorum militum; Exsultet caelum laudibus; Hostis Herodes impie; Huius obtentu; Iste confessor

2 Jesu corona virginum; Jesu nostra redemptio; Lucis Creator optime; Nardi Maria pistici; O lux beata Trinitas; Pange lingua gloriosi; Petrus beatus catenarum laqueos; Rex gloriose martyrum; Sanctorum meritis; Tibi Christe splendor Patri; Tristes erant apostoli; Urbs beata Jerusalem; Ut queant laxis resonare fibris; Veni creator Spiritus; Vexilla Regis prodeunt

MADRIGALS

Afflitti spirti miei, 3vv, M vii; Aggiacci et arde, 4vv; Ahi, lasso che spero, 3vv, M vii; Alte gratie et divine, 4vv; Altro non è'l mio amor, 3vv, M vii (also attrib. Arcadelt); Amanti il servir vostro, 4vv, M viii; Amanti io el vo pur dir, 4vv; Amanti io lo dico a voi, 4vv; Amanti o lieti amanti, 4vv, M viii; Amor ben puoi tu hormai, 5vv, M vii; Amor che mi consigli, 2vv, M vii; Amor s'al primo sguardo, 4vv, M viii; Aura gentil che in ver, 4vv; Bramo morir per non patir, 4vv, M viii (also attrib. Arcadelt); Cad' amor la tua gloria, 4vv; Caron Caron un amante fedel, 4vv; Che giova saggitar, 3vv, M vii; Che parlo o dove sono, 3vv, M vii; Che si può più vedere, 3vv, M vii; Chiar'Arno'l dolor mio, 4vv, M viii; Chi de cognoscer, 4vv; Chi vuol veder, 4vv, M viii; Come che'l desir segue, 3vv, M vii; Come lieto si mostra, 4vv, M viii; Come potria giamai, 4vv; Constantia 'l vo pur dire, 5vv, M vii; Coppia d'amici a cui, 4vv, M viii; Coppia felice a cui, 4vv, M viii; Così estrema è la doglia, 6vv; Così soav' il foco, 4vv, M viii

D'amor le generose, 4vv, M viii; Datemi pace o duri miei pensieri, 4vv, M viii; Deh piaccia al cielo, 3vv, M vii; Divelt' è'l mio bel vivo, 4vv, M viii; Dolce inimica mia, 4vv; Dolor sta sempre meco, 3vv, M vii; Donna che lungi, 4vv; Donna non fu, 5vv, M vii; Donna s'io vi dicessi, 4vv, M viii; Donna si vi spaventa, 4vv, M viii; Due cose fan contrasto, 5vv, M vii; Duro è il partito, 4vv, M viii; E morta la speranza, 4vv, M viii; Et se per gelosia, 3vv, M vii; Già mi godea felice, 4vv; Hor vegio ben, 4vv; Ingiustissimo amor, 3vv, M vii; Io dovea ben pensarmi, 4vv; Io non so ben, 4vv; Io son tal volta, 4vv, M vii (also attrib. Arcadelt); Ite caldi sospiri, 4vv; Lasso che amor mi mena, 4vv; Lasso che ben mi acorgo, 4vv; La semplice farfalla, 4vv; Leggiadri amanti in cui, 4vv; Lieti fior verde frondi, 4vv, M viii; Lieto non hebbi mai, 3vv, M vii

Madonna al volto mio pallido, 3vv, M vii; Madonna al volto mio pallido, 4vv, M viii; Madonna il vostro orgoglio, 3vv, M vii; Madonna io mi consumo (i), 3vv, M vii; Madonna io mi consumo (ii), 3vv, M vii; Madonna io prend' ardire, 3vv, M vii; Madonna io sol vorrei, 3vv, M vii; Madonna io v'amo et taccio, 3vv, M vii; Madonna i preghi miei, 5vv, M vii; Madonna oimè per qual cagion, 4vv, M viii (also attrib. Arcadelt); Mentre nel dubbio petto, 5vv, M vii; Nasce fra l'herbe, 4vv, M viii; Non mi duol il morir, 3vv, M vii; Non mi par che sia ver, 3vv, M vii; Non s'incolpa la voglia, 5vv, M vii; Occhi non ma del ciel, 4vv; O dio che la brunetta mia, 3vv, M vii; O felici color che nott'e giorno, 4vv, M viii; Ogni beltà madonna, 3vv, M vii; Ogni loco m'attrista, 3vv, M vii; O solitario ed a me grato, 5vv, M vii; Per alti monti, 4vv, M viii; Perché madonna io vivo, 4vv, M viii; Per inhospiti boschi, 4vv, M viii; Più che mai vaga, 4vv, M viii; Porta negli occhi, 4vv, M viii

Qual anima ignorante, 5vv, M vii; Qual paura ho, 4vv, M viii; Qual sarà mai, 3vv, M vii; Quando i bell'occhi, 4vv; Quando ritrovo la mia pastorella, 4vv, M viii; Quanto più m'ard', 4vv, M viii; Quanto più solco d'Adria, 4vv; Real natura, 4vv, M viii; Ridendo la mia donna (i), 4vv, M viii; Ridendo la mia donna (ii), 4vv; Sacra pianta da quel arbor, 5vv, M vii; Se grato o ingrato, 4vv, M viii; Se i sguardi di costei, 4vv, M viii (also attrib. Arcadelt); Sel'humana natura, 4vv, M viii; Se mai vedete amanti, 3vv, M vii; Se mort' in me potesse, 4vv, M viii; Se non fosse il sperar (i), 3vv, M vii; Se non fosse il sperar (ii); Se per forza di doglia, 5vv, M vii; Se saper donna curi, 4vv; Se voi mirasti dentro, 4vv; Se voi mirasti dentro, 4vv; Si come sete bella (i), 3vv, M vii; Si come sete bella (ii), 3vv, M vii; Si come seti bella, 4vv; Si liet' alcun giamai, 4vv, M viii (also attrib. Arcadelt); Si travaliato il stato, 4vv; So che nissun mi crede, 4vv, M viii; Sopra una verde e dilettosa riva, 3vv, M vii; Suave e dolce loco, 4vv; Tra quante furno et sonno, 4vv; Una donna l'altrier, 3vv, M vii; Un baciar furioso, 4vv, M viii; Vaghi luci sol, 3vv, M vii; Valli desert' e sole, 4vv, M viii; Vegghi hor con gli occh', 4vv, M viii; Venite amanti insieme, 3vv, M vii; Venuta era madonna, 3vv, M vii; Venuta era madonna, 4vv; Veramente in amore, 4vv

JAMES HAAR

Festa, Sebastiano (*b* Villafranca Sabauda, Piedmont, *c*1490–95; *d* Rome, 31 July 1524). Italian composer, perhaps related to Costanzo Festa. He may have received his early training in Turin, where his father Jacobinus resided in the 1520s. The first page of *I-Bc* Q19 has the inscription '1518 / a di 10 di zugno / seb. festa' above a motet, *Angele Dei*, presumably by Festa (the manuscript contains two other motets by him as well as several by Costanzo Festa). The manuscript is thought to have been compiled in north-east Italy *c*1516–19; the extent to which Sebastiano Festa was involved with, or even copied, the entire manuscript (the first pages are an addition, preceding the index) remains a matter for speculation. Festa was active in Rome, in a circle of musicians connected with the papal court of Leo X (*d* 1521). In 1520 he was in the employ of Ottobono Fieschi, a young Genoese noble who was bishop of Mondovì, near Turin, who lived in Rome as protonotary for Leo X; in the same year Festa was given a canonicate at Turin Cathedral.

Festa's small output (four motets and about a dozen madrigals) suggests that he died young. He is nonetheless important as one of the earliest cultivators of the nascent madrigal, along with Carpentras and Pisano, both in Leo X's chapel; Costanzo Festa, also a member of this chapel, and Verdelot (in Rome *c*1520) must have known his work. His Italian pieces are written in a very simple texture of chordal declamation varied only by an occasional pre-cadential melisma. One or two show hints of frottola rhythms but on the whole the patterns are derived from the French chanson of the period. These madrigals were well known in Florence, copied into manuscripts such as *I-Fn* Magl.164–7 and *US-NH* 179 in the 1520s; during that decade Roman printers published most of them.

One piece in particular, *O passi sparsi*, setting a Petrarch sonnet in an unassuming and schematic way, appears in many manuscripts: in the *Libro primo de la croce* (RISM 1526[6], a reprint of a lost earlier edition), in an Attaingnant print of 1533 (Claudin de Sermisy wrote a mass based on it) and in many later 16th-century prints where it is, alas, attributed to Costanzo Festa. It was also a favourite among instrumental intabulators.

JAMES HAAR

Festa teatrale (It.: 'theatrical celebration'). A title applied to a dramatic work. Although attempts have been made to identify them as members of a single, distinct genre, *feste teatrali* fall into two quite distinct classes: operas and serenatas (*see* SERENATA). When divided into acts, as in Marazzoli's *Gli amori di Giasone e d'Isifile* (1642, Venice) and Cesti's *Il pomo d'oro* (1668, Vienna), they belong to the first category; when they are undivided or consist of two parts, as in works written for the Viennese court to librettos supplied by Metastasio, Pariati, Pasquini and others, they belong to the second. What operas and serenatas so labelled have in common is that they are

presented on stage (unlike most serenatas described merely as 'drammatico') and celebrate, often with direct allusions, some important public event such as an imperial birthday or wedding.

The first of Metastasio's nine serenatas titled *festa teatrale* by their author was *La contesa de' numi* (1729, Rome, music by Vinci); all the rest except *La pace fra le tre dee* were written for the Viennese court. The last work in the series was Hasse's *Partenope* (1767). No librettist after Metastasio appears to have revived the term.

MICHAEL TALBOT

Festetics Quartet. Hungarian string quartet. One of Europe's most accomplished period-instrument quartets, it was founded in Budapest in 1982 by Istvan Kertész and Erika Petöfi, violins, Peter Ligeti, viola, and Reszö Pertorini, cello. While the Festetics's repertory embraces the complete quartets of Mozart (which it has recorded) and many of Beethoven's and Schubert's quartets, the group has a special affinity with the quartets of Haydn. Its complete recorded cycle of the quartets, made in collaboration with the noted Haydn scholar László Somfai and using the most authentic editions, has been widely praised for its perception and its unity of style. The Festetics performs regularly in Hungary and throughout Europe, and has appeared at major festivals in Budapest, Vienna, Stuttgart, Utrecht and elsewhere.

RICHARD WIGMORE

Festing, Michael Christian (*b* London, 29 Nov 1705; *d* London, 24 July 1752). English composer and violinist. He was a son of John and Elizabeth Festing, and it is possible that the family had some connection with Gros Festin, near Stralsund in Schleswig-Holstein, Germany. John Festing, one of his brothers, played the flute and the oboe, and left a sizable fortune, which he obtained mainly by teaching. He is believed to be the musician portrayed in Hogarth's painting *The Enraged Musician* (1741, now in the Tate Gallery, London).

Michael Christian Festing was primarily a violin virtuoso. He was taught the violin first by Richard Jones and then by Francesco Geminiani. Festing in his turn gave violin lessons, Thomas Arne being one of his pupils. It is likely that the manuscript discovered in 1993, containing three of Festing's op.4 violin solos (*GB-Lbl*), belonged to one of his pupils. His first public appearance was on 6 March 1723 at Hickford's Room, London, and the first mention of music composed by him occurs in a concert advertisement in 1726. In 1729 he performed at the York Buildings, Villiers Street, and his first published composition, *Twelve Solos for a Violin and Thorough Bass* op.1, dedicated to the Earl of Plymouth, appeared the following year. On 4 November 1726 he replaced James Moore as a member of the King's Musick. His close involvement with the court is shown by the appearance of three sets of minuets for the reigning monarch's birthday, each 'perform'd at the Ball at Court'. Festing was also closely associated with amateur music societies, the earliest of which met at the Swan Tavern, Cornhill. He was a member of the Academy of Ancient Music, but he and Maurice Greene left over the Bononcini–Lotti affair of 1731 and set up the Apollo Academy in the Devil Tavern. According to Burney, Festing was director of the orchestra at the Italian opera house in 1737; however, Hawkins claimed that John Clegg became leader. In 1738 Festing and a group of colleagues founded the Fund for the Support of Decay'd Musicians and their Families, later known as the Royal Society of Musicians; for many years he acted as honorary secretary. All the notable musicians of the day, including Handel, became members. When the Ranelagh Gardens were opened in 1742, Festing was appointed musical director, providing compositions and leading the band for the next ten years. He had two sons and two daughters; Michael (*b* 1725) married Maurice Greene's daughter, Katherine.

Festing's works generally show a clear line of development from the Baroque to the *galant* style. The early instrumental pieces employ ground basses, canons at the octave and fugal treatments. His output in general is more adventurous than that of Geminiani, although in some respects close parallels can be drawn between the two composers. In particular, virtuoso improvisatory passages reflect the influence of Geminiani, rising as high as d'''', which was then regarded as the uppermost limit of the violin's register. Festing followed Geminiani's example in his elaborate and detailed ornamentation of the solo parts; more unusually, the bass lines (notably of the trio sonatas) are extensively marked with bowing, phrasing and ornaments. All Festing's works include sudden and unusual modulations. Key changes up or down a tone are common, and other dramatic modulations reflect the Spanish harmonies of Domenico Scarlatti. Some of Festing's vocal compositions were written for Ranelagh, and others were performed at the Apollo Academy. Most of the cantatas are homophonic, with orchestral accompaniments, and include arias with binary structure. In many respects they resemble the cantatas of John Stanley. His *Ode on the Return of ... the Duke of Cumberland* is particularly noteworthy for its use of full Baroque orchestra including kettledrums, trumpets, oboes and horns. His *Ode on St Cecilia's Day* reflects the influence of Handel's oratorio *Alexander's Feast*. His odes and cantatas owe their importance to their break from the Italian tradition; the use of extended aria forms and inventive orchestration, and the imaginative use of dramatic gesture betray an English trait.

MELANIE GROUNDSELL (text, bibliography), ELIZABETH M. LAMB (work-list)

Festival. A generic term, derived from the Latin *festivitas*, for a social gathering convened for the purpose of celebration or thanksgiving. Such occasions were originally of a ritual nature and were associated with mythological, religious and ethnic traditions. From the earliest times festivals have been distinguished by their use of music, often in association with drama. In modern times the music festival, frequently embracing other forms of art, has flourished as an independent cultural enterprise, but it is still often possible to discover some vestige of ancient ritual in its celebration of town or nation, political or religious philosophy, living or historical person. The competitive music festival has also retained combative features reminiscent of festival events of former times.

The present article is concerned with the evolution of the musical festival in Western Europe and North America, and with developments elsewhere in the world that have sprung from these traditions; discussions of individual festivals may also be found in the articles on the relevant towns and cities.

1. Ritual origins. 2. Court festivals of state, *c*1350–*c*1800. 3. Choral festivals in England, Germany and Austria, *c*1650–*c*1900. 4. Commemorative festivals, *c*1750–*c*1900. 5. North American festivals, *c*1850–*c*1900. 6. The 20th century. 7. List.

1. RITUAL ORIGINS. The earliest festivals were held to celebrate important points within the annual cycle of seasons, as well as family or tribal events. Their main purpose was to stimulate the unseen forces considered to be the arbiters of human destiny to give good crops and protection against natural disaster. The most famous early example of festival ritual was the Olympic Games, held on the plain of Olympus in Greece in honour of Zeus. These combined athletic competitions and religious observances with music and dancing, and were held at the time of the summer solstice. From 776 BC the games took place every fourth year until, in their original form, they were abolished at the end of the 4th century. In *The History of the Decline and Fall of the Roman Empire* (1776–88; chap.15) Edward Gibbon gave a succinct account of the character of festivals, 'artfully framed and disposed throughout the year', that distinguished Roman civilization. In due course their influence coalesced with that of various Middle Eastern traditions subsumed in Hebraic culture to provide a foundation for the religious feasts of European Christianity. Lang (1884) pointed out, for example, that 'in Catholic countries, to this day, we may watch, in Holy Week, the Adonis feast described by Theocritus (Idyll XV), and the procession and entombment of the old god of spring'.

Among the British people who withdrew into Wales under the impact of post-Roman invasions the art forms of the Druidic bards were retained in the EISTEDDFOD, a competition in poetry and music. The first for which there is reliable documentary evidence was in 1176, but an eisteddfod supervised by the famous bard Taliesin is reputed to have taken place as early as 517 at Ystum Llwdiarth in South Wales, and another about 20 years later near Conway in North Wales. Since the 12th century the institution has played an important role within the concept of Welsh nationhood. In the 16th century the highly competitive nature of the eisteddfod was emphasized by the presentation of silver models of bardic chair, tongue, harp and crwth to those who performed best in the main sections. The modern Royal National Eisteddfod is held each year in a different place in Wales and, being conducted entirely in Welsh, it has contributed much to the development of Welsh political consciousness as well as to Welsh culture. Since the late 19th century eisteddfods have been held among Welsh communities in the USA, Canada and Australia, and in 1947 an International Eisteddfod was inaugurated at Llangollen in North Wales.

In Ireland pagan and Christian practices met traditionally on St Bridget's Day (the first day of spring), St Patrick's Day (the first day of sowing), May Day, St John's Eve, All Hallows Day and many more. The term 'feis', associated in the first place with an ancient gathering at Tara described in the 12th-century *Book of Leinster*, is now used to denote a cultural festival. The Feis Ceoil, inaugurated in Dublin in 1897 by the Irish National Literary Society and the Gaelic League, is, like the Welsh eisteddfod, intensely nationalist in content. Also in 1897 a purely Gaelic cultural festival, 'Oireachtas, was instituted under the presidency of Douglas Hyde.

An institution similar to the eisteddfod was the PUY, a competitive festival held from the 12th century to the early 17th in northern France by the literary–musical societies also known as *puys*. Around 1575 a musical *puy* dedicated to St Cecelia was established in Evreux;

Giullaume Costeley was among its founders, and Orlande de Lassus among the prizewinners.

During the medieval period the festival absorbed elements of chivalry, popular dumb-shows, religious theatre and allegory. Its principal element was the procession with its religious overtones, mute pageants or *tableaux vivants*, and mystery plays. Depending on the context, a distinction was made between musical ensembles of loud and soft instruments; vocal music was either sung unaccompanied or combined with the latter.

2. COURT FESTIVALS OF STATE, *c*1350–*c*1800. With the start of the Renaissance, festivals began to be used as court propaganda, testaments to the power, wealth and prestige of the ruling houses of Europe. Elaborate festivities were planned in conjunction with events of state such as coronations, weddings, baptisms, ceremonies of allegiance, state visits or entries, peace treaties and funerals. They included processions, competitions such as dramatic tournaments or tilting, pageants, banquets, often with their own dramatic interludes, balls, masquerades, theatrical presentations, regattas and water shows, and fireworks with general illumination. They lasted from a few days to several months, offering innumerable occasions for music-making.

For his coronation in 1377, Richard II was welcomed by all of London. On a stage 'were many [dressed as] angels, with dyvers melidiez and songe'. When Charles V of France entertained the Holy Roman Emperor in Paris, trumpet fanfares accompanied the march back to the city, where an ensemble of royal musicians played 'virelais, chansons and other bergerettes'. When in 1461 the newly crowned Louis IX left Reims for Paris, no fewer than 54 trumpeters accompanied him; at one tableau on the route three pretty girls, nude, sang 'little motets and bergerettes', and next to them were many performers of *bas instrumens*. At one pageant for the visit of Charles VIII to Rouen in 1485, seated figures representing the 24 Old Men of the Apocalypse held portative organs, harps, lutes, rebecs, shawms, crumhorns and other instruments, while minstrels did the playing from behind. It was customary for the loud instruments to be placed on a scaffold or balcony, where they performed for banquets and dances such as the lively saltarello or *alta danza*. They were also featured at tournaments, where fanfares of penetrating sonority were called for. Soft instruments, on the other hand, often played or accompanied the singing of chansons for the slow, stately *basse danse*.

Renaissance festivals reflected the pervasive influence of classical antiquity in triumphal arches with inscriptions, pageant-wagons and theatre with humanistic or mythological themes. Both vocal and instrumental music encompassed the new style. This was most apparent in the long series of extravagant MEDICI festivals in Florence. The marriage of Cosimo I and Eleonora of Toledo in 1539 included a huge banquet with a comedy staged in the palace courtyard, its acts interspersed with *intermedi* featuring madrigals by such composers as FRANCESCO CORTECCIA and Costanzo Festa. For the wedding celebrations of Cosimo's heir Francesco I and Joanna of Austria in 1566, the artist and art historian Giorgio Vasari designed the costumes and pageant-wagons. The bride was ushered into Florence 'to the sounds of many trumpets and the roar of drums'. The birth of a daughter to Francesco was celebrated during the carnival season of 1567 with mock combats, masquerades, banquets, an allegorical pageant, a comedy and fireworks. A six-part madrigal by Corteccia was sung with the parts doubled by two cornetts, two crumhorns and two trombones. One of the jousts displayed 'a great number of trumpets and shawms [as well as] Turkish-style kettledrums, all mounted'. At the second marriage of the duke in 1579, to Bianca Cappello of Venice, one of the six major events was a staged battle, with 'diverse musicians with many voices and innumerable instruments'. Music by Vincenzo Galilei, Piero Strozzi and Alessandro Striggio were performed; one of the singers was Giulio Caccini.

The courts of northern Europe soon absorbed these new influences, examples including the numerous state visits of Holy Roman Emperor Charles V between 1515 and 1533, the coronation festivities for Anne Boleyn in 1533, 'garnysshed with mynstralsy & chyldren syngyng', with pageants featuring Apollo and the Nine Muses and the Judgement of Paris; and the French royal festivals, conceived by humanists 'in the antique style', during the reigns of Francois I and Henri II, who had married Catherine de' Medici. When Henri made a triumphal entry into Lyons in 1540, from the top of a classical edifice an ensemble of cornetts, shawms, crumhorns and dulcians was heard. A long series of festive entries (*joyeuses entrées* or *blijde inkomsten*) into Flemish cities celebrated the successive imperial governors: when Archduke Ernest arrived in Brussels and Antwerp in 1594, one of the staged tableaux represented the Nine Muses, six playing cornett, buisine, triangle, *viola da braccio*, flute and gamba, and three singing from partbooks. The elaborate celebrations for the marriage of Duke Wilhelm V of Bavaria and Renée of Lorraine in 1568 included processions, feasting, games of skill, dancing, dramatic performances and fireworks. The music was directed, and largely composed, by the Kapellmeister Orlande de Lassus. During the prenuptial banquet winds and strings alternated with vocal music. At the wedding service a six-part mass by Lassus was performed by chorus and instruments, while the banquet which followed included an organ composition by Annibale Padovano, a motet by Lassus played by cornetts and trombones, and all sorts of instrumental and vocal music between the various courses.

At the wedding of Archduke Johann Friedrich of Württemberg and Barbara Sophia of Brandenburg 'there was a completely glorious musical performance'. Each of the noble guests brought along his own musical establishment, all participating in the dramatic processions and banquets. The skill of the ducal musicians was on display at the baptism of Prince Friedrich in 1616. Sacred works by Ludwig Daser and Gregor Aichinger were performed by voices accompanied by basoons, bombardes, cornetts and trombones. The rulers of Savoy in Turin were known for their lavish festivals. Marco da Gagliano's *Dafne* was performed at the wedding of Marguerite of Savoy and Francesco Gonzaga of Mantua in 1608. For the wedding of Princess Adelaide and Ferdinand Maria of Bavaria in 1650, an ensemble of 24 violins played throughout the banquet, and a dramatic horse-ballet included the court musical ensemble playing from the logia of a stage set representing the Palace of Love.

At his coronation in 1654 Louis XIV of France 'was escorted to the cathedral [of Reims] preceded by a dozen trumpeters, drummers, fife players, oboists, flautists, bagpipers and trombonists'. Following the service, as soon as the doors were thrown open, 'trumpets, fifes,

drums and other instruments ... blended their agreeable sounds with the voices of the populace, crying "vive le Roy"'. The king entertained his court at Versailles with elaborate festivities including ballets, theatre, banquets and grand balls. Lully's *Alceste* had its première at a *divertissement* in 1674 celebrating a military victory. As Charles II of England was welcomed on his way to his coronation in Westminster Abbey in 1660, he passed through four triumphal arches upon which dramatic performances were staged along with music: respectively, trumpets and drums, a wind band, string instruments and a mixed ensemble. Spread out along the route of march, other musicians played as the procession passed by.

Italian opera became a staple feature of these court festivals, especially at the imperial court in Vienna beginning with Ferdinand II. Antonio Cesti's *Il pomo d'oro* was first performed during birthday celebrations for Queen Margherita in 1668. In the same year, Antonio Draghi's *Il fuoco eterno* was commissioned for the birth of a daughter to Emperor Leopold I. The combination of opera, masked balls, theatre, ballets, parades and liturgical music with orchestral companiment added to the magnificence of these occasions. The carnival season at the Saxonian court in Dresden in 1695 included as its main event an 11-part dramatic procession of pagan gods and goddesses, the music for which was organized and directed by the Kapellmeister Nicolas Strungk. The entire musical ensemble, as well as those from other invited courts, was integrated into the affair, the choice of instruments being determined by the deity and dramatic context of each segment.

Full-scale, homogeneous instrumental and vocal performances were the norm in 18th-century court festivals. One of the most important political events was the marriage in 1719 of Friedrich August II of Saxony and Princess Maria Josepha of Austria. The famous Dresden court orchestra was on display; the evening's entertainment included work for 64 trumpets and eight timpani and the *serenata La gara degli dei* by the orchestra's director Johann David Heinichen, while the main feature was the performance of Antonio Lotti's opera, *Teofane*. Heinichen's *serenata Diana sull'Elba* was the highlight of an aquatic festival for which a large orchestra performed from a barge shaped like a seashell.

Oaths of allegiance and fidelity were festal occasions as well. When Emperor Charles VI was installed as Duke of Steyer in 1728 the ceremonial banquet included a concert by ensembles of instruments stationed in the various dining chambers. At the homage ceremony made by the Austrian nobles to Maria Theresa as Archduchess of Austria in 1740, the customary trumpets and kettledrums were employed in both sacred and secular music-making as a symbol of imperial power. Louis XV was welcomed by the cities of Strasbourg and Mets in 1744; at one ceremony the festivities included a *Te Deum*, the voices 'intermingled with fanfares from trumpets and timpani and [the sounds of] oboes and bassoons'. In both royal and imperial processions throughout Europe, military regiments by then included wind bands or oboes, bassoons and sometimes even horns.

The coronation of Holy Roman Emperor Leopold II in 1790 took place in Frankfurt; the music, directed by Vincenzo Righini, Kapellmeister at Mainz, was performed by the archbishop's own ensemble, augmented by 15 members of the imperial orchestra from Vienna. This represented perhaps the apogee of festal performances of the period, combining fully concerted music with works commissioned especially for the occasion.

3. Choral festivals in England, Germany and Austria, c1650–c1900. In England St Cecilia's Day (22 November) received particular attention and musical celebration (*see* Cecilian festivals). In her honour performances were given by the choristers of the Sardinion Embassy Chapel (dedicated to her) and by the Musical Society at St Bride's Church in Fleet Street. In 1683 Purcell dedicated the first of his St Cecilia odes, *Welcome to all the pleasures*, to the society. Other composers who provided substantial works for this festival included John Blow, G.B. Draghi, John Eccles and Handel; the most celebrated poem set was Dryden's *From Harmony, from Heav'nly Harmony*. Various other bodies organized similar functions for different occasions; some, not least under the aegis of the Church of England, placed emphasis on charity. The Corporation of the Sons of the Clergy, founded in 1655, held an annual service to raise funds for the relief of distress among the families of clergy; from 1697 this was held each May in St Paul's Cathedral. The best professional talent was employed, and for many years Purcell's *Te Deum and Jubilate* in D was regularly performed. In later years Handel's music took pride of place. Another festival came into being at about the same time to provide funds for children in the charity schools of London, with music performed by the children themselves. This also took place, in due course, in St Paul's, and eventually as many as 6000 children participated. Both Haydn and Berlioz praised the standard of their performance.

No other composer, perhaps, stimulated as many festivals in England as Handel, reverence for whom rapidly overtook that previously done to St Cecilia. His large-scale choral works, fashioned to a considerable extent from the indigenous anthem, enjoyed so much popularity that arrangements for their regular performance were established in towns and villages throughout Britain. The example of the Sons of the Clergy and St Cecilia festivals stimulated an annual 'Meeting' of the cathedral choirs from Gloucester, Worcester and Hereford, the first of which took place about 1715. By 1752 the practice of diversifying the schedule of music with secular works in other buildings was well established. In either case Handel's music, held in universal veneration, provided the mainstay of the programmes. The Three choirs festival, as it came to be known in the 19th century, developed into a major musical occasion which afforded increasing opportunity for performances of new works by the principal British composers, and of important works from Europe and North America.

Festival performances of Handel's oratorios were given during the last years of his life and immediately after his death in many towns, of which the most important were Newcastle upon Tyne, Salisbury, Bristol, Bath, Coventry, Oxford and Cambridge In centres of industrial expansion such festivals were usually coupled with middle-class concern about social conditions, and important events were organized in Leeds (1767), Birmingham (1768), Norwich (1770), Chester (1772), Newcastle (1778), Liverpool (1784), Manchester (1785), Sheffield (1786) and York (1791) with the primary aim of raising funds to establish or support new hospitals.

In 1784 the 'centenary' commemoration of Handel in Westminster Abbey and the Pantheon, with some 500 performers from all parts of England, accelerated the formation of choral societies and charitable foundations. It also implanted the idea that excellence was somehow related to size. This found expression in the early 19th-century Handel performances held under the direction of George Smart, who controlled most of the principal festivals in the country between 1820 and 1850. He was followed by Michael Costa, who directed the Handel festival (1859) at the Crystal Palace, where similar festivals were held triennially until 1926. During the 19th century major festivals developed in the industrial centres of England, fuelled by a great expansion of amateur choral activity. The new concert and town halls erected in Birmingham, Bristol, Leeds, Liverpool, Manchester and Norwich were used for large-scale musical festivals. While Handel remained central in programmes, Mendelssohn (whose *Elijah* was a Birmingham commission) enjoyed lasting popularity. Other European composers, including Dvořák, Gounod, Massenet and Raff, received generous commissions.In 1874 a Tonic Solfa festival took place at the Crystal Palace in London, with 3000 children participating. This was the brainchild of John Curwen, who was also responsible for instituting competitions to stimulate high standards of musical literacy. These in turn inspired Mary Wakefield to hold a modest competitive festival in Westmorland in 1885. From this sprang the modern competitive movement which, since 1921, has been regulated in Britain by the British Federation of Music Festivals (since 1991 part of the British Federation of Festivals), to which over 300 festivals are affiliated. Non-competitive festivals for schools were promoted by Geoffrey Shaw and Cyril Winn, both Board of Education inspectors. Among composers contributing to such amateur music-making were Thomas Dunhill, Gerald Finzi, Gustav Holst, Gordon Jacob, Herbert Howells, John Ireland, Ralph Vaughan Williams and Peter Warlock.

In German-speaking countries, as in England, the oratorios of Handel and Haydn lent impetus to the formation of choirs and related associations. On 20–21 June 1810 G.F. Bischoff, Kantor of Frankenhausen, assembled singers and instrumentalists from neighbouring towns in Thuringia for a performance of Haydn's *The Creation* and other works under Spohr's direction. This was Germany's first festival in the modern sense, and its success led to similar events in that town in 1812, 1815 and 1829. On 15–16 August 1811 Bischoff was constrained to organize a 'Napoleon Festival' in Erfurt. Although he probably disliked the reason for the festival, he provided an interesting and varied programme, including works by Haydn, Mozart, Beethoven and Spohr. In 1820 the industrious Bischoff arranged a three-day festival in Helmstedt, and it was after his example that Johannes Schornstein, musical director at Elberfeld, combined singers from that town and from Düsseldorf for a Whitsuntide festival in 1817. From this developed the Niederrheinisches Musikfest, held in turn in Düsseldorf, Aachen, Wuppertal and Cologne, which Mendelssohn conducted from 1833 until his death in 1847.

That festivals should be directed by a distinguished guest conductor became an early principle, and one that usually delighted the amateur singers who took part. In 1829 J.F. Naue, musical director at Halle, engaged Spontini to conduct a festival in the city, and two years later he concentrated attention on Halle's most famous son in a Handel festival. All these ventures were evidence of a zeal for choral music and for the ideals that went with it. The most obvious of these were concerned with nationalism and education; pioneers of the music festival as an educational resource included Hans Georg Nägeli and Friedrich Silcher, who founded a festival at Plochingen (Württemberg) in 1827. In Vienna large-scale festival performances of Handel's *Alexander's Feast* in 1812 contributed to the foundation of the Gesellschaft der Musikfreunde and thereafter annual music festivals, at which oratorios were given by a large number of performers in the Riding School.

4. Commemorative festivals, *c*1750–*c*1900. Festivals to commemorate a great writer or musician seem to have originated in the second half of the 18th century. In 1769, even before the Handel Festival of 1784 (see §3 above), Stratford-on-Avon had marked the bicentenary of Shakespeare's birth with pageantry for which music was composed by Thomas Arne. After the death of Beethoven the cult of the great artist became stronger in response to evolving nationalist urges. Handel festivals, designed to further a British or a German national heritage according to where they took place, continued to proliferate, but at the end of the 18th century and the beginning of the 19th other important German-speaking composers, particularly of the Baroque and Classical periods, began to find support and adulation from societies and collateral festivals. On 23 April 1843, a year after a statue of Mozart had been placed in Salzburg, a monument to Bach was unveiled in Leipzig, with the performance of suitable music chosen by Mendelssohn. This occasion may be taken as the progenitor of all subsequent Bach festivals. In August 1845 the new statue of Beethoven in Bonn occasioned a much larger demonstration of devotion in a truly international festival, the forerunner of countless Beethoven festivals in many parts of the world. During the 1858 Handel Festival in Halle a statue of him was presented to the public. A Mozarteum was instituted in Salzburg, and the first of the great sequence of Mozart festivals took place there in 1877. This was appreciatively noticed by Mary Cowden-Clarke, not only on account of the excellence of the music but also because of the 'gastronomical pleasures' that are now taken to be a necessary concomitant to artistic enterprises designed to accommodate touristic interest. Wagner can be said to have instituted his own commemorative festival in 1876, when the Festspielhaus was opened at Bayreuth for the sole purpose of presenting his music dramas.

5. North American festivals, *c*1850–*c*1900. In the USA festivals had a particular appeal among German immigrant communities who had formed their own choirs, and they were furthered by the establishment of a 'North German Bund' in 1847. In 1857 and 1858 the Handel and Haydn Society of Boston organized 'conventions' (i.e. festivals) in Boston and Worcester. But it was Patrick S. Gilmore, a bandmaster styled 'high priest of the colossal', who brought the cult of bigness to its first climax in the National Peace Jubilee and Musical Festival held in Boston in 1869. Described at the time as 'the grandest musical festival ever known in the history of the world', it required a chorus of 10,000 and an orchestra of 1000. The conclusion of the Franco-Prussian War in 1871 so stimulated interest in German music in the USA that some

20,000 performers took part in Gilmore's World Peace Jubilee in Boston in 1872. A prominent conductor in the USA at that time was the German-born Theodore Thomas. With his own orchestra, he had conspicuous success in organizing the Cincinnati May Festival of 1873 and the Philadelphia Centennial Concerts of 1876, and he was given control of those held in New York and Chicago in 1883.

Meanwhile music festivals were taking root in Canada; the first of any importance took place in Montreal on 24 October 1860, when the Prince of Wales opened the Victoria Bridge. British connections remained strong, and the choral tradition was cultivated by British-born musicians. One of the most active was Charles Harriss, who in 1903 invited Alexander Mackenzie to direct 18 festivals in five weeks, the programmes being almost entirely of works by British composers. In 1906 Harriss organized a successful British-Canadian Music Festival in London (England). A choir of multi-cultural character that sang in many festivals both in Canada and abroad was the Toronto Mendelssohn Choir, founded by the German A.S. Vogt (1894) and taken over after his retirement by H.A. Fricker, formerly chorus master for the Leeds Festival. The patriotic feelings of German Canadians led to a Friedensfest in Berlin (now Kitchener), Ontario, at the end of the Franco-Prussian War, and to a Sängerfest in the same place in 1875. This was a rallying point for such immigrant music groups as the Concordia of Berlin and the Germania of Hamilton. Nationalism of another kind was also evident in the Fête Nationale des Canadiens-Français held in Quebec in 1880, at which Calixa Lavallée's *O Canada* was first sung.

6. The 20th century. As the century progressed there was an unprecedented proliferation of music festivals of all kinds. Modern communications ensured that those well established in the 19th century became increasingly international in character and that newly-established festivals were quickly able to find places on the international scene. Among the latter were the Maggio Musicale Fiorentino (inaugurated 1933), the Holland Festival (1948), and festivals at Lucerne (1938), Prague (1946) and Edinburgh (1947).

In Europe the music festival continued through the century to function as an embodiment of national or ideological aspirations. In 1905 it was claimed that there were some 50,000 amateur singers engaged in competitive choral festivals in England. In that year a festival primarily for rural choirs was founded in England at Leith Hill, where Vaughan Williams lived; he became closely associated with it and it remains a monument to his concern for amateur musicians. In Germany the Arbeiter Sängerbund, founded in 1928, held music festivals with political objectives, organizing an international Arbeiter Olympiade in Strasbourg in 1935. After the Yalta conference of 1945, the political climate affected Eastern European festivals for 50 years. Music at public festivals was meant to support the tenets of Marxism; in the German Democratic Republic in particular there was no shortage of suitable new texts from the pens of, among others, Berthold Brecht, Johannes R. Becher and Stephen Hermelin, and the composers Hanns Eisler and Ernst Hermann Meyer made effective use of this material. Central to the East German festival tradition were the Arbeiter-Festspiele, to which many composers contributed. Bach and Handel festivals were also continued. The Festival of Britain (1951), conceived as 'a tonic for the nation' in a time of austerity and marking the centenary of the Great Exhibition, included music as an important element. An ambitious range of concerts, opera and ballet was given in London, where the Royal Festival Hall remains as a monument, and music was included in local arts festivals throughout the country. The Arts Council of Great Britain provided financial support, promoted concert series of early music, and commissioned works by many British composers.

The festival organized by Benjamin Britten and others in Aldeburgh, Suffolk (from 1948), included other arts than music, particularly painting and literature; this became a popular practice for festivals established in the latter half of the century. Just as Britten's initiative gave prominence to its locality, so did the festival at Kirkwall in the Orkney Islands, established by Peter Maxwell Davies in 1974. In both places local authorities, at first reluctant, discovered that such events could help the local economy as well as the community's artistic reputation. By the end of the century there were few European towns associated with scenic beauty, distinguished architecture or a famous composer that did not have their own festivals, and few festivals could resist claiming 'international' status. The music festival has also become an international phenomenon taken up by major cities throughout the world. From the 1950s Rio de Janeiro was a centre of festivals and music competitions. Arts festivals in Tokyo (established 1948), Osaka (1958), Hong Kong (1972) and Seoul (1976) all include music as an important element.

Most of the large towns and many centres of tourism in Australia, Canada and the USA initiated music festivals of one kind or another during the 20th century, and festivals were organized around major orchestras. Among the most important North American events is the Tanglewood Festival in Massachusetts (first held in 1934 in Stockbridge), centred on concerts by the Boston SO. The Marlboro (Vermont) Music Festival (founded 1951) is devoted entirely to the performance of chamber music. Other well-established American festivals include those at Aspen, Colorado (founded 1949), Ravinia Park, near Chicago (1936), Wolf Trap Farm Park, near Washington, DC (1971), Ojai, near Los Angeles, and the Grant Park Concerts in Chicago (1934). One of the first festivals devoted to indigenous American music was the Old Time Fiddlers' Convention, founded in 1924 in North Carolina. The National Folk Festival in the USA had its origins in St Louis in 1934; its permanent base from 1971 was Wolf Trap Farm Park. In Canada, festivals of traditional music were inaugurated in Calgary, Edmonton, Vancouver and Winnipeg during the 1970s and 80s. The Smithsonian Institution in Washington, DC, holds an American Folklife Festival; the Philadelphia Folk Festival was founded in 1962. Although a precursor of the jazz festival took place in Chicago in the form of the International Jazz Congress of 1926, the first true jazz festivals sprang up outside the USA: the Australian Jazz Convention was first held in 1946, and the Nice Jazz Festival, the first jazz festival of international importance, was in 1948, followed by the first Paris Jazz Fair in 1949. Among important and long-lived American jazz festivals are those at Newport, Rhode Island, in 1954 (moved to New York in 1972) and Monterey, California, in 1958. The jazz festival in Warsaw founded in 1959 also drew

international attention. Such festivals provided unprecedented opportunities for internationally known jazz musicians to come together, and some musicians made careers travelling from one festival to another. Scores of jazz festivals were inaugurated throughout North America and Western Europe in the 1970s and 80s, reflecting the increasing interest in jazz as concert music.

The proliferation of festivals has led many organizers to look for a focal point for their concerts and recitals. Often a different anniversary or aspect of music is chosen each year. In other cases a festival may be built around a celebrated executant (e.g. Casals at the PRADES FESTIVAL and in Puerto Rico, Menhuin in Bath and Windsor) or a famous composer (e.g. Britten at the ALDEBURGH FESTIVAL, Villa-Lobos in Rio de Janeiro). Festivals wholly or partly devoted to opera, apart from Bayreuth, include those at Munich (dating in its present form from 1901), Zürich (1909), Glyndebourne (1934), Aix-en-Provence (1948), Wexford (1951) and Marseilles (1971, devoted to contemporary opera). The Haslemere Festival was founded in 1925 by Arnold Dolmetsch to give practical effect to his research in the performance of early music. In the second half of the century early music played an increasingly important role in many festivals, and several festivals devoted to it were established, among them those at Innsbruck (inaugurated 1972), Cervantes, Mexico (1972), York (1977), Boston (1981) and Glasgow (1990). Devotees of the organ are served by several specialist festivals; one of the best known, the biennial International Organ Festival, was established by Peter Hurford at St Albans, Hertfordshire, in 1963. The earliest 20th-century festival to focus on contemporary music was at Donaueschingen, initiated in 1921 by Prince Max Egon zu Fürstenberg. It was at first for chamber music, but this emphasis was abandoned when it was revived in 1950. The first of many important festivals organized by the ISCM (1923) was also given over to chamber music, but the scope soon widened to include many different genres. Festivals devoted to contemporary music were later established in Venice (1930), Witten (1936, chamber music), Cheltenham (1945, British music), Brussels (1958), Palermo (1960), Wrocław (1962), Royan and La Rochelle (1964), Brescia (1969), Huddersfield (1978) and San Francisco (1980). The Japanese Society of 20th-Century Music (founded in 1957) sponsors a summer festival, and the Japanisch-Deutsches Festival für Neue Musik was established in 1967.

A fashion for pop and rock festivals on a huge scale was set by the Monterey International Pop Festival held in 1967, which attracted an audience of 60,000; two years later the rock festival at Woodstock, New York, drew 300,000 people. Their mix of internationally famous performers, enthusiastic audience participation, drug use and social protest was imitated elsewhere in the USA and Europe during the 1970s. By the end of the 20th century popular music particular to the young, while owing much to American practice, had become international. The use of global communication media to promote pop festivals and performers, together with the increased availability of international travel, have allowed such festivals to reach unprecedentedly large and diverse audiences. This potential was exploited in the 1980s and 90s to raise money for charity, notably with Band Aid in Britain and Farm Aid in the USA; in both cases the performances and appeals for donations were broadcast internationally. The travelling Lollapalooza festival, founded in the early 1990s around grunge music, also used international media to publicize its annual season of tours.

7. LIST. The following is a selective list of non-competitive festivals that have achieved international significance. The list is organized alphabetically by country, and within that, by city and name of festival. Each entry is based on the following scheme:

(i) Name of festival. Each festival is given under its full original name. Subsequent name changes are given in chronological order, with dates provided where known. Variations in name, or alternative names, are also indicated after the original name. Square brackets are used to indicate original language titles of festivals, or English translations of festivals that are used in this dictionary.

(ii) Founding date. The date of foundation of the festival, where known, is shown in parentheses at the end of the entry.

(iii) Frequency of festival. This is indicated as follows: Y – yearly, B – biennially, T – triennially, O – occasionally or irregularly.

Other details are shown after a semicolon. Further information can be found in the appropriate country or city articles and, in some cases, in articles on the festival. Where only the country or state is mentioned instead of a city, the festival takes place in more than one location.

ALBANIA

GJIROKASTRA National Folklore Festival of Gjirokastra [Festivali Folklorik Kombëtar i Gjirokastrës] (1968) O

GHKODËR National Children's and Pioneers' Festival [Festivali Kombëtar i Këngës për Fatosa dhe Pionierë] (1963) Y

TIRANA Albanian Radio and Television Song Festival [Festivali i Këngës në Radiotelevizion] (1962) Y

Festival of Two Worlds [Festival dei Due Mondi]. Opera festival founded in SPOLETO in 1958 by Menotti. In May 1977 the festival was expanded to Charleston, South Carolina. *See* CHARLESTON (i).

Festival van Vlaanderen. Annual festival in Belgium; it includes musical activities based in ANTWERP, BRUGES, BRUSSELS and other cities in Belgium.

Festschriften (Ger.: 'festival-writing'). A publication of essays and other contributions usually issued to celebrate the birthday of a distinguished scholar, as a memorial volume, or on the occasion of an important anniversary. While Festschriften are described by a German word (and the custom of publishing them began in Germany), the phenomenon of producing such collections is an international one, with numerous series or individual volumes in English, French, Italian, and, indeed, in almost every other language used for scholarly writing. According to the *Oxford English Dictionary*, the earliest use of the word in an English-language publication was *An English Miscellany* (Oxford, 1901), a collection of essays presented to the literary scholar F.J. Furnivall on his 75th birthday, which was subtitled 'a Festschrift'.

The Festschrift has been a feature of music literature since the 19th century and in addition to honouring academics, Festschriften have also been dedicated to the work of composers, performers and others involved in music such as librarians and publishers. The scope and usefulness of such publications varies widely, and the contents are sometimes too disparate to make a satisfying whole. But in many cases Festschriften contain a coherent group of contributions (sometimes in more than one language) on, for example, a particular aspect of music or musicology, or a particular composer. Others are affectionate but usually less enduring collections of short tributes from friends and colleagues, more in the tradition of the Birthday Book.

Though musical Festschriften have been roundly condemned by Nicolas Slonimsky as a 'wasteland of depressing dullness' (*Lectionary of Music*, London, 1989, p.165), a number of them have been planned and compiled with a clear focus which gives them a lasting value. These include volumes devoted to the detailed exploration of a subject closely associated with a particular scholar. Examples of this kind of 'thematic' Festschrift include historical performance practice in *Source Materials and the Interpretation of Music: a Memorial Volume to Thurston Dart* (London, 1981); aspects of music bibliography in *Musik und Verlag: Karl Vötterle zum 65. Geburtstag* (Kassel, 1968), *Music and Bibliography: Essays in Honour of Alec Hyatt King* (London, 1980), and *Music Publishing & Collecting: Essays in Honor of Donald W. Krummel* (Urbana, IL, 1994) and studies related to the holdings of a major library such as *Sundry Sorts of Music Books: Essays on the British Library Collection presented to O.W. Neighbour on his 70th Birthday* (London, 1993).

There are many volumes devoted to single composers such as Beethoven (*Divertimento für Hermann J. Abs: Beethoven-Studien dargebracht zu seinem 80. Geburtstag*, Bonn, 1980; *Beethoven Essays: Studies in Honor of Elliot Forbes*, Cambridge, MA, 1984), Handel (*Georg Friedrich Händel: ein Lebensinhalt: Gedenkschrift für Bernd Baselt*, Kassel, 1995), Bruckner (*Bruckner-Studien: Leopold Nowak zum 60. Geburtstag*, Vienna, 1964) and Delius (*A Delius Companion: a 70th Birthday Tribute to Eric Fenby*, London, 1976); more particular aspects of research

on a composer have also produced useful publications such as *Bach-Interpretation* (Göttingen, 1969, in honour of Walter Blankenburg's 65th birthday) and *Franz Schubert: Jahre der Krise, 1818–1823; Arnold Feil zum 60. Geburtstag* (Kassel, 1985).

Specific national or regional styles are examined in *A Celebration of American Music: Words and Music in Honor of H. Wiley Hitchcock* (Ann Arbor, 1990), *Musical Canada: Words and Music Honouring Helmut Kallmann* (Toronto, 1988), *Russian and Soviet Music: Essays for Boris Schwarz* (Ann Arbor, 1984) and *Slavonic and Western Music: Essays for Gerald Abraham* (Ann Arbor and Oxford, 1985).

A clearly defined period in music history has been the concern of Festschriften such as *Music in Renaissance Cities and Courts: Studies in Honor of Lewis Lockwood* (Warren, MI, 1997), *Jean-Baptiste Lully and the Music of the French Baroque: Essays in Honor of James R. Anthony* (Cambridge, 1989), *Studies in Eighteenth-Century Music: a Tribute to Karl Geiringer on his Seventieth Birthday* (New York and London, 1970), *Eighteenth-Century Music in Theory and Practice: Essays in Honor of Alfred Mann* (Stuyvesant, NY, 1994), and the more nationally orientated *Music in Eighteenth-Century England: Essays in Memory of Charles Cudworth* (Cambridge, 1983).

Other Festschriften have been devoted to a particular genre such as opera (*Music and Theatre: Essays in Honour of Winton Dean*, Cambridge, 1987) or to a more specialized area of opera as in *New Looks at Italian Opera: Essays in Honor of Donald J. Grout* (Ithaca, NY, 1968); and the musical life in a particular city or region has sometimes provided a helpful focus, such as *Beiträge zur Musikgeschichte der Stadt Köln: zum 70. Geburtstag von Paul Mies* (Cologne, 1959). Aspects of ethnomusicology and organology have also been the subject of important Festschriften. Several longer-lived German-speaking scholars have been honoured with more than one Festschrift: Otto Erich Deutsch, for example, was the recipient of volumes published to celebrate both his 75th and 80th birthdays (in 1958 and 1963) and others with two or more Festschriften dedicated to them include Alfred Orel, Karl Gustav Fellerer, Hellmut Federhofer and Joseph Schmidt-Görg.

Other Festschriften are devoted to consideration of an individual's life and work, either as a celebration or as a memorial. Of the publications of this kind offered as tributes to composers, the most remarkable include the special numbers of the *Revue musicale* devoted to – among others – Debussy (1920), Dukas (1936), Roussel (1937) and Ravel (1938), each following their deaths, and the numbers produced in honour of Fauré (1922) and Roussel (1929). In most cases these included not only extensive essays, reminiscences, correspondence and tributes, but also a substantial supplement of music composed especially for the volume. All these publications are of considerable and lasting value (the Ravel issue was reprinted in 1987, with the addition of an introduction by Marcel Marnat and a chronology by Jean Roy, as *Maurice Ravel: Qui êtes vous?*). Other periodicals such as *Tempo* and the *Österreichische Musikzeitschrift* have regularly produced similar special issues to celebrate or commemorate important composers and *Tempo*, in particular, has continued the tradition established by the *Revue musicale* of including new music as well as writings.

Among performers, it is perhaps conductors who are most often the subject of Festschriften: Furtwängler, Karajan, Mengelberg, Nikisch and Weingartner have all had anniversary or memorial volumes devoted to them, as have pianists such as Dinu Lipatti and Clara Haskil. As with volumes dedicated to individual scholars or composers, these are of variable quality, ranging from significant essays to short contributions of a kind more often encountered in a Commonplace Book. Not only composers, performers, scholars and music librarians, but also publishers have been the subject of Festschriften, such as the volume of tributes to Jacques Durand from many of the composers associated with his firm (*Jacques Durand 1865–1928*, Geneva, 1929) and the collection of essays in *Musik, Edition, Interpretation: Gedenkschrift Günter Henle* (Munich, 1980).

Musical organizations such as orchestras, concert societies, opera companies and publishing houses have all been the subject of volumes produced to celebrate important landmarks. Performing organizations have sometimes used an important anniversary as the opportunity to produce a Festschrift which consists of detailed documentation of their activity: useful examples include the 50th anniversary publications of the Vienna PO (Richard von Perger's *Denkschrift zur Feier des Fünfzigjährigen unterbrochenen Bestandes der Philharmonischen Konzerte in Wien 1860–1910*, Vienna and Leipzig, 1910) and of the Vienna Opera (*50 Jahre Wiener Operntheater*, ed. A. Przistaupinsky, Vienna, 1919). Among publishers, Universal Edition used their 25th anniversary in 1926 as an opportunity to launch their first yearbook, *25 Jahre neue Musik* (Vienna, 1926), a Festschrift in all but name, which includes not only a chronology of the firm's activities, but also essays on a range of musical subjects by several of its most distinguished composers: Berg, Hauer, Krenek, Malipiero, Schoenberg, Wellesz and Weill, among others. The great Leipzig music-printing firm Röder published a handsome Festschrift on the occasion of its 50th anniversary (*Festschrift zur 50jährigen Jubelfeier, 1846–1896, des Bestehens des Firma C.G. Röder*, Leipzig, 1896) which included an important essay by Hugo Riemann, 'Notenschrift und Notendruck'. The same firm's 75th anniversary was celebrated with a more unusual (though very appropriate) volume: Walter von zur Westen's *Musiktitel aus vier Jahrhunderten: Festschrift anlässlich des 75jährigen Bestehens der Firma C.G. Röder, Leipzig* (Leipzig, 1921), a magnificently produced iconography. The contents of musical Festschriften up to the late 1960s have been indexed in Walter Gerboth's *An Index to Musical Festschriften and Similar Publications* (New York, 1969).

NIGEL SIMEONE

Festum stultorum [Festum fatuorum] (Lat.). *See* FEAST OF FOOLS.

Fethy, Sir **John** (*fl* *c*1530–68). Scottish composer, poet, priest and teacher. There are many references to a John Fethy in 16th-century Scotland – possibly not all to the same man; e.g. one to a 'dominus Johannus Fethy, noster confrater' who received permission from the Abbot of Arbroath to study abroad at university is perhaps rather too early (1498) to refer to this composer. A note by Thomas Wood (i) in his partbooks (*IRL-Dtc*, *GB-Eu*, *Lbl*, *US-Wgu*) in 1592 recorded that Fethy was a 'papeist preist', spent some time abroad, returned to Scotland in

about 1530, brought the new technique of five-finger organ playing with him and that he wrote both text and music of *O God abufe* (MB, xv, 1957, 3/1975 no.37), a partsong in a motet-like style similar to Josquin's. Traces survive of other songs (both music and text) in the later Claudin style. In the 1540s Fethy was canon of the Chapel Royal and spent a short time as Master of the Aberdeen song school between 1544 and 1546, though there is evidence of dispute on a matter of discipline with John Black, also composer and teacher there. He was Master of the Edinburgh song school from 1551 until his resignation in 1568, and was named as one of the prebendaries of the Chapel Royal to receive a 'teind of benefice' in 1561.

KENNETH ELLIOTT

Fétis. Belgian family of musical scholars, critics, teachers and composers.

(1) François-Joseph Fétis (*b* Mons, nr Liège, 25 March 1784; *d* Brussels, 26 March 1871). Musicologist, critic, teacher and composer. At once both a pioneer and a conservative, he was among the most influential musical figures in continental Europe for most of the 19th century, occupying key posts within the Franco-Belgian musical establishment and initiating significant cultural trends through his theoretical works and his concert activity.

Fétis came from a family of musicians and instrument makers: his grandfather, Simon-Joseph, was an organist and organ builder; his father, Antoine-Joseph, an organist, violinist in a local theatre and a conductor of subscription concerts in Mons. As a child he played the organ, piano and violin and began to compose; he was giving piano lessons in his early teens in order to help his family out of financial difficulties. As a result of playing continuo for his father's musical gatherings, he became well acquainted with the music of C.P.E. Bach, Viotti, Mozart and Haydn before leaving for Paris aged 16 to study at the Conservatoire, where he matriculated on 31 October 1800. His piano teachers included Boieldieu and Louis Pradher; he studied harmony with J.-B. Rey, a disciple of Rameau, but soon recognized the conflict between Rey's teachings and the new theories propounded in Catel's *Traité de l'harmonie*. The incompatibility of the two theories provoked Fétis to undertake a detailed study of harmonic systems that was to culminate in his own highly influential treatise of 1844. Since the Conservatoire offered no formal tuition in the history of music, it was through his own interest, kindled by Cherubini's encouragement, that Fétis began to study the writings of Zarlino and Martini, the music of Palestrina, and the notational problems of medieval music; the latter resulted in an unfinished commission to prepare a new edition of the Gradual and the Antiphonal. In 1806 he married the 14-year-old Adelaïde Robert, the wealthy daughter of the editor of the *Mercure national*, and was able to look forward to a life of independent means, his career prospects boosted by the award of second prize in composition at the Conservatoire in 1807 (the competition later became the Prix de Rome). In 1811, however, the sudden loss of his wife's fortune forced the couple to move to the provinces in search of employment. Settling first in Bouvignes in the Ardennes and then, in 1813, in Douai, Fétis made a living as an organist and schoolteacher of harmony and singing, studying and writing throughout. His tenure as organist at St Pierre, Douai, fuelled his enthusiasm for the music of J.S. Bach. Fétis's return to Paris in 1818 marked the rather belated beginning of his professional career as a composer, teacher and critic, and he began by piecing together a freelance existence. He seems to have been music director at the Comédie-Française briefly during 1820, and was appointed professor of counterpoint and fugue at the Paris Conservatoire in 1821, a post which paid only 1800 francs per year. To supplement his income, he taught privately, was tutor in harmony at Choron's Institution Royale de Musique Classique et Religieuse and composed music in popular genres: piano variations and fantasias, and teaching pieces. His first published treatise, the *Méthode élémentaire et abrégée d'harmonie et d'accompagnement*, appeared in 1823. Seven operas were staged at the Opéra-Comique between 1820 and 1832, of which only one, *La vieille* (1826), was a success. That year, Fétis was appointed librarian at the Conservatoire, a post he had coveted for several years and from which he was removed in 1831 (on account of absenteeism in the cause of his research) to be succeeded by Bottée de Toulmon. Fétis's departure was followed by a storm of accusations of theft; until October 1871 there were concerted attempts to retrieve from Brussels valuable historic items still 'on loan' to their erstwhile curator. During the 1820s Fétis supplemented his income through writings which made him a particularly influential figure in Parisian musical life. He wrote reviews for *Le temps* and *Le national*, and in 1827 founded and wrote almost single-handedly the *Revue musicale*, a weekly specialist journal which became a model for future publications (his first attempt at a specialist journal, the *Journal de musique* of 1804, was short-lived). He also instituted in 1832 a series of Concerts Historiques, in which he introduced his chosen repertory with a set of mini-lectures which were then printed in the *Revue*. Sometimes lasting over three hours, the concerts were carefully organized around themes (the first presented a history of opera; the second was devoted entirely to music of the 16th century), but often marred by inadequate performance.

Following his appointment in 1833 as Director of the Brussels Conservatory and *maître de chapelle* to Léopold I, Fétis continued many of the activities which had earned him renown in Paris. From August 1833 until July 1834 he published the *Gazette musicale de la Belgique*, whose text was almost identical to that of the *Revue musicale*, now supervised in Paris by his son, Edouard. After the takeover of his *Revue* by Maurice Schlesinger in November 1835, he wrote for the new *Revue et gazette musicale* until his death, though with decreasing frequency. He resumed his Concerts Historiques in 1839 and continued to compose, also beginning a prolific period of theoretical, pedagogical and historical writing marked in particular by the first edition of the *Biographie universelle des musiciens* (1835–44) and the *Traité de l'harmonie* (1844), in which his ideas on the philosophy of tonality were fully expounded. Fétis remained based in Brussels for the rest of his life, regularly visiting Paris. Of immense influence

in his native Belgium, he remained powerful in France, where he regularly caused controversy with his writings for the *Revue et gazette* (the Wagner essays of 1852–3 are perhaps the most important example).

Fétis's immersion in the musical past was undoubtedly a reaction against much of the music of his own time, particularly that of Wagner, Liszt, Berlioz and Schumann. His own output was suitably eclectic: his instrumental compositions are classically inspired, the most well-known during his lifetime being the *Grand sextuor* (1820), which was written for the unusual combination of piano duet and string quartet but conservative in form. Mozartian in its melodic chromaticism and its concertante treatment of the piano in the finale, it reveals piano writing and use of texture which look towards Schubert, combined with contrapuntal work reminiscent of early Beethoven. His *opéras comiques* are firmly situated within Grétry's model. Doubtless on account of a long-standing friendship and abundant reviews revealing Fétis's empathy with his compositional style, Meyerbeer regarded Fétis as the person most suited to making the final revisions of his last opera, *L'africaine*, in 1865.

The trajectory of Fétis's thought was set definitively by the nature of his studies in Paris. His interests in early music and music theory, first pursued in 1800, found a decisive philosophical focus 26 years later in the lectures on aesthetics of a man eight years his junior, Victor Cousin, whose thought appeared most famously as *Du vrai, du beau, et du bien* of 1853. Both men shared intellectual empathy with the German idealists, particularly Schelling and Herbart. Moreover, Cousin's new theory of eclecticism, with its rejection of all forms of philosophical extremism, including positivism's theories

François-Joseph Fétis, 1860s

of progress, offered an aesthetic justification for renewed interest in the early music Fétis so admired. Cousin's argument that all periods of history contained valuable truths, and that truth existed on two levels (the apparent and the real) enabled Fétis to argue that great music of any period embodied a real and universal truth which was shrouded by a surface level of apparent truth dictated by fashion. Hence his maxim that although music changes over time (its apparent truth is altered), it does not progress (its real truth, the expression of emotion, remains constant).

Cousin's anti-extremist promotion of a *juste milieu* (middle way) in government, aesthetics and philosophy, was to prove of supreme importance in all Fétis's future writing. The conflict between Fétis and Berlioz (from 1832 until their partial rapprochement in the face of a common enemy: Wagner) arose not from the incompatibility of a French Romantic and a French Classicist, but from the incompatibility of a philosophy of extremes with the philosophy of the *juste milieu*. However, throughout his career, Fétis was caught between two contradictory musical philosophies which he never convincingly reconciled. The philosophy of the *juste milieu* gave rise to his celebrated claim that 'art does not progress, it merely changes', a belief that underpinned the revival of early music in 19th-century France and Belgium, since it allowed early music to be judged by standards other than those of the 19th century; yet elements of his theory of harmony, as presented in 1844 and applied in his other writings, suggested that he subscribed to a theory of progress more akin to the work of the positivist Auguste Comte on the progress of civilization. Fétis identified four periods in the history of harmony: the *ordre unitonique* (modal music); the *ordre transitonique* (precipitated by the discovery of tonal modulation); the *ordre pluritonique* (a mature modulatory system epitomized by Mozart); and the *ordre omnitonique* (modulatory practice so chromatic that it threatens tonality itself). Fétis elevated Monteverdi above all other 17th-century composers, crediting him with the invention of the dominant 7th, which enabled the development of the tonal system which Mozart had brought to its height; conversely, music of the *ordre unitonique* was incomplete, as though an art in waiting. By relegating pre-tonal music to an inferior order, Fétis suggested that his philosophy of harmony was based on the principle of progression; however, he retreated from the logical consequences of his prophetic *ordre omnitonique*, in which the hierarchies of tonality itself came under threat from the 'beginning of an acoustic division of the scale into 12 equal semitones, on account of the equality of attractions'. Since he detected (and could not accept) the extended use of the fourth *ordre* in the music of his own time, he advocated the eclectic use of all the *ordres* in appropriate combination, a procedure which he found at its most sophisticated in the operas of Meyerbeer, and which he applied in his own compositions. The effect of Fétis's theorizing on his own criticism was profound, resulting in a view of music history which lionized Mozart as the peak of two centuries of development surrounded by chromatic decadence on the one hand and music based on an incomplete harmonic system on the other. Nevertheless, his commitment to the performance of such 'incomplete' music remained undiminished.

From Cousin, too, came Fétis's suspicion of composers such as Wagner and Berlioz who theorized about their

work and who were rejected by the public. Cousin's Hegelian theory of 'great men' held that such figures were vessels through which predestiny worked, and that they expressed the unarticulated desires of the people; the only unrecognized genius was therefore a false genius. Yet Fétis followed Hoffmann rather than Cousin in his view of programme music, which he disparaged as a regression to 18th-century ideas of imitation. For him, the project of the *Fantastique* was misguided because it put untexted music's most attractive quality, the expression of indeterminate emotion, into a straitjacket: it stemmed from 'the narrowest possible conception of music's purpose'.

Such aesthetic principles are abundantly evident in Fétis's biographical dictionaries: the two editions of the *Biographie universelle des musiciens* (1835–44 and 1860–65), though they are less blatant in the second edition, a collaborative volume in which Aristide Farrenc wrote, checked and revised many of the entries. Despite the subjective and error-strewn nature of the dictionary, it was a landmark in the discipline of musicology, and indicated the comprehensivity of knowledge for which Fétis craved, yet which he was prepared to compromise in the interests of evangelism (the same is true of his Concerts Historiques, for which on at least one occasion he composed an aria by 'Stradella'). Many vast projects were left incomplete at his death; all indicate his intention, driven by the eclectic need to gather information from all relevant periods of history before making a judgment, to provide the widest possible coverage and to bring to the public's attention the greatest variety of music. He planned or partly completed anthologies containing historical treatises in translation and comprising four centuries of music, including harpsichord, piano and organ works, early modern music of the Netherlandish schools, and international folksong; moreover, he acted as a catalyst and adviser for ventures such as Aristide and Louise Farrenc's keyboard anthology *Le trésor des pianistes* (1861–74), which encompassed Byrd and Chopin and for which he lent manuscripts from his collection. At his death he had completed five volumes of a projected eight-volume general history of music which, exceptionally for its time, included material on ethnomusicological subjects. Sometimes referred to as the founding father of comparative musicology, Fétis brought to his work a positivistic approach (probably influenced by Arthur de Gobineau) based upon the conviction that musicality was biologically determined and unequally shared among races: the sophistication of a race's musical culture was an indicator of its brain capacity. His ethnomusicological work was necessarily limited, since he never travelled to the countries about whose music he wrote, having instead to reply upon the writings of others.

In collaboration with Ignaz Moscheles, who planned and performed his own series of Concerts Historiques in the 1840s, Fétis wrote a piano method (the *Méthode des méthodes de piano* of 1840) based on the eclectic principle of combining the best of diverse methods and technique, hence the title. The same principles underpinned his *Méthode des méthodes de chant* of 1869, in which he extracted elements from 18th- and 19th-century treatises to compile a superior method for the training of singers. Such practice illustrates the stability of Fétis's thought and practice in the 40 years since his first exposure to Cousin's work; it also underpins his reputation as a narrow-minded and stubborn teacher who, having formulated his aesthetic ideas in his maturity, remained resistant to new ideas.

Fétis was at the centre of a network of historians, librarians and early-music performers active in France and Belgium throughout the 19th century. His writings, though recognized as flawed, provided a reference point for such musicians and often offered valuable methodological models regarding the use of primary and secondary sources in the quest for historical information. Most important of all, he displayed unerring judgment regarding the most urgent historical projects which needed to be undertaken, thereby encouraging others to finish that which he was too busy to complete. His vast library and important collection of early instruments, many of them in playing condition, were bequeathed to the Belgian nation: his library is housed in the Bibliothèque Albert Ier, his instrument collection forms part of the museum of the Brussels Conservatory.

WORKS

printed works published in Paris unless otherwise stated

for fuller list see Huys (1972)

STAGE

performed in Paris

L'école de la jeunesse, 1807 (oc, L. Anseaume), unperf.

L'amant et le mari (oc, 2, C. Etienne and J.-F. Roger), OC (Feydeau), 8 June 1820 (1820)

Les soeurs jumelles (oc, 1, F.-A.-E. de Planard), OC (Feydeau), 5 July 1823, excerpts (1823)

Marie Stuart en Ecosse (drame lyrique, 3, Planard), OC (Feydeau), 30 Aug 1823, *B-Br*

Phidias (op, 2), 1824, unperf., *Br*

Le bourgeois de Reims (oc, 1, J.H. Vernoy de Saint-Georges and C. Ménissier), OC (Feydeau), 7 June 1825, *Br*

La vieille (oc, 1, E. Scribe and G. Delavigne), OC (Feydeau), 14 March 1826 (1826)

Le mannequin de Bergame (opéra bouffe, 1, Planard and E. Duport), OC (Ventadour), 1 March 1832, excerpts (1832)

Other stage works

VOCAL

Sacred: Mass, 5vv, 1810; Requiem en expiation de la mort de Louis XVI, 1814 or 1815, lost; Requiem (1850); Te Deum (1856); Domine salvum fac regem nostrum, 4vv, orch, org (Brussels, 1866); Lamentations de Jérémie, 6vv, org, lost; many other works, some lost

Secular: Ariane (cant.), 1807, *B-Br*; 2 nocturnes and canzonette, 2vv (1820); other works

INSTRUMENTAL

Orch: 2 pf concs., before 1800, lost; Concert ov. (Brunswick, 1854); Sym. no.1, E♭ (Brussels, 1862); Sym. no.2, g (Brussels, 1863); Fantaisie symphonique, orch, org (Brussels, 1866); Fl Conc., 1869, *B-Br*; other works, some lost

Chbr: 3 str qts, before 1800, *B-Bc*; Pièces de harmonie, 8 ww insts, op.1 (1810); Grand sextuor, pf 4 hands, 2 vn, va, vc, op.5 (1820); Grand duo, pf, vn, op.8 (1821); 3 str qnts, 2 vn, 2 va, vc, no.1 (Brussels, 1860), nos.2, 3 (Brussels, 1862); other works

Pf: 2 fantasias, opp.2–3 (1818); Préludes progressifs, op.4 (1818); Fantaisie chromatique, op.6 (1819); 3 sonates faciles, pf 4 hands, ?op.7 (1819); Variations, pf 4 hands, op.9 (1823); other works, some lost

Org: 6 messes faciles (1840); Vêpres et saluts du dimanche (1843); 60 preludes and fugues, ?*c*1834, lost; La science de l'organiste, inc., *Bc*; other works

WRITINGS

Méthode élémentaire et abrégée d'harmonie et d'accompagnement (Paris, 1823, 3/1841; Eng. trans., 1835)

Traité au contrepoint et de la fugue (Paris, 1824, enlarged 2/1846)

Solfèges progressifs (Paris, 1827, 4/*c*1857)

with Chabert: *Galerie des musiciens célèbres, compositeurs, chanteurs et instrumentistes* (Paris, *c*1827–30)

Traité de l'accompagnement de la partition sur le piano ou l'orgue (Paris, 1829; Eng. trans., 1888)

Verhandelingen over de vraag: welke verdiensten hebben zich de Nederlanders vooral in de 14e, 15e en 16e eeuw in het vak der toonkunst verworven, en in hoe verre kunnen de nederlandse kunstenaars van dien tijd, die zich naar Italien begeren hebben, in vloed gehad hebben op de muzijkscholen, die zich kort daarna in Italien hebben gevormd? (Amsterdam, 1829/*R*)
Curiosités historiques de la musique, complément nécessaire de La musique mise à la portée de tout le monde(Paris, 1830) [collection of articles from *Revue musicale*]
La musique mise à la portée de tout le monde (Paris, 1830, enlarged 3/1847; Eng. trans., 1831)
Notice biographique sur Sébastien Erard (Paris, 1831)
Traité élémentaire de musique (Brussels, 1831–2)
Etudes de Beethoven: traité d'harmonie et de composition (Paris, 1833)
Biographie universelle des musiciens et bibliographie générale de la musique (Brussels, 1835–44, 2/1860–65/*R*1963, and many later impressions) [suppl. ed. A. Pougin (1878–80/*R*1963)]

(2) Edouard (Louis François) Fétis (*b* Bouvignes, nr Dinant, 16 May 1812; *d* Brussels, 31 Jan 1909). Critic and teacher, eldest son of (1) François-Joseph Fétis. He assisted his father with the *Revue musicale*, and edited it after his father's departure from Paris in 1833, turning it into a more acerbic and confrontational journal. After the journal's closure he went to Brussels and became fine arts

editor of *L'indépendance belge*. In 1836 he was employed by the Bibliothèque Royale, where he eventually became curator in the department of printed books. From 1839 he contributed to Schlesinger's *Revue et gazette musicale*, providing articles whose subject matter ranged from the politics, censorship and state funding of theatres (a particular interest of his) to historical essays on *opéra comique* (especially the music of Grétry), fiction and polemics. His musical tastes were similar to those of his father, and he argued doggedly against new music intended to challenge its audience. He taught aesthetics at the Académie Royale des Beaux-Arts, Brussels, was the first secretary to the government commission which prepared the *Collection complète des oeuvres de Grétry* (1884–1937), and edited the fifth and posthumous volume of his father's *Histoire générale de la musique*.

(3) **Adolphe Louis Eugène Fétis** (*b* Paris, 20 Aug 1820; *d* Paris, 20 March 1873). Pianist, teacher and composer, son of (1) François-Joseph Fétis. He studied at the Brussels Conservatory and then in Paris, where his teachers included Henri Herz (piano) and Halévy (composition). He taught harmony and piano in Brussels, Antwerp and, later, Paris. His compositions include comic operas and operettas, songs, light piano and harmonium works, and a string quintet. Of his operettas, only the one-act *Le major Schlagmann* (1859, Paris, Bouffes-Parisiens) was performed complete and published. Based on a weak libretto, its overture was better received than most of the numbers, the counterpoint described by *Le Ménestrel*'s critic Jules Lovy as redolent of a Haydn scherzo. The following year an aria from his *opéra comique L'oncle Tranchard* was performed at the Salle Pleyel.

KATHARINE ELLIS (text, bibliography),
ROBERT WANGERMÉE (work-list, writings) (1);
GUSTAVE CHOUQUET, KATHARINE ELLIS (2–3)

Fetrás, Oscar [Faster, Otto] (*b* Hamburg, 16 Feb 1854; *d* Hamburg, 11 Jan 1931). German conductor and composer. The son of a journalist, he was educated in Hamburg and studied music with August Herzog (1870–72). He began a career in business, but from 1880 was active as conductor and composer of waltzes, polkas, and other dances and marches. His waltz *Mondnacht auf der Alster* op.60 (*c*1890) achieved lasting international popularity and earned him the title of the 'Hamburg Waltz King', making him in demand as guest conductor in cities and spas throughout Germany. His later works embraced 20th-century dances such as the tango and foxtrot, and he also composed incidental music for stage productions. Fetrás was an ardent admirer of Johann Strauss (ii), and he built up a collection of Strauss memorabilia and important manuscripts, acquired by the Vienna Stadtbibliothek in 1971.

ANDREW LAMB

Feuermann, Emanuel (*b* Kolomed [now Kolomyya, Ukraine], 22 Nov 1902; *d* New York, 25 May 1942). Austrian cellist, active in the USA. In 1909 his family moved to Vienna, where he studied with Anton Walter; he later continued his studies privately with Klengel in Leipzig (1917–19). At the age of 16, on Klengel's recommendation, Feuermann was appointed head of cello at the Cologne Conservatory, as well as cellist of the Gürzenich Quartet and principal cellist with the Gürzenich Orchestra. His successful career as a solo artist led him to resign his orchestral duties, and from 1923 to 1929 he toured continuously in Europe, including a recital tour in Russia with Artur Schnabel. In 1929 Feuermann succeeded Hugo Becker as professor of cello at the Berlin Hochschule für Musik, and with Hindemith and Joseph Wolfsthal (later replaced by Szymon Goldberg) he formed a string trio. As a Jew, he was dismissed from his position in 1933 by the Nazis. Until his emigration to the United States in 1938, he toured throughout the world, including East Asia and South America. He made his New York début with Bruno Walter in 1935 playing Haydn's D major Concerto. In 1938 he gave a pioneering series of concerts with the National Orchestral Association at Carnegie Hall, where within four concerts he played 13 works for cello and orchestra. He collaborated closely with Heifetz – their 1939 recording of Brahms's Double Concerto with Ormandy and the Philadelphia Orchestra remains a milestone – and later formed a renowned trio with Heifetz and Rubinstein, which made famous recordings of trios by Beethoven, Schubert and Brahms. In 1928–9 Feuermann made the first commercial recording of Dvořák's Cello Concerto with the Berlin Staatsoper orchestra conducted by Michael Taube. His other notable recordings include *Don Quixote* and Bloch's *Schelomo*. In 1941 he was appointed to the Curtis Institute, Philadelphia. His many distinguished students included Hideo Saito, George Neikrug, Bernard Greenhouse, Claus Adam and Zara Nelsova. His principal instruments were a David Tecchler, a Montagnana and the 'De Munck' Stradivarius.

Feuermann, arguably more than Casals, was responsible for revolutionizing cello technique. His astonishing technical facility made him the first cellist to play with the ease of a violinist, while his purity of tone, intensity of sound, clarity of articulation and fine musicianship mark him out as one of the greatest string players of the 20th century. His untimely death from peritonitis appears to have been the result of a medical mishap.

His brother, Sigmund Feuermann (*b* 1900), was a brilliant child prodigy on the violin, playing concertos at the age of 11 under Nikisch and Weingartner in Leipzig, Berlin and London, and making frequent tours with his brother playing Brahms's Double Concerto. But Sigmund's early promise was not fulfilled. After a period teaching the violin in the USA, he moved with his parents to Palestine in 1939. From 1941 to 1945 he taught at the American University in Beirut. He died from a brain tumour in Israel in 1952.

ANNETTE MORREAU

Feuille d'album (Fr.). *See* ALBUMLEAF.

Feuillet, Raoul-Auger (*b* 1659–60; *d* 14 June 1710). French choreographer, dancing-master and author. He worked at the court of Louis XIV. His fame rests on his *Chorégraphie*, a book describing a system of dance notation that was used in Europe throughout the 18th century. He probably did not invent the system himself (although he said he had) but derived it from the original work of PIERRE BEAUCHAMPS, Louis XIV's personal dancing-master. Unlike previous methods, which describe movement verbally and use letters to refer to the sequence of steps, Feuillet's system is a track notation (see illustration). It represents symbolically not only the steps of the dancer, with his turns, leaps and slides, but also the floor pattern in which he is to travel. The dance music is printed at the top of the page, and the steps are marked off in a manner corresponding to the structure of the music (see Little and Marsh for an inventory of the extant dances).

The publication of the Beauchamp-Feuillet notation meant that specific dances could easily be distributed throughout Europe. It also added to France's pre-eminence in the world of dance. Today the system makes it possible for scholars to study some of the dances in use in the late 17th and early 18th centuries, an important period for the development of the classical French ballet style and technique. Over 350 choreographies are extant in the notation; some are ball dances, intended for use at social functions, and some are theatrical dances, which are the more elaborate choreographies seen in the ballets and operas of the period. Many dances of the types usually known to musicians from the music alone are included in both categories: minuets, bourrées, gavottes, sarabandes, gigues, passepieds, loures, rigaudons, chaconnes, passacailles, forlanes, canaries, pavanes, galliards, hornpipes, courantes and various other entrées. Reconstruction of these choreographies is possible in most cases with the help of verbal descriptions of the steps by writers such as Pierre Rameau (*Le maître à danser*, Paris, 1725/*R*), Kellom Tomlinson (*The Art of Dancing*, London, 1735), and Gottfried Taubert (*Rechtschaffener Tantzmeister*, Leipzig, 1717).

'La Gouastalla': a passepied with its dance notation from Feuillet's 'VIIIe recueil de dances pour l'année 1710' (F-Po Rés.841, p.46)

After the appearance of *Chorégraphie*, Feuillet began publishing dances that he had written into the new notation. He started in 1700 with two collections, one containing 15 of his own works and one with nine dances and dance suites by his illustrious contemporary LOUIS GUILLAUME PÉCOUR. In 1704 there was published a superb collection of theatrical dances choreographed by Pécour and written by Feuillet, many of them giving the names of the dancers who had performed them and the opera or ballet in which they occurred. In 1706 came a simplified method for notating English country dances (or contredanses, as they were called in France), along with ten individual compositions. Beginning in 1702 Feuillet published eight collections of ball dances which were to be performed at important social gatherings of aristocrats. They were issued in annual collections of three or four dances the year before they were to be used, so that everyone could learn them. On Feuillet's death the privilege to publish dances passed to his pupil Dezais, who continued the annual collections until at least 1725 (it is in the preface to the ninth collection of dances for the year 1711 that Dezais referred to the date of Feuillet's death at the age of 50).

At least 38 choreographies by Feuillet himself survive: 15 in the collection of 1700; 10 ball dances in the annual collections; the separately published ball dance *La Madalena*; and 12 solo dances in manuscript (*F-Po* Rés.817). His works show expert craftsmanship and a sensitive use of step patterns to form graceful dances. He will always, however, be in the shadow of Pécour, 120 of whose exquisite choreographies survive, and although *Chorégraphie* was paraphrased or translated into many languages as French dances spread throughout Europe, the system proved to be unsuitable for recording the inevitable changes in style in theatrical dancing. Still, the Beauchamp-Feuillet notation appears in slightly altered form in as late a work as Franz Anton Roller's *Systhematisches Lehrbuch der bildenden Tanzkunst* (Weimar, 1843). The notation was much used in England in the early 18th century, and at least 74 theatrical and ball dances using it are found in the publications and manuscripts of choreographers such as Anthony L'Abbé, Isaac, Josias Priest, Siris, Tomlinson, Thomas Caverley and Grover Leach.

WRITINGS

Chorégraphie ou L'art de décrire la dance, par caractères, figures et signes démonstratifs, avec lesquels on apprend facilement de soy-même toutes sortes de dances (Paris, 1700; 2/1701/*R*; [with Dezais] 3/1709/*R*; Eng. trans., J. Weaver: *Orchesography*, London, 1706/*R*, 2/1710

Recüeil de dances, composées par M. Feuillet (Paris, 1700/*R*)

Recüeil de dances composées par M. Pécour ... et mises sur le papier par M. Feuillet (Paris, 1700/*R*)

La Madalena (Paris, 1703)

Recüeil de dances contenant un très grand nombre des meillieures entrées de ballet de Mr. Pécour, tant pour hommes que pour femmes, dont la plus grande partie ont été dancées à l'Opéra. Recüeillies et mises au jour par Mr. Feuillet (Paris, 1704/*R*)

Recüeil de contredances mises en chorégraphie d'une manière si aisée, que toutes personnes peuvent facilement les apprendre sans le secours d'aucun maître et même sans avoir eu aucune connoissance de la chorégraphie (Paris, 1706/*R*; Eng. trans., J. Essex: *For the Further Improvement of Dancing*, London, 1710/*R*)

Recüeilles de toutes les dances de bal & qui ont été gravées depuis l'année 1700, in *F-Po* Rés.841 [contains the annual collections of ball dances, Paris, 1702–9; continued by Dezais, 1709–22; *La Madalena* by Feuillet (1703) and 4 single works by Pécour]

MEREDITH ELLIS LITTLE

Févin, Antoine de (*b* ?Arras, *c*1470; *d* Blois, late 1511 or early 1512). French composer. A genealogy of the noble Févin family prepared in 1627 and published by de Puisieux after a now lost manuscript summarized the principal facts known about Antoine's life: he was the second son of Pierre, squire, Lord of Graincourt and Garinet, and alderman of Arras, he was a priest and singer in the service of Louis XII, and he died at Blois. Although his family came from Febvin-Palfart near St Omer (Pas de Calais), they had settled in Arras by the late 14th century and Antoine was probably born there. Glarean called him 'symphoneta aurelianensis' ('composer of Orléans'), but the reference is probably not to Févin's birthplace but to his association with the French royal court, centred in Orléans as well as Blois.

On the basis of circumstantial evidence, Clinkscale suggested that Févin left his native town in the late 1480s or early 1490s. No documents have yet come to light that explain when and where he was ordained as a priest; nor is it clear that Guillaume Crétin's reference to him as 'maistre' should be interpreted to mean that the composer had earned a master's degree at a university. Févin's association with the royal court dated at least from 1507. In that year Louis XII wrote from Italy to ask that a chanson by Févin and a portrait by Jean de Paris (Jean Perréal) be sent him so that he could impress the foreign ladies, who had nothing to equal them.

Crétin's lament for another royal musician, *Plainte sur le trespas de feu maistre Jehan Braconnier, dit Lourdault*, also commemorated Févin, who had died shortly before. Since Braconnier was mortally ill in January 1512, Févin probably died late in 1511 or early in 1512. Jean Mouton, the composer's colleague at court, wrote a déploration, *Qui ne regrettoit le gentil Févin?*, in his memory. He is mentioned as a distinguished musician by Jean Daniel, by Rabelais, and, along with his brother Robert, by Pierre Moulu in a motet that pays tribute to the most celebrated French musicians of the time.

Glarean described him as a follower of Josquin ('felix Jodoci aemulator'). Whether or not his remark referred to a personal relationship between the two composers, it aptly characterizes Févin. His music is invariably distinguished by its clarity of texture and formal design. It is written entirely in the new style begun about 1490 in which all the voices are vocal in character and in which imitative sections are interspersed with chordal passages. He not only laid out his points of imitation in a transparent manner, relying heavily on paired imitation and fragments of dialogue between parts of the chorus, but he also frequently used duets to articulate the structure and to furnish contrast with the full sound. Like his contemporaries he took some pains to devise melodic lines that reflect the texts; yet wrong text accentuation abounds in his settings. Indeed, the purely musical design almost always takes precedence over any attempt to express the emotional power of the words.

The high regard of his contemporaries is reflected in the fact that Petrucci published a volume of his masses. The collection, however, called *Misse Antonii de Fevin* (Fossombrone, 1515), actually contains only three masses by Antoine, and one of them, the *Missa 'Sancta Trinitas'*, is probably by Mouton. (The two remaining masses in Petrucci's volume are by Robert de Févin and Pierre de La Rue, identified as 'Pierzon'.) At least four of Févin's ten surviving masses use parody technique. No model has yet been discovered for some of his masses, for example, the *Missa super 'O quam glorifica luce'*. Some are based on Gregorian chants. In these he incorporated highly embellished paraphrases of the borrowed melody into all of the voices and reverted to the older cantus firmus technique of presenting a simple version of the chant in one voice only occasionally. The high proportion of parody masses and the relative absence of older scaffolding techniques identify Févin as a man of his time, abandoning old-fashioned principles in favour of the new compositional procedures introduced by Josquin and other composers of the previous generation. Similarly his motets make little use of cantus firmi, even though some of them paraphrase plainchants; their formal structure depends not on a borrowed melody but rather on an imaginative juxtaposition of imitative phrases and chordal passages.

Most of Févin's chansons, on the other hand, incorporate a borrowed monophonic popular melody relatively unembellished in one voice, usually the tenor. Paradoxically, these three-part popular arrangements, making use of a kind of cantus firmus technique, are as much of their time as the structurally freer masses and motets, for urban entertainment music seems to have enjoyed a great vogue at the court of Louis XII. The charm of these pieces lies in the various ways the outer voices imitate and play against the pre-existent melody.

Conflicting attributions are especially numerous with regard to Févin. The situation is particularly serious in the largest works; of the ten masses possibly by Antoine de Févin, five are also attributed to other composers. Until some of these ambiguities can be resolved, it is not possible to obtain a clear picture of Févin's style. For example, the *Missa 'O quam glorifica luce'* ascribed to Févin in *D-Mbs* Mus.ms.7 and *A-Wn* 15497 is also transmitted in *P-Cug* 2 as *Missa 'Iste confessor Domini'* ascribed to La Rue. Superficially the Munich and Vienna

ascriptions might appear to be reliable, but the manuscripts' readings are markedly deficient with regard to critical passages in the Sanctus, while the presentation in Coimbra is quite clear.

WORKS

Incomplete source information in Collected Works; selected sources given here to indicate the patterns of distribution.

Edition: *Collected Works of Antoine de Févin*, ed. E. Clinkscale (Ottawa, 1980–96) [C]

MASSES, MAGNIFICAT SETTINGS, LAMENTATIONS
for 4 voices unless otherwise stated

Missa 'Ave Maria' (on Josquin's motet), 1515[1], 1516[1], 9 other MSS and 3 excerpts; C, ii, 1

Missa de feria, 5vv (canonic), 1516[1], 12 MSS and 1 excerpt (in *E-Tc* Res 23 the Credo seems to be ascribed to Gascogne); C ii, 80

Missa 'Dictes moy toutes' (on Compère's rondeau), *I-Rvat* C.S.16, *Rvat* C.G.XII.2 (ascribed to Divitis, but almost certainly by Févin), 5 other MSS; C ii, 37

Missa 'Mente tota' (on Josquin's motet), 1515[1], 1516[1], 7 MSS and 3 excerpts; C ii 139

Missa 'O quam glorifica luce', *A-Wn* 15497, *D-Mbs* Mus.ms.7, *P-Cug* 2 (as Missa 'Iste confessor Domini'ascribed to attrib. La Rue), 3 other MSS; C i, 97

Missa parva (Missa ad placitum), *A-Wn* 4810, *I-Rvat* C.S.16, 4 other MSS and 4 excerpts

Missa pro fidelibus defunctis, 4–5vv, *A-Wn* 15497, 18832, *B-Br* IV.922 (ascribed 'Antonius Divitis', surely in error), *D-Ju* 5, *E-Tc* Res 23; C i, 1

Missa 'Salve sancta parens', *D-Mbs* Mus.ms.7; C, i, 33

Missa 'Sanctorum meritis', *A-Wn* 4810, *I-Rvat* C.S.26, 3 excerpts; C, i, 71

Magnificat primi toni, 1534[7], 1 MS; C, iii, 27

Magnificat tertii toni, 1544[4], 4 MSS; C, iii 37

Magnificat quarti toni, 1544[4], 2 MSS; C, iii 49

3 Lamentations, 3–4vv, 1549[1] (attrib. 'N. Fevin'), *GB-Cmc* 1760 (index also ascribes first two to Robert de Févin), other sources; C, iii, 3

Missa 'Sancta Trinitas' (doubtful, probably by Mouton; on Févin's motet), 1515[1] (sole ascription to Févin), 6 MSS and 6 excerpts; C iv, 1

MOTETS
for 4 voices unless otherwise stated

Adiutorium nostrum (ascribed to Févin in *GB-Cmc* 1760 and elsewhere; 1514[1] as 2p. Mouton's *Celeste beneficium* and perhaps by him)

Ascendens Christus in altum, 6vv (given as doubtful in *Grove6* and in C, but ascription endorsed by fragment *F-Pn* Rés.Vm 1431); C iv, 36

Benedictus Dominus Deus meus; C iii, 63

Dilectus Deo et hominibus, 1538[8] (ascribed to Févin), 1538[7] (ascribed to Josquin), 1514[1] (1p., anon.), 1526[1] (1p., anon.), *I-Pc* A17 (1p., anon.); C iii, 69

Egregie Christi martir, 1514[1] (ascribed to Févin, supported by Pietro Aaron), *A-Wn* 15941 (ascribed to Mouton); C iv, 43

Gaude Francorum regia; C iii, 80

Homo quidam fecit cenam magnam, inc.; C, iv, 59

Inclita pura sanctissima virgo, 3vv; C, iii, 84

Letare mater ecclesia; C iii, 86

Lauda Syon salvatorem; C, iii, 91

Letabundus, ?6vv (only canonic tenor survives), *F-Pn* Rés.Vm 1431

Nesciens mater; C iii, 100

Nobilis progenie; C iii, 105

O preclara stella maris, 3vv; C iii, 109

Que est ista, 4vv (1 canon); C iii, 112

Sancta Trinitas, 41 sources incl. ascriptions to Craen, Morales, Mouton, Costanzo Festa and Josquin; several contain a 6vv arr by Arnold von Bruck; the sources for the Févin ascription leave no possible doubt that it is by him; C iii, 112

Tempus meum est; C iii, 119

Textless motet, *D-Mbs* Mus.ms.3154; C iv, 68

DOUBTFUL

O pulcherrima mulierum, *A-Wn* 15941 ('Fevÿn'), *I-Bc* R142 ('Co. Festa'), *E-Bbc* 454 ('Johannes Mouton'), 1519[1] ('Bauldeweyn'); C iv, 50

Salve regina, *D-Mbs* Mus.ms.3154 (ascribed 'Ar.Fer'; on tenor of Du Fay's *Le serviteur*); ed. in EDM, lxxxi (1993)

Verbum bonum et suave (probably by Therache), *GB-Cmc* 1760 (ascribed to Févin in index but Therache above the music); ed. in MRM, iii–v (1968), no.12

CHANSONS
for 3 voices unless otherwise stated, all ed. in C iii

Adieu solas tout plaisir; Chacun maudit ces jaleux, C; En amours n'a sinon que bien; Faulte d'argent c'est doleur; Fors seullement (over 20 sources, incl. 1 late source with ascription to Robert de Févin; apparently based on Pipelare's chanson); Fuyés regretz; Helas, je suis marry de ces jalloux; Il fait bon aymer l'oyselet; Il m'est advis que je voy perrichon (*GB-Cmc* 1760 attrib. Hilaire, *D-HRD* 9821 attrib. Fevin; almost certainly by Hilaire)

J'ayme bien mon amy de bonne amour, *GB-Cmc* 1760 (ascribed 'de fevin' in index but 'N. le petiti' above the music); J'ay veu la beauté; Je le lairray; Mauditz soient ces maryz jaleux; N'aymés jamais une villaine; On a mal dit de mon amy (9 MSS and 3 prints); Pardonnés moy se je foloye, 4vv (C lacks bassus which appears in *CH-Zz* 169 and *D-HRD* 9820); Petite camusette, 1578[16] (attrib. 'Josquin'), *GB-Cmc* 1760 (ascribed 'Anth. de Fevin'); Qui ne l'aymeroit la belle au corps gent, 1520, 4vv ex 2 canon (anon.), *DK-Kk* 1872, 8vv ex 4 canon ('Antoine Fevin'); 8vv version ed. in Dania sonans, v (Copenhagen, 1986), 390, Tres douke dame debonnaire, C iii, 165

HOWARD MAYER BROWN/T. HERMAN KEAHEY

Févin, Robert de (*fl* 1500–15). French composer. He was evidently the brother of Antoine de Févin, as witnessed by the words 'decori fratres de Févin' among the composers named in Pierre Moulu's motet *Mater floreat* (Lowinsky). Fétis reported, citing an obit book that cannot now be traced, that Févin was master of the Savoy ducal chapel (at Chambéry) and came from Cambrai. Since the family was from Arras, this may mean simply that he was ordained in the diocese of Cambrai. A date of death could be derived from the ascription 'Robertus de fevin pie memorie' above his mass '*La sol mi fa re*' in *D-Mbs* Mus.ms.7, perhaps from 1516–1518.

Févin was an immaculate contrapuntist, evidently owing much to Josquin. His masses *La sol mi fa re* and *Le vilain jaloux* are based directly on works of Josquin; and the Credo *La belle se siet* (which seems more likely

his than Josquin's) shows a knowledge of Josquin's three-voice setting of that melody. All known sources containing his securely attributed music are from the first quarter of the 16th century.

WORKS

Edition: *The Collected Works of Robert de Févin*, ed. E. Clinkscale (Ottawa, 1993) [C]

Missa 'Ave Maria', 4vv; C, 1
Missa 'La sol mi fa re', 4vv; C, 38
Missa 'Le vilain jaloux', 4vv; C, 75
Credo 'La belle se siet', 4vv, 1505[1] ascribed 'Josquin'; *I-Rvat* C.S.41 ascribed 'Roberti Fevin'; C, 123
Alma redemptoris mater, 5vv; C, 140

DOUBTFUL WORKS

2 Lamentations, 4vv and 3vv, in *GB-Cmc* 1760 are ascribed to 'Ro. de fevin' in the original index but in the body of the manuscript the ascriptions are altered to Antoine de fevin. Fors seulement la mort, 3vv, given as by Antoine de Févin in *GB-Cmc* 1760 and two later prints, is given to 'Robertus Fevin' in Stonyhurst College, B.VI.23 (see Fenlon)

DAVID FALLOWS

Fêvre. *See* LEFÈVRE.

Fevre, Joducus [Josquin]. *See* FABRI, JODUCUS.

Février, Henry (*b* Paris, 2 Oct 1875; *d* Paris, 8 July 1957). French composer. He studied composition at the Paris Conservatoire with Massenet and Fauré and privately with Messager, of whom he later wrote a biography (*André Messager: mon maître, mon ami*, 1948). His early compositions were small-scale, but he later turned almost exclusively to opera composition. Many of the operas (e.g. *Le roi aveugle*, 1906; *L'île désenchantée*, 1925) are set in remote, other-worldly locations, and the redemption of mankind through love is a constant theme, manifest most noticeably in *La damnation de Blanchefleur* (1920). He is probably best known for *Monna Vanna* (1909), a setting of a play by Maeterlinck, for whose work he had a particular affection. Lucien Fugère played a leading role in *Carmosine* (1913), and *Gismonda* (1919, Chicago) opened with Mary Garden in the title role.

In his musical dramas, Février favoured a continuous dramatic flow, uninterrupted by clearly defined arias and choruses. The love duet between the main characters is, however, an exception and in works such as *Le roi aveugle* takes up what appears to be a disproportionate amount of music. His use of such 'set pieces', plus a limited use of leitmotif, and the nature of his plots exhibit the influence of Wagner to a high degree, although his contemporaries saw in *Monna Vanna* the influence of Massenet and Italian *verismo*. Besides opera, he also left sonatas for violin and piano and cello and piano which attracted some attention in their time. His songs reflect his development as a composer: from the conventional early pieces, they gradually absorb the various musical languages of the 20th century, including a surface orientalism. He had considerable success with patriotic songs written during and just after World War I. During the late 1920s he was active as a composer of music for silent films, mostly scored for orchestra or theatre orchestra with piano-conductor. The later music, such as the *Estampes japonaises* for piano, is skilfully written, with a melodic strength and simplicity and an occasional leaning towards pastiche.

WORKS
(*selective list*)

STAGE

Le roi aveugle (op, 2, H. le Roux), Paris, OC (Favart), 8 May 1906 (1906)
Monna Vanna (drame lyrique, 4, after M. Maeterlinck), Paris, Opéra, 13 Jan 1909
Carmosine (conte romanesque, 4, H. Cain and L. Payen, after G. Boccaccio and A. de Musset), Paris, Gaîté, 24 Feb 1913 (1913)
Gismonda (drame lyrique, 4, Cain and Payen, after V. Sardou), Chicago, Auditorium, 14 Jan 1919 (1920)
La damnation de Blanchefleur (miracle, 2, M. Léna), Monte Carlo, Opéra, 13 March 1920 (1920)
L'île désenchantée (drame musical, 2, 3 tableaux, M. Star [E. Stern], after E. Schuré), Paris, Opéra, 23 Nov 1925 (1925)
Oletta, la fille du corse (drame musical, 3, 4 tableaux, A. Leroy and P. de Choudens), Bordeaux, 28 Oct 1927 (1926)
La femme nue (drame lyrique, 4, Payen, after H. Bataille), Monte Carlo, Opéra, 23 March 1929 (1929)
Sylvette (opérette, 3, R. Peter and M. Carré), Paris, Trianon Lyrique, 17 Feb 1932, collab. M. Delmas
Incid music: L'autre France (Cortège funèbre), 1900; Agnès (Dame galante), 1912; La princesse et le porcher (after H.C. Andersen), 1912; Aphrodite (after P. Louÿs, 1914

INSTRUMENTAL

Theatre orch with pf-conc: A l'approche du soir (1923); A la fiancée (1924); A la veillée (1925); Malédiction (1926); Nocturne (1926); Le récit de Djalmar (1926); Remords (1926); A genoux (1927); En suivant la course (1927); L'entrée des fêtards (1927); Les feuilles tombent (Lamento) (1927); Kermesse (1927); Quand j'étais jeune (1927); Tendre histoire (1927); Traqué (1927); Les conjures (1928) Tableau villageois, sym. poem (1928); Idylle au bord de l'étang (1929); Sur les remparts (1929); Grande marche française (1930); Lamento (1930), collab. M. Delmas; La sorcière (1930), collab. Delmas; Pour une princesse (Madrigal)
Chbr and solo inst: Sonata, vn, pf (1901); Pièces mélodiques, vc, pf (1904); Int, hp, 1905, arr. pf (1907); Petite suite d'Antan, pf (1905), orchd 1909; Pf Trio (1907); Allemande, pf (1908); Cortège nuptiale, pf/org (1909); Légende, vn, pf (1909); 3 esquisses, pf (1910); Guirlandes, pf (1913); Stella (Prélude), pf (1913); L'heure sentimentale, pf (1914); La bonne journée, pf (1920); La fée des songes, solo vn, str, perc, pf (*c*1924); Bourée, pf, 1926; Un bruit de rames, pf (1926); La fleur merveilleuse, pf (1926); Frivolités, pf (1926); Remember, pf (1926); Sur le lac sacré, pf (1926); Impromptu, pf (1927); Sonata, vc, pf (1928); Estampes japonaises (ballet), pf (1938)

VOCAL

Songs, 1v, pf: Captif (S. Mancel) (1897); Les savent-elles (Mancel); Aubade (J. Sabine) (1899); Amitié (Mancel) (1905); 2 chansons (M. Maeterlinck) (1905); Soleil couchant (A. Silvestre) (1905); Vers l'amour (V. Hugo) (1905); Les yeux bleus (Mancel) (1905); Petite berceuse (H. Steckel) (1908); 3 prières (F. Jammes) (1908); Les Colombes (T. Gautier) (1909); Larmes (E.P. Lafargue) (1909); Loin de toi (Hugo) (1909); L'oubli (Mancel) (1909); La dernière chanson (R.F.A. Sully-Prudhomme) (1913); Ô femmes qui pleurez! (C. Batilliot) (1914); Or vers le soir (Lafargue) (1914); L'an prochain (Chanson de victoire) (R. Fauchois) (1915); Aux morts de la patrie (C. Péguy: *Hymne*) (1915), also orchd; Les chansons de la Woëvre Verdun 1915 (9 songs, A. Piedallu) (1915); Nos morts sont vivants (Chant patriotique) (Piedallu) (1915); 2 mélodies (Sully-Prudhomme, G. Grappe) (1918); Les saisons (S. Liégeard) (1918); Mon enfant … j'ai peur (Maeterlinck) (1920); Noël (Gautier) (1922); 4 mélodies (J. Heugel) (1925); Veillée de Noël (F. Gregh) (1926); Eternel avril (H. de Régnier) (1927); L'oiseau (A. Delacour) (1927); Les amies (Elégie) (C. Mauclair) (1928); Il était trois garçons charmants (Légende) (V. Margueritte) (1928); Neige, blancheur de la mort (Elégie) (C. Oulmont) (1948)
Other: Le petit mitron (M. Boukay), S, SATB (1939); Hymne à la nature (M. Saint-René), 4 male vv (1943)

JOHN WAGSTAFF/RICHARD LANGHAM SMITH

Février, Jacques (*b* Saint-Germain-en-Laye, 26 July 1900; *d* Epinal, 2 Sept 1979). French pianist and teacher, son of HENRY FÉVRIER. He studied with Edouard Risler and Marguerite Long at the Paris Conservatoire, receiving a *premier prix* in 1921. He was a champion of modern French music and a friend of the group Les Six. In 1932 he gave the first performance of Poulenc's Concerto for two pianos with the composer (they later recorded the work), and in 1937 he was chosen by Ravel to be the first French pianist to perform the Concerto for the left hand in France and the USA. From 1952 to 1957 he was a professor of chamber music at the Paris Conservatoire. His crisply rhythmic touch and temperamentally reserved approach made him an ideal interpreter of much of the French music that he recorded, including major works of Poulenc and Debussy, Satie's *Trois morceaux en forme de poire* (which he recorded both with Poulenc and Auric) and Ravel's complete piano music (which won a Grand Prix du Disque in 1963).

CHARLES TIMBRELL

Février [Febvrier], **Pierre** (*b* Abbeville, 21 March 1696; *d* Paris, 5 Nov 1760). French organist and composer. He was the eldest son of the organist Pierre Febvrier (1669–1706) and Marie-Anne Lescouvette. He succeeded his father as organist of St Vulfran in Abbeville on 7 February 1707 but did not assume the duties of the position until 1 November 1714. About the same time he was also appointed organist of Ste Catherine, Abbeville, again succeeding his father. In September 1720 he left Abbeville and settled in Paris, where he replaced Jean Landrin as organist of the convent of the Jacobins, on the site of the present Marché St Honoré, from July 1721 until his death. From 8 March 1732 until his dismissal on 27 December 1740 he was organist of the collegiate church of Ste Opportune. At the same time, according to Maupoint, he acted as deputy for Louis Garnier and then for Landrin at St Roch, and for Jérôme de La Guerre at the Ste Chapelle. Finally, he was organist of the Jesuit College of Louis-le-Grand. On 18 March 1736 and 8 December 1741, motets of his were performed at the Concert Spirituel. He dedicated his cantata *Le rossignol* to the Countess de La Marck, to whom he had probably given harpsichord lessons. After his death, the guardianship of his younger daughter, Cécile Anne, was entrusted to the organist Charles Noblet.

Février's surviving works – all, apparently, composed between about 1734 and 1741 – bear witness to a training and to attitudes unusual among French organists of his generation. There is a quality of earnestness, of care taken, which is absent from the music of his lesser colleagues and is concealed by the elegant artifice of his greater ones. Two of the suites begin with fugues (Marpurg wrote of 'schöne Fugen auf Händelische Art'), very nearly the only ones in French harpsichord music. The motifs of the allemande *La magnanime* are subjected to a kind of calculated manipulation quite alien to ordinary French practice. Elsewhere, the textures are enriched by the movement of inner parts, by more than the usual amount of dissonance and chord inversion, and by the use of figuration to supply missing chord factors. In his cantata, *Le rossignol*, voice and obbligato instrument have to execute intricate filigree work together.

WORKS

Le besoin d'aimer, 1er cantatille, 1v, fl, vn, bc (Paris, 1734)

Pièces de clavecin, 1er livre (Paris, 1734)

L'amant discret, 1v, fl, vn, bc (Paris, 1737), lost

Pièces de clavecin, 2me livre (Paris, 1737), lost

Vulcain dupé par l'amour, 3me cantatille, B, vn, bc (Paris, 1742)

Le rossignol, cant, S/T, fl, vn/fl, bc (Paris, 1751)

2 motets perf. Concert Spirituel, cited in *Mercure de France*, lost

DAVID FULLER

Fewkes, Jesse Walter (*b* Newton, MA, 14 Nov 1850; *d* Forest Glen, MD, 31 May 1930). American ethnologist. He studied biology at Harvard (AB 1875, PhD 1877), and later studied at Leipzig and the University of Arizona. He was field director of the Hemenway Southwestern Archaeological Expedition (1889–94), and, commissioned by Mary Hemenway, tested the value of the phonograph for fieldwork in March 1890 by recording songs of the Passamaquoddy Indians in Maine. These were soon followed by his Zuni (1890) and Hopi Pueblo (1891) recordings which were then analysed by Benjamin Ives Gilman. He was responsible for the Hemenway Exhibition at the Madrid exhibition of 1892 commemorating Columbus's discovery of America, and consequently received many honours. As a result of his work in Madrid, Hemenway later commissioned recordings by Gilman. From 1895 to 1918 Fewkes worked as an ethnologist at the Bureau of American Ethnology in Washington, DC, becoming chief in 1918, and remaining there until his retirement in 1928.

Fewkes was the first man to record exotic music for the benefit of science. His most important musical contributions are found in the corpus of his lifelong ethnological studies among the Pueblo Indians in Arizona. His legacy to ethnomusicology lies not only in his articles on music but also in the historical value of his many writings on ritual observances and ceremonials accompanied by music and dance, and those on folklore and language relevant to the study of musical instruments and texts. A man with changing careers, Fewkes undertook extensive fieldwork in ethnology, archaeology and invertebrate zoology, and was a prolific writer.

SUE CAROLE DEVALE/R

Feyerabend, Sigmund (*b* Heidelberg, 1527 or 1528; *d* Frankfurt, 22 April 1590). German publisher. Much of Frankfurt's status as the leading city for printing in 16th-century Germany was due to his activities. His father Ägidius was a painter and engraver, and a cousin, Johann, was a printer and bookseller active in Frankfurt from 1559. Feyerabend appears to have started printing in Augsburg, before visiting Venice. He was in Frankfurt before 25 May 1559, when he was made a citizen. He set up there as a wood-cutter, doing commissions for the printers David Zöpfel and Johann Rasch, and a portrait of the Doge of Venice in Andress Keller's *Chronik*. Almost immediately he began publishing, employing most of the printers of a lively centre in the following 30 years. In 1563 he entered into an agreement with Georg Rab and the widow of the printer Weigand Han, as a result of which he printed over 60 titles in the next seven years. He employed distinguished craftsmen and artists: his engravers included Jobst Amman and Virgil Solis. He exhibited regularly at the annual Frankfurt fairs, and the extant lists show not only the range of his stock, but also the numbers of copies of individual titles that were taken to exhibition. In 1568 these included seven music titles in 247 copies intended for sale to the trade. He also used agents at the fairs: in 1574 he sold 285 copies of an evangeliary to two agents who took them to the spring fair. Meiland's two pieces composed in honour of Feyerabend and his son praise them for their support of music.

STANLEY BOORMAN

Feynberg, Samuil Yevgen'yevich. *See* FEINBERG, SAMUIL YEVGEN'YEVICH.

Fezandat [Faisandat], **Michel** [Dauphin, Dauphiné] (*fl* Paris, 1538–66). French printer and bookseller. He was active in Paris as a publisher from 1538 to 1566, dealing specifically with music between 1551 and 1558. From the Hostel d'Albret on Mont St Hilaire he published literary works by François Habert (1549, 1551, 1557, 1560), Michael Beuther (1551), François Rabelais (1552), Marc-Claude Buttet (1561) and others, using four different marks: a pheasant and dolphin, a winged Mercury, a snake with the motto 'Ne la mort ne le venin' and a heron holding a dolphin in its claws. He collaborated with other publishers including Nicolas Buffet (1543), Jérome de Marnef (*c*1550), Vincent Sertenas (1551), Jean Vincent (1554), Robert Granjon (1550–51) and Guillaume Morlaye (1552–8).

His activity in music began on 23 December 1550 when he signed a ten-year contract with Robert Granjon. The association may have realized around 14 books between 1550 and 1551. A new agreement for 18 months was signed on 19 November 1551, but the partnership was dissolved 38 days later after producing two guitar books, by Simon Gorlier (1551[22]) and Guillaume Morlaye (1552[32]). Granjon retained the punches, matrices, moulds and type for a small music type he himself had cut, and formed a new association with Gorlier, concentrating on the Lyons market, while Fezandat continued business at Paris in collaboration with Morlaye. On 19 April 1552 Fezandat contracted to print lute music supplied and corrected by Morlaye in maximum sets of 1200 copies; in return for bearing the whole cost of publication Fezandat was to sell half for his own profit. This partnership produced some 15 instrumental tablatures between 1552 and 1558 including further books for guitar or cittern by Morlaye (1552[33], 1553[34]), four for lute by Morlaye (1552[34], *BrownI* 1554[5], RISM 1558[18], 1558[19]) and a series of lutebooks by the late Alberto da Ripa, edited by Morlaye (1552[36], 1554[34], 1554[35], 1554[36], 1555[36], *BrownI* 1558[6]). Others listed in the catalogues of Antoine Du Verdier and Fétis are lost. Fezandat secured his own ten-year royal privilege to print music on 8 January 1552 and used it to publish two books of four-voice psalms (1552[3], repr. 1556[12]; 1553[18]) and two books of four-voice chansons (1556[20], 1556[21]): the latter include one piece by 'G. Pelletier' who may be Guillaume le Pelletier, apprenticed to Fezandat in 1543. In 1561–2 Fezandat printed four editions of the Genevan Psalter, the last being for the publisher Jacques Du Puys (see Noailly, nos.5–9).

Fiala, George (Joseph) (*b* Kiev, 31 March 1922). Naturalized Canadian composer of Ukrainian birth. Between 1939 and 1948 he studied composition, musicology and conducting at the Kiev Conservatory, the Hochschule für Musik in Berlin and the Brussels Conservatory. In 1949 he settled in Montreal, where he has been active as a composer, pianist and organist, and in 1955 he became a Canadian citizen. From 1967 to 1987 he was an announcer and music producer for the Russian section of Radio Canada International, and in that capacity wrote over 1000 scripts for his radio programmes 'Canadian Music Journal' and 'Jazz in Canada'. He was invited to Kiev for concerts of his music in 1990 and, to celebrate his 70th birthday, in 1992. Fiala is categorical in his rejection of avant-garde idioms and insists upon the controlling logic of tonality. Prokofiev, Shostakovich and Khachaturian, all of whom he met in Kiev, were formative influences. On occasion he has drawn upon musical elements from his native Ukraine, from jazz (which he admires), and, in a handful of works written in the 1960s, from serialism. A hard working and fluent composer, Fiala had written over 250 compositions by 2000. His personal papers are at the University of Calgary and his music is available from the Canadian Music Centre. (*EMC2*, G. Potvin)

ROBIN ELLIOTT

Fiala, Joseph (*b* Lochovitz [now Lochovice], western Bohemia, 2 March 1748; *d* Donaueschingen, 31 July 1816). Bohemian composer, oboist, cellist and viol player. In his youth he was bound to the service of Countess Netolická (Netolitzky) and studied the oboe in Prague with Jan Šťastný (i) and the cello with Franz Joseph Werner, who also taught Josef Reicha. There are divergent accounts of his precipitous departure from Prague and his visits to Regensburg and Vienna. From 1774 Fiala was an oboist in the Kapelle of Prince (Fürst) Kraft Ernst von Oettingen-Wallerstein in Swabia, where his colleagues included Ignaz von Beecke, Josef Reicha and Antonio Rosetti. The Wallerstein parish records mention the baptism of an illegitimate son, 'Franciscus Xav. Josephus', on 26 October 1776, the father being described as 'Josephus Viola Musicus auliens'.

In 1777 Fiala was appointed oboist in the Munich Hofkapelle of Elector Maxmilian III Joseph. He met Mozart in Munich, and a lifelong friendship between the Fiala and Mozart families developed. Also in 1777, he married Josepha Prohaska, daughter of a horn player in the Munich Hofkapelle. Of their several children the sons Franz and Maximilian became musicians in the Badische Hofkapelle in Karlsruhe.

At the end of 1778 the Fialas went to Salzburg, where they stayed in the house of Mozart's birth in the Getreidegasse and Fiala became first oboist in the Kapelle of Archbishop Hieronymus Colloredo. However, he was turning increasingly to the cello and the viol; he played the solo cello in the first performance in Salzburg of Mozart's *Die Entführung aus dem Serail*. After a 'chest ailment' prevented Fiala from playing the oboe for some time, the Archbishop dismissed him summarily on 31 August 1785.

Fiala now went to Vienna. According to an unsubstantiated report, one 'Joseph Fiala' was conductor of Prince Esterházy's wind band at this time. In 1786 he took up an invitation to visit St Petersburg, where he set up a Kapelle for Prince Orlov. On his return from Russia he made concert tours to cities including Prague, Berlin and Breslau, where he played before King Friedrich Wilhelm II of Prussia. In 1792 Fiala became a virtuoso cellist in the Kapelle of Prince Joseph Maria Benedikt zu Fürstenberg at Donaueschingen, where the Kapellmeisters were Wenzeslaus Nerlinger (Nördlinger) and Karl Joseph von Hampeln, not Fiala himself, as has often been incorrectly stated. J.F. Reichardt described him in 1792 as 'the best living player of the viol'.

Fiala's versatility as a composer was characteristic of the musical virtuosity of his native Bohemia. The influence of Mozart is also unmistakable, particularly his chamber music. Four string quartets formerly attributed to Mozart (KA 210–13/C20.01–20.04) and now attributed to Joseph Schuster were once thought to be by Fiala. Mozart himself was enthusiastic about Fiala's compositions. He wrote of a group of wind players in Munich: 'You can easily tell that they were trained by Fiala. They played some of his works, and I must say they are very pretty. He has very good ideas [*er hat sehr gute gedancken*]'.

CLAUS REINLÄNDER

Fiamengo, Arnoldo. *See* FLANDRUS, ARNOLDUS.

Fiamengo, Francesco (*fl* 1620–37). Italian composer of Flemish origin. In 1620 and 1621, already a priest, he was a tenor in the *cappella* maintained by the city authorities of Caltagirone, Sicily. Between 1627 and 1629 he was organist there. Documents of 1628 and 1629 refer to him as Doctor of Theology and Doctor of Medicine respectively. By 1637 he was working at Messina, Sicily, where his earliest known collection of music, *Cantate a tre voci* (now lost), was published in 1632. On the title-page of his sole surviving publication, *Pastorali concenti al presepe, co' responsorij della sacra notte del natale di N[ostro] S[ignore]* op.3, for two to six voices and continuo (Venice, 1637), he is styled 'Dottor Don Francesco Fiamengo'. In the dedication, which is dated 1 May 1637, he referred to a volume of masses that he had published a few months earlier. The 1637 book comprises Latin responses, a *Sonata pastorale* for four instruments and several vernacular pieces in celebration of Christmas. A recitative-dialogue for four voices, based on the Sofronia and Olindo episode in Tasso's *Gerusalemme liberata* (ed. in Balsano) survives in manuscript in the archives of St John's Co-Cathedral, Valletta.

Fiauto [flauto] **d'echo** (It.). *See* ECHO FLUTE.

Fibich, Zdeněk [Zdenko] (**Antonín Václav**) (*b* Všebořice, Bohemia, 21 Dec 1850; *d* Prague, 15 Oct 1900). Czech composer. After Smetana and Dvořák he was the most prominent Czech composer of the second half of the 19th century, notably of operas and orchestral and piano music. His concert and stage melodramas were some of the most ambitious and effective ever written and prompted other Czech composers to write in the same genre, thus creating a sizable and unique repertory for Czech music. Among his compositional strengths were lucid portrayals of the dramatic, particularly apparent in the symphonic poems and concert overtures, a command of miniature forms reminiscent of Schumann and a gift for producing effective melodic lines that range from the straightforward and aggressive to the strikingly poignant.

1. Life. 2. Style. 3. Instrumental works. 4. Vocal works.

1. LIFE. His father, Jan Fibich, came from a long line of forestry officials who served the Auersperg estate; his mother, Marie Römisch, was from a cultured, German-speaking Viennese family. He enjoyed a happy childhood in woodland surroundings, both at Všebořice (south-east of Prague) and Libáň (north-east of Havlíčkův Brod), where his father was transferred in 1857. He attended Hermann's Öffentliche Hauptschule (1859–62) and the Academic Gymnasium (1862–3) in Vienna before transferring to the Czech Gymnasium in Prague's Malá strana (Little Quarter) (1863–5). Fibich's mother had begun teaching him the piano (with his sister Marie) in 1857 and, encouraged by a local priest, František Černý, he wrote his first composition (*Pange lingua*), now lost, in 1862. In Prague he attended (1864–5) the private music institute (founded 1860) of Zikmund Kolešovský, organist at St Ignác. By the middle of 1865, when Fibich left Prague, he had written about 50 works, mostly songs and piano pieces (including *Le printemps*, published that year as his op.1), but also an overture and closing music for Shakespeare's *Romeo and Juliet*, a sketch, in string quartet form, for a symphony in E♭ and part of an opera, *Medea*, to his own libretto.

He continued his training in Leipzig (1865–7), where he studied the piano with Moscheles and theory with E.F. Richter at the Leipzig Conservatory until Christmas 1866. He then studied privately with Salomon Jadassohn, who encouraged an interest in Bach and counterpoint. In addition to several songs and a second symphony (G minor), Fibich wrote three operas while in Leipzig: two works to his own text (*Kapellmeister in Venedig*, 1866, and *Gutta von Guttenfels*, probably in 1867) and one and a half acts to Geibel's *Loreley* (1866–7), which he knew from Max Bruch's setting. After eight months in Paris (1868–9), where he made his living as a piano teacher and pursued his interest in art and sculpture, he concluded his studies in Mannheim (1869–70) with the conductor Vinzenz Lachner, who staged Wagner's *Meistersinger* during Fibich's stay. After his return to Bohemia, he lived with his parents first in Žáky (south of Čáslav) (1870–71), then, when his father retired in Prague. During this period Fibich devoted himself to composition, producing several songs, including a series of pieces to texts from Goethe's *Wilhelm Meisters Lehrjahre*, as well as his first extant opera, *Bukovín*, to a libretto obtained six years earlier, at his request, from Karel Sabina, the librettist for Smetana's *The Bartered Bride*.

In February 1873 Fibich married Růžena Hanušová and in September accepted a choir-training post in Vilnius. Růžena died in October 1874 shortly after she and her husband moved back to Prague, and in the summer of 1875 Fibich married Růžena's older sister Betty (1846–1901), a contralto at the Provisional and National Theatres who created leading roles in several of Smetana's and Fibich's operas.

From 1875 to 1881 Fibich was deputy conductor and choirmaster of the Provisional Theatre in Prague. Adolf Čech was principal conductor and Fibich conducted mostly operettas. From 1878 to 1881 he was also choirmaster of the Russian Orthodox Church, which he found more congenial and less time-consuming. (He succeeded Karel Bendl in both positions.) It was also during this period that he began writing reviews for the periodical *Dalibor*. After 1881 he turned entirely to composition and private teaching (piano and theory) when a post at the Prague Conservatory failed to materialize.

In 1886 Anežka Schulzová (1868–1905), the daughter of Ferdinand Schulz (1835–1905), a well-known historian, writer and literary critic, began to study the piano with Fibich. In 1892, when she started composition lessons, Schulzová began to have a profound effect on her teacher. The passionate relationship that developed was the inspiration for many of Fibich's later compositions. Schulzová became Fibich's collaborator and wrote the librettos for his last three operas, *Hedy*, *Šarka* and *Pád Arkuna* ('The Fall of Arkona'). In 1900 František Urbánek's publishing firm in Prague released Schulzová's book *Zdenko Fibich: eine musikalische silhouette* under the pseudonym Carl Ludwig Richter.

During the last year of his life, Fibich returned to public service in a temporary post as Dramaturg for the National Theatre (1899–1900). The theatre management changed shortly after Fibich's appointment and abolished the position, forcing him to return briefly to private teaching, despite declining health and a weak heart. He died of pneumonia on 15 October 1900, less than a month before the première of his last opera, *The Fall of Arkona*.

1. Zdeněk Fibich

2. STYLE. Unlike his contemporaries Smetana and Dvořák, who cultivated a pervasive Czech style in many of their works, Fibich more often borrowed discriminatingly from folk sources to add familiar spice. The highly stylized version of a polka in the second movement of his First Symphony (op.17) is one such example.

While historians have often distinguished Fibich from Smetana and Dvořák because he seems less 'Czech', it should be noted that all three were significantly influenced by foreign models and all were, to some extent, followers of Wagner in their concern with programmatic content and their devotion to opera. But it was perhaps Fibich, more than his contemporaries, who proved to be the most tenacious in the search for extramusical inspirations and convincing means of translating them to music. The range of works inspired by such sources is wide, from personal experience in the symphonic poem *V podvečer* ('At Twilight') and the piano suite *Z hor* ('From the Mountains') to the illustration of Schulzová's physical attributes in the 'piano diary' *Nálady, dojmy a upomínky* ('Moods, Impressions and Reminiscences'), interpretations of art in the piano suite *Malířské studie* ('Studies of Paintings') and nature in the symphonic poem *Vesna* ('Spring'). His stage works show a similar diversity, drawing their inspiration from Czech legend (*Šárka*), Greek myth (*Hippodamia*) and some of the greatest writers in the wider scope of European literature, including Schiller, Shakespeare and Byron.

Fibich was also responsible for an impressive number of firsts in Czech music. His nationalistic symphonic poem *Záboj, Slavoj a Luděk* ('Záboj, Slavoj and Luděk', 1873), the earliest based on a Czech subject, inspired Smetana's cycle *Má vlast*. (The opening theme of Smetana's *Vyšehrad*, *c*1872–4, bears a striking resemblance to Záboj's theme. Both works also contain strategically important and substantial parts for the harp.) His *Toman a lesní panna* ('Toman and the Wood Nymph', 1874–5), based on František Čelakovský's ballad from the cycle *Ohlas písní českých* ('Echo of Czech Songs', 1839), antedated Dvořák's symphonic poems on K.J. Erben's ballads by more than 20 years. Fibich's concert melodramas heralded a Czech vogue for the genre, to which J.B. Foerster and Otakar Ostrčil made some of the most significant later contributions. (The most important successor to Fibich's staged melodrama *Hippodamia*, 1888–91, was Josef Suk's *Radúz and Mahulena*, 1897–8.)

Fibich is often referred to as the greatest Czech Romantic composer. A cultured man with a broad knowledge of art and literature as well as an extensive familiarity with music of the past, he numbered the poet Jaroslav Vrchlický and the aesthetician Otakar Hostinský among his friends. These two writers provided him with some of the best Czech opera librettos of the 19th century. In his development of the concert melodrama he achieved great popularity in a perilous medium and prepared the way for his unique achievement, the trilogy of stage melodramas *Hippodamia*.

Fibich was the master of a fluent technique that, in its manipulation and transformation of themes, was capable of great subtlety and extraordinary inventiveness. His large-scale works incorporate certain of Wagner's techniques, particularly the leitmotif, and shifts of harmony reminiscent of Smetana, with his own precise dramatic interpretations and sumptuous melodies, which include some of the most lyrical and luxuriant.

Broader aspects of Fibich's style can be related to three lines of development. Springtime subject matter and moods in his early music, culminating in the cantata *Jarní romance* ('A Springtime Tale', 1880–81), the tone poem *Vesna* ('Spring', 1881) and the F major Symphony (1877–83), stem from a love of nature formed during his youth and cherished throughout his life. He exhibits a fondness for the ballad and its melancholy, fearful and fatalistic moods, particularly in the works based on Erben's texts – the concert melodramas *Štědrý den* ('Christmas Day', 1875) and *Vodník* ('The Water Goblin', 1883) – and in the tone poem *Toman and the Wood Nymph*. In his operas this tendency is characterized by the prominent 'fate' themes that run from *Bukovín* (1870–71) to *The Fall of Arkona* (1898–9). A more intimate mode of expression was awakened by his liaison with Anežka Schulzová, resulting in the piano diary *Moods, Impressions and Reminiscences* (1892–9), which describes minute details of their relationship, as well as a series of female-centred operas, including *Šárka*, his most successful, to a libretto by Schulzová.

Although melodies and rhythms characteristic of folk music occur in the chamber pieces, along with several convincing polkas in the orchestral works, folklike music is not an organic feature in most of Fibich's compositions. Yet an enthusiastic German critic of *The Tempest* (1893–4) went perhaps too far when he described it as fundamentally German music ('in seinen Wurzeln deutschen Musik'). While it is true that Schumann, Weber and Wagner were potent musical influences and while Fibich wrote his first operas and well over 100 songs to German texts, he was no less competent when he turned to Czech, devoting great care and skill to idiomatic word-setting.

Fibich's music is solidly crafted, with forceful rhythms and mellow orchestration rich in horns. His skilful use of chromatic harmony complements abundantly fertile melodic gifts and, like Smetana, he could manipulate constantly modulating phrases in such a way that they sounded forthright and unambiguous.

3. INSTRUMENTAL WORKS. The three completed symphonies of Fibich's maturity were written over a period of 20 years, interspersed among the operas: no.1 in F, op.17 (1877–83), no.2 in E♭, op.38 (1892–3) and no.3 in E minor, op.53 (1898). Nos.2 and 3 belong to the period of Fibich's attraction to Schulzová. In fact, a central theme of the second movement of the Third Symphony comes from the piano diary. Ostensibly all three symphonies are conventional four-movement works, observing the formalities of sonata form in their outer movements. Fibich's melodic gifts are evident in the variety of themes in the expositions. His inventive craftsmanship is likewise apparent in the monothematic treatment of the first movement of no.2 in E♭, the first Czech cyclic symphony. Perhaps the most compelling first movement is found in the E minor symphony, however, where a persistent ostinato figure provides the tension that propels the movement forward.

Some of Fibich's most effective orchestral writing is found in the symphonic poems and overtures. *Noc na Karlštejně* ('A Night at Karlštejn [Castle]', 1886), dedicated to Saint-Saëns, and the Komenský Overture (1892) are thematically ingenious (the former in its treatment of the rhythmically incisive first theme, the latter in the way in which the introductory chorale from the Amsterdam hymnbook, published by Komenský in 1659, provides the material for future themes in the Allegro). But in both cases it is their programmes, more than any other single factor, that seem to have sparked Fibich's imagination. His other programme music ranges from the general evocation of mood (as in *Vigiliae*, 1883–5, and the monothematic tone poem *Spring*, where transformations of a single theme suggesting different aspects of spring are enlivened by a polka in the middle section) to the Shakespeare tone poems (on *Othello* and *The Tempest*), in which he followed Smetana's plan in *Richard III* of elaborating a sonata-form structure with themes representing contrasting incidents and characters in the play without reproducing the story in detail. *Záboj, Slavoj and Luděk*, based on material from the Dvůr Králové manuscript, delineates musically the contrasting personalities of Záboj and Luděk while conveying specific events in the legend. Further examples include *At Twilight*, a reminder of evenings spent on Prague's Žofín island with his favourite companion, Anežka Schulzová, that incorporates the theme from no.139 of the piano diary ('Poème') and *Toman and the Wood Nymph*, which echoes in musical analogies almost every incident in Čelakovský's poem.

Fibich's chamber music was written mainly during the early part of his career, and includes several works for violin and piano duo, two piano trios, two string quartets and a piano quartet. The most important of his chamber works, however, is the last, a quintet for piano, clarinet, horn, violin and cello (1893). The use of material from the diary reveals the work's genesis in Fibich's relationship with Schulzová and conveys his happiness during the latter part of his career. Its unusual scoring provided the opportunity for an ingenious mixture of timbres to complement the work's melodic inventiveness.

Fibich's piano music includes several early sonatas for two hands, suites and arrangements for four hands, and the broadly conceived *Velká teoreticko-praktická škola hry na klavír* ('Grand Theoretical and Practical School of Piano Playing', 1883–7, compiled with Jan Malát), in which he incorporated several early works along with newly composed pieces. In addition, he completed two late suites for piano that were connected with his favourite pastimes: the cyclic *From the Mountains* (1887) based on his impressions of the Alps, where he frequently went for holidays (each piece is preceded by a motto from Vrchlický praising the mountain scenery), and *Studies of Paintings* (1898–9), consisting of five musical interpretations of paintings by Ruysdael, Pieter Bruegel, Fra Angelico (Fra Giovanni da Fiesole), Correggio and Watteau.

The most unusual of Fibich's piano works are the 376 *Moods, Impressions and Reminiscences* recording his love for Anežka Schulzová, to whom he presented six of the pieces as a birthday gift in 1893. The collection contains pieces that range from one line to several pages in many styles and moods. Many are in ternary or simple

rondo form and some are grouped into suites. These miniatures assumed a special significance for Fibich and Schulzová. The cross-referencing among the pieces and quotations from other works by Fibich and other composers, represent specific situations in their relationship. Fibich also assigned private titles to the pieces but they were not included in the published scores. Except in a few obvious cases, the titles are more a code than a descriptive programme.

Zdeněk Nejedlý's commentary *Zdeňka Fibicha milostný deník* ('Zdeněk Fibich's Erotic Diary', 1925), based on a study of Fibich's annotations on many of the manuscripts and on Schulzová's own notes, brought the work's private messages into public view. Nejedlý's action provoked arguments about its propriety, but convincingly documented the diary's central significance for Fibich during the last phase of his career. Nejedlý's work explains the pieces' non-chronological grouping for publication into sets of narrative 'reminiscences' (of specific events such as Schulzová's counterpoint lesson, their conversations, their walks along the street, Fibich's confession of love, meeting her parents, various journeys etc.), lyrical 'impressions' (many devoted, in comprehensive detail, to parts of Schulzová's body) and 'moods' (which combine features of the two other groupings, including a succession of pieces illustrating Schulzová in different clothes).

Fibich soon began to borrow thematic material from *Moods, Impressions and Reminiscences* for other works, including the E minor Symphony (no.3), the Quintet and the operas *The Tempest*, *Hedy* and *Šárka*, but the relationship of these works with the diary is often complex. Allusions to existing works sometimes illuminate their programmes, some pieces were written simultaneously with other non-diary works (e.g. *Hedy*), and some of the later pieces, despite the annotations for Schulzová's benefit, are transcriptions of earlier unpublished works. By late 1896, the pieces were becoming fewer and less clearly concerned with Schulzová. Though Fibich was not losing interest in her (he left his wife in 1897), he seemed more eager to throw his energies into large-scale works such as the Third Symphony and the later operas, with Schulzová as his librettist. By the time of his last opera, *The Fall of Arkona*, he was no longer adding to the diary nor does the opera contain references to it.

4. Vocal works. In the last years of his life Fibich destroyed most of the church music written during his youth (all that remains is a published mass) and over half of his 200 songs. These surviving works show how strong was the influence of Schumann and Schubert in his early years. (His prolific songwriting had almost stopped by 1880.) Of the secular cantatas, only *A Springtime Tale*, to a poem of the same name by Vrchlický, proved popular and lasting.

Fibich's most important vocal music is concentrated in his operas and melodramas. The earliest extant operas, *Bukovín* (1870–71), which reveals his admiration for Weber with significant sections modelled on *Der Freischütz*, and *Blaník* (1874–7), dedicated to Smetana, were composed to quasi-historical texts by Smetana's librettists Karel Sabina and Eliška Krásnohorská respectively. But it was his next opera, *Nevěsta messinská* ('The Bride of Messina', 1882–3), to a libretto adapted from Schiller's tragedy by Hostinský, that has sometimes been praised as the finest Czech 19th-century tragic opera. Its dominant features of a severe declamatory style and a complex system of leitmotifs have led admirers to point to the influence of Gluck while critics have denounced it as an imitation of Wagner.

In *Námluvy Pelopovy* ('The Courtship of Pelops'), *Smír Tantalův* ('The Atonement of Tantalus') and *Smrt Hippodamie* ('Hippodamia's Death'), the trilogy of four-act works that make up the stage melodrama *Hippodamia* (1888–91), Fibich took both these features to their logical extreme and, in a further effort to balance words and music, assigned a speaking voice (with pitch and rhythm unspecified) to the continuous text against an accompaniment characterized by an intricate web of leitmotifs. Through careful control of texture and density in the orchestral writing he was able to avoid obscuring the simultaneously performed text, providing music that achieved a successful synthesis with the words.

In the *Hippodamia* trilogy, Fibich composed the most ambitious melodramas ever written. He knew Benda's *Ariadne auf Naxos* and *Medea* that had so impressed Mozart (from conducting them in 1875), as well as Schumann's declamatory ballads and his incidental music for *Manfred* with its numerous sections of melodrama. The Greek myths on which both Benda's melodramas and Fibich's *Hippodamia* are based contain an intense level of dramatic action to drive the works forward. But while Benda relied primarily on the alternation of text and music, Fibich presented text and music simultaneously for most of the work, a practice more closely related to Schumann's in the declamatory ballads. Fibich gained practical experience with this method of text setting in his concert melodramas on Czech and foreign ballads (in Czech translation). These works prepared the way for *Hippodamia* with its continuous instrumental component. *Christmas Day* (1875), written shortly after *Toman and the Wood Nymph*, represents a logical progression from narrative symphonic poem to narrative ballad set as melodrama. Like *Pomsta květin* ('The Revenge of the Flowers', 1877), *Věčnost* ('Eternity', 1878) and *Královna Ema* ('Queen Emma', 1883), it was written for piano and reciter (Fibich orchestrated *Christmas Day* in 1899). *Christmas Day* and *The Water Goblin* (1883, originally for orchestra and reciter), using well-known texts from Erben's collection of folktales *Kytice*, were by far the most popular of Fibich's concert melodramas. In both *The Water Goblin* and *Hakon* (1888) Fibich provides a continuous, symphonically developed companion for the text and in so doing leads directly to *Hippodamia*.

It was several years before Fibich returned to operatic stage works. Meanwhile his relationship with Schulzová had intensified and he had started the piano diary. Both changed the course of his later operas. From *Hedy* (1894–5) onwards all his operas were written to librettos by Schulzová and all focussed on women. Even in the preceding *Tempest* (1893–4), to Vrchlický's adaptation of Shakespeare), Fibich shifted the emphasis strongly towards Miranda and Ferdinand. Furthermore, Fibich's use of pieces from the diary, particularly in *The Tempest* and *Hedy*, shows that he was now frequently reworking existing music so that the principles on which he wrote *The Bride of Messina* no longer applied. Instead of the words dictating the course of the music, they are moulded into cooperation. While *The Bride of Messina* is set in a straightforward declamatory manner that leaves little room for set numbers and affords only the chorus an occasional ensemble, *The Tempest* and *Hedy*, in direct

2. Costume design by Mikoláš Aleš for the title role in the original production of Fibich's 'Šárka', Prague, 1897

contrast, adopt operatic conventions that give voice to Fibich's superior melodic gifts in a collection of set numbers, arias, duets and, in *Hedy*, even a ballet that borrows heavily from the diary pieces. There is less of this ready-made music in *Šárka* (the main character may have been too stark a contrast to Schulzová), but it too was planned around set numbers, particularly the fine succession of pieces that depict the central incident of Čtirad and Šárka's mutual hatred turning to love. *Šárka* is Fibich's most straightforward and best-known opera in which he returned to a Czech subject at a time when he was being denounced as a Wagnerian (fig.2). The next opera, *The Fall of Arkona*, on the other hand, was based on the broader historical topic of early Christianity among the Baltic Slavs. Written in two parts, the one-act prologue *Helga* and the three-act *Dargun*, which takes place 20 years later, it experiments with a more conversational style (e.g. in the chamber-like prologue) that shows Fibich turning to new approaches, a trend cut short by his death a few weeks before the opera's première.

WORKS

Edition: *Souborné vydání děl Zdeňka Fibicha* [Collected Edition of Works of Fibich], ed. L. Boháček, J. Burghauser, J. Hanuš, L. Láska, A. Pokorný and K. Šolc (Prague, 1950–67) [SV]

Printed works were published in Prague unless otherwise stated; op. no.55 was used twice, 58–9 not at all; MSS are mostly in the Fibich family archive, Prague, and in *Cz-Pndh*, *Pnm*, *Bm*, Muzeum české hudby, Prague, and other Czech archives.

OPERAS AND STAGE MELODRAMAS

unless otherwise stated, first performed at Prague, National Theatre

Bukovín (romantic op, 3, K. Sabina), 1870–71, Prague, Provisional, 16 April 1874

Blaník (op, 3, E. Krásnohorská), op.50, 1874–7, Prague, Provisional, 25 Nov 1881, vs (1897)

Nevěsta messinská [The Bride of Messina] (tragic op, 3, O. Hostinský, after F. von Schiller), op.18, 1882–3, 28 March 1884, vs (1884)

Hippodamie [Hippodamia] (stage melodrama trilogy, J. Vrchlický, after Sophocles, Euripides and Apollodorus): Námluvy Pelopovy [The Courtship of Pelops] (4), op.31, 1888–9, 21 Feb 1890, vs (1890); Smír Tantalův [The Atonement of Tantalus] (4), op.32, 1890, 2 June 1891, vs (1891); Smrt Hippodamie [Hippodamia's Death] (4), op.33, 1891, 8 Nov 1891, vs (1891)

Bouře [The Tempest] (op, 3, J. Vrchlický, after W. Shakespeare), op.40, 1893–4, 1 March 1895, vs (1895)

Hedy (op, 4, A. Schulzová, after Byron: *Don Juan*), op.43, 1894–5, 12 Feb 1896, vs (1895)

Šárka (op, 3, Schulzová), op.51, 1896–7, 28 Dec 1897, vs (1897)

Pád Arkuna [The Fall of Arkona] (op, Schulzová): Helga (prol), op.55, 1898, vs (1899); Dargun (3), op.60, 1898–9, 9 Nov 1900, vs (1901)

Lost or destroyed: Medea (op, Fibich), frag., 1863; Kapellmeister in Venedig (comic op, Fibich), 1866, ?perf. Libáň, 6 Jan 1868; Loreley (romantic op, 3, E. Geibel), frag., 1866–7; Gutta von Guttenfels (serious operetta, 1, Fibich), ?1867; Litocha (op, J. Kaňka), frag., 1871; Frithjóf (op, P. Lohmann), frag., 1874

CONCERT MELODRAMAS

Štědrý den [Christmas Day] (K.J. Erben), reciter, pf, op.9, 1875 (1880), orchd 1899, SV

Pomsta květin [The Revenge of the Flowers] (F. Freiligrath, trans. J. Vrchlický), reciter, pf, 1877 (1881), SV

Věčnost [Eternity] (R. Mayer), reciter, pf, op.14, 1878 (1883), SV

Vodník [The Water Goblin] (Erben), reciter, orch, op.15, 1883, vs (1883), SV

Královna Ema [Queen Emma] (Vrchlický), reciter, pf, 1883, *Humoristické listy*, suppl. no.8 (1883), SV

Hakon (Vrchlický), reciter, pf, op.30, 1888, orchd 1888, SV

INCIDENTAL AND OCCASIONAL MUSIC

lost or destroyed except where noted; for orchestra unless otherwise stated

Pražský žid [The Jew of Prague] (J.J. Kolár), ov., 1871, chorus, 1877, MSS extant, ov. pubd

Arria a Messalina (Willbrandt), bacchanal music, 1876

Prolog k otevření Nového českého divadla [Prologue for the Opening of the New Czech Theatre], 1876, MS extant

Strakonický dudák [The Bagpiper from Strakonice] (J.K. Tyl), bagpipe song, fairy chorus, 1876, Prague, 11 Aug 1878

Veřejné tajemství [A Public Secret] (C. Gozzi), song, inst serenade, 1876, Prague, 7 Dec 1876, MS extant

Český dobrodruh a francouzská selka [The Czech Adventurer and the French Farmer's Wife], song, 1877, Prague, 18 Aug 1877

Cesta Prahou v 18 dnech [A Journey through Prague in 18 Days], comic march, 1877, not perf. [banned by censor]

Dora (V. Sardou), melodrama interludes, 1877, Prague, 11 April 1877, MS extant

Od stolu a lože [From the Table and the Bed], song (H. Meilhac and L. Halévy), 1877

Stará panna [The Old Maid] (L. Stroupežnický), song, 1877, MS extant

Valdštýnův tábor [Wallenstein's Camp] (F. von Schiller), march, 1877

Pan Měsíček, obchodník [Mr Moon, Salesman] (Stroupežnický), song, ?1877, Prague, ?3 June 1877

Velká hudební monografie stavby Národního divadla [Great Musical Monograph of the Building of the National Theatre], tableaux vivants, perf. [without tableaux] 15 May 1881, MS extant

12.VIII.1881–18.X.1883, pf, 1883, pubd in *Dalibor* (14 Nov 1883) [for reopening of National Theatre]

Hudba k živému obrazu při znovuotevření Národního divadla [Music for a Tableau Vivant for the Reopening of the National Theatre] (F. Kollár and J. Vrchlický), 1883, Prague, National, 18 Nov 1883 [arr. pf 4 hands in Zlatý věk, no.12 (1885)]

Midasovy uši [Midas's Ears] (Vrchlický), 1890, Prague, National, 7 Oct 1890

Hudba k živému obrazu při oslavě 300. narození J.A. Komenského [Music for Tableau Vivant for the Celebrations of 300th Anniversary of the Birth of Komenský], 1892, Prague, National, 27 March 1892, MS extant; see also ORCHESTRAL (Ovs.)

Pietro Aretino (Vrchlický), 1892, Prague, National, 30 April 1892
Neklan (J. Zeyer), 1896, Prague, National, 30 March 1896

SACRED CHORAL AND CANTATAS

Meluzina (G. Kinkel: *Die Windsbraut*, trans. J. Srb-Debrnov), solo vv, SATB, orch, op.55, 1872–4, vs (1911)
Svatební scéna [Wedding Scene] (K.J. Erben, Cz. trad.), 7 solo vv, SATB, orch, 1872–4, vs (1875)
Jarní romance [A Springtime Tale] (J. Vrchlický), S, B, SATB, orch, op.23, 1880–81, full score and parts (1886), vs SV
Missa brevis, F, SATB, org, str orch ad lib, op.21, 1885 (?1890)

Lost or destroyed: over 25 sacred works, mostly for mixed vv, incl. mass frag., 1873, requiem frag., 1874, 2 Kyries, 3 Ave Maria settings, motets, spiritual songs; Kantáta na pamět' 500. vyročí úmrtí Karla IV [Cantata for 500th Anniversary of the Death of Charles IV], 2 male choruses, 1878

CHORUSES AND PARTSONGS

Male vv: Vytrvej! [Hold on!] (E. Krásnohorská, 1877, *Dalibor*, ii/2 (1880); Tichá noc [Silent Night] (G. Pfleger-Moravský), 1877, *Dalibor*, iv/2 (1882); 2 folksong arrs., Ó Velvary, Proč bychom veselí nebyli [Why should we not be merry], ed. J. Malát (Ratibor, 1886)
Mixed vv: U mohyly [At the Grave] (J. Jahn), SATB, pf 4 hands, 1872, vv only (n.d.); Ždání or Prosba [Request] (H. Heine), 1878 (n.d.)
Women's vv: 2 folksong arrs., Nechoď tam, pojď radš k nám [Don't go there, come to us instead], Proč sem jdeš [Why are you coming here?], ed. J. Malát (Ratibor, 1886)
Partsongs: Osm dvojzpěvů [8 duets] (Heine, J. Eichendorff, A. von Chamisso, J.W. von Goethe, F. Rückert), 3 for SA, pf, 5 for 2vv, pf, 1871–2 (1876); Letní [A Summer Song] or Jarní [A Spring Song] or Společenská [A Sociable Song] (V. Sokolová), 2vv, hmn/pf, 1884 (n.d.)
Lost or destroyed: Pange lingua, 1862; *c*10 choruses; *c*10 partsongs, 2–3vv

SONGS

Wünsch (Etwas wünschen und verlangen) (F. Rückert), 1865; König Wiswamitra (H. Heine), 1865; Ende (Sag, wo ist dein schönes Liebchen) (Heine), 1865; Zwei Gesänge (Heine), op.3 (Leipzig, 1866), in Cz. as Dvě zpěvů, op.3 (1901): Ich will meine Seele tauchen, 1865; Sommerabend (Dämmernd liegt der Sommerabend), 1866; Eisblumen (Viele holde, wilde Rosen) (M.G. Saphir), 1866; Dein Bild (Oft seh' ich deinen süssen Blick) (Saphir), 1866; Ihr Lied (Hör' ich das Liedchen) (Heine), 1866; Am Meer (Das Meer erglänzte) (Heine), 1866; Wandl' ich in dem Wald (Heine), 1866
Verloren (Stille bei Nacht) (J. Eichendorff), 1867; Ihr Bildnis [Ihr Bild] (Ich stand in dunkeln Träumen) (Heine), 1867; Wasserfahrt (Mein Liebchen, wir sassen beisammen) (Heine), 1867; Mädchen mit dem roten Mündchen (Heine), 1868; Nachtlied (Vergangen ist der lichte Tag) (Eichendorff), 1868; An ein Mädchen (Nicht fliehen) (Anacreon), 1868; Bitte (N. Lenau), 1868; Oh wär ich ein See (M. Háfiz), 1868; Altes Lied (Es war einmal ein König) (J.W. von Goethe), 1869; Frage (Was soll ich sagen) (A. von Chamisso), 1869; An den Mond (Füllest wieder Busch und Thal) (Goethe), 1869
Fürbitte der Blumen (Am leuchtenden Sommermorgen) (Heine), 1869; Sturmnacht (Das ist ein Brausen) (Heine), 1869; Am Meeresstrande or Abend am Meere (Es war so schön) (Fibich), 1869; Dein Bild (Wenn ich auf dem Lager) (Heine), 1870; Erwartung (Morgens steh' ich auf) (Heine), 1870 [two extant settings]; cycle from *Wilhelm Meisters Lehrjahre* (Goethe), 1871: Heiss mich nicht reden, So lasst mich scheinen, Kennst du das Land, Nur wer die Sehnsucht kennt, An die Türen will ich schleichen, Wer nie sein Brot mit Tränen ass, Singet nicht in Trauertönen, Wer sich der Einsamkeit ergibt, Der Sänger (Was hör' ich draussen von dem Tor)
Hildenbrandlied (J.V. Scheffel), 1871; Patero písní z 'Večerních písní' [5 Songs from 'Evening Songs'] (V. Hálek), op.5, 1871 (1871): Umlklo stromů šumění [The rustling of the trees has ceased], Na nebi plno hvězdiček [The heavens are full of stars], Ty dívko zvláště líbezná [Oh you most charming girl], Tvé oko, krásné jezero [Your eye, a beautiful lake], Přilétlo jaro zdaleka [Spring has arrived from afar]
Tři pisně: Róže [Rose] (from Dvůr Králové MS), Na nebi měsíc s hvězdami [The moon and stars in the sky] (Hálek), Tak často mi to připadá [So often it seems to me] (Hálek), 1871 (1875), also pubd with Tak mne kouzlem ondy jala [How she once charmed me] (F.L. Čelakovský), 1871, Kdyby všecky slzičky [If all the tears] (Čelakovský), 1872, as Patero zpěvů [5 Songs] (1903) [Čelakovský settings orig. pubd in *Dalibor*, iii (1875), suppls.]; 2 songs (from Dvůr Králové MS), 1871, *Dalibor*, i (1873), suppl. no.9: Skřivánek [The Lark], Opuščená [Deserted]
Der Asra (Heine), 1872; Es haben uns're Herzen (Heine), 1872; Die Sterbende (Chamisso), 1872; Neun Gedichte (Heine), 1872: Gekommen ist der Maie, Wie die Nelken duftig atmen, Es fällt ein Stern herunter, Deine weissen Lilienfinger, Das Meer erstrahlt, Ach ich sehne mich im Sonnenschein, Morgens send ich dir die Veilchen, Schattenküsse, Schattenlieben, Es hat die warme Frühlingsnacht; Drei Lieder, 1872: Tränen (Chamisso), Nach Sevilla (C. Brentano), Abendlich schon rauscht (Eichendorff); Erlkönigs Tochter (Herder), 1872
4 Balladen, op.7: (Leipzig, 1873), in Cz. as Čtyři balady (1896): Der Spielmann (Chamisso), 1872, Waldnacht (Wie uralt weht's) (H. Lingg), 1873, Loreley (Ich weiss nicht was soll es bedeuten) (Heine), 1872, Tragödie (Heine), 1873 [orchd 1875]; Kytice [Bouquet] (from Dvůr Králové MS), 1875, *Album Dalibora*, iv [?v] (n.d.); Žežhulice [Cuckoo] (from Dvůr Králové MS), 1875, *Album Dalibora*, iv [?v] (n.d.); Jahody [Strawberries] (from Dvůr Králové MS), 1877, *Album Dalibora*, iii (n.d.)
Neue Lieder: Sprecht ihr mitternächtgen Sterne (Lingg), 1875, Ob rauh der Herbst (E. Geibel), 1876, Die Sennin (Lenau), 1875, Wasserfahrt (Heine), 1876, pubd in Cz. as Jízda po vodě in *Česká moderní píseň* (1925), Wie bist du meine Königin (G.F. Daumer, after Háfiz), 1874, Die Jungfrau schläft (Heine), 1876, Im Frühling (J. Sturm), 1876, Fensterschau (Heine), 1877, Das Marienbild in der Waldkapelle (Boritsch), 1877
Šestero písní [6 Songs], op.12 (1881): Má dívenka jak růže [My love is like a red, red rose] (R. Burns), 1872, Kohoutek (Teprv já můj milý) [The Cock (Only now my love)] (Čelakovský), 1876, Holubička z dubu (The dove [flew] from the oaktree) (Čelakovský), 1877, Pomoc pro náramnou lásku (Ach, Haničko) [Help for great love] (Čelakovský), 1877, V lese [In the Forest] (L. Quis), 1878, Jarní [Spring Song] (K. Groth), 1876
Jarní paprsky (Frühlingsstrahlen), op.36 (1893): Předtucha jara (Frühlingsahnung) (Vrchlický), 1891, Noční nálada (Nachtstück) (Eichendorff), 1872, Pěvcova útěcha (Sängers Trost) (J. Kerner), 1872, Mignon (Goethe), 1871, To tam! (Vorbei!) (Eichendorff), 1870, Snící jezero (Der träumende See) (J. Mosen), 1872, Večerní píseň (Abendlied) (Shi-king), 1877, Večerní modlitba (Abendgebet) (Eichendorff), 1872, Probuzení jara (Erwachen des Frühlings) (Sturm), 1876, Májová noc (Maiennacht) (Geibel), 1874, Veselá dívčina (Milchmaid) (Groth), 1876, Opuštěná (Verlassen) (Groth), 1874, Žena vojínova (Das Kriegerweib) (Groth), 1874, Požehnání (Der Segen) (J.G. Fischer), 1879
Tys mi blízko [You are near to me] (Vrchlický), 1893, facs. in *Zlatá Praha*, x (1893), 147 only; Když k vám vesel chodím [When merrily I walk to you] (J. Neruda), 1893 (1893); Lass' mich von deinem Aug', 1894 [another MS to Cz. words, Mne z oka tvého nech, 1878]; Poupata [Buds], op.45, 1895 (1896): Před spaním [Before going to sleep] (J.V. Sládek), Pěnkava a sedmihlásek [The Finch and the Warbler] (V. Sokolová), Okáč [Big Eyes] (Sládek), Lesní zvonky [Woodland Bells] (Sládek), Zahrajem si na vojáky [Let's play soldiers] (Sládek); Drahý zpěvák [Dear Singer] (Čelakovský), 1895, in *Ohlas písní českých* (1896)
Lost or destroyed: *c*95 songs

ORCHESTRAL

Hnilička], 1865, lost; 'no.2', g, 1866, lost except for Scherzo, arr. pf 4 hands; no.1, F, op.17, 1877–83, arr. pf 4 hands (?1883), fs, SV; no.2, E♭, op.38, 1892–3, arr. pf 4 hands (1893), fs (1911), SV; G, frag., 1893; no.3, e, op.53, 1898, arr. pf 4 hands (?1898), fs, SV; A, frag., 1899
Sym. poems: Othello, after Shakespeare, op.6, 1873, fs (1873), SV; Záboj, Slavoj a Luděk [Záboj, Slavoj and Luděk] (from Dvůr Králové MS), op.37, 1873, arr. pf 4 hands (1893), fs, SV; Toman a lesní panna [Toman and the Wood Nymph], after F.L. Čelakovský, op.49, 1874–5, arr. pf 4 hands, 1875, arr. pf 4 hands by A. Schulzová (1897), fs, SV; Bouře [The Tempest], after Shakespeare, op.46, 1880, arr. pf 4 hands by A. Schulzová (1896), fs, SV; Vesna [Spring], op.13, 1881, arr. pf 4 hands (1882), fs, SV; V podvečer [At Twilight], op.39, 1893, arr. pf 4 hands (n.d.), fs (Prague, 1896), SV; Potopený zvon [The Submerged Bell], after G. Hauptmann, frag., 1900
Ovs.: Veseloherní ouvertura [Comedy Ov.], op.35 [orig. op.19], 1873, arr. pf 4 hands by J. Koráb (n.d.) [used in incid music for

Midasovy uši, 1890]; Noc na Karlštejně [A Night at Karlštejn (Castle)], after J. Vrchlický, op.26, 1886, arr. pf 4 hands (1886), fs (1886), SV; Komenský, festival ov., op.34, 1892, arr. pf 4 hands (1892), fs, SV; Oldřich a Božena [Oldřich and Božena], op.52, 1898, arr. pf 4 hands (1898); see also INCIDENTAL AND OCCASIONAL MUSIC above

Other works: Romeo a Julie, ov. and closing music, 1865, lost; Orchestrální fantasie ve formě ouvertury, 1871–2; Valčík [Waltz], introduction, 5 movts, coda, C, 1881, destroyed, arr. pf 2 hands (n.d.); [2] Vigiliae, op.20, 1883, pf 4 hands (n.d.), orchd 1885; Dojmy z venkova [Impressions from the Country], suite, op.54, 1897–8, arr. pf 4 hands by F. Heyduk (n.d.), fs, SV [4th movt pf solo from Dolce far niente, 1897]

CHAMBER

Instruktivní sonatina, d, vn, pf, op.27, 1869 (1877)
Piano Trio, f, 1872 (1908)
Jasná noc [Clear Night] (Andantino), vn, pf, 1873, Mladý houslista (n.d.), in Sbírka populárních skladeb (n.d.)
Piano Quartet, e, op.11, 1874 (1880)
String Quartet, A, 1874, SV
Sonata, C, vn, pf, 1874
Sonata, D, vn, pf, 1875, SV
Koncertní polonesa [Concert Polonaise], vn, pf, 1878, ed. N. Kubát (1922)
String Quartet, G, op.8, 1878 (1879)
Romance, B♭, vn, pf, op.10, 1879, *Dalibor*, ii (1880), suppl.
Selanka [Idyll], cl/vn, pf, op.16, 1879 (1883 or 1884)
Tema con variazioni, B♭, 2 vn, va, vc, 1883, parts (1910) [rev. and enlarged transcr. of Variations, pf, 1877]
Quintet, D, pf, cl, hn, vn, vc, op.42, 1893 (1895), arr. pf 4 hands by A. Schulzová (1896)
Other works: *c*20 works lost or destroyed, incl. Balada, vc, pf, 1874, Vánoční [Christmas], sonata, ?1878, several canons for various combinations; Allegro grazioso, vc, pf, 1876, used in syms. in G and e; Pf Trio, E♭, 1876, used in Sym. no.2, op.38; several works transcr. for pf in Nálady, dojmy a upomínky, 1892–9

PIANO

for piano solo unless otherwise stated

Le printemps, op.1, 1865 (1865)
[5] Albumblätter, op.2, 1865–6 (Leipzig, ?1866), as Lístky do památníku (1901)
Scherzo, e, op.4, 1866 (Leipzig, ?1866); with Scherzo, E♭, 1871, ed. K. Šolc (1953)
Fugato (Fughetta), 4 hands, 1868, pubd as op.24 [with Kolo vil, 1885] (1886)
Ciacona, 4 hands, 1868, pubd as op.25 [with Impromptu, 1885] (1886)
Mazurek, B, 1871 (n.d.), ed. J. Heřman (1936)
Scherzo, E♭, 1871, *Dalibor*, iii (1881), suppl.; with Scherzo, e, 1866, ed. K. Šolc (1953)
Offenheim-Walzer, 1875 (n.d.) [pubd under pseud. Giovanni Mihuczeni; incl. Valčík (Waltz), E♭, 1869]
Suite, g, 1877 [3 movts transcr. for 4 hands, 2 in Zlatý věk, 1869–85, 1 in Maličkosti, 1870–77]
Variations, B♭, 1877 [transcr. for str qt, 1883]
[4] Maličkosti [Bagatelles], 1st ser., 4 hands, op.19, 1870–77 (1884) [incl. transcr. of 1 movt of Suite, pf, g, 1877]
Dvě rondina [2 rondinos], F, G, 1885 (1890)
Valčík [Waltz], C, introduction, 5 sections, coda, C, 1880–81 (n.d.) [transcr. from orch]
Zlatý věk [The Golden Age], 12 miniatures, 4 hands, op.22, 1869–85 (1885) [incl. transcr. of 2 movts of Suite, g, pf, 1877, Pověz, ó pověz, dívčino krásná [Tell me, O tell me, my beautiful girl], lost song, 1871, Skřivánek [The Lark], song, 1871, Hudba k živému obrazu při znovuotevření Národního divadla, occasional music, 1883]
Kolo vil [Fairies' Round-Dance], 4 hands, 1885, pubd as op.24 [with Fugato, 1868] (1886)
Impromptu, 4 hands, 1885, pubd as op.25 [with Ciacona, 1868] (1886)
Sonata, B♭, 4 hands, op.28, 1886 (1887), SV
Z hor [From the Mountains], cycle, op.29, 1887 (1888), SV
Zastaveníčko [Serenade], G, 1891 (n.d.) [transcr. of incid music to Midasovy uši, 1890]
[2] Čtyřruční kousky [Pieces for 4 Hands], 1894 [longer cycle projected]
[4] Maličkosti [Bagatelles], 2nd ser., 4 hands, op.48, 1895 (1896)
Dolce far niente, 1897, *Neue musikalische Presse*, no.46 (1897), suppl. [used in 4th movt of Dojmy z venkova, orch]
[376] Nálady, dojmy a upomínky [Moods, Impressions and Reminiscences], 1892–9, op.41 (1894), op.44 (1895), op.47 (1896), op.57 (1902)
[5] Malířské studie [Studies of Paintings], op.56, 1898–9 (1902), ed. V. Holzknecht (1951) [longer cycle projected]

Lost or destroyed: over 100 pieces and arrs. for pf solo, incl. 3 sonatas (?, 1865; d, 1871; d, 1874), 25 pieces and arrs. for 4 hands, 5 pieces, org/hmn incl. Sonata, B♭, 1878; many early works incl. in Velká teoreticko-praktická škola, Nálady, dojmy a upomínky and other inst works

with J. Malát: Velká teoreticko-praktická škola hry na klavír [Grand Theoretical and Practical School of Piano Playing], 1883–7 (1883–91, 1899) [incl. many earlier pf pieces, otherwise lost, and many specially written and separately pubd pieces for teaching, e.g. Polka, A, 1882 (n.d.), Sonatina, d, 1885, ed. R. Kurzová (1931)]

JOHN TYRRELL/JUDITH A. MABARY

Fibonacci series. A sequence of numbers in which each is the sum of the previous two, thus: 0, 1, 1, 2, 3, 5, 8, 13, 21, 34 etc. It is found in nature (in numbers of petals in single flowers, for instance, or in the proportions of snail shells); it has also been used by composers to govern rhythms and forms (*see* NUMBERS AND MUSIC).

The series was first described by Leonardo da Pisa (*Liber abaci*, 1202) as the successive population sizes of pairs of rabbits breeding each month from one parent pair. The ratio of successive numbers is an arithmetical expression of Euclid's geometrical division into extreme and mean ratio (the 'golden ratio'; *see* GOLDEN NUMBER), but da Pisa was unaware of this. The first written connection between Fibonacci's series and Euclid's ratio appears in a handwritten comment in a copy of Pacioli's 1509 edition of Euclid's *Elements*. The mathematician Johannes Kepler also demonstrated a connection between the two in a letter of 12 May 1608 to Professor Joachim Tanckius.

$$fn = \frac{1}{\sqrt{5}}[G^{n+1} - (-\frac{1}{G})^{n+1}],\ n \geq 1$$

It has been claimed that composers have used Fibonacci numbers in musical compositions as a deliberate attempt to reproduce the golden ratio. While this is undoubtedly the case in certain 20th-century compositions, it appears to be a historical impossibility for earlier composers. The first attested use of the term 'golden number' in a strictly mathematical context was by Martin Ohm in 1835, and it was not until 1843 that the explicit expression for f_n in terms of G was published by J.P.M. Binet. Thus any composer using Fibonacci numbers before then would not have done so with the 'golden number' in mind. It could be argued that 'naturally occurring' Fibonacci sequences appear in compositions written before 1843, but in such cases the musicologist must maintain a clear distinction between an interpretation imposed on the composition and the composer's conscious intention.

For bibliography *see* NUMBERS AND MUSIC.

RUTH TATLOW

Fich. Composer who may be identifiable with JOHANNES FEDÉ or HENRICUS TIK.

Ficher, Jacobo (*b* Odessa, 15 Jan 1896; *d* Buenos Aires, 9 Sept 1978). Argentine composer, violinist and conductor of Russian origin. A musician's son, he began violin lessons at the age of nine with Stolyarsky and later studied with M.T. Hait. He continued violin studies with Sergei Korguyev and Auer at the St Petersburg Conservatory (1912–17); among his other teachers were Vasily Kalafati, Maximilian Steinberg, Nikolay Tcherepnin and Nikolay Sokolov. In 1919 he won by competition the post of leader of the Petrograd State Academic Theatre orchestra, but he did not take up the appointment. In 1923 he settled

in Buenos Aires, where in 1929 he was a founder-member of the Grupo Renovación, devoted to studying and promoting new compositional trends; he was also among the founders of the Argentinian Composers' League (1947). He was appointed in 1956 to teach composition at the University of La Plata, where he eventually became professor, and he has also taught at the National Conservatory in Buenos Aires, the Municipal Conservatory and the Instituto Superior de Arte of the Teatro Colón. He won several prizes, among them the Coolidge Prize for the Second Quartet, and in 1969 he was elected to the National Fine Arts Academy.

Ficher's career stretched over 50 years and his output comprises about 150 works. His work is marked by various influences, among which is his Jewish heritage, apparent in early works such as the Suite for orchestra (1924) as well as in the mature cantata *Kadish* (1969). Slavonic themes can also be found, especially in the two Chekhov-based operas. In the 1920s there was a flash of French Impressionism, and later he became interested in Hindemith. After settling in Argentina he was stimulated by native gaucho literature (*Obertura para Don Segundo Sombra*, 1954), popular urban music (*Tangos y milongas* for piano, 1948–59), the folk music of the countryside (*Tres danzas populares*) and historical themes (for example the Seventh Symphony, which commemorates the Argentinian Independence Revolution). Ficher's style oscillates between neo-romanticism and neo-classicism, with polyphonic lines interwoven with harsh polyharmony. Although he explored 12-note technique, serialism, atonality and other fashionable trends, he refused to be tied to a single technique or scheme unless the work's character seemed to require it; thus he maintained a stylistic individualism enriched by his own motifs and themes.

WORKS
(*selective list*)

Ops: El oso (chbr op, 1, after A. Chekhov), op.75, 1952; Pedido de mano (chbr op, 1, after Chekhov), op.84, 1955–6

Ballets: Colombina de hoy (1), op.25, 2 pf, 1933; Los invitados (1), op.26, 1933; Melchor (3, C. Tiempo), op.40, chorus, 14 str, 1938–9; Golondrina (3), op.47, 1942

Choral: Ps cxix, Pulvis eris et pulvis reverteris, op.52, T, female vv, orch, 1944; Salmo de alegría, cant. (R. Alberti), op.69, solo vv, chorus, orch, 1949; Rapsodía, op.88, chorus, sax qt, 1956; 4 sonetos de amor (M. Rugeles), op.104, chorus, 1964; Kadish (cant.), op.112, S, A, T, B, chorus, orch, 1969

SUSANA SALGADO

Ficino, Marsilio (*b* Figline, 1433; *d* Florence, 1499). Florentine humanist and philosopher. He was supported by the steady patronage and friendship of Cosimo and Lorenzo de' Medici, and was the guiding spirit of the Accademia Platonica di Firenze. His interest in music was that of a dedicated neo-Platonist, and according to contemporary accounts he demonstrated this by singing Orphic hymns to an improvised accompaniment on the 'lyre' (probably a *lira da braccio*). A number of his writings touch on neo-Platonic theories of magic and on neo-Pythagorean musical topics: in *De triplici vita* (*Opera*, 1576, p.529) he expounded theories of the effect of music on the human 'spiritus'; in an *Espistola de musica* (*Opera*, p.650) he wrote of the connections between music and medicine; in another letter 'de rationibus musicae' (Kristeller, 1937, p.51) and in his commentary on Plato's *Timaeus* (*Opera*, p.1438) he gave an account of the Pythagorean mathematics of music theory. Occasional remarks, such as the equating of the triad with the three Graces, suggest that Ficino thought of music in the terms of his own times, but his main concern was the ethos of ancient musical doctrine. He was nonetheless a great influence on 16th-century writers who stressed the 'natural force and imitative potency of [musical] sound' (Tomlinson, 141).

JAMES HAAR

Fickénscher, Arthur (*b* Aurora, IL, 9 March 1871; *d* San Francisco, 15 April 1954). American composer, pianist and inventor. A precocious musician, he graduated with 'unprecedented' honours from the Königliche Musikschule, Munich (1889), having studied with Rheinberger and Thuille. He settled in San Francisco in 1896, touring widely with Anton Schott, Amalie Materna, David

Bispham and Ernestine Schumann-Heink. In 1901 he married the singer Edith Cruzan. He moved back to Germany in 1911, where he established a vocal studio in Berlin and obtained a patent (1912) for a new keyboard design with 60 notes to the octave. After returning to the USA in 1914, he became head of the music department at the University of Virginia (from 1920). His retirement in 1941 coincided with an American patent for the polytone, an instrument using an extended keyboard and allowing for a purer intonation of 3rds and 5ths.

Fickénscher's compositional style, highly regarded by Grainger, reflects a transition between late Romanticism and modernism. Traditional harmony is decorated with microtonal inflection and motion in parallel 7ths, while vocal melody is coloured by a mystic sensibility. Most of his early works, including two unfinished operas, were destroyed in the San Francisco earthquake of 1906.

GORDON RUMSON

Ficker, Rudolf von (*b* Munich, 11 June 1886; *d* Igls, nr Innsbruck, 2 Aug 1954). Austrian musicologist of German birth. He studied musicology in Vienna with Adler, and composition in Munich with Thuille and Courvoisier, between 1905 and 1912, and took the doctorate at Vienna University in 1913 with a dissertation on the 16th-century Italian madrigal. In 1920 he completed the *Habilitation* and became a lecturer at Innsbruck University, and in 1923 was made reader. In 1927 he was appointed reader at Vienna, and co-director of the musicology department. In 1931 he succeeded Sandberger as professor and director of the musicology department at Munich, where he served as dean.

Ficker was an early champion of medieval music through his performances, editions and writings. He argued vigorously for its equality of artistic worth beside medieval painting and architecture, and indeed borrowed the terms 'Romanesque' and 'Gothic' from art history. He had a speculative turn of mind, and was greatly interested in psychological and anthropological matters, particularly as they applied to the origins of Western polyphony. His book, *Die Grundlagen der abendländischen Mehrstimmigkeit*, remained unfinished.

IAN D. BENT/PAMELA M. POTTER

Ficta (Lat.: 'false', 'feigned'). A term used loosely to describe accidentals added to the sources of early music by either the performer or the modern editor; *see* MUSICA FICTA.

Fiddle [fedylle, ffidil, ffythele, fiele, fithele, phidil, vithele etc.] (Fr. *viele*, *vielle*, *viula* (Provençal) etc.; Ger. *Fiedel*, *Videl*, *Vigel* etc.; Lat. *viella*, *vidula*, *vitula*, *viola* etc.; Nor. *fele*; Sp. *vihuela de arco*). A generic term for any chordophone played with a bow. It includes all such instruments, whether of art or popular music, and hybrid types which do not conform to any more standardized pattern. Colloquially, 'fiddle' is often used for a member of the violin family (*see* VIOLIN, §II, 1(i)) or for the KIT ('dancing-master's fiddle'). During the Middle Ages and early Renaissance the medieval versions of the word were used not only for bowed instruments in general, but also for one particular type, itself admitting much variety, which is known today as the 'medieval fiddle'. It is with this type that the present article is mainly concerned, other types being discussed under their own specific names or countries of origin (*see* REBEC; CRWTH; VIOL).

Few bowed instruments have survived from the Middle Ages, so our knowledge of them must to a great extent be gained from visual and literary sources. Inevitably these are not always accurate, the artist or writer often exhibiting considerable artistic licence, ignorance, or humour, perhaps substituting a garden rake for a bow;

the most usual skit, from the 13th century onwards, was to show bellows held at the shoulder and 'bowed' with a pair of tongs. A picture of an instrument can be regarded as completely trustworthy only if that instrument would work and the picture is free from careless 'restoration'. Literary sources are also problematic. The writer of a treatise might describe one type of instrument but omit to mention its variants; compilers of general dictionaries were no more expertly knowledgeable on the subject of instruments than they are today. Chroniclers and poets, particularly when describing past events, would frequently mention instruments that they themselves knew even though the event concerned was several hundred years earlier: Robert Manning of Brunne, for instance, writing *The Story of England* in the 14th century, gave a vivid picture of minstrelsy at the court of King Arthur, but the 'ffytheles, citoles, sautreours' and other instruments were of his own day; King Arthur would have recognized few of them.

1. Nomenclature. Among the distinct categories of instrument covered by the generic term fiddle are the rebec, usually with a pear-shaped or otherwise tapering outline and a vaulted back, and the crowd, a bowed lyre which was played mainly in northern Europe and which developed into the later Welsh crwth and Scandinavian *jouhikantele* or STRÅKHARPA (*see also* ROTTE (ii)). Other types sometimes overlapped so much that a clear differentiation between them is impossible, the problem made worse by the fact that some of these instruments could be either plucked or bowed.

One distinctive form, for which no independent medieval name seems to have survived, is known today by variants of 'figure-of-eight fiddle' or 'medieval viol' (Fr. *vièle-de-gambe*; Ger. *Achtformfidel*; It. *viella-da-gamba*; Sp. *fidula en ocho*), due to its shape being frequently (but not always) like a figure-of-eight, and to the instrument being played downwards in the lap with the bow gripped from below, in the manner of the much later viol of the Renaissance. It had no frets, often no fingerboard, and approximately three strings. This instrument was played in northern Europe from the early 12th century to about 1300, but also earlier and sometimes later in the south. It went out of fashion mainly because of the greater convenience of the instrument known in the more particular sense as the 'medieval fiddle', which could be played up at the shoulder while the performer was walking around or riding on horseback. This was widespread in Europe by the 13th century (see §§2 and 5 below).

Just as it is sometimes difficult to classify visual representations of the fiddle families, so it is often difficult to know which kind of instrument a writer had in mind, particularly during the 13th century when the 'medieval viol' and 'medieval fiddle' were both being played, and were both covered by the words 'fithele', 'viella', 'vielle', 'fidel', 'viula' etc., according to the language involved. Increasingly, though, after about 1300 it is most likely to be the fiddle that was intended by the writer. In the late Middle Ages the French word 'vielle' was also applied to instruments of the HURDY-GURDY family. To decide which instrument was meant requires an awareness of the date, the instruments applicable, and the context. The English term 'rybybe', equated with 'fidula' in certain

1. Two fiddles (one spade-shaped) and a horn: miniature from an Italian psalter, 12th century (GB-Lbl Add.9350, f.1r)

2. Fretted fiddle: miniature from Richard de Fournival's 'Le bestiaire d'amour rimet', c1300 (F-Pn fr.1951, f.9)

15th-century dictionaries, seems to have been applied mostly to the rebec, to judge by descriptions of its performance and sound.

2. Structure. The outline of the medieval fiddle varied considerably, the most usual shapes being oval, elliptical or approximately rectangular, while a spade-like fiddle (fig.1) was common in southern Europe during the Romanesque and early Gothic periods. Many fiddles had incurved sides allowing for more versatility of bowing, although such indentations had already been known before the invention of the bow itself.

In early examples the design was first drawn around a template onto a slab of hard wood such as sycamore or maple and then hollowed out and cut around the edges in such a way that the back, sides and neck were all in one piece; this was varnished as required. A soundboard of soft wood such as pine, fir or spruce was then stuck on top, and soundholes were carved at appropriate places. These ranged from small perforations grouped in patterns, to round holes, semicircles, squares, rectangles or any appropriate design that occurred to the maker. The most usual type in northern Europe was a pair of C-shaped holes, one on each side of the strings (fig.2), though roses were frequently carved during the later Middle Ages. The f-shaped holes associated with the later violin family were

already becoming known during this time. Some fiddles were elaborately decorated by carving, inlaid wood or jewels on the body of the instrument, while on others this decoration was restricted to the tailpiece and fingerboard, where it did not affect the sound. In south-eastern Europe the fiddle often had a skin belly, a characteristic which remains in the modern *gusle*.

Strings in Europe were generally made of gut, as described in the *Secretum philosophorum* of which several 14th- and 15th-century copies survive. The author described how the intestines of sheep are washed, soaked in red wine, dried, and three or four lengths twisted together to make the required thickness. The 13th-century Franciscan Bartholomeus Anglicus in his *De proprietatibus rerum* (trans. by John of Trevisa, 1398–9, in *GB-Lbl* Add.27944, f.142*v*) described the uses and dangers of the gut of wolves:

> Strengis made of guttes of wolves destroyeth and fretith and corrumpith strengis made of guttis of schiepe, if it so be that they beth so sette among them as in fethele or in harpe.

Silk strings, which had long been known in Asia and the Arab countries, were referred to in the 13th-century treatise *Summa musice* and the 14th-century poem *Busant*, both of Germanic origin, while strings of horsehair were mentioned in the *In psalmos*, a commentary by the 14th-century English Franciscan, Henry of Cossey. At the upper end of the instrument the strings were wound upon pegs inserted either from above or below (sagittal pegs) into a flat or cup-shaped pegholder, or from the sides (lateral pegs) into one shaped as a sickle or scroll or deflected back at a sharp angle. At the lower end they were attached to a frontal stringholder, tailpiece, endpin or endpins. Up to the 13th century lateral pegs and a frontal stringholder tended to appear together in sources of southern influence, while in northern Europe sagittal pegs were accompanied by an endpin or tailpiece or both. However, this was not always the case, and particularly from the 14th century onwards most types of string fixing could be found in combination.

For the strings to be pressed down by the fingers, they needed to be raised above the level of the soundboard and neck of the instrument. A frontal stringholder fulfilled this function in itself, but with a tailpiece or its alternatives there was need for a bridge to support the strings. Throughout the Middle Ages bridges were often flat, thus enabling the performer to play on all strings at once for drone effects. To play a melody without drones some means of holding the strings at different levels was required. This could be a curved bridge, a flat one with grooves cut down to different depths, studs built to different heights (*see* Rebec, fig.2) or other devices to create the same effect. To trace the history of curved bridges is a difficult problem, as early medieval artists often showed the full front view of an instrument, in such a position that the bridge would appear as a straight line even if in fact it was meant to be curved. There is some indication, however, that curved bridges were already known from the Romanesque era onwards. In many pictures and carvings there is no bridge visible at all, and this occurs far too often for it to have been an omission on the part of the artist. On such an instrument the tailpiece had feet (or some other means of support), thus combining its function with that of a bridge (fig.3). When seen from straight ahead these feet would not be visible, giving the illusion that the artist had left out a support for

3. Fiddle with frets and tailpiece with feet: detail from the 'Coronation of the Virgin' by Bernardino di Mariotto, early 16th century (Galleria Nazionale dell' Umbria, Perugia)

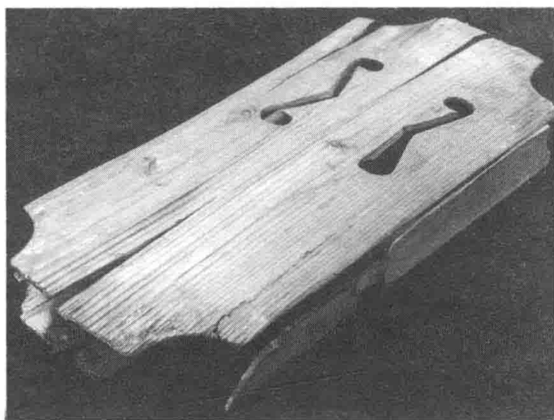
the strings. In other cases the tailpiece rested on a bridge wider than itself, as can be seen in the *Cantígas de Santa María* (*E-E* b-I-2, f.46*v*) of Alfonso X of Castile, and in paintings by Sano di Pietro, Stefan Lochner and many others. Such a device allowed for a longer sounding length of string than if the bridge were separate, and consequently for a lower pitch.

The presence of a fingerboard was not universal. In earlier fiddles it was often absent, as it was in later ones with a frontal stringholder (which would not raise the strings high enough for a fingerboard to be necessary). A fingerboard is generally found on fiddles with a tailpiece and bridge (or a device combining both in one); it was occasionally tilted up from the neck by a wedge (fig.5), as was the fingerboard of early violins. Frets are to be seen in certain pictures of fiddles from about 1300 onwards (fig.3), and their wide spacing in some examples suggests that a change of hand position may have been necessary for reaching the higher notes. As position-changing seems to have been known on some contemporary citoles, it cannot be ruled out in the case of certain fretted fiddles. (However, it is always possible that the widely spaced frets may have been due to artistic error).

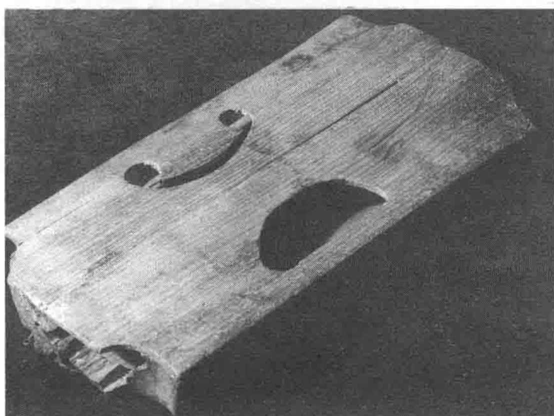
The best type of fiddle seems to have combined a clear demarcation between the body and the neck (even when they were made in one piece) and a flat or almost flat

4. Fiddle with curved bridge, from the Pienza Cope, English, early 14th century (Museo della Cattedrale, Pienza)

5. Fiddle with overlapping edges and a wedge between the neck and fingerboard: detail from the 'Coronation of the Virgin' by the Master of the Life of the Virgin, c1465 (Alte Pinakothek, Munich)



back; most fiddles displayed at least one of these characteristics. It often had five strings, one of which could be a lateral drone or *bordunus*, to be plucked by the left thumb or touched by the bow as required (fig.6). The pegbox was of an inverted cup shape. Although this fiddle continued in Italy until it was merged into the *lira da braccio* in the 15th century, the *bordunus* went out of fashion in England before 1400. (Research is needed in other countries to find out whether they lost the *bordunus*, not only for the knowledge itself, but also for the more authentic performance of medieval music). Another type of fiddle had no drone string but five strings over the fingerboard. From the writings of Albertus Magnus, Hieronymus de Moravia and others, it seems clear that a five-string fiddle was considered the best. Visual sources indicate, however, that any number of strings from two to six was quite usual, and even more than six may occasionally be found. Sometimes four strings appear to be arranged in two courses, or six in three; the following groupings can regularly be seen ('+1' referring to a lateral drone): 2; 3; 3+1; 4; 4+1; 5; 6; 2+2; 2+2+1; 2+2+2. It used to be assumed that the medieval fiddle had a soundpost to support the belly and transmit vibrations to the back of the instrument but later there was a reaction against this theory. If the soundpost did exist before the 16th century, definite evidence of it has yet to appear.



A fiddle of hybrid construction, which belonged to St Caterina de' Vigri (1413–63), survives in the Corpus Domini monastery at Bologna, of which she became the abbess after its foundation in 1456. Its body and neck are made from one piece of maple, and part of the soundboard is supported below by a bar, but there is no soundpost. It had four strings. A very similar fiddle, although proportionately larger, can be seen on a 15th-century corbel at the church of All Saints, Broad Chalke, Wiltshire.

In 1981–2 the remains of two fiddles were discovered on Henry VIII's flagship the *Mary Rose*, which sank in the Solent in 1545 (fig.7). In each case the soundboard and back survive separately, but in one example the extant side is carved in one piece with the back. There is no indentation of the sides, a characteristic found in many contemporary representations of fiddles, such at that at Altarnun in Cornwall (see fig.8 below). (Other items such as pegs, bridges and tailpieces were not found.)

6. Fiddle with five strings, including a lateral drone: triforium relief, before 1280, in the Angel choir, Lincoln Cathedral

7. Surviving parts of a fiddle from the wreck of the 'Mary Rose', which sank in 1545 (Mary Rose Museum, Portsmouth)

3. TUNINGS. The variety shown above indicates that the fiddle had no universal tuning. The frequent grouping of strings in pairs suggests that each course would be tuned to one note, or to a note and its octave, and this is confirmed in surviving descriptions of fiddle tuning by two writers. Hieronymus de Moravia (*d* after 1271) gave three different tunings for the 'viella', the first one having a *bordunus* which could be touched by the bow or left thumb as required: *d*/*G*–*g*–*d*′–*d*′, *d*–*G*–*g*–*d*′–*g*′ and *G*–*G*–*d*–*c*′–*c*′. The pitch was not absolute. Hieronymus showed that in the first tuning the fingers could stop all the strings placed over the fingerboard, but that a complete scale could not be played from the bottom *G* upwards. This situation is remedied in the second tuning, which caters for lais and other 'greatly irregular melodies' that need to be played all over the fingerboard. The third tuning again cannot produce an unbroken scale from the bottom note to the top and a later annotation by Pierre de Limoges says that the first G should be a *bordunus*.

Johannes Tinctoris, a Fleming working in Naples in about 1487, wrote that the bow could play on one string at a time and that the 'viola' had three strings tuned in 5ths or five strings tuned in 5ths and unisons. He did not give any specific pitch.

From these different tunings and string arrangements it seems clear that the fiddler, who may often have made his own instrument, decided on the tuning and pitch according to the music he was to play. One vital factor was the shape of the bridge or its equivalent. If the strings could be played separately there would be great freedom in the choice of tuning, within the conventions of the time. If, however, they sounded all together, the strings would have to be tuned in such a way that those which were unstopped at any given moment would produce a suitable accompaniment, as drones, to the fingered melody.

4. THE BOW. The bow, or 'fydylstyk', was originally curved like its hunting prototype, thus answering to the Latin names 'arcus' and 'arculus'. The rosined horsehairs were knotted through or wound round each end of the stick, or else fixed some way in from one end to leave a handle. Sometimes the bow was made from a cleft stick, one side having been broken off to leave a nut to which the hairs could be attached; by the end of the Middle Ages built-up nuts were made specially for this purpose. From the 13th century onwards there was an increased variety of bow shapes. While the arched type continued, experiments produced bows with a less pronounced curve, some which were quite straight, and others which were even slightly concave (like those of today). Yet another type expanded the breadth of its arc considerably in the upper half (see fig.2). The handle was often carefully fashioned, and several 15th-century paintings show a knob at the end, perhaps a device for securing the hairs. A bow would no doubt be selected to suit the instrument concerned (according to its shape and whether the strings could be played separately or not) or the music to be played, a long bow being more suitable for slow-moving music such as drones, and a short one for lively dances. Often there was no particular distinction between bows made for the fiddle, rebec, crwth or medieval viol (although for the latter they were sometimes more elaborate), and it seems that most of them were interchangeable.

5. PLAYING POSITIONS. The manner of holding the instrument depended on the music involved and, to a certain extent, on local custom. For difficult music it would have been held up at the shoulder, while for simple parts, particularly drones, it could point downwards in varying degrees. In Germanic countries it was frequently held across the chest, supported by a strap, as is the surviving Wendish *husla* (*see* MINNESANG, fig.2). Any of these positions enabled the performer to play while walking. Some continental pictures, however, show the instrument being played down in the lap (such a position was suitable for stopping the strings from the side with the nails rather than the fingertips), but this was rare in England except in the case of the medieval viol.

The manner of holding the bow depended on its shape and the position in which the instrument was held. Sometimes the stick was gripped by the whole fist, while at other times it was held in a way very similar to the violin bow grip of today. Pictures frequently show two fingers on each side of the stick. Occasionally the thumb pressed on the bow-hairs, thereby regulating their tension.

6. HISTORICAL DEVELOPMENT. The history of the fiddle is obscured, particularly in its early stages from which so little iconographical evidence survives, because the word was used to cover such varied instruments. At first the word 'fiddle' did not imply the use of a bow. An example being in the *Evangelienbuch* (*c*870 CE) of Otfried von Weissenburg where the 'fidula' was certainly plucked. At that time bowing was only beginning to spread outwards from Central Asia, where it is thought to have originated from the hunting bow. This new method of playing was

known in Spain and southern Italy in the 10th century. It came via the Arabic lands and Byzantium, where the *rabāb* and *lūrā* respectively were known to be played with a bow (similar instruments are still being used in north Africa and the Balkans). By the mid-11th century bowing was known throughout the greater part of northern Europe on instruments of the rebec family, while in the south the medieval viol was making its appearance, together with large experimental fiddles also played downwards (see Bachmann, pl.1, for 10th-century examples).

The medieval fiddle in its specific sense is shown in Byzantine manuscripts such as the Theodore Psalter (*GB-Lbl* Add.19352, f.191; Bachmann, pl.11), which dates from 1066. Its use by the troubadours, some of whom passed through Byzantium on crusading routes, is confirmed by many French sources during the next 100 years. One of them is the seal of Bertrand II, Count of Forcalquier, dating from 1168; on one side he is seen on horseback, while on the other he is seated playing a large fiddle which points downwards from his shoulder (*F-Pan*, Collection de Sceaux, Supplement 4512 et bis; for facsimile see Page, 1986, p.7).

Only from the 13th century onwards does the fiddle appear regularly in the visual arts of England. Its chief structural alterations (apart from the variety in shape) after this time concerned the back and sides, which before the 14th century were generally carved from one piece of wood. After about 1300 they were increasingly built up from several pieces, often with overlapping edges, to produce lighter instruments than had been known hitherto. Among other developments around the same time were the introduction of frets on certain fiddles, and a more frequent use of curved bridges.

In late 15th-century Italy, important developments took place which did not spread much to other countries at that time: the fiddle with a lateral drone string developed into the *lira da braccio*, while the droneless type with indented sides led to the Renaissance *viola da braccio* and to the violin. (The term *viola da braccio*, like 'fiddle', has been used for different instruments at different times and in 16th-century Italy may also have included instruments of the violin family.) In northern Europe, however, the medieval fiddle continued longer in use, one of its late shapes having a more or less rectangular body. This is seen clearly on a bench-end of after 1523 in St Nonna's church, Altarnun, Cornwall (fig.8), where the instrument is very similar to those found in the *Mary Rose* (fig.7), and is played at the shoulder.

The Renaissance viol developed in the late 15th century and the violin emerged around 1500, and they, together with the Italian instruments mentioned above, gradually supplanted the various types of medieval fiddle. Virdung, in his *Musica Getutscht* of 1511, described and illustrated viols and rebecs but made no mention of fiddles, which he must have known but considered old-fashioned. Martin Agricola did the same in the 1528 edition of his *Musica instrumentalis deudsch*, although in the 1545 edition he mentioned Polish fiddles with four strings tuned in fifths; these were touched by the fingernails and produced vibrato. Unfortunately Agricola did not illustrate them.

7. Professional fiddlers. The fiddle was played in all strata of society from the nobility to the peasantry. Some professional fiddlers were unruly minstrels who would have been classified by Thomas de Chobham, in his *Summa confessorum* (*c*1216) as 'damnabiles', while others held worthy positions in noble households, sometimes combined with other duties such as those of a groom or footman. They wore, as did civic minstrels, special livery to denote their office. While some must have known how to read music, others relied on improvisation and learning from memory tunes which were passed from one musician to another. During Lent, when there was less entertaining to be done, they could go to special schools of minstrelsy to replenish their repertory, polish their technique and buy new instruments. Merlin, a 'vidulator' at the court of Edward III, was given leave to go to minstrel schools on the Continent in February 1334 and received a grant towards his expenses. (It is known that around this time there were celebrated schools for fiddlers at Mechelen, Ypres and Deventer.) Other occasions for going abroad came when minstrels travelled with their employers. Fiddlers were in the retinue of Princess Eleanor, the sister of Edward III, when she went to the Low Countries in 1332 to become the Countess of Guelders; and Snyth Fydeler was one of several minstrels who accompanied Henry V to Agincourt in 1415. In a similar manner foreign fiddlers visited England, either with their own masters or to serve English ones. Such

8. Bench-end, after 1523 (St Nonna's, Altarnun)

were Bestrudus and Beruche, two 'vidulatores' from Geneva who spent some time at the court of Edward I in 1302. (It is possible that they were players of the medieval viol rather than the fiddle, the date being still within the time when a 'vidulator' could have played either instrument.)

As part of their duties, minstrels often dressed up as angels, animals, grotesques and even devils, and as such they gave pleasure to their audiences and inspiration to pictorial artists and sculptors.

8. Use in liturgy and drama. The customary church instrument, where it could be afforded, was the organ. Other instruments were sometimes forbidden and sometimes welcomed by the church, just as the pendulum swung over the same matter during the 20th century. The 12th-century *Codex Calixtinus* (*E-SC*) at Santiago de Compostela tells how, during the night vigil for the feast of the Translation of St James the Great, minstrels of different countries played their string, wind and percussion instruments by the light of hundreds of candles in the cathedral; the bowed instruments that they played on were, in the ablative case, 'violis' (*see* Santiago de Compostela). Somewhat later, Raoul d'Argences, Abbot of Fécamp from 1190 to 1220, drew up a charter allowing members of the local *confrérie des jongleurs* to play on their instruments in the abbey church, but we do not know if they took part in the actual liturgy. There are, however, many instances of fiddlers playing in church on completely non-liturgical occasions. The 13th-century *Dit des Taboureurs* tells how Petrus Iverni of Sigelar sang and played hymns on his fiddle in the church of Notre Dame at Rocamadour. Another occasion was when Princess Eleanor went to the Low Countries in 1332 (see §7 above). She stopped at St Paul's Cathedral, and while she made an offering at the great *Crux borealis* in the North Chapel, music was played by several fiddlers.

From the liturgy there sprang liturgical drama. While the evidence of instrumental participation in this is slight (a notable exception being the Play of Daniel), it is more pronounced for mystery and miracle plays, although the frequent rubric 'Minstrelles playe' is frustratingly vague. When particular instruments are specified the fiddle is not included. A possible exception is in the *Coventry Pageant of the Shearmen and Taylors*, where Herod says:

> And the whyle thatt I do resst,
> Trompettis, viallis andother armone
> Schall bles the wakying of my maieste,

but as the manuscript of the play was written *c*1535, 'viallis' could have meant the Renaissance viols, which were then superseding the old fiddles. In the Innsbruck *Himmelfahrt* play, however, the rubric instructs Jesus to be accompanied from the stage by two fiddlers ('exit Ihesus cum suis angelis, procedit cum vialatoribus'). Further information can be gleaned from the visual arts, such as a stained glass window in the south aisle of York Minster, where a scene from Herod's feast shows a fiddler who has just played for Salome's dance. M.D. Anderson (*Drama and Imagery in English Medieval Churches*, Cambridge, 1963, pp.92–3) has pointed out that the picture could be based on actual drama.

Other directions within plays, both sacred and secular, often refer to music, but less frequently specify which instruments are to be used, perhaps to allow for the availability of different ones according to circumstances. Sometimes a fiddle is mentioned, however, as in *Gammer Gurton's Needle*, an English play dating from the reign of Edward VI (although what type of fiddle was meant in this mid-16th-century source is again open to question):

> In the meane time felowes, pype upp your fiddles,
> I saie take them
> And let your freyndes here such mirth as ye
> can make them.

Thomas Preston's play *Cambises* (printed in 1569) contains the lines

> They be at hand sir with stick and fidle
> The can play a new daunce called Hey didle didle.

and by 1587 there was an inn called the 'Catte and Fidle' at Old Chaunge. By that time the 'fidle' was probably the violin, but the instrument in John Skelton's *The Garlande of Laurelle* (1523) is more likely to have been the old medieval one:

> And what blunderar is yonder
> that playth didil diddil?
> He fyndith fals mesuris out of
> his fonde fiddill.

The subject of the 'cat and fiddle' is represented in art numerous times from the 13th century onwards.

9. Feasts and dancing. From the moment a guest arrived at a feast, there was music, as described in this extract from *Sir Gawain and the Carl of Carlisle* (15th century):

> Trompettis mette hem at the gate,
> Clarions of siluer redy therate,
> Serteyne wythoutyn lette;
> Harpe, fedylle, and sawtry,
> Lute, geteron, and menstracy,
> Into the halle hem fett.

Inside the hall, minstrels would accompany the food-bearers to the high table. The Queen Mary Psalter (*GB-Lbl* Roy.II.B.VII, ff.184*v*–185) shows a single fiddler doing this, while on the 14th-century Braunche brass at St Margaret's Church, King's Lynn, the instruments are a fiddle and gittern behind one dish, and a shawm and two trumpets behind another. They may have been played in alternate groups, being shown together here for the sake of the picture. Entertainment during a feast included the singing of epic songs accompanied generally by a harp or fiddle or both, performance by groups of instruments alone and elaborate interludes between courses. At the feast of Westminster, which took place on Whit Sunday 1306 in Westminster Hall (the occasion on which Edward I knighted his son, who was soon to become Edward II), over 160 minstrels were present, including at least 12 'vidulatores'. One of these was Tomasin, the prince's own fiddler, while others had come in the retinues of the earls of Warwick, Arundel and Lancaster. Further prominent figures were Nicholas de Caumbray, 'vidulator' to the King of France, and 'Le Roy Druet', who was one of the most important fiddlers in England, being entitled 'King of the Minstrels'. While we know from the payment list which instruments were played by most of the minstrels present, there is no known description of the actual musical events which took place. More substantial information of this nature comes from the Feast of the Pheasant, held by Philip the Good, Duke of Burgundy, on 17 February 1454, at the Palais de la Salle, Lille. One of the many musical interludes which issued forth from the famous pie (if 'pasté' really meant a pie in this context)

was a song sung by a lady called Pacquette, accompanied by a lute and two 'vielles' (a term applied both to fiddles and to members of the hurdy-gurdy family) played by Jehan de Cordoval and Jehan Fernandez, two blind musicians from Portugal who were in the service of the duchess.

After feasting came dancing, with instruments as described in *Launfal* (*c*1400):

> They hadde menstrales of moch honours,
> Fydelers, sytolyrs, and trompours,
> And elles hyt were unryght;
> Ther they playde, for sothe to say,
> After mete the somerys day,
> All what hyt was neygh nyght.

Dancing in other settings is also well documented. Moniot d'Arras, in his song *Ce fut en mai*, described how a knight and a lady danced outside in springtime to the music of a 'viele'. In *Sir Beves de Hamtoun* (*c*1300), Iosian, a princess incognita, 'had lerned ... upon a fithele for to play Staumpes, notes, garibles gay'.

For general entertainment the fiddle was used to accompany singers, to provide music for acrobats and performing animals, and to enrich events. A good musician generally played several instruments: the troubadour Guiraut de Calanson named many which a good jongleur should be able to play, but added that he should also throw up apples and catch them on knives, imitate the songs of birds, and jump through four hoops. The wandering minstrels from Gascony were particularly adept at such arts.

10. Repertory. Very little medieval music was composed for specific instruments; the performer evidently played on whatever was available and suitable for the occasion. The only known medieval piece to imply by its title the use of a bowed instrument is the 13th-century textless motet *In seculum viellatoris*, and considering its date it could have involved the medieval viol or the fiddle. However, the wide range of the repertory is indicated by Johannes de Grocheio's statement (*c*1300) that the 'viella' could play 'every cantus and cantilena and every musical form', which implicitly acknowledges the frequent use of curved bridges or their equivalent. The following suggestions as to what we may infer about the repertory of the medieval fiddle are based on descriptions by contemporary writers, known medieval performing practice, traditional heterophony as played on folk instruments today, and the author's own experience with medieval-type fiddles.

The use of fiddles in plainsong is conjectural, but judging from pictures of them in Corpus Christi processions, it is likely that they may at least have doubled the singers in hymns such as the *Pange lingua gloriosi*. There was more scope for them in completely non-liturgical settings, such as when a king was making an offering in church, or in plays when 'heavenly music' was required. Antiphons such as the *Salve regina* could have been most suitably played on a fiddle on such occasions.

Monophonic songs are the earliest surviving examples of secular medieval music, but their performance was not restricted to the voice. A fiddle could take part either by playing a song as an instrumental solo (with or without ornamentation and drones, according to the nature of the piece) or as an accompaniment to the voice, by doubling it, playing parallel to it at a given interval (according to the conventions of the period and the country concerned), playing in heterophony around it, droning, or providing a prologue (an 'inguoinge of the vithele'), interludes between verses, and an epilogue. Of course a fiddle might do these things in combination with other instruments instead of, or in addition to, the voice, and the fiddler often accompanied his own singing.

If a fiddler was involved in polyphony, whether sacred or secular, he might play any part in a completely instrumental performance (with no voices), or double the voices (with or without ornamentation), or else play one part (e.g. the tenor in a motet) in consort with singers and/or other instrumentalists.

Tinctoris left a first-hand account of fiddlers in the act of performing:

> ... a recent event, the performance of two Flemings, the brothers Charles and Jean Orbus, who are no less learned in letters than skilled in music. At Bruges, I heard Charles take the treble and Jean the tenor in many songs, playing [the] 'viola' so expertly and with such charm that the 'viola' has never pleased me so well.

Although the song 'Kalenda maya' by Raimbaut de Vaqeiras is based on a dance that he heard played by two Provençal fiddlers at the court of Monferrato (*c*1198), purely instrumental dances survive from the 13th century onwards; these include examples of the *estampie*, *trotto*, saltarello and basse danse. Numerous pictures show the fiddle being played for dancing, and the surviving dance music is, on the whole, most suitable for it, with or without other instruments. Some of the early dances can take drone accompaniment to good advantage, and could therefore be played on a fiddle with a flat bridge. Pictorial evidence suggests that in the 15th-century basse danse a fiddle with a curved bridge might have provided the cantus firmus while a pipe and tabor improvised above.

As the fiddle is a comparatively soft-toned ('bas') instrument, it was generally used in consort with others of a similar strength. Plucked instruments were its usual companions, the harp appearing with it throughout its history, and the psaltery for most of that time. The citole was a regular companion in the 13th century and the 14th, when its place was gradually taken by the gittern and the lute. Sources seldom show the rebec in duet with the fiddle, and reconstructed instruments show that the combination of their two sounds in the same register is often unpleasant. A fiddle could, however, play a useful drone below a rebec's melody, and in larger groups of instruments any jarring between their sounds could be offset by different tone-colours. As the fiddle superseded the medieval viol, their appearance in duet form is rare, but two fiddles are often seen being played together. Among wind instruments the portative organ appears often with the fiddle from about 1300 onwards, and from somewhat earlier the pipe and tabor, or single pipe, which led to the recorder. A good many pictures, however, show the fiddle in company with loud instruments, such as the shawm, bagpipes or trumpet, and it should be borne in mind that a fiddler playing on five strings at once could make a loud enough noise to hold his own against these. Percussion instruments seen playing with the fiddle include the melodic chime bells, as well as the rhythmic tabor, timbrel, triangle and clappers, the last being the ancestors of the castanets. In large groups of musicians the fiddle could be found in company with any of the instruments of its time. Representations in the visual arts, however, must be treated with caution, regarding both the instruments themselves and their setting. While an apparently normal group of musicians is sometimes set in symbolic

context, more unlikely minstrels such as angels and grotesques are frequently based on the professional entertainers who dressed up as part of their trade. Nevertheless, it must not be forgotten that, although they are often symbolic, pictorial sources may often be taken at their face value, and that a cat playing a fiddle may, in certain circumstances, represent nothing more than a cat playing a fiddle.

MARY REMNANT

Fidelis, Lancilotto (*fl* 1570). Flemish composer, active in Italy. All that is known of him comes from the single surviving partbook of his volume of four-part madrigals (RISM 1570[25]), where he is called a Fleming. He dedicated his work, calling it 'questa mia operetta di madrigali', to a Genoese patrician, describing himself as 'still young and not yet expert in music'. His madrigals, setting well-known texts by Petrarch, Ariosto and Tansillo, are called 'madrigali aerosi'. From the surviving tenor part it would seem that at least a few of them resemble the declamatory 'narrative' style for which Antonio Barré had first used the term 'arioso' (in RISM 1555[22]).

JAMES HAAR

Fidicen (Lat.). A KITHARA player.

Fido [Fidoe, Fidow, Fidor], **John** (*b c*1570; *d* ?Worcester, *c*1640). English organist and composer. His first recorded appointment was at Hereford Cathedral, where he was organist from 1591 until he was replaced by John Farrant in 1592. The Hereford Cathedral archives record Fido's reappointment on 24 December 1593, although his unruly behaviour led to his dismissal in February 1595. Within less than a month Fido was appointed organist of Worcester Cathedral on the death of Nathaniel Patrick. He held this post until about October 1596. Despite his previous record the dean and chapter of Hereford again saw fit to reappoint him in 1596; he was replaced by William Inglott in the following year. By 1610 Fido was back at Worcester as a minor canon. It appears that his disagreements with the cathedral authorities were not yet over, for on 25 November 1633, after repeated admonitions, he was suspended. He was rector of St Nicholas's Church, Worcester, from 1615 to 1636. Payments to Fido are recorded in the Worcester Cathedral Treasurer's Accounts as late as 1639, but his name has disappeared by 1642. Of his six verse anthems (his only known compositions) only *Hear me, O Lord* appears to have enjoyed more than a local appeal. A Fido was employed in copying music and playing the organ at King's College, Cambridge, in 1607, and a John Fido is mentioned in the records of the College of Vicars-choral at Wells during the early 17th century.

Fiedel (Ger.). *See* FIDDLE.

Fiedler, Arthur (*b* Boston, 17 Dec 1894; *d* Boston, 10 July 1979). American conductor and violinist. The son of Emanuel Fiedler, an Austrian-born violinist in the Boston SO and the Kneisel Quartet, who was his first teacher, he went as a boy to Berlin, where he studied the violin, the piano and conducting at the Hochschule für Musik. He made his début there at 17 as a violinist, but returned to the USA at the outbreak of World War I and joined the Boston SO as a viola player, under Muck, Monteux and Koussevitzky. In 1924, with 25 of his fellow players, he formed the Boston Sinfonietta to vary the city's concert fare; he toured with it to remote centres in Massachusetts and neighhouring states. From 1929 he organized the highly successful outdoor series of Esplanade Concerts at Boston, where his skill in attracting and holding the interest of large audiences led the next year to his appointment as conductor, in succession to Casella, of the Boston Pops Orchestra, which he directed until his death. The Boston Pops Orchestra became a model for similar undertakings throughout the USA; when an annual summer 'pops' season was created in San Francisco, Fiedler was engaged to conduct the San Francisco SO (1951–78). He created a separate Boston Pops Tour Orchestra, which travelled around the USA from 1953. He also made appearances internationally as a guest conductor from 1957. Fiedler's force of personality and eclectic approach to music (he frequently extended the orchestral repertory to include show-tune medleys and arrangements of popular songs in a variety of styles) combined with commercial success in a great quantity of television, radio and recording work to bring him a wide reputation at home and abroad.

BERNARD JACOBSON/R

Fiedler, (August) Max (*b* Zittau, 31 Dec 1859; *d* Stockholm, 1 Dec 1939). German conductor and composer. He first studied the piano under his father, Karl August Fiedler, and later entered the Leipzig Conservatory (1877–80), intending to become a concert pianist. He was on the staff of Hamburg Conservatory, 1882–1908, and director from 1903. In 1904 he assumed the conductorship of the Philharmonic concerts in Hamburg. He visited England in 1907, and was conductor of the Boston SO from 1908 to 1912. In 1916 he was appointed music director to the city of Essen, where he remained until 1934; he then lived in Berlin and Stockholm, where he was active as a guest conductor, and also as a piano accompanist.

As a conductor Fiedler had a wide repertory, including Classical, Romantic and contemporary works, among them music by Strauss and Russian composers; it was, however, as a conductor of Brahms that his reputation chiefly stood. He was noted for his spontaneity and the natural musicianship of his interpretations. His compositions include chamber music (notably a string quartet and

a string quintet), piano music, songs and choral works, and a number of orchestral pieces, which, apart from two overtures *Lustspiel* (1914) and *Essen* (1933), are mostly early works.

H.C. COLLES/R

Field, John (*b* Dublin, ?26 July 1782, bap. 5 Sept; *d* Moscow, 23 Jan 1837). Irish composer and pianist. He was the originator of the NOCTURNE and of the style of pianism regarded as 'Chopinesque'.

1. Life. 2. Piano playing and teaching. 3. Works. 4. Legacy.

1. LIFE. Of Protestant Irish stock, he was the eldest son of a professional violinist, Robert Field, and Grace Field (née Marsh), and the grandson of a professional organist, also John Field, from whom he received his first musical instruction. Parental pressure ensured rapid early progress and Tommaso Giordani accepted him as a pupil for a year, during which he performed in three public concerts in Dublin. At the first, on 24 March 1792 'Madam Krumpholz's difficult pedal harp concerto ... performed on the Grand Piano Forte by Master Field ... was really an astonishing performance by such a child, and had a precision and execution far beyond what could have been expected' (*Dublin Evening Post*, 27 March). There is no evidence for W.H. Grattan Flood's assertion that Field's first music was composed in Ireland, though the crudest surviving piece (Rondo on 'Go to the Devil' H3), known only from an anonymous London publication five years later, is a possible candidate.

In 1793 the family left for London (again it is doubtful that, according to Flood, they visited Bath on the way) and secured young John an apprenticeship with Muzio Clementi. The connection may have been made through Giordani, for both Italians had worked together at the King's Theatre, Haymarket, in the previous decade, and, perhaps not coincidentally, it was to the Little Haymarket Theatre that Robert Field was appointed violinist on his arrival in London. John was also soon performing. The organist of Wymondham Abbey 'received a letter from Messrs Longman & Broderip', Field's first London employer, 'saying they shall send down Master Field, to play a Concerto on the Grand Piano Forte, at the evening concert, who, tho' only ten years of age, is said to be as celebrated a Performer on that Instrument as any now in London' (*Norfolk Chronicle*, 10 August 1793).

He continued to perform during the first years of his apprenticeship with Clementi: a Dussek concerto in 1794 and probably in 1795 (the last year he played in public until 1798); Haydn mentioned in his Third London Notebook 'Field a young boy, which plays the piano Extremely well'. He also learnt the violin, seemingly with J.P. Salomon and in company with G.F. Pinto (his Stainer instrument was last heard of in Finland in 1920). At the end of his apprenticeship the 18-year-old Field became an established virtuoso on the London concert scene. Clementi also required Field to assist him in another branch of his activities – the making and selling of musical instruments – by demonstrating their virtues through his piano playing. Although his Variations on *Fal lal la* H1, were issued by Clementi in 1795 and followed by a sequence of rondos and variations on topical themes, the principal works of his London years were a piano concerto performed in 1799 and the three sonatas that Clementi published as his official first opus (H8) in 1801.

In the summer of 1802, master and pupil travelled on business to Paris (where a second edition of the sonatas was issued by Erard), to Vienna (where Field undertook a brief course of counterpoint with Albrechtsberger) and, in early winter, to St Petersburg, where the flourishing and congenial artistic life induced Field to remain. Before leaving in June 1803, Clementi had introduced him to a wide circle of aristocratic patrons and secured him a summer teaching post in Narva, in the household of General Marklovsky; his career in both teaching and private performance was assured. Clementi had already admitted him as his deputy and on his departure Field assumed the same high fees. A busy concert season (1803–4) culminated in his public début in March 1804 at the St Petersburg Philharmonic Society. Founded only two years earlier, it proved to be a beneficial influence in Clementi's absence. After a concert tour in the Baltic states and a further summer residence in 1805, he first played in Moscow in March 1806, during the Lenten concert season on which his public performances centred for the rest of his Russian career.

His return to St Petersburg that summer coincided with another visit by Clementi, who left behind two other pupils (August Klengel and Ludwig Berger) and, in return for a piano, expected the 'lazy dog' (Field) to send his latest music to London for publication. He seems also to have arranged for the first publication of his pupil's music in Russia, in late 1806, a reissue by Dittmar of the rondo of Sonata no.1. However, Field returned to Moscow in April 1807, possibly as a result of his liaison with Adelaide Percheron, a French pianist and pupil whom he married in 1810. Although his apartment on Vasil'yevskiy Island remained registered, Field seems not to have revisited St Petersburg until 1811. It was in Moscow, therefore, that his post-London style was developed. Clementi's correspondence in 1806–7 mentions 'a Concerto' (presumably the 1799 London work), 'a Quintette' (presumably the first draft of the Rondo H18) and 'something more', but two prime catalysts drew Field back to concentrated composition after an initial period of establishment in performance and teaching. Dussek's piano sonatas opp.61, 70 and 75, mature and stylistically prophetic late works, were published 1807–11 (and we see below that Field must have known these pieces), while the periodical publication in Moscow of Daniil Kashin's collection of folktunes *Zhurnal otechestvennoy muzïki* (1806–9) rekindled Field's lifelong fascination for local colour.

His first publications of new music (1808–9), the duet H10 and *Kamarinskaya* H22, were variations on Russian folktunes later used by Tchaikovsky and Glinka respectively. By this time also, he had evolved the characteristic texture – chromatically decorated coloratura melody accompanied by sonorously laid out left hand and pedal – which was consolidated by the publication of Nocturnes nos.1–3 (November 1812) in St Petersburg, to which Field now returned for a decade that saw the composition of the majority of his principal works. Fortunate in a fruitful collaboration with the foremost publisher in Russia, H.J. Dalmas, he saw the almost immediate issue of new works, and of revised editions of earlier ones, throughout this prolific period. A publishing agreement with Breitkopf & Härtel in 1815 ensured the spread of his music throughout Europe, while

reports of his playing fostered an image of legendary powers. An informal artistic collaboration with Daniel Steibelt, director of the French opera in St Petersburg and whom Field had known in London, increased an already lucrative public career that encompassed even the first Russian performance (1815) of Bach's four-keyboard arrangement (BWV1065) of Vivaldi's concerto for four violins (R580).

Also that year, a son, Leon Charpentier, was born of a liaison with a member of Steibelt's company, although Field remained with his wife and collaborated in concerts with her. They had a son, Adrien, in 1819, at which time Field was offered, and refused, the appointment of court pianist, a sign of his material prosperity. In December that year he performed a *fantaisie* during a theatrical performance attended by Pushkin; they appear to have become and remained friends, for a double portrait of them exists from the late 1820s. Their political affinities were similar and, given Pushkin's involvement in the Decembrist uprising of 1825, it is not surprising that Field dedicated both the *Chanson russe variéé* H41 and Nocturne no.10 to another Decembrist family, the Rayevskys.

An increasing connection from 1816 with his last regular Russian publisher, Wenzel of Moscow, led Field to revisit Moscow in 1818 and again, for a series of concerts with his wife, in 1821. The third of them, on 20 April, was their last appearance together, and mother and child departed, the former to lead a life as teacher and performer which relied heavily on her estranged husband's name. (She appeared with some success in St Petersburg, Kiev and Smolensk; she died in 1869.) Field remained in Moscow and in 1822 a notable meeting took place with J.N. Hummel, who was there on a concert tour; they collaborated in a performance of Hummel's duet sonata op.92 on 10 February. Field introduced his *Fantaisie sur un air favorit* (deest 4A) and the first movement of Concerto no.7 a few weeks later, but from 1823 his performances decreased yearly (although his former pupil A.N. Verstovsky assisted him in a series of benefit concerts for his son Leon). He reworked Nocturnes nos.1 and 5 as songs with piano accompaniment (H50) for publication in 1825 and made important revisions to other works, while Nocturnes nos.9 and 10 appeared in 1827 and 1829 respectively.

By now his Byronic lifestyle had taken a permanent toll on his health in the form of rectal cancer. His social behaviour (tolerated with more amusement in Russia than elsewhere) was often outrageous, yet slovenly dress did not mar a striking personal aura, alchohol did not blunt a brisk wit and igniting a cigar with his fee did not diminish the aristocracy's demand for private tuition. Nonetheless, the need for medical attention forced him to contemplate a concert tour, for which he prepared by performing part of Hummel's latest piano concerto (in A♭, op.113), first published in 1830. He reached London in September 1831 (by way of Paris, where Leon continued his vocal training) and, after an operation, gave concerts in London and Manchester, met Mendelssohn, Moscheles and Sterndale Bennett, and acted as pallbearer at Clementi's funeral. He published some new pieces and revisions of others while preparing Concerto no.7 for its first complete performance, in Paris on Christmas Day 1832. His reception, mixed in both London and Paris, was prompted not yet by any failing powers, but by changing fashion, and his relations with Chopin and Liszt were cool.

John Field: portrait by Vassily Tropinin, c1822 (original lost)

After Paris, the procession of concerts and declining health across Europe ended with nine months (1834–5) in a Naples hospital. Rescue by Russian patrons led – apart from a brief stay with Czerny in Vienna, where he gave three recitals and wrote Nocturne no.14 – to a last year with his younger son, Adrien, in Moscow, devoted seemingly to further revisions (published posthumously by his pupils) and the composition of the nocturne-like AndanteH64. At his last concert, organized by his pupil Charles Mayer in March 1836, he performed Dussek's Quintet op.41; there seems no foundation for Nikolayev's suggestion that he played Chopin on this or any other occasion. Both sons pursued musical careers, Adrien less successfully as a pianist, Leon as a distinguished tenor (known as Leon Leonov), who sang in the first performances of Glinka's *A Life for the Tsar* and *Ruslan and Lyudmila*.

2. PIANO PLAYING AND TEACHING. That the majority of Field's major works begin – and a high proportion end – quietly, betokens an original approach to the role of the virtuoso performer-composer. Regarded as the supreme pianist of his generation, his quiet, self-effacing attitude at the keyboard was as unusual as it was mesmeric: playing 'as though he sat at his own fireside', charismatic not through the grandeur of his technique but because of his musiciality and unmatched beauty of tone. (He once admonished Hummel during a public duet performance with a peremptory 'ne tapez pas si fort'.) From the earliest, reviews emphasized the 'sweetness and shading in his playing', the 'speed, evenness and purity of embellishment, strength and beauty of tone', all achieved with 'an inconceivable serenity in performance'. His pupil V.F. Odoyevsky recalled that 'everywhere his first chord

annihilated all his rivals' and said that 'under Field's fingers the piano becomes an entirely different instrument'. Glinka, briefly also a pupil, remembered 'his forceful, gentle, and distinct playing. It seemed that he did not strike the keys but his fingers fell on them as large raindrops and scattered like pearls on velvet'. Glinka did not agree with Liszt, who said in his presence that Field's playing was 'sleepy'. He considered rather that 'Field's music was often full of energy, capricious and diverse, but he did not make the art of music ugly by charlatanism, and did not chop cutlets with his fingers like the majority of modern fashionable pianists'. Both in London and Paris, Field's performances of some of Bach's preludes and fugues (Clementi owned the autograph of *Das wohltemperirte Clavier* Book 2) excited admiration for the precision and delicacy of his part-playing. Unusually, he also taught his pupils Bach, besides his own music and that of his virtuoso contemporaries, emphasizing effortless command and equality of all fingers, slow practice, and tonal control through hand techniques far in advance of his time, the whole subordinate to musical ends. Such distinguished pupils as Charles Mayer, Anton Kontski and Maria Szymanowska transmitted his style across Europe, while others – Aleksandr Gurilyov, Jean Rheinhardt and, particularly, Aleksandr Dubuque – laid the foundations of modern Russian pianism.

3. WORKS. An acute ear for piano sonority ensured from the outset a new luminosity of sound in Field's compositions, achieved through chord spacing, wide-ranging left-hand harmonic writing supported by the sustaining pedal, and an adventurous use of the expanding compass of the keyboard. London in Field's youth was both in the forefront of mechanical advances in piano manufacture and the centre of activity for a group of forward-looking pianist-composers, the majority of foreign birth but including some whose residency was permanent (Clementi) or long-term (Dussek). Clementi's influence on the formulation of Field's style may be encapsulated in one work, his A major Sonata op.25, no.3 of 1790 (not op.2 no.4, as mistakenly identified by F.A. Gebhard and later writers, an early piece exploiting rapid octaves – which never formed part of Field's technical armoury – among other alien features). Here melismatic decoration over slow-paced harmony, drone basses, fleet fingerwork, surprise metrical and modulatory interruption, and thematic similarities, are all reflected in Field's Concerto no.1. The presence of Haydn and Dussek during these formative years afforded ready examples of the assimilation of folk elements into the current formal and harmonic idiom. Dussek's London works gave Field a vital view of sonorous harmonic layout and melodic decoration, and the catalyst for the resumption of creative work in the early Russian years came specifically from Dussek's three sonatas opp.61, 70 and 75 of 1807–11. Concordances of texture and gesture with op.61 and op.70, are clear in the first movement of Concerto no.2; passage-work and thematic elements from op.75 are found respectively in the first movement of Concerto no.3 and the waltz-rhythm finale to the Rondo H18, which was pre-published as a separate piano piece with concertos nos.1–3, in 1811. Nonetheless, there is a strikingly sudden maturity of utterance and range in both the publicly confident solo entry in Concerto no.2 (ex.1) and the private chromatic expression of the *Fantaisie* H15 (ex.2), both first published in that year.

Ex.1 Second Concerto, first movement, piano entry

There is also an ease in the early handling of Russian themes. David Brown's reminder (in *The New Grove Dictionary*, 1980) that 'the Russian thought more readily in terms of full melodic statements and subsequent variations' concurs with Field's own mastery of developing variation more easily than other Western composers of his time. His style also featured an uncommon fondness

Ex.2 Fantaisie sur l'Andante de Martini, first variation

for pedal points, ostinato (and sometimes hemiola) patterns, and false relations. Three early duets (H10–12) reveal a keen ear for style. The first, using three themes, pioneers the sophisticated variation-rondo structure of the *fantaisies*, and introduces as local colour a balalaika figure. In H11 a very Russian treatment – repetition and subtle variation – is given to a melancholy, but as far as is known, original theme, while in the third duet, the constant variation of Russian folksong is created over a tonally shifting ostinato. Glimpses of Russian melody continue to be seen in later works, notably a hint of Aleksandr Alyab'yev's *Solovey* in Nocturne no.8, an exotic section of balalaika-like repeated notes in Concerto no.7, and Kaminskaya (1949) found even a quotation from M.M. Sokolovsky's comic opera *The Miller* in Concerto no.2. The varied harmonies applied to the Russian themes in *Fantaisie* no.3 and in *Chanson russe variée* H41 are knowingly apposite.

As a rapid modulating tool, the augmented 6th was to Field as the diminished 7th was to Weber, and appeared regularly from the London period alongside modulation by 3rds. Surprise key changes, often by tone or semitone, for drama or humour, tend to be quitted too soon for maximum effect, and long-term modulatory structure is wayward until tightened in the late years. Nonetheless, Field broadened his harmonic specturm to encompass suspension of the tonal centre by block chromaticism, as in Concerto no.5 (1815; ex.3), and superimposed dissonances beyond the vocabulary of his time in a late revision of Concerto no.4 (ex.4).

The 16 numbered nocturnes, and associated pieces in the same style entitled pastorale, *romance* or serenade, were perhaps some of the most widely-known and influential piano music in the early Romantic period. They dispensed with rigid formal considerations, relying

Ex.3 Concerto no.5, 1st movt., bars 206–13

on eliding variation of melody, harmony and accompaniment to achieve a unified variety in the exposition of a mood conjured without the assistance of a text or programme. Indeed, some of Field's nocturnes are song-like structures – the 'vocal' verses introduced and separated by 'accompaniment' interludes – the whole accommodated within a single spectrum of variegated piano texture. In this, for the first time, dynamic differentiation is controlled by subtle blending of simultaneous graded finger pressures and sustaining pedal, as in Nocturne no.1 (ex.5), which also illustrates the shifts in melodic emphasis common to Field's later revisions. Whereas the majority of the nocturnes are treble melodies over accompaniment, nos.6 and 7 introduce thematic elements in the left hand and nos.13 and 15 explore a simpler, more Schumannesque texture, while no.14 is an extended operatic scena complete with interrupting recitative.

Field's four substantial *fantaisies* (five with his solo arrangement, Andante, of the Quintet H34) are virtuoso works of high calibre, and in them he pioneered an influential early-Romantic large-scale episodic structure, not dependent on sonata form but a fusion of modulating rondo and variation elements. The variations are decorative after the Mozartian pattern rather than developmental like Beethoven's (Field was not an admirer of Beethoven's piano music, though he performed with pleasure the 'Kreutzer' Sonata with Karol Lipiński); the best of them (deest 3, H20 and H41) are rewarding in both keyboard terms and harmony, as are the many instances of variation techniques in other works. The individual rondos, popular in their own time as brilliant entertainment music, bring less to us today, despite their pianistic and melodic felicities, and Field's resource in this form is more fully shown in the final movements of the sonatas and concertos.

The first three sonatas (*c*1798–1801) are increasingly expansive in pre-Schubertian lyricism and modulatory resource, though their emphasis on pianistic luxuriance over cellular thematic invention renders them less close-knit than the C minor sonata which Pinto dedicated to Field in 1802. The fundamental stylistic influence is Dussek, in the richness of the sonorous virtuosity and cantabile coloratura. Even the opening of Sonata no.4 (1813) reflects Dussek's op.10 no.3 of 1789, though the subsequent treatment, in (now more concise) sonata form (with motivically connected principal subjects), and an imaginatively harmonized folk rondo, is entirely original. sonatas nos.3 and 4 also reveal Field's perhaps unexpected capacity for concentrated motivic development, seen again on a larger scale in concertos nos.4 and 7.

The concertos, despite their unconventional and often discursive form, were, from the publication of the first three (1811), central to the developing 19th-century piano concerto. Their orchestration is unusally imaginative, even in the many purely accompanied passages, with deftly telling wind writing, pizzicato, tremolando, muted and even *col legno* strings, and rhetorical (sometimes solo) timpani – Concerto no.7 opens in this way – while the powerful depiction of a storm in Concerto no.5 (1815), with climactic tam-tam and bell, is a worthy precursor of the Wolf's Glen in Weber's *Der Freischütz* (1821). Nonetheless, it is the originality of the piano writing, both heroic and delicate, which impinged on not only the concertos of Moscheles, Hummel, Kalkbrenner

Ex.4 Piano concerto no.4, first movement, bars 187-9

and their greater successors. Formally, Field soon adapted the rigours of strict sonata structure to accommodate one or more sections of contrasting atmospheric style and tempo, sometimes to avoid cellular development of mainly lyrical music, more often as an 'inspirational aside' to the main thrust of the principal ideas. Herein lay a weakening of control over the large span of the opening sonata and closing rondo movements which Field did not always surmount successfully (except in later revisions). By contrast the central movement – decorative variations or nocturne-like – consistently demonstrates the miniaturist's mastery of harmonic nuance and melodic coloratura.

Miniatures of a blunter kind form the collections of short dances, mostly simple ternary structures in waltz rhythm. From the energetically bucolic to the suavely elegant, all share some common denominators – characteristic pedal effects in the écossaises, aspirated dotted rhythms elsewhere – and, despite doubts over authenticity, all but the last and finest, the *Sehnsuchts-Walzer* (H51), survive in editions from publishers with whom Field had known connections. The *Six danses* H42, though known only from an 1820 German edition, refer to the *Kehraus* also heard in Schumann's *Papillons*, and may date from Field's first visit to Vienna in 1802, a supposition supported by similarities to the waltz finale of the Sonata no.2 (London, 1801) and a typographical idiosyncracy on the title-page familiar from Russian editions of Field's other music. The studies are of two kinds, scalic and figural finger exercises, which gain cohesion by modulating through all keys (H33 and 48), and attractive character-pieces that look forward to Stephen Heller (the left hand study from the Quintet H34) and the melodic studies of Carl Loeschhorn (H44 and that derived from Concerto no.4 H28).

The chamber music, all for strings and piano, arose from three circumstances: the widespread Russian fondness for string quartet playing, the practice of rehearsing (and occasionally performing) concertos with soloist and string quartet only, and Field's deliberate use of supporting accompaniment to sustain his early experiments in keyboard texture (internal evidence suggests that the *Fantaisie* H15 and Nocturne no.3 were also originally conceived in this form), hence the generally subordinate melodic role of the string parts, despite the felicitous scoring of the harmonic underpinning. Only the opening Pastorale of Divertissement no.2, and the Quintet H34, a fine single-movement *fantaisie* in rondo-variation form, show some equality between the forces.

In the decade 1821–31, Field encountered a creative crisis, presaged by the extensive revisions to Concerto no.6 between the first performance (1819) and publication (1823), and confirmed by his indecision over the final version of Concerto no.7 (1821–32). Of new music, only the *Fantaisie* no.3, in its original form with orchestra, and the Nocturnes nos.9 and 10, were completed and published immediately. For the rest, he returned to earlier works (primarily Sonatas no.1 and 3, Concertos nos.1–5, the two Quintets H18 and 34), to intensify their harmonic and melodic content and, above all, to reassess their overall proportions, particularly those movements in sonata form. He had published a considerably more concise orchestral edition of Concerto no.4 by 1819. The similar shortening of Concerto no.2 (*A-Wgm*) was not published, but, perhaps through increasingly unreliable health, the emphasis lay with radical reworkings of accompanied works for solo piano. He made valuable concert sonatas out of concertos nos.1–5 (Plantinga describes Clementi's less successful similar efforts three decades earlier), though the notable adaptation of sonata form – especially the reduction of the recapitulations to token, almost coda-like, reminiscences of the lengthy expositions and developments – had no influence on his contemporaries or immediate successors, as they too were not published. Field's late grasp of sonata structure in early Romantic terms is in marked contrast to Hummel's adhrence to formal repetition.

Ex.5 Nocturne no.1, bars 54-6

4. Legacy. Brahms owned a copy of Field's first three nocturnes and his Variations op.21 no.1 reflect the widespread triplet accompaniment figures, pedal notes and semitonal clashes of Nocturne no.3, while Schumann viewed afresh many details of its ideas in his *Romanze* op.28 no.2. His many eulogistic reviews of Field's music suggest a thorough knowledge of it, particularly of Concerto no.7, the autograph full score of which he studied: hence the slower interlude in the first movement, the intermezzo style for a central movement (erased in Field's case, perhaps mistakenly, before publication), and the waltz-rhythm finale, which his own piano concerto shares. Liszt, probably through his friendship with Glinka, used rare Russian published sources incorporating Field's late revisions for his edition of the nocturnes and adopted much of Field's idiosyncratic but idiomatic fingering into his own music.

Field was offended by the close concordances between his RomanceH30 and Chopin's Nocturne op.9 no.2; Branson (1973) catalogued myriad other derivations, both virtuoso and poetic, many of which were already in Field's vocabulary by the time of Chopin's early childhood. The Fieldian songlike character-piece, transmitted to Mendelssohn directly through his teacher Ludwig Berger, and to numberless others throughout the 19th century, reached the 20th with the nocturnes of Skryabin and Fauré, while Metner is glimpsed in Field's Nocturne no.11. Earlier, his pupil I.F. Laskovsky's piano music (especially the two sets of variations on Russian folk melodies, the Barcarolle and *Chansonnette sans paroles*) reflects Field's own and, if Glinka adopted Field's figuration without his piquant dissonance, his masterly handling of folksong stems directly from Field.

Asaf'yev (1947) asserted that, through Dubuque's pupils Balakirev and Nikolay Zverev (Zverev taught Skryabin and Rachmaninoff), 'the history of the Russian Piano School Field's tradition was long and influential'. The popularity of his music waned, apart from the nocturnes, only in the last years of the 19th century. Ferruccio Busoni did not live to instigate his planned Field revival in the 1920s, and no other great pianist has yet taken up Field's challenge of bel canto and self-effacing virtuosity. Indeed, they may neither mirror his performing practice nor study his final texts until editions that include his fingering and the mature revisions to many of his most substantial works are published. Nonetheless, Field remains one of the most original figures in the development of Romantic piano music.

ROBIN LANGLEY

Field-Dodgson, Robert (*b* London, 2 March 1926). New Zealand choral conductor and teacher. Taken to New Zealand in 1928, he became a chorister at Christchurch Cathedral, and studied at the University of Canterbury. He was appointed conductor of the Royal Christchurch Musical Society in 1949 and director of music at Christ's College from 1952, quickly earning a first-class reputation. In 1956 he received a state bursary to study in London with Boult. On his return to New Zealand he resumed his choral conducting, and took the RCMS Choir to the 1962 Adelaide Festival, the first overseas visit to be made by a New Zealand choir. He has worked as chorus master with distinguished visiting conductors, including Sargent, Groves, Walton, Malko and Cavdarski, prepared the first performance outside Britain of Britten's *War Requiem*, and conducted works by New Zealand composers including Jenny McLeod and David Farquhar. In 1970 the Queen Elizabeth II Arts Council awarded him a travelling fellowship and from 1972 to 1978 he was chairman of the Christchurch Civic Music Council. In 1976 he was made an MBE to mark 40 years of service with the RCMS and 34 years at Christ's College. He has published *The Literature of Music: a History of Style* (Wellington, 1976).

FREDERICK PAGE/J.M. THOMSON

Field holler. An extemporized form of black American song, sung by southern labourers to accompany their work. It differs from the collective work song in that it was sung solo, though early observers noted that a holler, or 'cry', might be echoed by other workers or passed from one to another. Though commonly associated with cotton cultivation, the field holler was also sung by levee workers, mule-skinners and field hands in rice and sugar plantations. As described by Frederick Law Olmstead in 1853 it was a 'long, loud, musical shout, rising and falling and breaking into falsetto', a description that would also have fitted examples recorded a century later. Some hollers are wordless, like the *Field Call* by Annie Grace Horn Dodson (1950, *Negro Folk Music of Alabama*, Folkways); others combine improvised lines concerning the singer's thoughts, with elaborated syllables and melismas, such as the long example recorded at the Parchman Farm penitentiary in Mississippi in 1947, by 'Bama', of a *Levee Camp Holler* (1947, *Negro Prison Songs*, Tradition). An unidentified singer of a *Camp Holler* was urged on with shouts and comments by his friends, suggesting that the holler could also have a social role (1941, *Negro Blues and Hollers*, Library of Congress). Some street cries might be considered an urban form of holler, though they serve a different function; an example is the call of 'The Blackberry Woman', Dora Bliggen, in New Orleans (1954, *Been Here and Gone*, Folkways). It is believed that the holler is the precursor of the blues, though it may in turn have been influenced by blues recordings. No recorded examples of hollers exist from before the mid-1930s, but some blues recordings, such as *Mistreatin' Mama* (1927, Black Patti) by the harmonica player Jaybird Coleman, show strong links with the field holler tradition. A white tradition of 'hollerin'' may be of similar age, but has been adequately researched. Since 1969 an annual 'hollerin'' contest has been held in Sampson County, North Carolina.

PAUL OLIVER

Fielding, Henry (*b* Glastonbury, 22 April 1707; *d* Lisbon, 8 Oct 1754). English playwright, novelist and librettist. Though remembered principally as the author of the novel *Tom Jones* – itself the basis of a popular *opéra comique* by F.-A.D. Philidor, as well as works by Arnold (a pasticcio, 1769), Edward German (1907) and Stephen Oliver (1976) – he was the most prolific and successful playwright in England in the decade following the triumph of Gay's *Beggar's Opera* in 1728. He wrote serious social comedies, irregular topical burlesques and a series of lightweight ballad farces starring Kitty Clive, including *Deborah* (1733; lost – probably a jibe at Handel's oratorio) and *Miss Lucy in Town* (1742; possibly a collaboration with Garrick). Cracks at 'Signor Opera' (Senesino) and 'Fairbelly' (Farinelli) are frequent, but two of his works are systematic satires on Italian opera. *Eurydice* (1737) is a lively travesty of the form, anticipating the tone of Offenbach: Eurydice does not wish to leave the delightful social whirl in Hell and engineers her return. The music is lost. In *Miss Lucy* the opera director Lord Middlesex is personified as Lord Bawble, while (according to Horace Walpole) Clive mimicked his mistress La Muscovita, and John Beard took off Amorevoli. Fielding was a brilliantly effective satirical critic of opera, both in musical farce and in his journalism (e.g. *The True Patriot*, 31 December 1745).

ROBERT D. HUME

Fields, Dorothy (*b* Allenhurst, NJ, 15 July 1905; *d* New York, 28 March 1974). American lyricist and librettist. She was the youngest member of a celebrated show business family: her father Lew Fields was a popular dialect comedian who later became a successful Broadway producer and her brothers Joseph and Herbert Fields were recognized librettists and playwrights. Discouraged by the family from going on the stage, she wrote light verse as a schoolgirl and after graduation teamed up with composer Jimmy McHugh; they contributed songs to various Broadway revues, most memorably *Blackbirds of 1928*. She went out to Hollywood in 1929 and, working with McHugh, Kern and others, wrote the scores for several films, including the popular *Swing Time* (1936) with the song 'The Way You Look Tonight' that won an Academy Award. Returning to New York in 1939 she joined her brother Herbert and wrote the librettos for several Cole Porter musicals and for Irving Berlin's *Annie*

Get Your Gun (1946). In the 1950s Fields teamed up with composer Arthur Schwartz to work on a handful of respected musicals, such as *A Tree Grows in Brooklyn* (1951), and later enjoyed a resurgence of popularity with *Sweet Charity* (1966) and *Seesaw* (1973) with Cy Coleman. Dorothy Fields had one of the longest writing careers in the American theatre, nearly 50 years, and her flexibility in writing all kinds of songs for both kinds of media was impressive. Her lyrics are distinguished by their vitality and seamless connection to the music as if her words explode or bounce off the melodies of her various composers.

dates are those of the first New York performance

Blackbirds of 1928 (J. McHugh), 9 May 1928 [incl. I can't give you anything but love, Diga Diga Doo, Doin' the New Low Down]
The International Revue (McHugh), 25 Feb 1930 [incl. Exactly Like You, On the Sunny Side of the Street]
Stars in Your Eyes (A. Schwartz), 9 Feb 1939 [incl. It's all yours]
Let's Face It (C. Porter), 29 Oct 1941 [libretto only]; film 1943
Mexican Hayride (Porter), 28 Jan 1944 [libretto only]; film 1948
Up in Central Park (S. Romberg), 27 Jan 1945 [incl. Close as Pages in a Book, April Snow); film 1948
Annie Get Your Gun (I. Berlin), 16 May 1946 [libretto only]; film 1950
A Tree Grows in Brooklyn (Schwartz), 19 April 1951 [incl. Look who's dancing, Love is the reason, Make the man love me]
By the Beautiful Sea (Schwartz), 8 April 1954 [incl. Alone too Long]
Sweet Charity (C. Coleman), 29 Jan 1966 [incl. Big Spender, Baby, dream your dream, If my friends could see me now]; film 1969
Seesaw (Coleman), 18 March 1973 [incl. It's not where you start, Nobody does it like me]

FILM

The Time and the Place and the Girl (McHugh), 1929; Dancing Lady (McHugh), 1933; Roberta (McHugh and J. Kern), 1935 [incl. Lovely to Look At, I won't dance]; Every Night at Eight (McHugh), 1935 [incl. I feel a song coming on, I'm in the mood for love]; Swing Time (Kern), 1936 [incl. The Way you Look Tonight, A Fine Romance, Bojangles of Harlem, Never Gonna Dance]; Joy of Living (Kern), 1938 [incl. You couldn't be cuter]; Lovely to Look At (Kern), 1952 [incl. I'll be hard to handle]

THOMAS S. HISCHAK

Fields, Dame **Gracie** [Stansfield, Grace] (*b* Rochdale, 9 June 1898; *d* Capri, 27 Sept 1979). English singer. As a child she appeared in music hall and then toured with revue before appearing in London at the Middlesex Music Hall (1915). She had her first major success in the long-running *Mr. Tower of London* (1918–25) alongside the comedian Archie Pitt, who also became her first husband in 1923. After a single straight acting role as Lady Weir in *SOS* (1928) she returned to revue, made the first of many appearances at Royal Variety performances, and in 1930 successfully launched her career in America. During the 1930s she consolidated her position as one of the highest earning performers in the world with stage appearances, tours and recordings. Through her 16 films (1931–46), particularly those of the 1930s, her public persona was set as a working class 'Lancashire lass', optimistic and generous of heart. The song 'Sally' (*Sally in our Alley*, 1931) became closely identified with her for the rest of her life, while the title song of *Sing as we Go* (1934) and 'Wish me luck (as you wave me goodbye)' (*Shipyard Sally*, 1939), along with many other successful numbers, were written by her regular accompanist HARRY PARR DAVIES, also a successful West End composer. Having left Pitt, by 1938 Fields was living with the film director Monty Banks; at the outbreak of war they left for Canada and the USA, marrying in Santa Monica in 1940. The idea that Fields had deserted Britain in order to avoid Banks's internment as an Italian national rather than as a result of Churchill's request for her to go to the USA for fund-raising and propaganda caused much public hostility that was only gradually eroded as she performed for the Allied troops on extensive and arduous tours during the war. From the early 1950s and for the rest of her life she alternated periods of concentrated performance, including tours of Britain, Canada and Australia (1964), and the USA (1965), with long stays at her home on Capri. Her public appearances in older age were enthusiastically received, and she continued to record and perform occasionally on stage and television until a few months before her death at the age of 81.

Her voice, although untrained, was strong and vibrant with a phenomenal range and ease of its use; her recording of *Why can't you?* (1929) demonstrates an extraordinary natural coloratura, and her role in the circus scene of *The Show's the Thing*, also in 1929, was appropriately 'The Lady with the Elastic Voice'. With a performing style rooted in music hall, she used an exaggerated sentimentality that was nonetheless genuine; she was also a natural comedian, and songs such as *The Biggest Aspidistra in the World* and *In my Little Bottom Drawer* were strangely paired to great effect with overtly emotional renditions of numbers that included *Ave Maria*, *The Lord's Prayer* and *Danny Boy*. She was made a CBE in 1938, the first variety performer to receive such an honour, and a DBE in 1978.

JOHN SNELSON

Fields, Herbert (*b* New York, 26 July 1897; *d* New York, 24 March 1958). American librettist. A member of the celebrated Fields family of show-business talents, he studied at Columbia and later sought to be a performer like his father, Lew Fields, until he took up directing and playwriting. Teaming with the young songwriters Richard Rodgers and Lorenz Hart, Fields wrote the librettos for all of their early and innovative musicals. Later he worked with his sister Dorothy Fields and provided musical comedy librettos for Cole Porter, Irving Berlin and others. Fields was a prolific and influential librettist, finding new ways to expand the boundaries of musical comedy.

For further information see A. Fields and L.M. Fields: *From the Bowery to Broadway: Lew Fields and the Roots of American Popular Theatre* (New York, 1993).

THOMAS S. HISCHAK

Fiele. *See* FIDDLE.

Fielitz, Alexander von (*b* Leipzig, 28 Dec 1860; *d* Bad Salzungen, 29 July 1930). German conductor and composer. His father was half Polish and his mother Russian. He studied composition and conducting with Edmund Kretschmer and the piano with Julius Schulhoff in Dresden. He worked as an opera conductor in Zürich (1884), Lübeck (1885–6) and with Nikisch in Leipzig (1886–7). He then went to Capri and Rome for ten years owing to poor health. There he composed piano pieces, songs, two orchestral suites and two operas, *Vendetta* (1891, Lübeck) and *Das stille Dorf* (1900, Hamburg), the latter also staged at Bremen, Lübeck, Ulm and elsewhere. His best-known work was the song cycle *Eliland*; his tasteful late Romantic style owes much to Mendelssohn and Brahms.

Fielitz became professor at the Stern Conservatory in Berlin and was appointed conductor at the Theater des Westens in 1904, but the following year he went to Chicago to teach and conduct. He returned to the Stern Conservatory in 1908 and became its director in 1915.

WALTER R. CREIGHTON/CHRISTOPHER FIFIELD

Fierdanck, Johann. *See* VIERDANCK, JOHANN.

Fiesco, Giulio (*fl* Ferrara, 1550–70). Italian composer. Fétis claimed Fiesco was born at Ferrara in 1519, died there in 1586, and served in the ducal chapel, but these dates have not been verified. Superbi and other local historians concur that Fiesco was Ferrarese though his name does not appear in the court payment rosters and nothing is known about him after about 1570. If he worked at all in Ferrara, he may have been employed as organist at S Francesco, where he was buried, as music tutor to the nuns of S Vito, or as a musician in the private employ of Cardinal Ippolito d'Este. He was evidently close to courtly circles. He dedicated madrigal books to Prince (later Duke) Alfonso d'Este, to Alfonso's sisters Lucrezia and Leonora, and to Luigi Gonzaga, marchese of Luzzara, who was residing at the Este court. He was also associated with the poet G.B. Guarini, since 1567 in the service of the court at Ferrara. Fiesco's important *Musica nova* of 1569 marks the first appearance in the madrigal literature of Guarini's verse; all the texts are thought to be by Guarini, including poems not printed elsewhere or included in the collected *Rime* of 1598. In the preface Fiesco says he set Guarini's verse to music at the poet's request, who had written it to please Lucrezia and Leonora d'Este, and to whom Fiesco dedicated the madrigal book. Fiesco's *Primo libro* (1554) has attracted considerable commentary. Einstein believed that Fiesco's choices of poetry from, among others, Sannazaro (*Arcadia*), Boccaccio (*Decameron*) and Ariosto (*Orlando furioso*) showed the literary influence of Cipriano de Rore, then working in Ferrara. The musical style of this book varies from straightforward to 'experimental', the latter receiving the most attention. Kaufman proposed the influence of Vicentino for the two madrigals labelled 'diatonico' and 'chromatico'; the diatonic work (*Nov'angioletta*) is characterized by the prevalence of step-wise motion and the absence of signed accidentals; the chromatic work (*Bacio soave*) uses signed B♭s and accidentals to the sharp side as far as D♯. A similarly 'chromatic' work from the same volume, *Vita de la mia vita*, was cited as an example of musical mannerism by Lowinsky, who contrasted Fiesco's work to the classicism of an Arcadelt madrigal. Fiesco's several contributions to an 'experimental' phase in the history of the madrigal are of interest but have yet to be placed in the wider context of his later madrigal books. He contributed a *madrigale arioso* to a predominantly Roman anthology, published a few scattered *napolitane* for three voices, and contributed a five-voice *greghesca* to the 1564 collection of settings of the dialect verse invented by the Venetian Antonio Molino (Manoli Blessi).

DAVID NUTTER

Fife (Fr. *fifre*; Ger. *Querpfeife*, *Militärflöte*; It. *fiffaro*; Sp. *pifano*). A small cylindrical transverse FLUTE, but with a narrower bore and hence a louder, shriller sound than the flute proper. Fifes were generally made from a single piece of wood, sometimes with ferrules of wood, cord, leather, brass or other metal at both ends, and had six finger-holes. After the 18th century they were sometimes supplied with a single key. In modern British drum and fife bands, short conical flutes with six keys (and therefore essentially a piccolo), pitched in B♭ (a 6th above the concert flute and a major 3rd below the orchestral piccolo), are called 'fifes'.

In the later Middle Ages and the Renaissance, fifes and side drums regulated the infantry while trumpets and kettle drums were reserved for cavalrymen. By the late 15th century fifes were associated especially with Swiss and south German mercenary foot soldiers (as the names *soldatenpfeife* and *fistula militaria* indicate), who evidently introduced the instrument to much of western Europe (fig.2). In German sources, for example, Martin Agricola (*Musica instrumentalis dendsch*, 1529) and Praetorius (*Syntagma musicum*, ii, 2/1619), the instruments are even called *Schweitzerpfeifen*, or (in Praetorius) *Feldpfeifen*. Praetorius explained that they were built then

1. *Fife in B♭, early 19th century (above), and fife in B♭ with one key, London, c1820 (Horniman Museum, London)*

in two sizes, with a compass about an octave and a half upwards from either *g′* or, in the case of the larger instrument, *d♯′*; and he noted that they were fingered differently from other flutes (Mersenne in *Harmonie universelle*, 1636–7 gave a tablature for the fife). Virdung's *Musica getutscht* (1511) is the earliest theoretical source to picture a fife, which he called *Zwerchpfeiff* and did not distinguish from an ordinary flute. (The term *Zwerchpfeiff* was also used for the pipe of the PIPE AND TABOR.)

Military fifers and drummers regulated the cadence of the march, played for roll call and gave the soldiers signals during battle. A British source dating from 1557 explains that the fifers and drummers must 'teach the companye the soundes of the marche, allarum, approache, assaulte, battaile, retreate, skirmishe, or any other challenge that of necessitie should be knowen'. On later signals by military fifers and drummers, *see* FIFE CALLS. 17th-century manuals show the fifes and drums situated next to the colours to provide a rallying point and a centre of command. Fifers also served as heralds and emissaries. Arbeau, in his book on dancing, *Orchésographie* (1588), described how players of the fife extemporized music for marches and for dances imitating battles, and gave an example of a free improvisation in which successive motifs are briefly taken up and varied.

From Arbeau's work and from various pictorial sources of the late 15th and 16th centuries, it is also clear that fifes and drums accompanied dancing, especially outdoor dancing, among all social classes.

During the 17th century the fife disappeared from the British army but it was reintroduced about 1745 in very much the same form as before, that is, with cylindrical bore, in one piece, and with no keys. A fifer then seems usually to have carried two fifes, one in B♭ (that is, a 6th above the concert flute) and one in C (a 7th above the concert flute), both slung from his belt in a baton-shaped metal case. Around 1870, this instrument was replaced in Britain by a short conical flute in B♭, with one key (eventually called a 'piccolo' with six keys). In 1810 the London maker George Miller was granted a patent for a brass fife intended 'to obviate the effect of hot climates'. In continental Europe late 19th-century fifes had a seventh tone hole at the foot of the body for the right-hand little finger. This tone hole was either open and built up above the body of the instrument or closed with a key.

In the USA, Switzerland, in most countries of the Commonwealth or former British colonies and in Ireland, instruments descended from the old *Feldpfeif* are played in military and civilian fife and drum bands. There is a fife and drum tradition in Caruarú, Brazil, and the Jonkonnu festival of the West Indies includes 'fife and drum' music played by an ensemble of bamboo fifes, drums, banjo and scraper. In the USA, civilian fife and drum bands were formed in the mid-to-late 19th century as military use declined; the 'ancient fife and drum corps' of the Connecticut River Valley (also copied elsewhere) are descended from these bands. In the USA and Canada, military-style fife and drum bands have been revived, primarily by amateurs, to perform 'field musick' as part of the movement for historical re-enactment. Both 'ancient' and re-enactment bands play reproductions of 18th-century wooden fifes and rope-tensioned wooden field drums with gut snares. A Company of Fifers and Drummers devoted to the preservation and promotion of martial music was founded in 1965; in 1997 the Company maintained a museum, archive and library in Ivoryton, Connecticut, and had an international membership of over 100 corps.

Fife calls. Tunes played on the fife to regulate military activities. When the fife was reintroduced into the British army in 1746 fife calls, to the drum's accompaniment, became the rule. They were possibly founded on 17th-century calls such as those that existed in France. Ex.1

Ex.1

shows the 'Drummers' Call' from Potter's treatise. Fife calls were used in Britain until the 1890s, the last official version being 'Drum and Flute [i.e. Fife] Duty', issued 1 October 1887, although fife and drum signals were still included in US army regulations as late as 1904.

For bibliography *see* FIFE.

See also MILITARY MUSIC and SIGNAL (i).

H.G. FARMER/R

Fife-major. Formerly a non-commissioned officer in the army who had charge of the regimental fifers. In Great Britain the rank was first mentioned in 1748 in the Royal Artillery; the office was abolished in that regiment in 1848, although the rank (without the office) continued for a few years longer. The office, although not the rank, also existed in the Foot Guards and regiments of foot.

Simes said that the fife-major was expected to keep a roster and roll of duties for his fifers, and had 'to take particular care that the fifers are properly dressed and their fifes in good order, and that they practise together twice a week'. When there was no fife-major the fifers were under the control of a DRUM-MAJOR.

H.G. FARMER/R

Fiffaro (i) (It.). (1) Flute or FIFE (and a cognate of fife and *Pfeife*). The use of the term goes back at least to the 16th century. It is sometimes confused with *piffaro* (or *piffero*), which in the first instance means SHAWM.

Fiffaro (ii) (It.). *See under* ORGAN STOP (*Piffaro*).

Fifre (Fr.). *See* FIFE.

Fifteenth. *See under* ORGAN STOP. *See also* SUPEROCTAVE.

Fifth (Fr. *quinte*; Ger. *Quinte*; It. *quinta*; Gk. *diapente*). The INTERVAL between any two notes that are four diatonic scale degrees apart (e.g. C–G, D–A). Unless specified, the term usually implies 'perfect 5th', which is the sum of three whole tones and a diatonic semitone. The diminished 5th, the sum of two whole tones and two diatonic semitones, can occur diatonically (e.g. B–F in C major or A minor); the augmented 5th, which is equal to a perfect 5th plus a chromatic semitone (e.g. C–G♯, B♭–F♯), is never diatonic.

In both the Pythagorean tuning system and JUST INTONATION, the ratio of the 5th is 3:2, which is slightly larger than that of an equal-tempered 5th. Because this ratio is the quotient of the lowest primes of the number system, it has almost never been disputed as the basis of the 'pure' 5th; Simon Stevin, however, the noted Dutch scientist and mathematician, asserted (*c*1600) that $2^{7/12}$:1 was the true ratio of the perfect 5th (i.e. the same as an equal-tempered 5th), and in the 18th century a certain Boisgelou believed that the ratio was $5^{1/4}$:1.

The 5th is the only interval besides the unison and the octave that has maintained the status of CONSONANCE throughout the history of Western music. In ancient Greek and medieval theory it shared with the 4th and the octave the status of PERFECT CONSONANCE (*see also* SYMPHONIA). In the earliest forms of two-part parallel ORGANUM, §2 the 4th was the commonest interval of separation, but in the 12th and 13th centuries, as polyphonic music developed, the 5th established itself as the most important consonance after the octave and the unison, a property it retained throughout the Renaissance.

In tonal music it is fundamental to the concepts of harmony and modulation, being the interval between tonic and dominant as well as between subdominant and tonic, and as such the interval between the tonalities that are most frequently contrasted. Key relationships are generally measured by the 5th, the 'remoteness' of one key from another usually being determined by the number of 5ths separating them; the CIRCLE OF FIFTHS, when it takes into account the system of relative keys (e.g. A minor is the relative minor of C major), has generally been regarded as the most direct path for modulation.

See also CONSECUTIVE FIFTHS, CONSECUTIVE OCTAVES; HIDDEN FIFTHS, HIDDEN OCTAVES; 'HORN' FIFTHS; 'MOZART' FIFTHS.

WILLIAM DRABKIN

Fifth flute. A descant RECORDER (lowest note *c″*, a 5th above the treble instrument).

Figner, Medea. *See* MEI-FIGNER, MEDEA.

Figner, Nikolay Nikolayevich (*b* Nikiforovka, nr Kazan′, 9/21 Feb 1857; *d* Kiev, 13 Dec 1918). Russian tenor. He studied in St Petersburg and Naples, where he made his début in Gounod's *Philémon et Baucis* in 1882. After further appearances in Italy he sang in Latin America, and in 1887 sang Raoul (*Les Huguenots*) at the Imperial Opera, St Petersburg. After his Covent Garden début in the same year, as the Duke in *Rigoletto*, he returned to the Imperial Opera, where he appeared regularly with his second wife, Medea Mei-Figner (see illustration), until their divorce in 1904. He took part in the premières of Tchaikovsky's *The Queen of Spades* (1890) and *Iolanta* (1892), and Nápravník's *Dubrovsky* (1895) and *Francesca da Rimini* (1902). From 1910 to 1915 he directed and sang at the Narodnïy Dom opera house. His repertory included Tchaikovsky's Lensky and Andrey Morozov (*Oprichnik*), the Prince in Dargomïzhsky's *Rusalka*, Grigory (*Boris Godunov*), Don José, Faust, Werther, Radames, Vasco da Gama (*L'Africaine*), Lohengrin, Canio and Turiddu. Figner's voice, although dry, was extremely expressive; he took enormous pains with diction, acting and costuming, cutting a figure of romantic elegance which held audiences enthralled.

Nikolay Nikolayevich Figner in the title role of Verdi's 'Otello', with Medea Mei-Figner as Desdemona

HAROLD BARNES/R

Figueredo, Carlos (Enrique) (*b* Tucuyito, Estado Carabobo, 15 Aug 1909; *d* Nov 1986). Venezuelan composer and diplomat. He began piano studies at an early age. He gave his first solo recital when he was eight, and as a youth participated in a number of amateur chamber ensembles. In 1930 he entered the Escuela de Música y Declamación (later the Conservatorio José Angel Lamas) to study piano with Salvador Llamozas. In 1941 he was admitted to the composition class of Vicente Emilio Sojo, and he graduated in 1947. From 1945 he was head of the Escuela Preparatoria de Música (later the Juan Manuel Olivares Conservatory), after which he was appointed to diplomatic posts in Paris (1948), Copenhagen (1953) and Madrid.

Figueredo's output includes music for piano, chorus, voice, and symphonic poems and symphonies. He won the National Composition Prize (1947) for *Nocturno* and the Vicente Emilio Sojo prize (1955) for his Third Symphony. His style, which exists within the framework of the post-Impressionist aesthetic of the Santa Capilla school led by Sojo, is characterized by a very personal and serene elegance. Figueredo's best-known piece is the 'Nocturno' of his First Symphony, which reflects his most salient merits as a composer and is often performed by itself.

CARMEN HELENA TÉLLEZ

Figulus [Töpfer], **Wolfgang** (*b* Naumburg an der Saale, *c*1525; *d* Meissen, probably Sept 1589). German composer, writer on music and teacher. He may well have been taught music by Martin Agricola at Magdeburg. In 1545–6 he was Kantor at Lübben, Lower Lusatia. Early in 1547 he probably matriculated at the University of Frankfurt an der Oder, though the actual record dates from early in 1548, when he matriculated at Leipzig University where he completed his education in music and the humanities. By that time he had abandoned the name Töpfer, and from then on he always called himself Figulus. From 1549 to 1551 he was Kantor at the Thomaskirche, Leipzig, and taught music at the university there. In 1551 Georg Fabricius, one of the most important Protestant teachers of the Reformation, summoned him to the more important post of Kantor and teacher at the Fürstenschule and church of St Afra, Meissen, which he held until he was pensioned off in 1588 'on account of infirmity and old age'. It was at Meissen that he published his theoretical writings and compositions, which were products of his duties as Kantor.

No study has yet been made of Figulus's compositions; since works by other composers have been identified in his *Hymni*, it may be that some pieces in his other volumes are not by him. Some 170 pieces have been ascribed to him, of which about 100 survive. They are nearly all sacred and range from bicinia and tricinia to eight-part double-choir motets, masses, *Magnificat* settings and psalms. They are transitional in style, standing between the established polyphonic idiom of Agricola and the newer homophonic idiom. His setting of Psalm cxxxiii (*Siehe, wie fein und lieblich ist*) owes much to Stoltzer and is in many ways similar to that of Johannes Reusch, who worked at Meissen from 1543 to 1555.

WORKS

SACRED VOCAL

Precationes aliquot musicis numeris, 3vv (Leipzig, 1553)

Tricinia sacra ad voces pueriles, 3vv (Nuremberg, 1559)

Cantionum sacrarum ... primi toni decas prima, 4–6, 8vv (Frankfurt an der Oder, 1575)

Vetera nova carmina sacra et selecta de natali Domini ... a diversis musicis composita, 4vv (Frankfurt, 1575[2])

Hymni sacri et scholastici cum melodiis, *c*1580, lost (enlarged Leipzig, 1594; 2/1604) [incl. at least 12 hymns not by Figulus; the title Melodiae in prudentium et alios poetas pios is incorrect]

Occasional works, Wittenberg, 1582, 1586, 1587; Leipzig, 1594 [complete list in *MGG1*]

THEORETICAL WORKS

Elementa musicae, 1555, lost; enlarged as *Libri primi musicae practicae elementa brevissima* (Nuremberg, 1565)

Deutsche Musica und Gesangbüchlein (Nuremberg, 1560) [enlarged edn of M. Agricola: Ein Sangbuchlein aller Sontags Evangelien, 1541]

De musica practica liber primus (Nuremberg, 1565)

WILFRIED BRENNECKE

Figural, figurate, figured (Fr. *figuré*; Ger. *figuriert*; It. *figurato*; Lat. *figuratus*). Florid, i.e. elaborated with various kinds of musical artifice. At its broadest 'figural music' simply means polyphonic or concerted music, as opposed to plainchant. All the terms could be applied to a single part, e.g. to distinguish a decorated line or cantus figuratus from the plainchant or cantus planus to which it might be added as a descant; it could also be applied to music in several parts, as for instance the *musica figurata* of the 15th and 16th centuries in which polyphony was created by combining a number of equally florid lines (as opposed to note-against-note counterpoint). This particular concept persisted to become the basis of Fux's fifth-species counterpoint and the ideal of the most developed kind of 18th-century fugue, although in the meantime it

had been described by many theorists under various names. Christopher Simpson devoted the whole of the fourth part of his *Compendium* (1667) to it under the heading 'The Form of Figurate Descant'. This he defined as 'the ornament or rhetorical part of music' in which were introduced 'all the varieties of points, fuges, syncopes or bindings, diversities of measures, intermixtures of discording sounds, or what else art and fancy can exhibit, which as different flowers and figures do set forth and adorn the composition, whence it is named Melothesia florida vel figurata, Florid or Figurate Descant'. In the 17th and 18th centuries the terms may simply be applied to the use of stereotyped decorative patterns (or figuration); a figured chorale is one in which the melody is accompanied by parts of a florid nature, usually developing patterns from motifs or figures in shorter note values throughout the piece. (O. Edwards: 'The Chiefest Flower in Figurate Descant: an 18th-Century View of Fugue', *MR*, xxxi (1970), 114–22)

A somewhat narrower use of the terms distinguishes between the *musica figurata* (or figural music) of Ockeghem and the early Flemish School and the less complex, less flamboyant *musica reservata* of Josquin.

A FIGURED BASS is a bass part with numerals added to signify a fuller accompaniment (*see also* CONTINUO).

MICHAEL TILMOUTH

Figuration. A kind of continued measured embellishment, accompaniment, or passage-work. In principle, figuration is composed of 'figures', or small patterns of notes occupying a beat or two of time; often, however, the term is used loosely for passage-work not readily divisible into 'figures', such as long scales or arpeggios. Figuration sometimes results from the process variously known as DIMINUTION, DIVISION or COLORATION, §2 – the breaking up of notes into figures which decorate the original pitches with little garlands of quick notes or connect one pitch with another; sometimes it is freshly composed to accompany a slower-moving melody or to display the virtuosity of a soloist. There is no distinct boundary between what is and what is not figuration; nevertheless, the term implies something more neutral – perhaps more mechanical or stereotyped – than motivic work. Figuration may be derived from thematic material, as it often is in Beethoven (e.g. the first movement of the 'Appassionata' Sonata), but it is not itself usually the source of germinal motives. As discussed here, figuration has nothing to do with the rhetorical *Figuren* described by German Baroque theorists such as Mattheson, nor with the figures of figured bass, nor with the term 'figural music', which means simply polyphonic or concerted music, as opposed to plainsong or simple hymns.

The great age for figuration was the period extending 30 or 40 years on either side of 1600, when English virginalists, German colorists, Italian violinists and singers of all nationalities spun out torrents of little black notes; when Mersenne presented diminutions in hemidemisemiquavers as an example of 'la perfection du beau toucher' (*Harmonie universelle*, iii, 394); and when for many

Ex.1 Estampie; Robertsbridge Codex (*GB-Lbl*)

composers the art of composition was more than anything the art of figuration. But figuration had long been a

Ex.2 Diminutions on Palestrina's *Benedicta sit Sancta Trinitas* from G. Bassano: *Motetti, madrigali. . . diminuiti* (Venice, 1591)

resource of music, as it still is, and its principles have changed remarkably little in the 650 years since the Robertsbridge Codex (*GB-Lbl*) was written (ex.1) Apart from its ancient functions as accompaniment and ornament, figuration serves a multitude of purposes in music, e.g. the painting of pictures or setting of moods, practised by composers from Monteverdi, with his *stile concitato*, to Debussy and beyond; and the display of performing technique – see the solo part of any concerto.

The examples show something of the variety of types and applications of figuration. Ex.1 is a dance with figures in universal patterns shaped by the hand on a keyboard; ex.2 is an example of vocal 'divisions' on a piece of Renaissance polyphony; ex.3 is the rich figuration of a

composer-virtuoso. Ex.4 is a display passage from the work of another composer-virtuoso.

DAVID FULLER

Figure (i). A number indicating all or part of a particular chord configuration in a thoroughbass progression, for example 6 for a first-inversion triad (6th chord), 6-4 for a

second-inversion triad. The term FIGURED BASS is often used to mean thoroughbass. *See also* CONTINUO.

WILLIAM DRABKIN

Figure (ii). A short melodic idea having a particular identity of rhythm and contour, often used repetitively or in conjunction with other such ideas to build a larger melodic idea or a theme. Thus it belongs to the category of musical ideas commonly called motifs (*see* MOTIF). Melodies that have florid motivic detail are sometimes said to be figurative, and the use of the term in this sense is related to the Italian *canto figurato*: *see* ANALYSIS, §II, 2. Certain musical figures in Renaissance and Baroque vocal music were seen as analogous to rhetorical figures of speech: *see* FIGURES, DOCTRINE OF MUSICAL.

WILLIAM DRABKIN

Figured bass. Like its equivalents *bezifferter Bass*, *basse chiffrée*, *basso numerato* etc., figured bass is a reference term for the bass part of an ensemble work, usually of the 17th or 18th centuries, furnished with figures and other signs telling the player the harmonies implied, stated or required above the bass; *see also* CONTINUO. It is not a term used for the function of the bass part, nor are the instrumental parts labelled thus; rather it reflects the later significance of continuo-playing as a didactic exercise. 'Figured' music in such a title as Lorenzo Penna: *Li primi albori musicali per li principianti della musica figurata* (Bologna, 1672) indicates figural music as opposed to plainsong; an early use of 'figured' or 'numbered' in the more literal sense occurs in Stanislao Mattei's title for his treatise *Practica d'accompagnamento sopra bassi numerati* (Bologna, *c*1824–5).

In short, the term figured bass and its equivalents in other languages are reference terms belonging not so much to the period of continuo playing as to the theorists, teachers and lexicographers of a later period who required a term to refer to the bass line itself. Earlier, however, C.P.E. Bach referred to *bezifferter Bass* as the instrumental part on which the keyboard player initiated in *Generalbassstudien* bases a *feine Accompagnement* or basso continuo. The term is not entirely satisfactory, since many early continuo parts are not figured, and very few (perhaps no) bass parts are figured completely from a theoretical point of view.

Conventions governing the use of figures vary considerably between repertories. As a general rule the principle of figuring is to notate only intervals over the bass note that deviate from the root position triad (5-3 chord): the figures 5 and 3 are therefore not normally written (ex.1*a*). For instance, a chord with a 3rd, a 5th and a 7th is normally written as just 7 (ex.1*d*). The figure 6 normally replaces 5, and 4 or 2 replaces 3: the inversions of triads are therefore abbreviated as in exx.1*b* and *c*. Inversions of 7th chords have two factors a step apart (the root and the 7th) and the conventional abbreviated figuring reflects this (exx.1 *e*–*g*).

Figures arranged horizontally show part movements, suspensions or appoggiaturas (98, 76, 43). Because the figure 2 normally replaces 3, the figure 9 is used in chords which also include the 3. Accidentals may be combined with any figures; an accidental on its own normally applies to the 3.

The complexity of figured-bass notation greatly increased after 1700. In 1711 Heinichen listed only 12

Ex.1

	(a)	(b)	(c)	(d)	(e)	(f)	(g)
full figuring	5 3	6 3	6 4	7 5 3	6 5 3	6 4 3	6 4 2
abbreviated figuring	(none)	6	6 4	7	6 5	4 3	2

figurings; in 1728 this had risen to 32. The greatest number is probably the 120 listed by J.-J. Rousseau (1768).

In Heinichen's table of 1728 the upper division gives the usual abbreviated figuring and the two lower divisions give the other notes needed to form the chord. Abbreviated figurings removed from a bass context have commonly been used for harmonic analysis (for details of figuring conventions and the use of figures for analytical purposes, *see* NOTATION, §III, 4(viii)).

PETER WILLIAMS, DAVID LEDBETTER

Figured chorale. (1) An organ chorale (or chorale prelude) in which a distinct figure or motif is exploited in one or another contrapuntal part throughout the piece, usually below the cantus firmus but not obviously derived from it. As such the term (or its less ambiguous synonym 'figural chorale') is sometimes used for a type of organ chorale found in (e.g.) Bach's *Orgelbüchlein* (1713–15), although for centuries composers had based organ accompaniments to chorale melodies on a continuous motif. In this respect, the *Orgelbüchlein* consists of organ pieces that, taken singly, resemble one of the variations in an organ chorale partita.

(2) A chorale written out in melody and bass only, the latter figured, for accompanying the singing. The practice began with chorale books compiled for private devotions before being adopted by collections designed for congregational use. Although figuring the bass below a choral melody would appear to be a simple process, in fact it occurred only when the original character of the Lutheran chorales had changed: by having their melodies in the treble rather than in the tenor (from *c*1589), by being harmonized and accompanied in chamber and church, and by being played from staff notation rather than tablature. Schein introduced figures above the bass in his four-part *Cantional* (Leipzig, 1627) for organists (harpsichordists and lutenists) to play from. The earliest collection to give just the melody with figured bass was Crüger's *Gesangbuch* (Berlin, 1640). In later 18th-century manuscript sources, such a chorale often follows a 'prelude', as a hymn might follow a solo introduction. Collections of figured chorales were common between about 1650 and the end of the 18th century. Examples include the Pietist *Geistreiches Gesang-buch* (Halle, 1704), edited by J.A. Freylinghausen, *Lieder-Buch* (Hamburg, 1730), edited by Telemann, and the Schemelli *Gesangbuch* (Leipzig, 1736), with the melodies edited by J.S. Bach.

See also CHORALE SETTINGS.

PETER WILLIAMS/ROBIN A. LEAVER

Figures, theory of musical (Ger. *Figurenlehre*). In its German form, a term created by German musicologists, beginning with Schering and including especially Heinz Brandes, H.H. Unger and Arnold Schmitz, which stands

for the interrelationship between rhetorical figures of speech and analogous musical figures. In classical works on rhetoric (for example by Aristotle, Cicero and Quintilian), orators were taught how to embellish their ideas with rhetorical imagery and to infuse their speech with passionate language. The techniques involved figures of speech, the technical devices used in the *decoratio* (also called the *elocutio*), which was the third part of rhetorical theory.

That composers enjoyed the possibilities of illustrating textual ideas and individual words with musical figures is extensively shown in both sacred and secular music from at least the early 16th century and can even be seen as far back as Gregorian chant. The madrigalisms or word-painting of the Renaissance madrigal are prominent examples of this kind of musical rhetoric. Only at the beginning of the 17th century, however, was an attempt made, by the German theorist Joachim Burmeister, to codify the practice and to establish a list of musical-rhetorical figures. For over a century and a half afterwards German writers continued his example of borrowing terminology from rhetoric for analogous musical figures, frequently employing different Latin and Greek names for the same figure. They also invented new musical figures unknown to spoken language. This basically German treatment of musical-rhetorical figures is therefore not unified, and no single systematic theory of musical figures exists for Baroque or later music.

See RHETORIC AND MUSIC for bibliography and for the various sources for, as well as definitions of, the most important musical-rhetorical figures.

GEORGE J. BUELOW

Figuš-Bystrý [Bystrý; Figuš], **Viliam** (*b* Banská Bystrica, 28 Feb 1875; *d* Banská Bystrica, 11 May 1937). Slovak composer and teacher. His given name was Viliam Figuš. A graduate of the teachers' institute in Banská Štiavinca, he studed at the Budapest Music Academy from 1911 to 1914; as a composer he was self-taught. Before permanently settling in Banská Bystrica (1907), he taught in various towns in the Austro-Hungarian empire, assiduously collecting folksongs wherever he went and considering ways of adapting them. In Banská Bystrica he taught at the evangelical school and then, from 1921, at the teachers' institute; he was also active as a choirmaster, conductor, organist and music administrator.

He focussed on folksong adaptation, song and choral composition and small character studies. Initially he set Hungarian texts and folksongs but later identified strongly with the music of Slovakia. Characterized by a simple, homophonic style, his folksong adaptations draw particularly upon the authentic, rustic models of central Slovakia; he was one of the first composers to recognize the potential of their intrinsic modal strata. His style's mode of expression is akin to that found in Mendelssohn's or Schumann's chamber works. His composed songs (the most remarkable being the cycle *Sny*, 'Dreams', 1903–33) also showing a prevailing illustrative trend, for the most part inspired by folksong. After 1918 he began writing more technically demanding works, as in the excellent *Šesť skladieb* ('Six Pieces') for organ (1937). *Detvan*, his only opera, suffers from incoherence as a result of an eclectic Romantic style of music and inserted folksong quotations.

WORKS
(*selective list*)

STAGE AND INSTRUMENTAL

Stage: Detvan (op, 3, E.B. Lukáč, after A. Sládkovič), op.64, 1922–6, Bratislava, 1 April 1928; Pod Poľanou [Under Poľana] (dance scene), op.109, T, chorus, orch, 1937

Inst: Náladové obrazy [Capricious Pictures], op.46, vn, pf, 1916; Pf Qt, E♭, op.48, 1918; Pestré lístky [Gay Leaves], op.54, pf, 1921–33; Z mojej mladosti [From my Youth], suite, op.56, orch, 1921–34; Str Trio, G, op.58, 1921–36; Poľné kvietky [Meadow Flowers], 2 vols., op.96, pf, 1933 [folksong arrs.]; Sonata, e, op.97, vn, pf, 1934; Slovenská sonáta v dórickej stupnici [Slovak Sonata in Dorian Mode], op.103, pf, 1935; 6 skladieb [6 pieces], op.107, org, 1937; Str Trio, e, op.108, 1937

VOCAL

Choral: Náboženské sbory [Sacred Choruses] (Slovak poets), op.10, chorus, 1903–36; Pieseň pokoja, lásky a mieru [Song of Calmness, Love and Peace] (P. Országh Hviezdoslav), op.29, S, female chorus, pf, 1906, arr. S, female chorus, orch, 1920; Az egri leány [The Girl from Eger] (ballad, J. Arany), op.30, solo vv, chorus, pf, 1907, arr. solo vv, chorus, orch; Slovenská pieseň (Országh Hviezdoslav), op.36, solo vv, chorus, pf, 1913, arr. solo vv, chorus, orch, 1917; Mixed Choruses (Slovak poets), op.60, 1922; Male Choruses (I. Krasko, M. Konopnická-Horín, M. Rázus), op.49, 1914–26; Ecce sacerdos magnus, op.90, chorus, org, 1932, arr. chorus, orch

Song cycles (1v, pf): Sny [Dreams] (Slovak poetry), 4 vols., op.8, 1903–33; Dalok [Songs] (Hung. poets), op.6, 1910; Po poliach a lúkach [Across the Fields and Meadows] (Slovak poetry), vol.i, op.53, 1920; Mati moja! [My Mother!] (F. Ruppeldt, P. Országh Hviezdoslav), op.85, 1932, arr. 1v, orch; Jesenné piesne [Autumn Songs] (Slovak poetry), op.95, 1934; Po poliach a lúkach, vol.ii, op.83, 1935; Vlastenecké piesne [Patriotic Songs] (Slovak poetry), op.100, 1935; Žiale a radosti [Sorrows and Joys] (V. Roy), op.99, 1937

Folksong arrs.: Slatinské ľudové piesne [Folksongs from Slatina], 5 vols., opp.28, 35, 39, 40, 41, 1v, pf, 1895–1915; Slovenský sborník [Slovak Collection], 2 vols., opp.51a and 57, chorus, 1919–21; 1000 slovenských ľudových piesní, 10 vols., 1v, pf, 1925–7; Ľudové balady [Folk Ballads], op.101, 1934

VLADIMÍR ZVARA

Fiji. *See* MELANESIA, §VII.

Filago. *See* CASATI, GIROLAMO.

Filago, Carlo. *See* FILLAGO, CARLO.

Filar il suono [fil di voce, filar la voce, filar il tuono] (It.: 'to spin the sound/the voice/the tone'; Fr. *filer le son*). A direction in singing to 'spin out' a long note, usually *pianissimo*, without any change in dynamics. Verdi uses this direction at the end of Violetta's aria 'Addio del passato' in *La traviata*, where the phrase 'un filo di voce' is attached to the final *a″*, its soft dynamic emphasized by the preceding direction, *allargando e morendo*. At the end of the sleep-walking scene in *Macbeth*, Verdi uses this term over the final four notes, rising to *d‴*, indicating that the phrase should be sung without a crescendo and, probably, with little or no vibrato.

The term is also used for wind instruments and (meaning without a change of bow) for string instruments, the direction usually implying that the note is to be sustained quietly and without any gradation in volume. L'Abbé le fils (J.-B. Saint-Sevin) defines the term this way in his *Principes du violon* (1761).

In both vocal and instrumental music the term has sometimes, confusingly, been equated with SON FILÉ or MESSA DI VOCE.

ELLEN T. HARRIS

Filet (Fr.; It. *filetto*). *See* PURFLING.

Fili [file]. A poet-seer in medieval Gaelic society in Ireland and Scotland, to whom a higher rank than that of the bard was assigned in medieval legal theory; *see* BARD, §3.

Filiberi, Orazio (*b* Verona; *fl* 1649). Italian composer. In 1649 he was *maestro di cappella* of Montagnana Cathedral. In that year he published in Venice his only known music: *Salmi concertati*, for three to six and eight voices, two violins and continuo, op.1.

Filibertus de Laurentiis. *See* LAURENZI, FILIBERTO.

Filimon, Nicolae (*b* Bucharest, 6 Sept 1819; *d* Bucharest, 19 March 1865). Romanian music critic and flautist. He studied at the School of Vocal and Instrumental Music in Bucharest (1836–8) with Ludwig Wiest (music theory and solfège) and Pietro Ferlendis (flute), and had further instruction in the flute from Michael Foltz (1844–8) while playing in the Bucharest Teatrol Italian orchestra (1845–57). But it is as a music critic that he is remembered; between 1857 and 1865 he wrote for several Bucharest periodicals, supporting Romanian opera and Romanian composers. He published the earliest Romanian biographical sketches of Verdi, Donizetti, Bellini and Paganini, as well as an outstanding historical survey of gypsy band music. Through his rigorous scholarship and elevated literary style he came to be regarded as the 'father of Romanian music criticism'.

VIOREL COSMA

Filipoctus de Caserta. *See* CASERTA, PHILIPPUS DE.

Filipenko, Arkady Dmitriyevich (*b* Kiev, 26 Dec 1911/8 Jan 1912; *d* Kiev, 24 Aug 1983). Ukrainian composer. In his youth he worked as a turner at a shipyard and studied at the worker's evening music faculty. Then he studied at the Kiev Conservatory with L. M. Revuts'ky (composition), graduating in 1939. He served in a military band (1939 to 1945), and thenceforth lived in Kiev, occupying official posts in the administration of the Ukrainian Union of Composers, the Ukrainian Choral Society, the Ukrainian Society for Cultural Links with Foreign Countries and the Union of Composers of the USSR. He has been awarded the State Prize of the USSR (1949), the titles of Honoured Representative of the Arts of Ukraine (1958), People's Artist of Ukraine (1969), and the orders of the Workers' Red Banner, the October Revolution, and of Cyril and Methodius (Bulgaria). He has written much for chorus (e.g. laudatory cantatas and patriotic songs), and has shown himself to be most outstanding of all in the music he has written for children. His son Vitaly (*b* Kiev, 2 Feb 1939) is a composer of operettas and numerous songs.

YELENA ZIN'KEVICH

Filippi, Filippo (*b* Vicenza, 13 Jan 1830; *d* Milan, 24 June 1887). Italian music critic. After studying the piano and organ, he graduated in law from Padua in 1853, but in 1851 had already been led to music criticism by the wish to defend *Rigoletto* against its detractors. Moving to Venice soon after taking his degree, he devoted himself completely to music. In 1859 he became assistant editor of the *Gazzetta musicale di Milano* and was editor from 1860 to 1862. From 1862 until his death he was critic of the Milan periodical *La perseveranza* and attained a commanding position among Italian music critics; his writings were constantly referred to by such leading figures as Basevi and Biaggi. He travelled widely in Europe, and his trips to hear Wagner's music in Germany resulted in a notable series of articles in *La perseveranza* in 1870 and 1876; the first was later republished in his *Musica e musicisti* and also in a German translation. He was an ardent admirer of Verdi, who treated him with considerable respect, while deploring the German influence which Filippi appeared to encourage. Verdi also opposed Filippi's decision to travel to Cairo for the première of *Aida* as unwarranted publicity.

Filippi produced the first authoritative appraisal of a work by Puccini when in 1883 he reviewed the première of the *Capriccio sinfonico*; his criticism of Puccini's 'symphonicism' in a review of *Le villi* in 1884 prompted Verdi to write the famous comment in a letter to Arrivabene, 'I do not believe it's a good thing to insert a piece of a symphony into an opera, simply for the pleasure of making the orchestra perform'. Filippi was among the first to study the Contarini archives in Venice. He published a number of songs. As a music critic Filippi's importance lay in his being among the first (together with Francesco D'Arcais) to bring intellectual authority to a profession which in Italy had until then amounted to mere *reportage*.

LEONARDO PINZAUTI/JULIAN BUDDEN

Filippi, Gaspare (*b* ?Valli di Pasubio, nr Vicenza; *d* Vicenza, 23 July 1655). Italian composer. In 1632 he became a singer in the choir of Vicenza Cathedral, and in August 1634 succeeded to the post of *maestro di cappella* there, which he retained until his death. Apart from a mixed collection of songs, madrigals and instrumental music (1649), his output is sacred and ranges from solo motets to double-choir masses and vesper psalms. Like much provincial music his motets make few demands on the singers but do not degenerate into dull syllabic settings. *Confitemini Domino*, a solo motet from the collection of 1637, is divided into varied sections: a brief triple-time opening with expansive melodic phrases, a more recitative-like central section and a final triple-time 'Alleluia'; this use of triple time for outer sections is forward-looking. Filippi also made good use of sequence to build his melodies and lead towards climaxes. (G. Mantese: *Storia musicale vicentina*, Vicenza, 1956, 79ff)

WORKS
all published in Venice

Concerti ecclesiastici ... a 1–5 voci (1637)
Musiche di Gaspare Filippi (1649), 17 Italian songs, 2–6vv; 12 madrigals, 5vv; 9 sonatas a 3, 4, 5
Sacrae laudes a 1 (1651)
Salmi verspertini a 2 chori (1653)
Messe a 2 chori (1653)
1 motet, 1645[3]

JEROME ROCHE

Filippini, Stefano [L'Argentina] (*b* Rimini, *c*1601; *d* Rimini, 4 Nov 1690). Italian composer. He was an Augustinian monk and a bachelor of arts. G.O. Pitoni (in *PitoniN* (i)) gave the date of his investiture as 1616 and said that he was *maestro di cappella* of S Stefano, Venice, in 1620 but no documentation exists to support this claim. There is also an attribution to Filippini of a motet by a C. Argentini in Lorenzo Calvi's *Symbolae diversorum musicorum* (RISM 1620[2]). Filippini served as *maestro di cappella* in a number of churches, according to Pitoni: at S Agostino, Rome, where he was established by 1643; at S Giovanni Evangelista, Rimini (1648–86); at the cathedrals of Ravenna (*c*1655) and San Marino (1675); and at churches in Forlì, Genoa and Montefiascone.

The first published works definitely by Filippini are three motets which appeared in collections of the 1640s; following these, over a period of more than 30 years, he published 12 volumes of polyphonic masses, psalms and motets, one of which is lost; their style is conservative, like that of most contemporary Bolognese sacred music.

WORKS
printed works published in Bologna unless otherwise stated

Concerti sacri ... libro primo, 2–5vv, op.2 (Ancona, 1652)
Salmi, 3–5vv, op.3 (Venice, 1655)
Salmi, 3vv, 2 vn, con il Dixit, e Magnificat, 5vv, op.4 (Venice, 1655)
[3] Messe, 3vv, op.5 (Rome, 1656)
Salmi per tutto l'anno, 5vv, org, op.6 (1670)

Motet, 5vv, *I-PAc*

ROSEMARY ROBERTS/R

Filipucci [Filipuzzi], **Agostino** (*b* Bologna, 16 June 1621; *d* Bologna, Dec 1679). Italian composer, organist and teacher. He trained for the priesthood and after his ordination he became organist of the church of the Madonna di Galliera, Bologna. In 1647 he was *maestro di cappella* of S Giovanni in Monte there. He was also a teacher of singing, counterpoint and the organ. He seems to have remained all his life in his native city, where he became an influential figure in musical circles. In 1666 he was a founder-member of the Accademia Filarmonica, to which he continued to give financial support; he was elected its president in 1669 and 1675. His known works are exclusively sacred and were evidently written for modest forces; in the dedication of his op.2 masses he indicated that the last three works in the collection were so arranged that, if no soprano were present, the top part might be sung an octave lower than written. He contributed two motets to collections by Marino Silvani of sacred works by Bolognese composers. He also composed an oratorio or 'drammetto', now lost, which was performed at the Oratorio di SS Sebastiano e Rocco, Bologna, in 1675.

WORKS

Messa e salmi per un vespro, 5vv, 2 vn, insts, op.1 (Bologna, 1665)
6 messe con una da morte nel fine, 4vv, op.2 (Bologna, 1667)
Messe e salmi, libro secondo, 4vv, op.3 (Bologna, 1671); lost, cited in *FétisB*
2 motets, 1, 3vv, bc, 1668[2], 1670[1]
Mass, 4vv, bc; Mag, 5–6vv; 3 motets, 1, 3vv, 2 vn, insts, org: *I-Baf**, *PAc*; orat, 1675, lost

Filitrani, Antonello. Italian musician. He was *maestro di cappella* of S Giovanni in Laterano, Rome, from mid-October 1630 to April 1649. He is not identifiable with ABUNDIO ANTONELLI.

Fill [fill-in]. A short, usually rhythmic figure played in jazz and popular music at points of melodic inactivity or stasis (between phrases, choruses or solos, or during a sustained note) by one or more members of an accompanying group. Usually such a figure lasts no more than a beat or two. In improvised jazz and styles of popular music such as rock, funk and soul, fills are usually rhythmic embellishments played by the drummer or by other members of the rhythm section, and this has been transferred to the electronic dance music of the 1980s and 90s. In music for large ensembles with more formal arrangements, fills are typically played by entire sections: in the opening of Woody Herman's *Four Brothers* (1947, Col.), for example, the brass play fills between the saxophone section's statements of the melody.

ROBERT WITMER/R

Fillago [Filago], **Carlo** (*b* Rovigo, *c*1586; *d* ? Venice, 1644). Italian composer and organist. He studied the organ with Luzzaschi. He was organist of Treviso Cathedral from December 1608 until 1623. In May of that year he won a

competition for the post of first organist at S Marco, Venice, and he remained in this position until his death. He was also, in succession to Cavalli, organist of SS Giovanni e Paolo, Venice, from 1631 until his death. He had already established a reputation at Treviso, which, however, led to friction with the choirmaster there, Amadio Freddi, since Fillago was given to playing virtuoso organ pieces without securing Freddi's permission. The outcome was that Freddi, deemed 'the true head of the music', had to approve the organ music. All of Fillago's published collections comprise solo motets and small-scale concertato church music of a type widely cultivated in north Italian churches at the time.

WORKS

all published in Venice

Motecta ... liber primus, 1–4vv (1611)
Sacrae cantiones, liber primus (1611)
Sacrarum cantionum, liber tertius, 2–6vv, bc (org) (1619)
Sacri concerti, 1v, bc, op.4 (1642)
4 motets, 1624[3]
2 madrigals, 2–3vv, 1624[11]

JEROME ROCHE

Filleborn, Daniel (*b* Warsaw, 7 Nov 1841; *d* Marcelin, 3 June 1904). Polish tenor. He studied with Quattrini in Warsaw, then with Lamperti in Milan. He made his début on 3 July 1862 at the Wielki Theatre in Warsaw in *Alessandro Stradella*. From 1865 he sang all the leading roles in Moniuszko's operas, and he was considered one of the finest interpreters of Jontek in *Halka*; he also won great acclaim as a lieder singer, and sang with Patti in St Petersburg and Moscow (1873–4). His voice was markedly lyrical and mellifluous, but he overstrained it when he transferred to baritone parts. He was forced by ill-health to retire prematurely, after a final appearance as Don Ottavio on 18 July 1882.

IRENA PONIATOWSKA

Fillmore, (James) Henry (*b* Cincinnati, 3 Dec 1881; *d* Miami, 7 Dec 1956). American composer, arranger, bandmaster and publisher. He graduated from the Miami Military Institute in 1901, studied briefly at the College of Music in Cincinnati and then worked as staff arranger and composer in his father's religious music publishing house, Fillmore Brothers (later Fillmore Music House). He first gained fame as a conductor with the Syrian Temple Shrine Band of Cincinnati (1921–6), which enjoyed a reputation as the United States's leading fraternal band, and then organized his own professional band; this gained considerable renown through its radio broadcasts. After 1938 he became an influential figure in the growth of school bands in Florida. He was president of the American Bandmasters Association from 1941 to 1946.

Fillmore composed at least 256 miniatures and arranged at least 774 others. He wrote under his own name and seven pseudonyms: Gus Beans, Harold Bennett, Ray Hall, Harry Hartley, Al Hayes, Will Huff and Henrietta Moore. Although known for his works for band, he also composed numerous pieces of church music, including hymns and children's cantatas. His most popular pieces are marches, such as *Americans We*, *Men of Ohio*, *His Honor*, *The Klaxon*, *Man of the Hour* and *Military Escort*, and trombone ragtime pieces ('smears') such as *Lassus Trombone*, *Miss Trombone* and *Shoutin' Liza Trombone*.

PAUL E. BIERLEY

Fillmore, John Comfort (*b* Franklin, CT, 4 Feb 1843; *d* Taftville, CT, 14 Aug 1898). American writer on music. He studied the organ at Oberlin College, then (1866–7) at Leipzig; he held appointments at Oberlin (1867–8), Ripon College, Wisconsin (1868–78), Milwaukee College for Women (1878–84), Milwaukee School of Music (1884–95) and Pomona College, California (1895). Fillmore was one of the first American writers to take a serious interest in the study of traditional (primarily Amerindian) musics. He believed that, according to the natural laws of physics and acoustics, the music of all cultures, like Western art music, has a harmonic basis in major and minor triads. Since few trained musicians shared his interest, his elaborate but misguided evolutionary scheme outlining the origin and development of all music received little criticism until after his death. Fillmore claimed to have transcribed many recordings collected by Alice Cunningham Fletcher, Franz Boas and others for their publications, but recent research does not corroborate this. His greatest contributions were his textbooks on Western music, which were widely read.

SUE CAROLE DEVALE/R

Filmer, Edward (*b* East Sutton, Kent, 1589 or 1590; *d* 1650). English amateur musician and music editor. He was the second son of Sir Edward Filmer of East Sutton, Kent (sheriff of Kent in 1615) and the younger brother of the royalist author Sir Robert Filmer, with whose son, Sir Edward (*d* 1668) he is sometime confused. Educated at Canterbury, he matriculated at Trinity College, Cambridge, in 1606 and at Gray's Inn in 1617. In 1629 he published an anthology of French *airs de cour* with English translations (similar to Robert Dowland's *A Musicall Banquet*, 1610).

On 13 March 1630 he was sworn 'An Esquire of His Majesty's Body', an unremunerated honorific. Filmer had dedicated his *French Court-aires* to Charles I's French queen, Henrietta Maria, but these events of 1629–39 notwithstanding, any further advancement at court eluded him. He appears to have led a retired life as an agent for his older brother, a resident of Maidstone and East Sutton, Kent and a minor landowner in that county until his death.

The Filmer collection of manuscript and printed music at Yale University (*US-NH*; see Ford) spans the 1570s through the 1740s but includes only a few materials from Edward Filmer's time, chiefly the first six volumes of Gabriel Bataille's *Airs de différents autheurs* (Paris, 1608–1615). The earlier layers of the first two manuscripts in the Filmer collection date from the period 1588–1605 and have no clear connections with the Filmer family, while the later layers, together with manuscripts 3–5, are largely the work of a professional musician perhaps associated with Sir Edward Filmer, the nephew, working between about 1635 and 1665. These include a dance entitled 'Sir E.F. his French Ayre'. The 1729 catalogue of books belonging to the 3rd Baronet Filmer, another Edward (*GB-MA* U120/Z4), mentions an 'Airs Nouveau 1608', probably identifiable as Jacques Mangeant's musical publication. A few of Filmer's *Court-aires* had figured in Mangeant's three collections of that year.

Filmer's *French Court-aires* contains 17 *airs de cour* by Pierre Guédron and two by Antoine Boësset, with translated texts; the French texts are given at the end of the volume. Most of the *airs* are known from prints published in Paris between 1608 and 1618; two had also appeared in *A Musicall Banquet*. The dedication implies that Henrietta Maria may have known or even sung the songs herself, but it is unlikely that Filmer's selection represented her preferences in 1629. In a long preface Filmer described the problems of scansion in translating the texts, noting that 'the French … led rather by their free Fant'sie of Aire …, do often … invert the natural stroke of a verse … [because of] … the Even pronunciation of their Tongue'. The musical style of most of the songs derives from their flexible rhythm; four are from *ballets de cour*, and three others are in dance-like rhythms. All are printed in the layout of earlier English publications, showing versions in parts, and for solo voice with lute tablature, on double pages. In France the latter versions were published separately, many of the lute parts being by Gabriel Bataille. There are some discrepancies between Filmer's versions and those in the French prints – often minor details in the tablatures – and in three songs the lute or voice parts (or both) conform more closely to the versions in parts than to the lute arrangements.

DAVID TILL/ROBERT FORD

Film music. Music composed, arranged, compiled or improvised to accompany motion pictures. In the sound cinema, music is recorded as a soundtrack on the film stock and reproduced in exact synchronization with the projected visual image. Film music falls into two broad categories: music contained within the action (known variously as diegetic, source, on-screen, intrinsic or realistic music), and background music amplifying the mood of the scene and/or explicating dramatic developments and aspects of character (termed extra-diegetic or extrinsic music, or underscoring). Both types are capable of generating continuity, narrative momentum and subliminal commentary, and the distinction between them has often been deliberately blurred by composers and directors for dramatic effect.

1. Music for silent films. Early cinematic presentations in the 1890s were an offshoot of vaudeville and show-booth melodrama and, as both entertainment and spectacle, tradition demanded from the outset that they be accompanied by music. In France, for example, Emile Reynaud's pioneering *Pantomimes lumineuses* (1892) were presented with original music by Gaston Paulin. As the craze for moving pictures spread, mechanical instruments initially predominated; these helped to drown projection noise and preserved a link with the fairground, but live music became quickly preferred as a better medium for humanizing the two-dimensional, monochrome and speechless moving image. Improvised accompaniments to silent films, at first provided by a pianist or reed-organ player, lent continuity to the succession of camera shots (the music being normally continuous from start to finish), supplied locational atmosphere and sound effects (sometimes with the aid of Kinematophone or Allefex machines), and furnished crude thematic signifiers of character traits along the well-established lines of 19th-century melodrama. The audience might be amused by appropriate references to hit songs and popular classics, and the musical style drew heavily on the idioms of Romantic opera and operetta; the use of Wagnerian leitmotifs as both narrative and structural device in early film music has persisted to the present day.

As movie theatres proliferated in the decade before World War I, musical accompaniments became more lavish and systematic. Resident instrumental ensembles and specialized cinema organs (notably the Wurlitzer and Kimball) supplanted the solo pianist, while a music director arranged appropriate repertory from (preferably non-copyright) classics and an increasing body of original compositions; passages of classical music might be linked by specially composed or improvised transitions. As early as 1909 Edison Pictures distributed cue sheets with their films to encourage the selection of appropriate musical numbers, and music publishers printed anthologies of

motion-picture music organized by mood or dramatic situation, to which the distributors' cue sheets made cross-reference: American pioneers of this approach were Max Winkler and John S. Zamecnik. Giuseppe Becce's *Kinothek* (= Kinobibliothek), published in Berlin in 1919, was a much imitated example, and Becce later collaborated with Hans Erdmann and Ludwig Brav to produce the encyclopedic *Allgemeines Handbuch der Filmmusik* in 1927. Several of the themes and techniques popularized by these anthologies became clichés that remain firmly in the popular imagination today, such as the use of diminished 7ths for villains, 'weepie' love themes on solo violin and the bridal march from Wagner's *Lohengrin* for wedding scenes. Live or recorded music was often performed on film sets during shooting to establish a specific mood to which the actors could respond, a procedure occasionally used by modern directors such as John Ford, Sergio Leone, Ken Russell and Peter Weir.

Original film scores were rare in the early years of silent cinema. In France, Saint-Saëns composed in 1908 a score for Henri Lavédan's *L'assassinat du duc de Guise*, which launched the highly theatrical style of *film d'art*. Pre-composed film scores became popular in the USA in the wake of the enormous success of D.W. Griffith's epic *The Birth of a Nation* (1915), which toured with its own orchestra performing a hybrid score (partly original, partly arranged from composers such as Grieg, Tchaikovsky and Wagner) compiled with the assistance of Joseph Carl Breil, who also collaborated with Griffith on *Intolerance* (1916). An entirely original score was supplied for *The Fall of a Nation* (1916) by Victor Herbert who, like some later commentators, objected to the use of pre-existing classical music on account of the potential distraction it offered to an audience familiar with the material. Other American composers of original scores included Ernö Rapée, Hugo Riesenfeld, Mortimer Wilson and Zamecnik – several of whom had been active as cue-sheet compilers. Important examples composed on the eve of the advent of sound films were Wilson's *The Thief of Bagdad* (1924) and Riesenfeld's *Beau Geste* (1926).

In France, Honegger composed music for Abel Gance's *La roue* (1922) and *Napoléon* (1927), and Milhaud scored Marcel L'Herbier's *L'inhumaine* (1924). In Germany, early scores included those by Joseph Weiss for *Der Student von Prag* and by Becce for *Richard Wagner* (both 1913), with many compilations undertaken by Becce, Erdmann and Friedrich Hollaender for the films of F.W. Murnau (including *Nosferatu*, 1922) and other directors. Gottfried Huppertz's original score for Fritz Lang's *Metropolis* (1926) was couched in a contemporary idiom and marked a stark contrast with the romantic clichés already overtaking the music for Hollywood films, while Edmund Meisel incorporated jazz elements in his music for Leonid Trauberg's *The Blue Express* (1929). Meisel achieved international fame with his music for Sergey Eisenstein's *The Battleship Potemkin* (1925), its modernistic idiom deemed sufficiently disturbing as to warrant suppression of the score in some countries, and his music for the same director's *October* and Walter Ruttmann's experimental documentary *Berlin: Symphony of a Great City* (both 1927). Film music in the Soviet Union was further advanced by Shostakovich, who gained valuable experience as a silent-cinema pianist and composed scores for *The New Babylon* (1929) and many early sound films; Kabalevsky also served as a silent-film accompanist. In this period, filmed segments with original music featured in innovative stage works by Satie (*Relâche*, 1924), Milhaud (*Christophe Colomb*, 1930) and Berg (*Lulu*, 1937).

Since the late 1970s, landmark scores for silent films have been reconstructed by scholars, notably Gillian Anderson and Dennis James, for live performance in conjunction with the images for which they were composed. New scores have also been commissioned (many by television and video companies) to accompany classics of the silent cinema; these include music by Carl Davis for *Napoléon* (1980), *The Thief of Bagdad* (1984), *Intolerance* (1986) and the 1925 *Ben-Hur* (1987), and scores by James Bernard, Jo van den Booren, Carmine Coppola, Adrian Johnston, Richard McLaughlin, Benedict Mason, David Newman and Wolfgang Thiele. In 1986–7 the veteran cinema organist Gaylord Carter recorded accompaniments for the video release of Paramount films from the 1920s.

2. Early sound films. Concern for the accurate synchronization of music and visual image increased during the 1920s. Devices designed to provide pre-set rhythmical cues to a conductor included Pierre de La Commune's *cinépupitre* (used by Honegger) and Carl Robert Blum's 'rhythmonome' (used in the staging of Krenek's opera *Jonny spielt auf* in 1927). Gramophone recordings intended for synchronization with the projector were drawn from sound libraries, supplementing printed cue sheets for live music. In 1926 William Axt and David Mendoza composed a score for the Warner Brothers picture *Don Juan*, recorded by the New York PO on the Vitaphone disc system, and Warner's commitment to disc-recorded soundtracks resulted in the first 'talkie': *The Jazz Singer* (1927), starring Al Jolson. The advent of the sound film brought with it the threat of unemployment for the many musicians who had established careers for themselves in cinema orchestras, and the novelty of the new medium temporarily put background scores out of fashion: music that appeared to emanate from the motion picture itself could be better justified if it were strictly diegetic in origin. In Hollywood, many early sound films included music only for opening and closing credits in addition to diegetic uses; as Max Steiner related, a violinist might be gratuitously included in the background of a love scene solely to justify the use of what would otherwise be invisible romantic underscoring.

An exception was the film musical, which grew out of the popularity of featured songs in dramatic films. *The Broadway Melody* (1929) and *Sunny Side Up* (1930) were among the first musicals composed specially for the screen, and within a few years choreographed routines had grown spectacular. Early highpoints were the work of Busby Berkeley (*Gold Diggers of 1933*), and Fred Astaire and Ginger Rogers, who filmed flamboyant interpretations of songs by Irving Berlin (*Top Hat*, 1935), Jerome Kern (*Swing Time*, 1936) and George Gershwin (*Shall we Dance*, 1937). After the success of *The Wizard of Oz* (1939), with songs by Harold Arlen and a score by Herbert Stothart, MGM produced lavish Technicolor musicals created by Vincente Minnelli and Gene Kelly, although examples specially written for the screen were rare after the mid-1950s when Broadway transfers became the norm.

The first sound films in Europe were Alfred Hitchcock's *Blackmail* (1929), which was intially shot as a silent then partly remade to include a synchronized score, and René Clair's *Sous les toits de Paris* (1929), both of which transferred the conventions of silent-cinema music more or less wholesale to the sound screen. More innovative were Milhaud's score for *Petite Lili* (1929) and Georges Auric's for Jean Cocteau's *Le sang d'un poète* (1931). In Germany, early pioneers of a creative use of original diegetic music were Friedrich Hollaender and Karol Rathaus, who scored *Der blaue Engel* (1930) and *The Brothers Karamazov* (1931) respectively. Wolfgang Zeller contributed a substantial through-composed score to Carl Dreyer's *Vampyr* in 1932. In the Soviet Union, early sound-film scores included Shostakovich's *Alone* (1930) and Prokofiev's *Lieutenant Kijé* (1933).

By the end of the 1920s new technology permitted sound to be recorded directly on to the celluloid strip carrying the visual image, and the Hollywood studios uniformly adopted the Western Electric process in 1930. Microphones were linked to either an oscillating lamp or a deflecting mirror in order to expose the soundtrack on film stock; during projection the soundtrack patterns were transformed into electric signals by a photo-electric cell. At first it was only possible for sound to be recorded simultaneously with the shooting of the visual image (with severe restrictions caused by inadequate microphones hidden on set and the need for the noisy cameras to be housed in sound-proof booths), but by the early 1930s sound could be dubbed after shooting, thereby opening up enormous creative potential. By the mid-1930s several tracks were available for the separate recording of dialogue, music and sound effects. Distortion was a serious problem when recording orchestral scores, and one reason why early soundtracks avoided complex textures and certain instruments; in Paris, the younger Adolphe Sax and Eric Sarnette developed special wind instruments with adjustable bells for studio recording, while Sarnette and Hanns Eisler abandoned string instruments. In the early 1930s the Germans Rudolph Pfenninger and Oscar Fischinger took the radical step of creating abstract musical tones with soundtrack patterns written by hand in an attempt to bypass the problems of recording fidelity and synchronization altogether, an experiment in 'animated sound' paralleled by inventors in the Soviet Union, England and elsewhere.

The potential for original extra-diegetic scores in dramatic pictures began to be realized in the USA as composers quickly developed a highly influential lingua franca of conventional orchestral film scoring. The idiom's firm roots in 19th-century Romanticism were perpetuated by many immigrant European composers steeped in the styles of Wagner, Strauss and French Impressionism. The Hollywood studios featured highly active music departments, and at first several composers collaborated on single scores as a team. The first individual composer to win renown for his creativity was Max Steiner, a Viennese émigré who arrived in Hollywood in 1929 after working on Broadway (a common career move in the early years of the Depression). Steiner's tentative score to *Symphony of Six Million* (1931) paved the way for his celebrated music for *King Kong* (1933). Traditionally viewed as the prototypical extra-diegetic score, *King Kong* featured a clear leitmotivic structure, illustrative music synchronized with specific on-screen activity, a degree of dissonance to suggest terror, and an intelligent use of silence to emphasize diegetic sound (notably in the climactic scene atop the Empire State Building, in which the sound of the biplanes' machine guns predominates). All these characteristics have remained central to mainstream film music.

3. Hollywood. The major Hollywood studios of the so-called Golden Age (*c*1935–55) were MGM, Paramount, RKO, Warner Brothers and 20th Century-Fox. Each housed a permanent music department, with contracted composers, arrangers, orchestrators, librarians and music editors, as well as a resident orchestra, all working under a senior music director. The heavy emphasis on commercially viable narrative films, and intense pressures on production staff to maintain a prolific output, inevitably led to stereotyped scoring in which the work of one composer was readily interchangeable with another's; many low-budget movies were 'tracked' with music from previous productions until this practice was prohibited in 1944. The majority of early composers shared Steiner's European and/or Broadway background, and moved with ease from high Romanticism to Gershwinesque symphonic jazz as required. Steiner won RKO an Academy Award for his score to *The Informer* in 1935; the best-score category had been introduced in the previous year, and for the first four years of its existence it was awarded to studio music departments, not composers. In his later music for romantic melodramas, including *Gone with the Wind* (1939), Steiner preserved a link with silent-cinema traditions by incorporating allusions to easily recognizable melodies such as Civil War songs and national anthems where dramatically justified. In *Casablanca* (1942) he transformed the diegetic popular song 'As Time Goes By' to provide narrative comment in the background score.

The conventions of the 'classical' Hollywood film score in the Golden Age – essentially a leitmotif-based symphonic romanticism with narrative orientation, the music almost always subordinated to the primacy of the visual image and dialogue – prevailed in scores by other expatriate musicians. Work for European immigrants was promoted by the European Film Fund (founded in 1939), an initiative followed by MGM and Warner Brothers. At Warner, the Viennese composer Erich Wolfgang Korngold provided flamboyant scores to the series of Errol Flynn costume dramas including *Captain Blood* (1935), *The Adventures of Robin Hood* (1938) and *The Sea Hawk* (1940), bringing the romantic-operatic style to its early highpoint. The German-born composer Franz Waxman developed a style of underscoring suited to the horror genre pioneered by Universal, where he was head of the music department, an early example being James Whale's *The Bride of Frankenstein* (1935); Waxman also exploited pre-existing musical structures such as fugue and passacaglia where these suited the narrative. The Hungarian composer Miklós Rózsa (who had worked for his compatriot, the producer Alexander Korda, in London before moving to Hollywood in 1939) and Dimitri Tiomkin (originally a silent-cinema pianist in Russia) both proved exceptionally versatile. Rózsa served as Professor of Film Music at the University of Southern California from 1945 to 1965, and his scores for epic productions in the 1950s were especially influential (see below). The success of Tiomkin's score to the western *High Noon* (1952) initiated a craze for the 'theme score', based largely on a main-title melody or song. Other

immigrant composers included Daniele Amfitheatrof, Adolph Deutsch, Ernest Gold, Werner Heymann, Friedrich Hollaender, Bronislaw Kaper and Cyril Mockridge; their American contemporaries included George Antheil (also an early film-music critic), David Buttolph, Hugo Friedhofer, John Green and Ray Heindorf (the two last specializing in musicals), Herbert Stothart and Victor Young.

The leading native American film composer in this period was Alfred Newman, another musician who had moved from Broadway to Hollywood. Newman was music director at 20th Century, for which he composed his famous fanfare in 1935, the year in which the company merged with Fox; he held the music directorship of 20th Century-Fox from 1939 until 1960. By his death in 1970 he had completed over 200 scores (of which the last was *Airport* in 1969) and received nine Academy Awards and 45 nominations. (The Newman family has remained prominent in Hollywood to this day: Lionel Newman was Alfred's brother, David and Thomas Newman are his sons and Randy Newman his nephew). In addition to his creative achievements, Newman was renowned as a sensitive music director and talent-spotter, and furthered the careers of young native talents such as David Raksin and Jerry Goldsmith. Raksin established his reputation with an inventive score to the unorthodox detective thriller *Laura* (1944), important equally for its near monothematicism (the main-title theme became a hit when lyrics were added by Johnny Mercer after the film's release), its subtle blurring of the distinction between diegetic and extra-diegetic music, and its canny blending of popular and art-music styles. In the wartime genre of *film noir* underscoring achieved a harmonic and textural sophistication (including novel instrumental colours and expressionistic dissonances) generally lacking in other genres. Fine examples were composed by Rózsa (*Double Indemnity*, 1944) and Roy Webb (*Farewell my Lovely*, 1944; *The Spiral Staircase*, 1945).

Copland's film scores – including *Of Mice and Men* and *Our Town* (both 1940), *The Red Pony* and *The Heiress* (both 1949) – encouraged American composers to explore a new clarity of texture and simple diatonicism. The strong flavour of American folk music in this style, which extends back to Virgil Thomson's score for the Depression documentary *The Plow that Broke the Plains* (1936) and was later represented by Friedhofer's to *The Best Years of our Lives* (1946), made it well suited to rural or western scenarios; it had a significant impact on scores for the latter genre composed by Jerome Moross, whose music for *The Big Country* (1958) was widely imitated, and Elmer Bernstein (*The Magnificent Seven*, 1960; *True Grit*, 1969). Bernstein's work in the 1950s often favoured smaller instrumental ensembles than the traditional studio orchestras, and his output has remained prolific and varied.

Dissonant modernism came to the fore in a high-profile score by Leonard Bernstein (*On the Waterfront*, 1954) and in Leonard Rosenman's partly atonal music for the James Dean vehicles *East of Eden* and *Rebel without a Cause* (both 1955), strongly influenced by Berg and the Second Viennese School; the gritty realism of the director Elia Kazan stimulated this trend. Serial techniques were occasionally employed: examples include Rosenman's *The Cobweb* (1955) and *Fantastic Voyage* (1966), Rózsa's portrayal of Satanic elements in *King of Kings* (1961) and Jerry Fielding's *Straw Dogs* (1971). The career of Bernard Herrmann, who provided critically acclaimed scores for the directors Orson Welles (*Citizen Kane*, 1941; *The Magnificent Ambersons*, 1942), Alfred Hitchcock (*Vertigo*, 1958; *North by Northwest*, 1959; *Psycho*, 1960), François Truffaut (see §4) and Martin Scorsese (*Taxi Driver*, 1976), set a new standard in essentially non-thematic but highly atmospheric and economical underscoring, with dissonant harmonies, resourceful instrumentation and often disquieting ostinato figurations.

In the field of animation, film scores quickly achieved a formidable virtuosity. The Disney studio, founded in 1923, added a soundtrack to *Steamboat Willie* in 1928, promoted the hit song 'Who's Afraid of the Big, Bad Wolf?' in *The Three Little Pigs* (1933) and thereafter specialized in comic shorts and full-length animated musicals, the first of which was *Snow White and the Seven Dwarfs* (1937), with music by Frank Churchill. *Fantasia* (1940) comprised inventive and witty scenes cut to famous pieces of classical music conducted by Stokowski. Eisenstein admired Disney's work for its close integration of image and music, and the term 'mickey-mousing' (i.e. musical effects directly synchronized with, and illustrative of, specific actions on screen) was adopted in live-action cinema, where it had proved especially appropriate in slapstick comedy. At Warner Brothers, Carl Stalling composed for the Bugs Bunny series between 1936 and 1958, while at MGM in the same period Scott Bradley wrote witty, jazz-inflected music for the Tom and Jerry cartoons; his score to *The Cat that Hated People* (1947) used a 12-note row with its retrograde to represent the antics of cat and mouse, while *The Cat Concerto* of the same year was cunningly cut to an adaptation of Liszt's Hungarian Rhapsody no.2. Established Hollywood film composers who contributed to full-length animated features include Raksin (*The Unicorn in the Garden*, 1953), Rosenman (*The Lord of the Rings*, 1978) and Hans Zimmer (*The Lion King*, 1993), while Disney's musicals have since 1989 been dominated by the work of Alan Menken.

The boom in television viewing in the 1950s threatened to diminish cinema audiences, who were lured into movie theatres by new gimmicks such as widescreen and 3-D presentation. Four-track stereophonic sound was introduced in the first CinemaScope production, *The Robe* (1953), with a score by Alfred Newman; alongside the greater flexibility of editing techniques made possible by the introduction of soundtrack recording on 35 mm magnetic tape in 1950, the increase in audio quality was significant. Lavish historical epics were ideal for the grandeur of widescreen presentation, and commanded budgets of which television companies could only dream. For these, Rózsa developed a manner of underscoring which drew heavily on organum techniques and quartal harmony to create a pseudo-archaic style, backed up by careful historical research, for the Roman epics *Quo vadis?* (1951), *Julius Caesar* (1953) and *Ben-Hur* (1959), and the Spanish epic *El Cid* (1961); composers influenced by this style included Alex North (*Spartacus*, 1960; *Cleopatra*, 1963).

Increasing competition from television, coupled with the demise of the permanent studio orchestras precipitated by a damaging musicians' union strike in 1958, made the survival of mainstream Hollywood scoring in the 1960s

less than certain: commercially targeted youth audiences ensured that jazz (see §5), electronic scores (see §6) and pop music (see §7) came to dominate the market. However, the success of full-blooded orchestral scores by composers such as Jerry Goldsmith (*The Blue Max*, 1966; *The Omen*, 1976; *Star Trek: the Motion Picture*, 1979) and John Williams (*Jaws*, 1975; *Star Wars*, 1977; *Raiders of the Lost Ark*, 1981; *E.T.*, 1982) steadily steered film music back towards its traditional symphonic realm. A fluid balance between lyrical and dissonant orchestral scoring, jazz, electronics, popular song and non-Western or traditional music, and rock-tinged percussiveness prevails in the work of contemporary Hollywood composers such as Carter Burwell, Bill Conti, Randy Edelman, Cliff Eidelman, Danny Elfman, Elliot Goldenthal, Dave Grusin, James Horner, James Newton Howard, Mark Isham, Michael Kamen, Thomas Newman, Basil Poledouris, Graeme Revell, Marc Shaiman, Howard Shore, Alan Silvestri and Hans Zimmer. More exceptional have been the extended minimalist soundtracks supplied by Philip Glass for the non-narrative films *Koyaanisqatsi* (1983) and *Powaqqatsi* (1988), although his music for *The Secret Agent* (1996) revealed a grasp of more conventional expressive techniques.

4. Developments outside the USA. Film music in Europe from the outset included a substantial body of work by established composers of concert music who, in collaboration with sympathetic directors, at times showed a greater inclination towards experimentation than their Hollywood counterparts. In France, Honegger followed up his work with Gance to compose scores for *Les misérables* (1934), *Crime et châtiment* (1935), *Mayerling* (1936) and the Oscar-winning British production of *Pygmalion* (1938). Maurice Jaubert worked with the directors Jean Vigo (*Zéro de conduite*, 1933) and Marcel Carné (*Le jour se lève*, 1939), while the Hungarian composer Joseph Kosma collaborated with Jean Renoir (*Une partie de campagne*, 1936; *Le déjeuner sur l'herbe*, 1959). Jacques Ibert, a former silent-cinema pianist, composed scores for G.W. Pabst's *Don Quichotte* (1933) and Orson Welles's *Macbeth* (1948). Auric's films included Clair's *A nous la liberté* (1932) and Cocteau's *La belle et la bête* (1946) and *Orphée* (1949), and several English-language productions, notably the Ealing comedies *Passport to Pimlico* (1949) and *The Lavender Hill Mob* (1951), and *The Innocents* (1961).

British composers wrote extensively for the enterprising documentary movement in the 1930s, starting with Clarence Raybould's scores for Paul Rotha's *Rising Tide* and *Contact* in 1933, Walter Leigh's for Basil Wright's *The Song of Ceylon* (1934) and Britten's for the General Post Office Film Unit, including *Coal Face* and *Night Mail* (1935–6, in collaboration with W.H. Auden, Alberto Cavalcanti and John Grierson). Wartime documentary and semi-documentary films (mostly produced by the Crown Film Unit) included scores by William Alwyn (among them the Oscar-winning *Desert Victory*, 1943), Alan Rawsthorne (*Burma Victory*, 1945) and Ralph Vaughan Williams (*49th Parallel*, 1941; *Coastal Command*, 1942). Concert composers were also active in feature films: Korda's *Things to Come* (1935) featured a score by Bliss that became popular in a concert suite, as did Walton's music for *The First of the Few* (1942) and for Laurence Olivier's Shakespeare series (*Henry V*, 1944; *Hamlet*, 1948; *Richard III*, 1955), as well as Vaughan Williams's for *Scott of the Antarctic* (1948), which he reworked as his *Sinfonia antartica*. Other British composers active in the cinema included Richard Addinsell, John Addison, Arnold Bax, Arthur Benjamin, Richard Rodney Bennett, Walter Goehr, Eugene Goossens, John Ireland and Elisabeth Lutyens; especially prolific were Alwyn and Malcolm Arnold. Several British scores achieved international prominence by winning Academy Awards, including Brian Easdale's *The Red Shoes* (1948) and Arnold's *The Bridge on the River Kwai* (1957). Mátyás Seiber specialized in music for cartoons, and composed a score for *Animal Farm* (1955), the first feature-length British animation.

The style of British film music has generally paralleled Hollywood techniques, with local colour provided by pastoral modality and (until the 1970s) a rousing patriotism typified by the war-movie style established by Ron Goodwin (*633 Squadron*, 1964; *Where Eagles Dare*, 1969). A brief spell of neo-realism in the late 1950s fizzled out in the mid-1960s as the lucrative James Bond series encouraged a significant injection of Hollywood funding into British productions, with concomitant restrictions on musical style that persist today. Since the 1980s the most fruitful composer-director collaborations have been those between George Fenton and Richard Attenborough, Patrick Doyle and Kenneth Branagh, and Michael Nyman and Peter Greenaway. Certain composers, most prominently John Barry and Fenton, have worked extensively in Hollywood; Fenton, however, is equally notable for his loyalty to the independent director Ken Loach.

World War II drastically affected the artistic development of cinema in mainland Europe. German film production was severely restricted by the Nazi party, although Leni Riefenstahl's *Olympia* (1938, with music by Herbert Windt) fulfilled its remit with creative flair. For political reasons German film music now avoided the earlier expressionistic experimentation of Hindemith's *Vormittagspuk* (1929), Zeller's *Vampyr* (1932) and Eisler's scores to *Kühle Wampe* (1932) and the Dutch documentary *Zuiderzee* (New Earth, 1934), the latter juxtaposing jazz and mechanical sound effects. It was not until the 1950s that mainland European cinema began to explore new avenues.

French film makers of the *nouvelle vague* took the lead in developing non-narrative cinema, a radical departure from Hollywood precedent in which the artificiality of cinematic technique was emphasized, in contrast to the 'transparent' mechanisms of the Hollywood narrative film, and the director was viewed as an omnipresent *auteur* who might promote music to the forefront of the production or abandon it altogether. François Truffaut commissioned scores from Herrmann for *Fahrenheit 451* (1966) and *The Bride Wore Black* (*La mariée était en noir*, 1968). More radical was Jean-Luc Godard, who for *Vivre sa vie* (1962) requested a theme and variations from Michel Legrand and cut the score so heavily as to leave almost no extra-diegetic music in the soundtrack. This stark economy proved to be influential, as did Godard's manipulation of diegetic music (mostly recorded live on set); these techniques were furthered by his dismembering of Antoine Duhamel's score in *Pierrot le fou* (1965), of which parts of the soundtrack were established in advance of the editing of the image track. Like Truffaut, the director Claude Chabrol was influenced by the work of Hitchcock; his longstanding collaboration with Pierre

Jansen elicited music with economical chamber textures, at times verging on atonality (e.g. *La rupture*, 1970). Alain Resnais attempted (without success) to coax film scores from Messiaen and Dallapiccola, and worked with Hans Werner Henze on *Muriel* (1963). Georges Delerue provided music for Truffaut (*Jules et Jim*, 1962), Resnais (*Hiroshima mon amour*, 1959, with Giovanni Fusco) and Godard (*Le mépris*, 1963), but since winning an Academy Award in 1979 has worked in Hollywood. Other French composers who have worked with equal success on both sides of the Atlantic, and shown themselves adept in more popular styles, include Maurice Jarre, Francis Lai, Jean-Claude Petit, Philippe Sarde and the Lebanese-born Gabriel Yared.

After a slow start, cinema in Italy was fostered by the personal interest of Mussolini and became so prosperous, star-orientated and artistically limited that in the early 1940s a rebellious 'neo-realism' (including improvised dialogue and amateur actors) was proposed by the writers Cesare Zavattini and Umberto Barbaro. Related to trends in French cinema, Italian neo-realism was bleaker in mood, and was promoted by the early work of the directors Luchino Visconti, Roberto Rossellini and Vittorio De Sica. Two of Rossellini's protégés, Michelangelo Antonioni and Federico Fellini, developed more personal realist styles in which music played a vital role. Fellini's collaboration with Nino Rota remains one of the most celebrated composer-director alliances in cinema history, and is well represented by *8½* (1963), *Giulietta degli spiriti* (1965), *Amarcord* (1974) and *Casanova* (1976). Rota also provided scores for Franco Zeffirelli's Shakespeare adaptations, *The Taming of the Shrew* (1967) and *Romeo and Juliet* (1968). Rota's highly melodic style, tinged with nostalgia, a subtle distortion of popular idioms and strong echoes of the Italian operatic tradition, proved to be a perfect match for the first two instalments of Francis Ford Coppola's *Godfather* trilogy (1972 and 1974).

The collaboration between Sergio Leone and Ennio Morricone came to international attention with the 'spaghetti western' trilogy *A Fistful of Dollars* (1964), *For a Few Dollars More* (1965) and *The Good, The Bad and the Ugly* (1966), in which tense, pop-tinged and motivically obsessive music dominated the montage at climactic moments. Leone's respect for Morricone's contribution to the aesthetic impact of his films resulted in the score of *Once upon a Time in the West* (1969) being composed in advance of shooting (an exceptionally rare procedure): the music was played to the actors on set to establish the appropriate moods. Typical of Morricone's inventive orchestration is an emphasis on guitar (both acoustic and electric), unorthodox percussion and the evocative sonority of the panpipes, which he employed in *Casualties of War* (1989) – one of a long line of Hollywood successes including *Once upon a Time in America* (Leone, 1984), for which music was again composed in advance of shooting – and his much imitated score to *The Mission* (1986). Other noted Italian film composers include Alessandro Cicognini, Giovanni Fusco, Mario Nascimbene and the Argentine-born Luis Enriquez Bacalov, who has worked in Italy since 1959: highlights of his career include music for many spaghetti westerns and for Pier Paolo Pasolini's *The Gospel according to St Matthew* (1964), and an Oscar-winning score to *Il postino* (1994).

In eastern Europe, Václav Trojan's music for the animated films of Czech director Jiří Trnka from the late 1940s benefited from significant creative input from the director. In Poland, Roman Polanski's early work featured abstract jazz (see §5). Wojciech Kilar worked locally for the directors Andrzej Wajda and Krzysztof Zanussi before achieving international success with his score for *Bram Stoker's Dracula* (1992), its style reminiscent of Lutosławski's early orchestral works; Kilar also provided scores for Polanski's *Death and the Maiden* (1995) and Jane Campion's *The Portrait of a Lady* (1996). The highest-profile Polish collaboration in the 1990s was that between Zbigniew Preisner and Krzysztof Kieslowski, the former providing music for *La double vie de Véronique* (1991) and the trilogy *Trois couleurs* (1993–4). In a broadly similar fashion to Indian cinema (see below), a reliance on choreographed musical numbers may be seen in Greek films of the 1960s and 70s (especially comedies), in which indigenous song and dance formed a vibrant element in the production; Greek folksong colours the film music of Mikis Theodorakis (famously in the British production *Zorba the Greek*, 1964), while more sombre traces of Greek folk music are to be heard in film scores by Eleni Karaindrou, including several for films by Theo Angelopoulos.

Outside Europe few countries initially escaped the influence of Hollywood productions, and early film-making in Latin America, Australia and North Africa produced pale imitations of American genres, chiefly westerns. Early Chinese cinema was partly backed by American funding, while Indian silent films were monopolized by the British. From the advent of sound in 1931, Indian cinema has consistently employed elements of traditional song and dance as a commercial attraction, even in violent action films, and synthetic styles blending Asian and Western techniques became highly marketable as indigenous popular music in their own right (*see* INDIA, §VIII, 1); the director Satyajit Ray, however, employed the *sitār* player Ravi Shankar to provide prominent improvised scores for his 'Apu trilogy' (*Pather Panchali*, 1955; *Aparajito*, 1957; *The World of Apu*, 1959). Since the mid-1960s many Chinese films have blended Eastern and Western elements in a fashion broadly analogous to Indian film music. The two countries that proved most resistant to Hollywood influences were the Soviet Union and Japan.

Early cinema in the Soviet Union benefited from the extensive involvement of Yury Shaporin, Kabalevsky, Shostakovich and Prokofiev. Shaporin's score to Vsevolod Pudovkin's *Deserter* (1933) was designed not as an illustrative accompaniment but to prolong emotional states even where these appeared to be contradicted by the visual image. Prokofiev collaborated with Eisenstein on the anti-Nazi epic *Aleksandr Nevsky* (1938, the year in which most Soviet cinemas acquired sound) and the two parts of *Ivan the Terrible* (1944 and 1946). Both Eisenstein and Prokofiev had experienced Hollywood production methods at first hand. In *Nevsky*, Prokofiev experimented with novel recording techniques (encouraging distortion when recording Teutonic trumpet fanfares, for example, to create a disturbing effect), and Eisenstein claimed that the 'moving graphic outlines' of the composer's musical ideas were inextricably linked with precise visual details. The director's famous 'audiovisual score' of a segment from the film (published in his

book *The Film Sense*; see illustration) attempted to demonstrate this, but his arguments have been widely discredited owing to their false assumptions of comparability between temporal and spatial dimensions. Nevertheless, Eisenstein's willingness to treat film music as a vital part of an indivisible aesthetic whole remained, until comparatively recently, one of the few positive attitudes towards the creative role of music in film montage. The stranglehold of Stalin's propaganda machine inevitably prevented continuing innovation in Soviet cinema, although major scores for propaganda films were composed by Shostakovich (*The Fall of Berlin*, 1949) and Khachaturian (*The Battle of Stalingrad*, 1949), while Shostakovich later provided music for *The Unforgettable Year 1919* (1951), *The Gadfly* (1955), *Hamlet* (1964) and *King Lear* (1970).

From its birth, Japanese cinema promoted links with the popular *kabuki* theatre and more esoteric *nō* plays. Silent films were narrated by *benshi*, who sat to one side of the screen and delivered their recitation with musical accompaniment, much in the manner of stage presentation used in *kabuki* and the puppet theatre *bunraku*. A lacuna in film production after the 1923 earthquake was filled by imported movies, which inspired a rash of domestic dramas; sound arrived in 1931, but six years later state censorship severely affected production. Early films with a period setting by Akira Kurosawa were banned by the Allied occupying forces after the end of World War II, but he placed Japanese cinema on the international map with the success of his Oscar-winning *Rashōmon* (1950), a highly stylized period mystery with an impressionistic, and disconcertingly westernized, score by Fumio Hayasaka. Hayasaka composed music for Kenji Mizoguchi's acclaimed *Ugetsu* in 1953, and provided a martial score for Kurosawa's *The Seven Samurai* (1954), which was partly inspired by John Ford's westerns and later remade in Hollywood as *The Magnificent Seven* (1960); a further link with the Wild West was created by *Yojimbo* (1963), with music by Matsuru Sato, which influenced the spaghetti westerns of Leone. The bittersweet flavour of Ysujirō Ozu's minimalist family dramas was reflected in their music tracks (e.g. *Tokyo Story*, 1953; music by Kojun Saito), and Western leitmotivic techniques were fully absorbed by Sato in his music for Kurosawa's *Sanjuro* (1962). The Japanese composer with the highest international profile in the cinema was Tōru Takemitsu, whose film career began with *Kurutta kajitsu* (1956); his leanings towards the Western avantgarde were demonstrated in his score to Hiroshi Teshigahara's *The Woman of the Dunes* (1964), while his evocative music for Kurosawa's *Ran* (1985) combined traditional Japanese instrumentation with elegiac orchestral writing reminiscent of Mahler and Berg. Scoring nearly 100 films, Takemitsu occasionally worked for Hollywood productions, including the thriller *Rising Sun* (1993). Other Japanese film composers of note are Akira Ifukube, Shin'ichiro Ikebe, Yoko Kanno, Ryuichi Sakamoto and Stomu Yamash'ta.

5. Jazz in the cinema. Jazz in the early sound cinema, and for several decades into the Hollywood Golden Age, was almost exclusively diegetic. Star performers made appearances on screen, as did Duke Ellington in *Black and Tan* and Bessie Smith in the all-black drama *St Louis Blues* (both 1929), but the tendency to restrict jazz to self-contained musical numbers in feature films facilitated the excision of any scenes featuring black performers when this was required by the sensibilities of white audiences in the USA. The growth in the production of musicals, and an awareness that big names from the jazz world could provide a significant box-office attraction, secured film work for many jazz performers in the 1930s. Cartoons proved amenable to accompaniment by music in various jazz styles, especially in the 1940s, while (according to Rózsa) easy-going symphonic jazz became explicitly associated with sophisticated urban settings – chiefly New York – in live-action cinema. Jazz performances were preserved as 'shorts', production of which flourished from as early as 1927: celebrated examples include *Rhapsody in Black and Blue* (1932), starring Louis Armstrong, *Symphony in Black* (1935), featuring Ellington and Billie Holiday, and the star-studded *Jammin' the Blues*, which

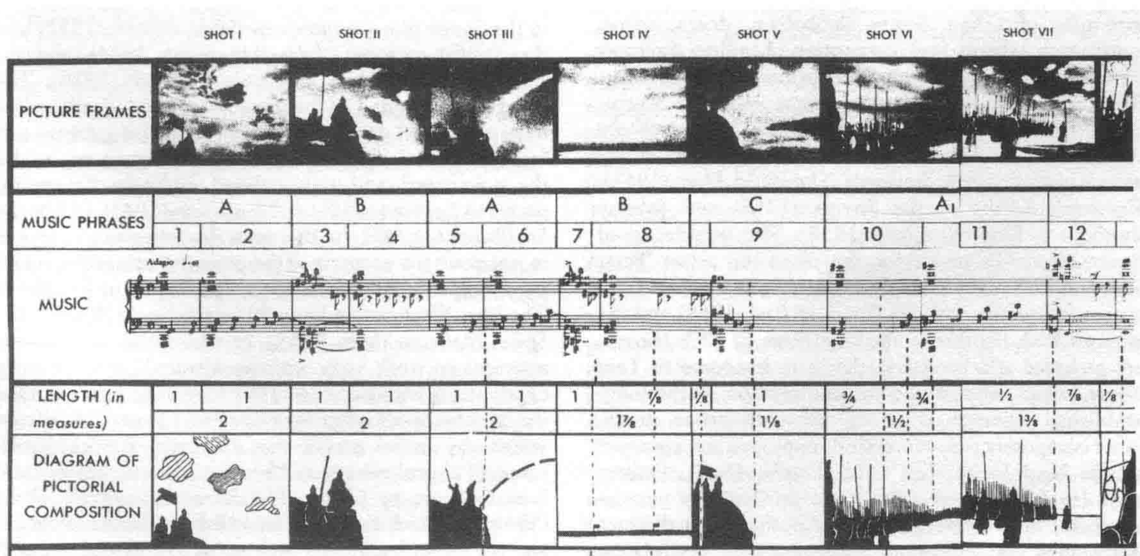

Diagram of visual and musical co-ordination in the sequence 'Dawn of Anxious Waiting' from Eisenstein's film 'Aleksandr Nevsky' (1938)

received an Oscar nomination in 1944. In 1940–47, numerous three-minute 'soundies' were shot for reproduction on optical jukeboxes by the RCM Corporation in the USA.

Biopics devoted to celebrated performers either featured the musicians themselves, as in the notorious Paul Whiteman portrait *The King of Jazz* (1930) and *The Fabulous Dorseys* (1947), or legendary players were impersonated by stars such as Robert Alda (as Gershwin in *Rhapsody in Blue*, 1945), James Stewart (*The Glenn Miller Story*, 1954), Steve Allen (*The Benny Goodman Story*, 1954), Nat 'King' Cole (as W.C. Handy in *St Louis Blues*, 1958), Sal Mineo (*The Gene Krupa Story*, 1959) and Diana Ross (as Holiday in *Lady Sings the Blues*, 1972). Clint Eastwood's *Bird* (1988), in which Forest Whitaker starred as Charlie Parker, used Parker's original recordings as the basis for its largely diegetic music track. Jazz naturally featured prominently as source music in pictures narrating the exploits of fictional jazz musicians, such as *The Crimson Canary* (1945) and *Young Man with a Horn* (1949); others include *A Man Called Adam* and *Sweet Love Bitter* (both 1966), *New York, New York* (1977), *The Cotton Club* (1984), *Round Midnight* (1986, featuring Dexter Gordon as an anti-hero based on the characters of Bud Powell and Lester Young, together with an Oscar-winning score by Herbie Hancock), *The Fabulous Baker Boys* (1989), *Mo' Better Blues* (1990) and *Kansas City* (1995).

The close identification between jazz and low-life, already established in the silent cinema, persisted when jazz first became a creative element in background scoring, chiefly in heavily jazz-inflected symphonic scores – many produced during the gradual collapse of the Hollywood studio system in the 1950s. A jazz flavour had already surfaced sporadically in scores by Antheil (*The Plainsman*, 1937), Raksin (*Force of Evil*, 1948) and Alfred Newman (*Pinky*, 1949; *Panic in the Streets*, 1950), but it was North's sultry score to *A Streetcar Named Desire* (1951) that paved the way for a more suggestive use of jazz underscoring. North's music and its many imitations promoted an implicit link between jazz idioms and the symptoms of urban decay: alcoholism, drugs, crime, prostitution, sleaze and corruption. Leading directors who favoured the idiom were Kazan and Otto Preminger. Elmer Bernstein contributed a jazzy score to the controversial study of heroin addiction, *The Man with the Golden Arm* (1955), and other jazz-tinged scores in this period include Leith Stevens's *The Wild One* (1953), Waxman's *Crime in the Streets* (1956) and Johnny Mandel's *I Want to Live!* (1958). The popularity of Henry Mancini's music for the television series 'Peter Gunn' in 1958 was a further stimulus; Mancini's best-known film scores include *Touch of Evil* (1958) and the series of 'Pink Panther' comedy thrillers. In 1976 Herrmann included a searing jazz theme in his score to *Taxi Driver*, which represented the culmination of the long-established tradition equating jazz with urban decay. Other composers who successfully exploited jazz elements include Neal Hefti (*The Odd Couple*, 1967), Quincy Jones (*In Cold Blood*, 1967) and third-stream pioneer Lalo Schifrin (*Bullitt*, 1968). Only in the 1980s did jazz partly shed its traditional suggestions of insalubrity: respected as a viable art form, it could now be associated with images of wealth and refinement.

Two influential film scores were recorded by American jazz musicians for French-language films in 1957. In Paris, Miles Davis improvised a soundtrack to Louis Malle's thriller *L'ascenseur pour l'échafaud* which looks forward in style to the modal jazz Davis was to pioneer soon afterwards. John Lewis and his Modern Jazz Quartet provided a score for Roger Vadim's *Sait-on jamais* which, in contrast, makes full use of pre-composed structures and neo-Baroque counterpoint. Both musicians went on to produce other notable film scores, Lewis scoring *Odds against Tomorrow* (1959) and Davis contributing music to the boxing epic *Jack Johnson* (1970). Prominent jazz musicians who produced original scores for the cinema include Ellington (*Anatomy of a Murder*, 1959; *Paris Blues*, 1961), Charles Mingus (*Shadows*, 1959), Hancock (*Blow-Up*, 1966; *Death Wish*, 1974), Oscar Peterson (*The Silent Partner*, 1978), Pat Metheny and Lyle Mays (*The Falcon and the Snowman*, 1984) and John Lurie (notably for the work of Jim Jarmusch in the late 1980s).

Jazz scores in British films include Chris Barber's music to *Look Back in Anger* (1959), John Dankworth's to *The Servant* (1963), Sonny Rollins's guest appearance on the soundtrack of *Alfie* (1966) and scores by Allyn Ferguson and Johnny Hawksworth. After the novelty of Davis's improvised music for *L'ascenseur pour l'échafaud*, jazz in the cinema of mainland Europe tended towards abstraction: a representative example is the work of the Polish pianist Krzysztof Komeda for the early films of Polanski. In France, jazz music tracks have included the work of Claude Bolling, André Hodeir, Hubert Rostaing and Stephane Grappelli, and, in Scandinavia, that of the Danish violinist Svend Asmussen and others.

6. Electronics. From the early 1930s directors and composers experimented with electronically modified recording techniques and electronic instruments in order to expand the range of sonorities at their disposal. In 1931 Rouben Mamoulian used a mixture of graphically animated sound (painted on the soundtrack) and modified recordings of heartbeats and percussion instruments in *Dr Jekyll and Mr Hyde*. Early electronic keyboard instruments included the ondes martenot, which featured in the Soviet film *Counterplan* (Shostakovich, 1932) and the pacifist cartoon *L'idée* (Honegger, 1934), and the theremin, invented in Russia in the early 1920s. The otherworldly sound of the theremin proved ideally suited to supernatural or psychologically disturbing scenes and featured prominently in a number of *films noirs*, as did the novachord and an amplified violin in Waxman's scores to *Rebecca* (1940) and *Suspicion* (1941). In Rózsa's *Spellbound* (1945) the theremin draws attention to key moments in the progress of the protagonist's amnesia and paranoia; it is associated with dipsomania in Tiomkin's *The Lost Weekend* and mental instability in Webb's *The Spiral Staircase* (both 1945). In addition to the various attempts to work with 'animated sound', notable early experiments with electronically processed sound included the modified piano chords in Raksin's *Laura* (1944), from which the initial attack was removed, Amfitheatrof's reversed choral effects in *The Lost Moment* (1947) and Rózsa's score to Lang's *The Secret beyond the Door* (1948), in which a cue was recorded as a strict retrograde and the recording played backwards to create an indefinably disturbing effect. Interest in electronic sonorities was so widespread in the 1940s that in 1946 Ivor Darreg

declared: 'The day will come when the film without electronic music will be as out of date as the silents'.

Herrmann employed creative multi-tracking and animated sound for the Satanic elements in *The Devil and Daniel Webster* (1941) and included two theremins, electric organs and amplified string instruments to suggest an alien sound world in *The Day the Earth Stood Still* (1951). The apparently perfect match between electronic sonorities and extra-terrestrial activity was cemented by the growth of science-fiction movies, and the 'electronic tonalities' produced by Louis and Bebe Barron for *Forbidden Planet* in 1956 were enormously influential in this genre until John Williams's unashamedly symphonic score to *Star Wars* halted the trend in 1977. In other genres, too, electronic elements increased – to the extent that Herrmann's screeching strings accompanying the shower scene in Hitchcock's *Psycho* (1960) were erroneously thought by some commentators to have been electronically generated. In *The Birds* (1963) Herrmann acted as Hitchcock's 'sound consultant' to advise Remi Gassmann and Oskar Sala on their novel soundtrack processed exclusively from bird calls; Herrmann's score to *Sisters* (1972) included a Moog synthesizer. Synthesized sound featured in *A Clockwork Orange* (1971), and the first Academy Award won by an electronic score went to Giorgio Moroder for *Midnight Express* (1978). Synthesizers provided the director-composer John Carpenter with a low-budget means of creating his much imitated music tracks for *Halloween* (1978) and similar shockers.

The early 1980s saw a boom in more popularly orientated electronic scores, by the likes of Vangelis (*Chariots of Fire*, 1981) and Tangerine Dream (*Sorcerer*, 1977; *Thief*, 1981), and synthesized scores by Howard Shore (*Videodrome*, 1983), Goldsmith (*Runaway*, 1985; *Criminal Law*, 1988), Maurice Jarre (who had introduced American filmgoers to the ondes martenot in *Lawrence of Arabia* in 1962, and whose later electronic scores include *Fatal Attraction*, 1987), Mancini and many others. Most of today's film composers are equally proficient in electronic techniques and conventional orchestral scoring, often combining both media to effect in a single project: a representative example is Fenton's eclectic score to *The Company of Wolves* (1984).

7. Popular and classical music. The use of popular music as a box-office attraction dates from the very start of sound cinema, when *The Jazz Singer* was followed by a rash of formulaic Hollywood musicals in the 1930s. 'Backstage musicals' presented a glamorous image of the entertainment industry, and capitalized on the inherent need for popular music to be concerned primarily with romantic love and supported by spectacle and choreography. The musicals produced by RKO in the 1930s and by MGM in the two subsequent decades (see §2) were essentially an extension of Tin Pan Alley and Broadway, with commercial interests directly linked to radio, theatre and the recording industry. In other film genres, the commercial potential of a hit 'theme tune' was evident from the success of scores such as *Laura* (1944) and *High Noon* (1952), an approach maintained in later romantic theme-scores, including Mancini's *Breakfast at Tiffany's* (1961), Jarre's *Doctor Zhivago* (1965), Legrand's *Summer of '42* (1971) and Marvin Hamlisch's *The Way we Were* (1973).

Rock and roll hit the big screen in *The Blackboard Jungle* (1955), featuring Bill Haley's 'Rock around the Clock', which paved the way for the hysterical response on both sides of the Atlantic to the follow-up Haley vehicle, *Rock around the Clock* (1956). These successes led to a fashion for 'teen-pics', and established the youth-orientated commercial outlook still prevalent in mainstream cinema today. In the USA, the wide exposure of Elvis Presley in *Love me Tender* (1956), *Loving You* and *Jailhouse Rock* (both 1957) was paralleled in Britain by that of Cliff Richard in *Expresso Bongo* (1959), *The Young Ones* (1961) and *Summer Holiday* (1963), while *Black Orpheus* (1958) helped initiate the bossa nova boom of the early 1960s. All were eclipsed by the international success attained by the Beatles in *A Hard Day's Night* (1964), which absorbed the techniques of realist cinema and broke away from the already well-established clichés of the pop musical; phenomenal takings at the global box office were complemented by sales of the soundtrack album netting over three times the film's production costs, the market for such recordings having grown steadily since the 1950s. Other groups followed suit, notably the Monkees in *Head* (1968), and easy-going pop scores were composed for narrative films such as *The Graduate* (Simon and Garfunkel, 1967) and *Butch Cassidy and the Sundance Kid* (Burt Bacharach, 1969). Composers with established backgrounds in the popular recording industry were ascendant in this period, some hailing from Europe; the most prominent were Morricone and Barry, the latter securing an international profile with his music for numerous James Bond films between 1962 and 1987.

Compilation scores fashioned from existing pop recordings were launched with *Easy Rider* (1969), *Zabriskie Point* (1969) and *American Graffiti* (1973), and this approach remained prominent in the 1990s, both in Hollywood teen-pics and in low-budget British comedies (e.g. *Peter's Friends*, 1992; *Four Weddings and a Funeral*, 1994). Profits from a soundtrack album reached an all-time high with the sale of 20 million copies of that accompanying *Saturday Night Fever* (1977). Film versions of pop musicals and rock operas, including *Jesus Christ Superstar* (1973), *Grease* (1978), *Hair* (1979) and *Evita* (1996), have proliferated since the 1970s. Developments in television and the recording industry, such as the growth of MTV and music video in the 1980s, influenced the production style of both mainstream productions and teen-pics with pop soundtracks, representative examples of each being *Top Gun* (1986) and *William Shakespeare's Romeo and Juliet* (1996) respectively. Pop and rock musicians active in the cinema have included Pink Floyd, Tangerine Dream, POPAL VU (notably in films by Werner Herzog), Mike Oldfield (*The Exorcist*, 1973; *The Killing Fields*, 1984) and the slide-guitarist Ry Cooder (*Paris, Texas*, 1984). As a single but striking example of the all-too-frequent capitulation of producers to the commercial pressures of a domestic youth market, it may be noted that Goldsmith's score to *Legend* (1986) was used only in the version of the film released in Europe: for the American market it was replaced by the music of Tangerine Dream.

Pre-existing classical music, a popular and economical resource for underscoring since the birth of cinema (see §1), has continued to be exploited. The most common use is as an agency for setting an appropriate period atmosphere in documentaries and narrative films, e.g. Verdi in *Little Dorrit* (1987), Handel in *The Madness of*

King George (1994) and Russian romantics in *Leo Tolstoy's Anna Karenina* (1997); composer biopics have included *A Song to Remember* (Chopin, 1944), *Song of Love* (Robert and Clara Schumann, 1947), *The Music Lovers* (Tchaikovsky, 1970), *Mahler* (1974), *Amadeus* (Mozart, 1984) and *Immortal Beloved* (Beethoven, 1994). Such films significantly boost sales of recordings of music by their subjects, often aided by the participation of high-profile musical directors from the classical arena such as Neville Marriner (*Amadeus*) and Georg Solti (*Anna Karenina*), a marketing device harking back to Stokowski's prominent appearance in Disney's *Fantasia* (see §3).

More creative has been the adaptation of classical music to serve as a structured underscore, of which a celebrated early example was the reworking of Rachmaninoff's Second Piano Concerto in *Brief Encounter* (1945); as with the use of Mahler's Fifth Symphony in Visconti's *Death in Venice* (1971), such films also significantly aid recording sales of the composers featured. Diegetic classical music has often been used in narrative films to underpin a climactic event: famous assassination sequences at live classical performances occur in Hitchcock's *The Man who Knew Too Much* (1934, remade 1956) and Coppola's *The Godfather Part III* (1990) – the latter paralleling *The Godfather* (1972), in which pastiche organ music created continuity during ironic cross-cutting between a church baptism and a series of violent killings. More modest, but clearly part of the same tradition, is the diegetic use of Berlioz's *Symphonie fantastique* on a domestic hi-fi at the climax of *Sleeping with the Enemy* (1990).

The diversity of applications to which classical music has been put may be illustrated by a few contrasting treatments of the music of J.S. Bach: in *Fantasia* (1940) a fugue is accompanied on screen by abstract animated patterns attempting to capture the texture of the counterpoint; in *Truly, Madly, Deeply* (1990) diegetic and extra-diegetic uses of Bach's music are subtly blurred according to the progress of the main characters' ghostly romance; in *Schindler's List* (1993) a German soldier gives an appropriately manic performance of an English Suite on a piano in the Kraków ghetto in which the occupants are being massacred, his comrades' inability to identify the composer making an obvious cultural point; and in *The English Patient* (1996), segments of the Goldberg Variations are used in conjunction with pastiche Bach composed by Yared to facilitate the merging of various musical strands towards the end of the film.

Part of the attraction of classical music for directors lies in its ready availability for 'temp-tracking', the process by which a rough cut of a film is given a temporary music track in advance of the composition of the original score. Notoriously, Stanley Kubrick retained several temp-tracks in the final releases of his work, with the result that *2001: a Space Odyssey* (1968) features the music of Richard Strauss, Johann Strauss, Khachaturian and Ligeti, and *The Shining* (1980) the music of Bartók and Ligeti. The casualty in such instances is inevitably the hired composer, Alex North's rejected score to *2001* (revived and recorded by Goldsmith in 1993) having become a *cause célèbre* in this regard. Temp-tracks and classical styles are convenient means by which a director can suggest appropriate musical idioms to the composer; models have included Strauss's *Salome* for Waxman's *Sunset Boulevard* (1950), Holst's *The Planets* for Williams's *Star Wars* (1977) and Reich's *Music for 18 Musicians* for Tangerine Dream's *Risky Business* (1983). Egregiously, the practice of directly modelling scores on already successful original soundtracks is widespread, with plagiarism often disguised only by token alterations.

8. Techniques and functions. The provision of music in the silent cinema has been attributed not only to the need to humanize the artificial image on screen, but also to practical considerations such as the attempt to cover the mechanical noise of the projector and to effect smooth transitions between disjointed camera shots. These requirements persisted in the sound cinema, where the communicative power of music serves to draw the spectator's attention away from the artificiality of the medium (paradoxically, since musical accompaniment to dramatic action is inherently bizarre in concept), and to suggest atmosphere, emotions, character traits and specific period or locational settings. The traditional use of music to unify diverse images and provide continuity and momentum has, in mainstream narrative cinema, resulted in a film's dramatic structure often being directly articulated by an appropriate musical structure. Ideally, the force of such structures should be appreciated subliminally: music's ability to create momentum, for example, may easily be gauged by watching a scene without the soundtrack, when it will invariably appear to be significantly longer in duration.

As Claudia Gorbman has pointed out (1987), the emotive power of film music can easily persuade a spectator to suspend objective critical faculties and become emotionally malleable, paralleling Brecht's assertion that personal identification with a dramatic character weakens critical objectivity. (Conversely, Bliss argued that one's emotional involvement in a film can lead to an over-generous assessment of the qualities of its musical accompaniment, but few today would agree with his view that film music must work equally well in the concert hall to be worthy of critical attention.) Not surprisingly, music has frequently been used by directors to strengthen the impact of scenes that are dramatically weak. Britten's music for *Love from a Stranger* (1936), for instance, is mostly concentrated in the first half of the film, in which little of dramatic interest takes place; the score disappears almost entirely once the plot begins to develop more rapidly in the second half.

Diegetic music can suggest the illusion of spatial depth absent in the visual image by the creative manipulation of tone-colour and volume: music from a radio may be heard softly as if from a distance, then gradually increase in intensity as a character (or the camera) closes in on the source. Diegetic music can also suggest that space exists outside the camera's field of vision, since the music's source need not be visible (e.g. music coming from the next room, or down the street). The creative application of stereophonic recording has increased the potential of these illusions. Directors will, however, sometimes reject such realism for aesthetic reasons, as Hitchcock did in the remake of *The Man who Knew Too Much* by keeping the volume of the diegetic music constantly loud in the climactic scene, even though the concert hall is seen from varying distances and perspectives. Diegetic music is a useful device for creating 'anempathy', since the use of music inappropriate to (or directly contradicting) the dramatic mood seems less contrived when not supplied by the background score. Extra-diegetic music is often

most effective when ambient diegetic sound is suppressed altogether, as in the battle scene of Kurosawa's *Ran*; Morricone has argued that if original music is to be used in a film, it must appear either prominently or not at all.

Original film scores are very rarely composed in advance of shooting, although exceptions have been noted above (see §4). Where rhythmic continuity is essential to the effect of a single scene, music for the scene in question may be recorded first and the shots edited to the music, as in the climactic montage of *High Noon* synchronized to the ticking of the clock; such pre-recording is more common in cartoons. Pre-recording is essential in the case of diegetic music to which actors mime instrumental playing or singing, although diegetic music is very occasionally performed live on set (as in *Round Midnight*). The composer is usually called in only when the 'rough cut' of the film is ready for viewing, having normally (but not invariably) read the script in advance. Deciding where to place music cues ('spotting') involves the director, composer and music editor. Agreed cues are identified by their location in a specific reel (the basic unit of film stock, *c*300 metres in length and lasting approximately ten minutes), and are listed in the form of a descriptive cue-sheet with precise timings. Playback of the relevant scenes was accomplished by the Moviola viewing device before the advent of video, which is now invariably used; a temp-track assembled from pre-existing music may be employed until the original score is ready (see §7). A maximum of eight weeks (frequently less) is normally permitted for the composition and recording of the music, the intense pressure of time compelling most composers to employ one or more orchestrators to complete their full scores from detailed short-score sketches, and copyists to prepare performing materials. Celebrated composer-orchestrator collaborations have included those of Erich Korngold with Hugo Friedhofer, John Williams with Herbert Spencer, and Jerry Goldsmith with Arthur Morton. As a result of the demise of the studio system in Hollywood, composers have since the 1960s tended to pursue freelance careers, with orchestras contracted specifically for individual projects.

Various devices have been adopted to assist the conductor in achieving exact synchronization with the visual image during recording sessions. The most basic in early cinema was a stopwatch, used in conjunction with the projection of the film on to a large screen at the back of the orchestra. A 'click track', first developed by Steiner and still in use, is an audible metronomic beat synchronized with the image and pre-programmed at whatever speed (or varying speeds) suits a particular music cue. In order for a cue to start and end at precise moments, or to aid the placing of a specific musical effect (e.g. a 'stinger' chord to accompany a violent action), a 'streamer' might be used. In this technique, a hole ('punch') in the film stock at the moment of desired synchronization is preceded by a long diagonal scratch on the film: when projected, the scratch translates into a vertical line moving across the screen, and the hole produces a flash as the line meets the edge of the picture. Films are now generally viewed on a video monitor, with a precise time/frame counter presented on screen, and computer programs are used to generate click tracks and streamers; MIDI technology allows a composer to play work in progress in accurate synchronization with the visual image well in advance of the recording session. Dialogue, ambient sound, sound effects and music (recorded on individual tracks) are finally condensed by dubbing mixers on to a single soundtrack. The composer normally has little say in the relative recording levels used, and the music is sometimes virtually inaudible beneath over-mixed sound effects in the final product, as in the action sequences of *Titanic* (1997); when music accompanies speech, its volume is often abruptly lowered during the dialogue – even if the music is diegetic, as in the comically inept mixing of Tippi Hedren's mimed piano performance in *The Birds*.

Producers can reject scores right up to the moment of a film's release, more often than not for political reasons rather than issues of quality or appropriateness. Infamous examples include Herrmann's score to Hitchcock's *Torn Curtain* (1966; replacement score by John Addison), Walton's to *Battle of Britain* (1969; replacement by Goodwin), North's to *2001* (see §7) and Fenton's to *Interview with the Vampire* (1994; replacement by Elliot Goldenthal). It was not uncommon in the 1990s for a Hollywood film to be furnished with as many as three independent scores before final release: Barry's score for *The Scarlet Letter* (1995), for example, replaced rejected scores by Morricone and Elmer Bernstein. In Hollywood, views expressed by the public at special film previews may affect the fate of a soundtrack. Formulaic music, a safe commercial bet, will emphasize the characteristics of the genre concerned at the expense of individuality: the score for one thriller, romance or western could as easily be exchanged with another in the same genre in the 1990s as was the case in the 1930s. Still current is a perceived need for appropriate mood-setting music to accompany the main titles: the expectation of this provision is so strong that silent credits (especially on a featureless background) remain an effective tension-builder. In spite of Sabaneyev's advice to film composers in 1935 to avoid the phenomenon that music's 'sudden cessation gives rise to a feeling of aesthetic perplexity', strategic use of silence in the soundtrack has since become an effective stock-in-trade. Sabaneyev also identified a category of 'neutral' film music that does not draw attention to itself, merely serving as an easy-listening background, and this essentially uncreative approach persists in spite of Morricone's protestations. Leitmotivic structures were at an early stage criticized by Copland, Eisler and others for their essentially formulaic quality and meaninglessness outside a cogent and partly autonomous musical argument, but they remain a standard technique, presumably on account of their melodic basis and their consequent ability to communicate directly to a lay audience.

That film music has, for so much of its history, played a strictly subordinate role to other aspects of production inevitably results in its being overlooked (and often entirely ignored) by scholars developing aesthetic theories for the film medium. This bias has been reinforced by the continuing primacy accorded to the visual image, a situation that has obtained since the silent era because moving pictures are the element that quintessentially distinguishes cinema from other mixed media employing music (e.g. radio, theatre and opera). Some early experiments aimed to create a genre of 'musical film' with little or no dialogue, such as Clair's *Sous les toits de Paris* (1929) and Chaplin's *Modern Times* (1936), but these had no lasting influence. In 1939 Eisler received a grant from the Rockefeller Foundation for a research project

aiming to apply modernist compositional techniques to film music and to attempt to close 'the gap between the highly evolved technique of the motion picture and the generally far less advanced techniques of motion-picture music'; the project included work on four experimental films and a chamber score (dedicated to Schoenberg) illustrating 14 ways to describe rain. Eisler, in collaboration with Adorno, went on to be sharply critical of the American studio system and the commercial bias of its 'culture industry', but their joint attack on standard film-music formulae passed by almost entirely unheeded by film makers. Cocteau was heavily critical of 'mickey-mousing', commenting in 1954 that it was by far the most vulgar film-music technique and 'a kind of glue where everything gets stuck rigid, and where no [interpretative] play is possible'; in his work with Auric, he attempted to manipulate the music to replace predetermined synchronization with what he termed 'accidental synchronism' (resulting in a considerable degree of anempathy).

Eisenstein's views on the ideal relationship between visual image and soundtrack (see §4) have been supplanted in the work of more recent film theorists by a fuller understanding of the complex interrelationship of plastic and temporal rhythms, although his three categories of audiovisual 'counterpoint' (in which music or sound may reinforce, contradict or parallel the visual image) remain a valid if simplistic starting-point. Modern film theories based on literary criticism, philosophy, anthropology and semiology, few of which address the musical component, have since the 1980s been increasingly supplemented by the work of musically literate scholars exploring alternative approaches in which the musical dimension receives the focussed attention it deserves, including fresh perspectives offered by psychoanalysis, gender studies and Marxism. As a result, film music has finally gained an intellectual respectability that had eluded it for many decades, and a better public understanding of the film composer's role has led to a sympathetic awareness of the often impossibly restrictive conditions under which such music is created.

MERVYN COOKE

Film musical. A film that includes musical numbers (songs, ensembles, dances) that are usually integrated (though not always closely) with the plot. A film musical is commonly a film version of a MUSICAL originally written for the theatre, or a work of the same type written for the screen, often by songwriters who established their reputations in the theatre. Although the film musical reflects the history of the stage musical, it has evolved its own distinctive settings and subjects, such as the rock-and-roll extravaganza and the backstage view of theatre life. 'Musical film' is also used of any film with occasional songs or other musical numbers. The distinction between such a film and a film musical is sometimes difficult to draw: many films of the interwar period had two or three songs as a matter of course and others that were not advertised as musicals might contain as much music as films that were. Westerns, mysteries and cartoons, for example, often include musical numbers but are not film musicals, and the full-length animated films made from the 1940s onwards by Walt Disney, though cast in the same format as the film musical, are not usually referred to as such. The same confusion does not arise with FILM MUSIC which is normally understood to be music written to accompany or 'underscore' film images.

The film musical is principally associated with Hollywood, which established itself as a world centre for film from the outset of the industry, and has further benefited from the global dissemination of American culture through the 20th century. Many writers (Fehr and Vogel, 1993, and Barrios, 1995, for example) have stressed the identification of America with the origins of the form. Although related European developments also form part of the narrative, the USA remains the principal focus for this article. For aspects of the film musical in other parts of the world see articles on individual countries, particularly INDIA, §VIII, 1.

1. To 1932. 2. 1933–9. 3. 1940–59. 4. 1960–79. 5. 1980–2000.

1. TO 1932. Short 'musical' films were first made around the turn of the century, though since the synchronization of film images with sound had not yet been perfected they were silent films that had to be projected with phonograph recordings to supply the music. Silent versions of stage musical comedies and operettas were also made and were accompanied in the cinema by an orchestra playing a score often adapted from the original. Among the most notable of these were versions of Franz Lehár's *Die lustige Witwe*, directed by Erich von Stroheim as *The Merry Widow* (1925), and Sigmund Romberg's *The Student Prince*, directed by Ernst Lubitsch as *The Student Prince in Old Heidelberg* (1927); both were made in America by MGM. In 1927 Warner Bros. released *The Jazz Singer*, the first feature-length film with talking and singing sequences, in which Al Jolson played the leading role. Besides its importance as a landmark in film technology, it demonstrated the appeal of the brash Broadway style of such performers and cemented the already existing relationship between Broadway and Hollywood.

During 1929 the Hollywood studios produced crude prototypes of every kind of musical that was to appear in the next decade. MGM, which became arguably the greatest maker of film musicals, devised the genre of the backstage revue for *The Broadway Melody*; this was also the first sound film with an original score – the songs were by Arthur Freed (a lyricist who became the most creative producer of musicals) and Nacio Herb Brown – and it won the first Academy Award for the best picture of the year given to a 'talkie'. Operettas proved as popular as revues: Universal's first effort was a partial conversion of a silent film of Kern's *Show Boat*; Warner Bros. filmed Romberg's *The Desert Song*; RKO transferred Tierney's *Rio Rita* to the screen with Technicolor sequences; and 20th Century-Fox made the first sound film of a Viennese operetta, *Married in Hollywood*, with a score by Oscar Straus. Paramount eclipsed all its rivals by engaging Lubitsch to direct an original film operetta, Victor Schertzinger's *The Love Parade* (starring Maurice Chevalier and Jeanette MacDonald), and also produced the Marx Brothers' first film, a version of their Broadway hit *The Cocoanuts* (with songs by Berlin).

Noted Broadway songwriters were commissioned to write in California: Romberg and Oscar Hammerstein II (*Viennese Nights*, 1930), Buddy DeSylva, Lew Brown and Ray Henderson (the 'science fiction' musical *Just Imagine*, 1930), George and Ira Gershwin (*Delicious*, 1931) and Richard Rodgers and Lorenz Hart (*Hallelujah, I'm a Bum*, 1933). Studios experimented with melodramatic musicals such as *Applause* (1929), the black musical pageant *Hallelujah* (1929) and *King of Jazz* (1930), which was stylishly staged in colour by the Broadway revue director John Murray Anderson and featured the big-band jazz of Paul Whiteman. Bing Crosby, one of the most popular of all cinema singers, appeared in *King of Jazz* and *The Big Broadcast* (1932), which was one of the first important films to deal with the world of radio. There were also collegiate and juvenile-romantic musicals, such as Henderson's *Sunny Side Up* (1929) and *Good News* (1930).

With Berlin emerging as Europe's capital of the entertainment and film industry in the 1920s (with an output of some 150 films between 1930 and 1933), it also became the melting-pot for a vast and unique array of distinguished composers of operetta and light entertainment music, who all seized the lucrative opportunity to work in the flourishing film business: Robert Stolz (*Two Hearts in 3/4 Time*, 1930), Franz Lehár (*Where is this Lady?*, 1932), Hans May (*My Song Goes Round the World*, 1933), Oscar Straus (*Voices of Spring*, 1933), Emmerich Kálmán (*Ronny*, 1931), Mischa Spoliansky (*Zwei Krawatten*, 1930), Paul Abraham (*Sunshine Susie*, 1931), Walter Jurmann (*A Song for You*, 1933) and Franz Wachsmann [Waxman] with Friedrich [Frederick] Holländer (*Ich und die Kaiserin*, 1933). What became German cinema's most successful contribution to the development of early sound pictures was the *Tonfilmoperette* (sound film operetta) that had both operettas exclusively written for the new medium as well as filmed re-creations of stage works (e.g. Paul Abraham's *Ball im Savoy*). This new stylistic height was abruptly curtailed by the advent of

1. *'The Shadow Waltz', choreographed by Busby Berkeley, from 'Gold Diggers of 1933' (Warner Bros., 1933)*

Nazism in 1933 and the resulting artistic exodus from Central Europe. Especially, Wilhelm Thiele's engaging *Die Drei von der Tankstelle* (1930) and Erik Charell's *Der Kongress tanzt* (1931) were revolutionary in the use of camera and sound. Both films had music by Werner Richard Heymann and consolidated the partnership of Lilian Harvey and Willy Fritsch, Europe's most popular musical stars. Such was the popularity of these and other, similar films that the film industry in Berlin often made versions in German, French and English simultaneously. Other noteworthy examples are *Walzerkrieg* (1933, music by Alois Melichar and Franz Grothe), *Viktor und Viktoria* (1933, Franz Doelle) and *Mein Herz ruft nach Dir* (1933–4, Robert Stolz), which contain almost through-composed scores. Musical pot-pourris constructed around the talents of opera singers such as Jan Kiepura and Marta Eggerth, Richard Tauber and Joseph Schmidt were also popular, and this type of film was adopted in Hollywood to show off stars such as Grace Moore, Lawrence Tibbett and the young Deanna Durbin. Josef von Sternberg directed Marlene Dietrich in *Der blaue Engel* (1930), a serious drama about romantic infatuation that included potently decadent musical numbers by Friedrich Holländer; the film enjoyed international success and all three artists later worked in Hollywood. Similar advances were made in France, where René Clair used sound and song with enviable charm in *Sous les toits de Paris* (1930) and *Le million* (1931). The European influence was most clearly seen in two outstanding American film operettas of 1932, Mamoulian's *Love me Tonight* with a score by Rodgers and Hart, and Lubitsch's *One Hour with You*, which had music by Oscar Straus and Richard Whiting.

2. 1933–9. The film musical enjoyed an international vogue from the mid-1930s to the early 40s. Its development coincided with the American Depression, a time when film makers believed that opulent escapism was wanted by audiences. In fact the early musical films, no matter how spectacular, were stilted and hampered by cumbersome recording techniques and were very soon ignored by audiences; only the intimate, sophisticated, European 'boudoir' operettas of the early 1930s had a lasting quality and style. *42nd Street* (Warner Bros., 1933) was a landmark in the history of film musicals: an assured, coherent, swift-moving comic drama, with lavish revue numbers. *42nd Street* (music by Harry Warren), which dealt with the backstage life of the modern Broadway theatre, established the genre of the musical within a musical. More than any earlier film musical it took full advantage of the technical possibilities of the medium and, in sumptuous production numbers, exploited the type of mass choreography devised by Busby Berkeley. Warner Bros. went on to issue a succession of highly elaborate musicals with the same pivotal creative team of Berkeley as choreographer and director, Al Dubin and Warren as songwriters, Leo Forbstein (the head of Warner's music department) and Ray Heindorf as orchestrators. Some were less effective as films than as pure spectacle (fig.1), such as *Gold Diggers of 1933* (and subsequent years), *Footlight Parade* (1933), *Dames* (1934) and *Fashions of 1934*. These provided stereotyped roles for James Cagney, Dick Powell, Joan Blondell, Ruby Keeler and Guy Kibbee, among others. Other studios were quick to imitate Berkeley's mannerisms, and in 1933 RKO inadvertently cast Fred Astaire and Ginger Rogers together in *Flying Down to Rio*, an otherwise pallid musical with an uneven score by Vincent Youmans. Their dancing was the highlight of a series of frivolous, enchanting films that attracted some of the greatest Broadway songwriters: Irving Berlin (*Top Hat*, 1935), Jerome Kern and Dorothy Fields (*Swing Time*, 1936) and George and Ira Gershwin (*Shall We Dance*, 1937). It is likely that Astaire, with a distinctive voice and phrasing, introduced more film-musical standards than any other performer.

During the 1930s and 40s film makers rarely treated the original scores of Broadway musicals with much fidelity. For example, *The Gay Divorcee* (1934), an adaptation of Porter's stage musical *Gay Divorce*, retained

only one song from the original score – 'Night and Day', sung by Astaire. The decision to omit parts of the original show in this way was fundamentally the producer's, though the film's stars, writers and music staff (whose motives were not always disinterested) often influenced the producer's opinions.

The romantic operetta, following a decline on Broadway in the early 1930s, was revived in Hollywood in 1935 with MGM's version of Victor Herbert's *Naughty Marietta*, starring Jeanette MacDonald and Nelson Eddy. The pair became an enormously popular institution and MGM adapted the scores of several operettas (generally by excising large portions and replacing them with operatic arias, light classical favourites, and reworked popular songs) in order to display the vocal prowess of the two stars. MacDonald, who had perfected a saucy, comic style under Lubitsch in film operettas, was obliged to abandon it for more direct sentiment in the films she made with Eddy, which included Friml's *Rose-Marie* (1936), Romberg's *Maytime* (1937), Herbert's *Sweethearts* (1938), Romberg's *The New Moon* (1940) and Noël Coward's *Bitter Sweet* (1941), all based to some degree on stage originals. Few other film operettas were as popular as these, though Universal tried to rival MGM by producing two films with attractive American themes starring Irene Dunne: a remake of Kern's *Show Boat* (1936), directed by James Whale, and an original screen musical by Kern, *High, Wide and Handsome* (1937), directed by Mamoulian.

Studios in Nazi Germany also tried to emulate MGM by manufacturing lighthearted and glossy operettas, but the creators of many of their earlier musical films were no longer permitted to work there, and many found employment in Hollywood. Such musicians included Walter Jurmann, Bronislau Kaper, Robert Stolz, Friedrich Holländer, Franz Wachsmann, Werner Richard Heymann, Hans Salter, Arthur Guttmann and Nicholas Brodszky. Stylistically the Nazi film musical lacked the somewhat sophisticated and seemingly improvised touch of its American counterpart. This was largely due to the huge loss of artistic – and mostly Jewish – personnel and to the arbitrary interference of the *Reichsfilmkammer*, which had German cinema under control, both artistically as well as in every aspect of administration.

In Britain the Cinematographic Films Act of 1927 had to a limited degree stimulated the production of native films and restricted the booking of American ones, so raising somewhat the profile of national stars who were primarily drawn from the popular musical stage – both music hall (notably Gracie Fields and George Formby) and musical comedy and revue (Jessie Matthews and Jack Buchanan). One early example of a home-grown film musical was the operetta *Good-Night, Vienna* by George Posford and Eric Maschwitz, first written for BBC radio (broadcast 7 January 1932) and filmed later in the same year with Anna Neagle and Jack Buchanan (director Herbert Wilcox). In 1934 *Chu Chin Chow* was filmed by Gainsborough (director Walter Forde), following the record-breaking run of the original production on stage (1916–21). By the mid-1930s, British film musicals were consciously catering both for a home market, particularly through the films of Gracie Fields, which played strongly on her regional (Lancashire) characteristics as in *Sally in our Alley* (1931) and *Sing as we Go* (1934), and less successfully for an American market, with such films as *Evergreen* (1934), featuring Jessie Matthews.

British film has never forged such strong links with the West End as those between Broadway and Hollywood, and it is notable how few successful British stage musicals have been filmed. In the 1930s and 40s, film musicals tended towards variety formats to feature known personalities from the stage and broadcasting, rather than adapting existing stage material. While a few of Ivor Novello's musical romances were filmed (*Glamorous Night*, 1937, *The Dancing Years*, 1950, *King's Rhapsody*, 1955), only *Bitter Sweet* was filmed of Noël Coward's stage shows (1933 and 1941). By the mid-1940s the film musical was not considered a viable product for the British film industry, and omissions from film's repertory of the theatrical adaptations repertory included such major West End successes as Vivian Ellis's *Bless the Bride* (stage 1947). The film musical did not reappear in Britain with any conviction until the rise of the pop star in the late 1950s and the films of such performers as Tommy Steele (*The Tommy Steele Story*, 1957) and Cliff Richard (*Expresso Bongo*, 1959).

3. 1940–59. Hollywood enjoyed great advantages over other centres of film making: it had a constant supply of writing and performing talent from Broadway (and an intense desire to rival or better Broadway productions in popularity and creative flair), and the investment capital required to make film musicals that were more extravagant and lavish than anything that could be mounted in the theatre. Particularly after World War II, only American studios continued consistently to make outstanding musicals, reaching a creative, if at times pretentious, zenith in the decade from 1945.

The 1940s and 50s saw several important developments in the film musical in America, the first examples of which had been released late in the 1930s. Walt Disney's first feature-length cartoon, *Snow White and the Seven Dwarfs* (1937), was a major achievement in animation with an enchanting score by Frank Churchill and Larry Morey. It was followed by *Pinocchio* (1940, with music by Leigh Harline), *Bambi* (1942, Churchill), *Alice in Wonderland* (1951, Sammy Fain) and *Peter Pan* (1953, Fain). All were composed to contain at least one exceptionally catchy song, intended to become a hit: 'Heigh-Ho' from *Snow White* and 'When You Wish Upon a Star' (which won an Academy Award) from *Pinocchio* continue to be remembered independently of the films. The fantasy musical *The Wizard of Oz*, an extravagant expansion of the story by L. Frank Baum, filmed in Technicolor, was released by MGM in 1939. Its cast included Judy Garland, Ray Bolger and Bert Lahr (fig.2), and Harold Arlen and E.Y. Harburg's fine song score introduced the standard 'Over the Rainbow'. However, the most far-reaching effect of the film was in bringing the production talents of Arthur Freed to sufficient prominence that he become a producer for MGM in his own right. Indeed, throughout the 1940s and 50s, the important developments in the film musical made at MGM came from the production unit headed by Freed. In varying combinations, its core musical personnel included Roger Edens, Conrad Salinger and Saul Chaplin as orchestrators and arrangers, Lennie Hayton as conductor and Kay Thompson as a vocal arranger and coach. The unit was responsible for such classic film musicals as *Meet Me in St. Louis*, *Easter Parade*, *On the Town*, *Singin' in the Rain* and *The Band Wagon*. The Freed unit

2. Judy Garland as Dorothy in 'The Wizard of Oz' (MGM, 1939), with Jack Haley (Tin Man), Ray Bolger (Scarecrow) and Bert Lahr (Cowardly Lion)

also employed the young André Previn, who became known through his work on *Gigi*.

The late 1930s and 40s saw the release of several biographical musicals, loosely based on the lives of famous composers and with scores fabricated from their works. These included *The Great Victor Herbert* (1939), *Words and Music* (Rodgers and Hart, 1948), *Rhapsody in Blue* (George Gershwin, 1945), *Night and Day* (Cole Porter, 1946), and at least five films with songs by Berlin, beginning with *Alexander's Ragtime Band* (1937). Similar 'biographies', with no greater claim to authenticity, were made about classical composers, from *A Song to Remember* (Chopin, 1945) to *Song of Norway* (Grieg, 1970).

The 1940s also saw three of the principal companies initiate popular and lucrative series. In 1939 MGM released *Babes in Arms* (songs by Rodgers and Hart), the first of several films in which the juvenile team of Mickey Rooney and Judy Garland played a pair of kids who put on improbably professional amateur shows and the first of Freed's films as producer. Paramount's comedy musical *The Road to Singapore* (1940, music by James Monaco and Victor Schertzinger), with Bob Hope, Bing Crosby and Dorothy Lamour, led to a phenomenally successful series set in places all over the world. *Down Argentine Way* (1940, music by Warren) inspired several more lighthearted Latin American stories in which 20th Century-Fox took advantage of the success of the 'Brazilian bombshell' Carmen Miranda.

The entry of the USA into World War II sent Hollywood back into the American past in search of story lines that had a patriotic slant, such as the jingoistic *Yankee Doodle Dandy* (1942), which was remarkable for a superb performance by James Cagney in admirable re-creations of scenes from George M. Cohan's stage musicals. The folksy, reassuring Americana of the Broadway musical *Oklahoma!* (1943) by Rodgers and Hammerstein was reflected in Vincente Minnelli's meticulous evocation of middle America in the early 1900s, *Meet Me in St. Louis* (1944, songs by Hugh Martin and Ralph Blane), and in George Sidney's western saga *The Harvey Girls* (1946, songs by Warren and Johnny Mercer). The musicals Minnelli made for MGM after the war were some of the best to come out of Hollywood: *The Pirate* (1948, Porter), *An American in Paris* (1951, Gershwin), *The Band Wagon* (1953, Arthur Schwartz), and *Gigi* (1958, Frederick Loewe). His training as a theatre designer and the technical improvement of colour photography gave his films a pictorial magnificence attained by few other directors, and his fluid handling of musical movement and dance was difficult to rival. In particular, *The Band Wagon* gave new life to the backstage revue and, *Gigi* was impeccably composed (the songs were by Lerner and Loewe) and costumed (by Cecil Beaton).

After a period in which big bands and their singers dominated film musicals – *Second Chorus* (1940, Artie Shaw), *The Fleet's In* (1942, Jimmy Dorsey), *No Leave, No Love* (1946, Xavier Cugat and Guy Lombardo), *Beat the Band* (1947, Gene Krupa) – dance came to the fore once again. Several dancers became choreographers and directors, among them Gene Kelly, who collaborated on a number of films with Stanley Donen. Their major achievement, *Singin' in the Rain* (1952), a clever comedy about the beginning of sound films with pastiche songs by Freed (who also produced the film) and Nacio Herb Brown, captured the period flavour of the late 1920s but was choreographed by Kelly and Donen in modern style. Their *On the Town* (1949, Leonard Bernstein), is regarded as having set the trend for filming dances on location through its use of the streets and scenes of New York for exuberant, balletic dance numbers. Donen, who specialized in developing the dance element of Broadway musicals in the setting of film, was most at ease with the muscular vigour of the period comedy *Seven Brides for Seven Brothers* (1954, Gene de Paul) and the vibrant working-class spirit of *The Pajama Game* (1957, Richard Adler), the best of Doris Day's films. He was also enormously successful in conveying the glossy world of New York fashion in *Funny Face* (1957), by means of

artfully rearranged songs of the 1920s by the Gershwins and the ageless grace of Fred Astaire.

In the 1950s the nostalgia prevalent during the war still provided material for some studios, including 20th Century-Fox, while others depended on popular crooners such as Frank Sinatra to make minor films successful. The musical biography was extensively used in the 1950s for songwriters, such as Stephen Foster for *I Dream of Jeannie* (1950), and performers such as Grace Moore for *So This Is Love* (1953). Jazz musicians especially received such treatment, with films including *Young Man with a Horn* (on Bix Beiderbecke, 1950), *The Glenn Miller Story* (1954), *The Benny Goodman Story* (1956), *St Louis Blues* (on W.C. Handy, 1958) and *The Five Pennies* (on Red Nichols) and *The Gene Krupa Story* (both 1959).

Whereas it had earlier been the case that Broadway musicals were often substantially rewritten in film versions as with, for example, *On the Town*, the 1950s saw a more faithful treatment of stage originals. In some instances not only the scores but even the casts were adopted almost unchanged by film directors. The most notable of the film musicals of the 1950s were those of works by Rodgers and Hammerstein, beginning with *Oklahoma!* (1955), and Mamoulian's *Silk Stockings* (1957), based on both the stage musical by Cole Porter and its source, Lubitsch's film *Ninotchka* (1939).

4. 1960–1979. By the 1960s film versions of Broadway musicals seemed tremendously profitable for the Hollywood studios; the films of Bernstein's *West Side Story* (1961), Loewe's *My Fair Lady* (1964) and Rodger's *The Sound of Music* (1965) all won Academy awards for best picture. Other notably successful film musicals were those directed by Bob Fosse, whose slick, expansive Broadway dances lent vigour to his film adaptation of *Sweet Charity* (1969, Cy Coleman) and were appropriately modified to depict the seedy Berlin nightlife of the early 1930s in *Cabaret* (1972, John Kander).

The ascendancy of rock and roll resulted in a few innovative feature films, beginning with Columbia's *Rock Around the Clock* (1956), with Bill Haley and the Comets. Most notable was the sequence of some 30 film musicals featuring Elvis Presley, beginning in the late 1950s with such examples as *Jail House Rock* (1957) and *Loving You* (1959), through to less innovative films in the 60s, such as *Blue Hawaii* (1961) and *Viva Las Vegas* (1964). Unsuccessful attempts were made through film for British pop singers Cliff Richard and Tommy Steele to break into the American market. Cliff Richard's *The Young Ones* (1962) was marketed in the USA as *Wonderful to be Young*, with a plot reminiscent of the Mickey Rooney–Judy Garland films of the 1940s, while adopting something of the pop-star focus of Elvis Presley's films. The following *Summer Holiday* (1963) also remained primarily a national success. Steele did, however, gain American prominence in several film musicals, but only by moving away from his rock-and-roll persona as seen in *The Tommy Steele Story* (1957) towards that of a song-and-dance entertainer in *Half a Sixpence* (1967), *The Happiest Millionaire* (1967) and *Finian's Rainbow* (1968). However, the Beatles' *A Hard Day's Night* (1964), a combination of American business acumen and British performing and directing talent, was innovative in its approach to both plot and use of a pop soundtrack and provides precedents for many features associated with later music video style (see Mundy, 1999, pp.162–74). The Beatles' later film musical, *Yellow Submarine* (1968), was distinctive through being almost completely animated and provides an antecedent to the many television cartoon series of the 1970s and 80s based on actual pop groups.

The extraordinary success of *The Sound of Music* in 1965 was an exception that disguised the trend of audiences away from film musicals. Later examples have seldom achieved success commensurate with their costs. The few that have gained a widespread and lasting appeal, such as *Oliver!* (1968, music by Lionel Bart) and *Fiddler on the Roof* (1971, Jerry Bock) occurred in isolation rather than as part of a continuous body of work from ongoing production units such as that of Freed at MGM in the previous decades. Of original works for the screen, *Lost Horizon* (1973, Burt Bacharach), based on James Hilton's oriental romance, was one of several such works that failed to justify an extravagant budget; others included *Doctor Dolittle* (1967) and the biography of Gertrude Lawrence as *Star!* (with Julie Andrews, 1968). The performances of Barbra Streisand were the highlight of the last era of film musicals based on Broadway shows (Jule Styne's *Funny Girl*, 1968; Jerry Herman's *Hello, Dolly!*, 1969;fig.3), which came to an end with some expensive failures, including *On a Clear Day you can See Forever* (1970, music by Burton Lane) and *Man of La Mancha* (1972, Mitch Leigh). The film version of the rock musical *Hair* (1979, Galt MacDermot) was an isolated example of a pop musical that achieved a measure of popularity, while *The Rocky Horror Picture Show* has achieved cult status in film (1975) to equal that of its stage show.

A symptom of the death of the film musical was seen in 1974 when MGM, the studio that had made some of the most memorable examples of the genre, released *That's Entertainment*, a compilation of scenes from its past triumphs. The causes of this decline have been linked to several factors, including fundamental changes in pop music and the issues it addresses, which in turn represent wider sociological shifts (Fehr and Vogel, 241–55).

5. 1980–2000. Examples of film musicals in the 1980s and 90s have been few. *Victor/Victoria* (1982), featuring Julie Andrews and Robert Preston, was conventionally structured and later adapted for the stage (1995). *Yentl* (1982) was designed around, directed by and featured Barbra Streisand, using the songs as an expression of her character's inner thoughts rather than as a participatory or expressive device for and with others. Both of these works used performers long identified with the film musical, which had become too sparsely represented to allow for the establishment of new performers in the genre. Unusual in its scale was Alan Parker's film version (1996) of Andrew Lloyd Webber and Tim Rice's rock opera *Evita* (1976), with Madonna in the title role, but it remained essentially old-fashioned, notably in the use of location filming in a panoramic style much akin to that of *The Sound of Music* some 30 years earlier. It is distinctive in being almost completely sung, a characteristic it shares with only a handful of film works, including *Les parapluies de Cherbourg* (1963, music by Michel Legrand) which was later staged (1979).

Once dance was again given a dominant position the public was enthusiastic for films such as *Saturday Night Fever* (1977), *Fame* (1980) and *Flashdance* (1983). This link with pop repertory has persisted in the compilation

3. Barbra Streisand with Louis Armstrong in 'Hello Dolly!' (20th Century-Fox, 1969)

soundtracks of films such as that for *Muriel's Wedding* (1994), which used songs by the Swedish pop group Abba. There are shared aspects of such films with the film musical, as in the use of song for commentary and the dramatic underscoring of scenes; however, the use of existing pop repertory has served both to decrease the cost of production and brought into play a series of pre-existing cultural references that provide additional elements of commentary, particularly irony. This provided the motivation behind Woody Allen's use of Hollywood musical style in *Everyone Says I Love You* (1996).

There had earlier been several documentaries of rock events, such as *Monterey Pop* (1968) and *Woodstock* (1970), but pop and rock groups were presented in film within dramatic contexts, as in *Stop Making Sense* (1984) about Talking Heads, and *The Great Rock-and-Roll Swindle* (1980) about the punk group the Sex Pistols. More overtly commercial in intent have been the few films promoting a particular group image, as with the Village People's unsuccessful *Can't Stop the Music* (1980) or *Spiceworld – the Movie* (1997), featuring the British group the Spice Girls. However, a new creativity in linking song and film emerged in the 1980s with the short music video (particularly associated with the rise of the dedicated channel MTV), which was usually made to promote a recording. Lacking a plot, this often combines surreal images with the drive and verve of a television commercial, as in the landmark video for Michael Jackson's *Thriller* (1982).

A growth in academic interest in the film musical stems from the early 1980s, with Jane Feuer (1982) and Rick Altman (1987) establishing new ways of approaching the form. Although the range of commentaries now extends beyond that of chronological listings and historical narrative, detailed analysis has tended to concentrate on sociological and psychological aspects of the film musical as an extension of the methodology of film studies. With few exceptions, the nature of the music itself has yet to be examined in depth.

RICHARD TRAUBNER/THOMAS L. GAYDA, JOHN SNELSON

Filothei, Sân Agăi Jipei (*b* Mârşa-Ilfov, 1670; *d* Bucharest, 1726). Romanian composer and singer. He was educated at the School of Deacon Teodosie in Bucharest, and then at Áyion Óros (Mt Athos), studying theology, music and Greek. He led a monastic life in Snagov, Bucharest and Târgovişte, becoming a leading authority on Byzantine church music and an avid proponent of singing sacred music in the Romanian language, to which purpose he translated several Greek books. His principal work is the *Psaltichia rumănească* [Romanian psalter] (MS, 1713, in Bucharest, Biblioteca Academici România); its 1193 settings constitute almost the entire canon of religious songs translated into Romanian from Greek. Among Filothei's other works are *Rugăciunea lui Filothei pentru Constantin Brâncoveanu* [Filothei's prayer for Constantin Brâncoveanu] and *Canonul Floriilor* [Canon of the flowers]. His work represents the keystone in the Romanianization of the nascent religious music of his time.

OCTAVIAN COSMA

Fils [Filtz, Filz], **(Johann) Anton** (*b* Eichstätt, bap. 22 Sept 1733; *d* Mannheim, bur. 14 March 1760). German composer and cellist. Long thought to be of Bohemian origin, despite Marpurg's designation of him in 1756 as 'from Bavaria', he was found in the 1960s to have been born in Eichstätt, where his father, Johann Georg Fils, was a cellist at the prince-bishop's court from 1732 until his death in 1749. At both Eichstätt and later at Mannheim the surname is consistently spelt 'Fils', though 'Filtz' predominates in prints of his music. His principal teacher was his father. He attended the local Gymnasium in Eichstätt and in November 1753 appeared on the rolls of the University of Ingolstadt as a student of law and theology.

On 15 May 1754 Fils was appointed cellist to the electoral court at Mannheim at a salary of 300 gulden, retroactive to 1 February of that year. There he may have studied composition with Johann Stamitz; he is described as a 'dissepolo' of the older composer on the title page of his trio sonatas op.3 (1760). In February 1757 Fils married Elisabeth Range. The couple had at least one child, a daughter born in October 1757, and they bought a house in October 1759, by which time Fils's salary had risen to 450 gulden. His early death in 1760 at the age of 26 led not only to comparisons with Pergolesi but also to conflicting accounts of his death, the strangest being C.F.D. Schubart's statement that he died 'as a result of his bizarre notion of eating spiders'.

Fils was extraordinarily prolific, leaving substantial bodies of orchestral, chamber, and sacred music. He is best known for his symphonies, which number at least 34. His first publication, the symphonies *a 4* op.1, appeared in Paris in late 1759 or early 1760, and was soon followed by the symphonies opp.2 and 5 and an extended series published individually and in anthologies. Fils also composed some 30 concertos, primarily for cello and flute, of which only about half have survived. His chamber music, most of it published in Paris, spans a variety of genres, often featuring obbligato cello.

No autographs of Fils's music have been identified with certainty, though the Cello Concerto in B♭ (*D-Bsb*), copied at Mannheim, makes a plausible candidate. None of Fils's works can be dated with certainty, but it seems likely that at least a few of the cello concertos date from before his arrival in Mannheim, and the advanced idiom of his best-known symphonies implies a date in the late 1750s. Both the style of the latter works and the discovery that Fils was born in 1733 – two years after Christian Cannabich and Joseph Toeschi – link him with these and other composers of the so-called second generation of Mannheim composers, all students of Johann Stamitz and strongly influenced by Italian opera composers of the Galuppi-Jommelli generation. Such influence is seen in Fils's predilection for prominently placed crescendo passages, simplicity of texture, long pedal points, slow harmonic rhythm, use of stock melodic figures like the turn and sigh, and frequent omission of double bars and repeat signs. Other, more individual traits of Fils's symphonic style include cultivation of the woodwind and horns and a fondness for uneven phrase lengths and folk-like melodic materials.

About 60% of the symphonies are in four movements. In his fast movements Fils is somewhat more likely than his contemporaries at Mannheim to use recapitulations that begin with the primary rather than the secondary theme, possibly reflecting Italian formal models or his Bavarian heritage. The style of Fils's concertos ranges from a fairly conservative late Baroque or pre-Classical idiom to a fully Classical one reminiscent of his later symphonies. The form of the fast movements is the standard one at Mannheim of four ritornellos framing three solo sections, the last solo section generally serving as a recapitulation. Notable in the cello concertos is the exceptional virtuosity of the solo parts, which demand great facility and range; these parts provide the only evidence of Fils's abilities as a performer.

Opinions about Fils's music after his death were divided. Conservative critics complained that his instrumental music was superficial and presented an incomprehensible mixture of serious and comic styles. More positive was the opinion of writers such as the Romantic C.F.D. Schubart, who eulogized him as follows:

> His spirit and his works ... have long made him immortal. I consider him the best composer of symphonies who ever lived. Splendour, sonority, the powerful, overwhelming rush and rage of the harmonic torrent; novelty in his ideas and transitions [*Wendungen*]; his inimitable *pomposo*, his inventive Andantes, his ingratiating minuets and trios, and finally his fleet, jubilant Prestos ... have assured him universal admiration even to the present day.

WORKS

printed works published in Paris unless otherwise stated

Syms. [thematic catalogue in DTB, iv, Jg.iii/1 (1902), and xiii, Jg.vii/2 (1906)]: 6 as op.1 (1759–60), 1 ed. D. Townsend (New York, 1987); 5 as op.2 (1760) [no.3 is by J.C. Bach], ed. in MAB, xciv (1960), 2 ed. in DTB, iv, Jg.iii/1 (1902); 6 as op.5 (1763); 7 pubd separately (1760–63) [1 lost, but MS in *D-Mbs*], 2 ed. in DTB, iv, Jg.iii/1 (1902), and xiii, Jg.vii/2 (1906), 2 ed. in *The Symphony 1720–1840*, ser. C, iv (New York, 1983), 1 ed. A. Carse (London, 1937); 4 pubd in anthologies (1761–2) [incl. 2 also pubd separately], 1 ed. in *TCMS*, i (1990); 6 in MS, *CH-Bu, D-BE, DO, HR, Rtt, US-Wc*; 3 others, doubtful, *CZ-Pnm, D-RH, S-Skma*; 10 others (incl. 2 partitas) of questionable authenticity known only from 18th-century thematic catalogues

EUGENE K. WOLF

Filter [equalizer] (Fr. *filtre*; Ger. *Filter*; It. *filtro*). An electrical device that enables a sound to be shaped by amplifying or removing one or more areas of its total sound spectrum. The principal types of filter are: band-pass, band-reject (or notch), high pass, low pass and parametric. A band-pass filter retains or boosts the region or regions in which sound is to be passed, while the complementary band-reject filter eliminates only those that are to be rejected; these are defined in terms of independent bands, normally one octave, ⅔, ½ or ⅓ of an octave in width, which can be individually controlled in loudness by means of parallel slide controls (a form of band-pass filter, in which the removal of pitch bands is less complete, is known as a graphic equalizer, and is found in all types of mixing desks and in some domestic hi-fi equipment). High and low pass filters remove areas of the sound spectrum that are respectively below and above a selected cut-off frequency, with a single overall loudness control; the sharpness or roll-off at which this is applied can be adjusted by a response, bandwidth or 'Q' control, and in certain synthesizers this can be set so sharply on a low pass filter that it oscillates as a sine-wave at the cut-off frequency. The 'wah-wah' pedal (often associated with the ELECTRIC GUITAR) is a type of limited low pass filter. High and low pass filters are sometimes combined in a single unit; two such combination filters are prominent in Stockhausen's live electronic *Mikrophonie I* (1964). Parametric filters feature elements of all the types of filters described above; several subdivisions of the spectrum (typically three or four) can be independently filtered in terms of central frequency, loudness and response. Further details are given in T. Cary: *Illustrated Compendium of Musical Technology* (London, 1992), 187–90, 195–203.

HUGH DAVIES

Filtsch, Károly [Karl] (*b* Szászsebes, Hungary [now Sebeş, Romania], 28 May 1830; *d* Venice, 11 May 1845). Hungarian pianist and composer of German descent. He was a child prodigy and his piano playing attracted great attention in Kolozsvár (now Cluj-Napoca) in 1835. Filtsch studied initially with his father, a Protestant pastor, and then in 1837 went to Vienna to study with Simon Sechter and August Mittag. On finishing his studies, Filtsch gave concerts in Vienna, Pest and Transylvania in 1841. These caused a sensation. He then left for Paris to study with Chopin and, when Chopin fell ill, with Liszt (1841–3). According to Lenz, Liszt said of him, 'When that youngster goes travelling, I shall shut up shop'. In Paris he played Chopin's concerto op.11 with the composer (11 January 1843), and appeared many times in private gatherings; in the same year in London (June–July) he played for Queen Victoria, with exceptional success. On his way home he gave numerous concerts in Vienna (November 1843 – March 1844) but he contracted tuberculosis and did not recover. Of his piano works, the Etude op.8 (dedicated to Ferenc Erkel) was published in Pest, while the Andante et Nocturne (1841) and *Premières pensées musicales* (1843) were published by Mechetti in Vienna.

DEZSŐ LEGÁNY

Final (Lat. *finalis*). The concluding scale degree of any melody said to be in a MODE. In the church modes, the

final note of a melody came to be regarded, together with its AMBITUS, as one of the two required determinants of the mode of that melody. In the earliest stages of the mutual adaptation of the eight-mode system and the repertory of Gregorian chant, the final degree of a melody did not have this overwhelming hegemony. Mode was originally an aural convenience that helped to control the melodic connection of an antiphon or responsory with its verse, as well as being a theoretical system of classification. In the practical domain of aural tradition the final of an antiphon was not as important as its incipit, since it was by the pattern of the antiphon's beginning that the choice of its DIFFERENCE, or manner of ending, was governed; but for responsories and their verses the final of the responsory did have a bearing on the verse. This is attested in passages from the tenth chapter of Aurelian's *Musica disciplina* (*c*840–50) and the second chapter of Regino's *Epistola* (*c*901) (see W. Apel: *Gregorian Chant*, Bloomington, IN, 1958, 3/1966/*R*, 174). The first treatise in which the final is the over-riding modal criterion is the anonymous *Dialogus de musica* of about 1000 (*GerbertS*, i, 257, trans. in *StrunkSR2*, ii).

In the modal theory of Hermannus Contractus and his followers, notably Wilhelm of Hirsau (*d* 1091), the term *exitus cantilenae*, 'end of the melody', was used (*GerbertS*, ii, 128 and 175; see also *GerbertS*, ii, 58), but unlike the term 'final' as it came to be understood, it had no connotation of structural governance, since in Hermannus's tetrachordal theory modality was conceived and analysed in terms of the melodic position of notes in the entire tone system rather than in terms of the hierarchy of tones within a melody.

The near synonymity of 'final' and TONIC has remained a pervasive notion in Western musical culture, although many scholars working in non-Western music, folk music and even early polyphony have begun to see this notion as a cultural assumption rather than an inherent connection.

HAROLD S. POWERS

Finale (It.; Eng. and Ger. by usage; Fr. *final*). Designation often applied since the mid-18th century to the last movement of an instrumental composition in several movements or to the concluding, continuously composed, section of an act of an opera or piece of stage music.

The term was used by Haydn in many of his piano trios, quartets and symphonies (including all the symphonies written for London), and by Mozart in several of his later symphonies though in comparatively few of his chamber works. Following the precedent of the gigue that usually concluded the suite at the time of J.S. Bach, the final movements in sonatas and symphonies by composers of the next generation were generally of a distinctly melodious character (and often in 6/8 or 3/8 time). This remained a strong tendency to the end of the century in the rondos, sonata rondos, variations, and minuets in which forms Mozart, Haydn and their contemporaries cast most of their finales.

In certain works such as Haydn's 'Clock' and Mozart's 'Jupiter' symphonies, however, contrapuntal episodes, dextrous and buoyant though they are, lent an earnestness to the music which began the process of shifting the centre of gravity of the symphony towards the finale. The last movement of Beethoven's Fifth Symphony is an apotheosis, a triumphant outcome of what has gone before. It is ironic that Beethoven did not use the term 'finale' in his Fifth or Ninth Symphonies, for these works, more than any others, instigated what is sometimes referred to as the 'finale-symphony' of the 19th century; the development of the 'finale-symphony' was furthered by the increasing tendency to relate thematically all the movements of a symphony (e.g. Schumann's Fourth), or to reintroduce material of earlier movements in the finale (e.g. Brahms's Third), and thus lend it some of the qualities of a summing-up of the entire composition. This is most evident in the symphonies of Tchaikovsky, Dvořák, Bruckner, Sibelius and Mahler. (Tchaikovsky was incidentally the originator in his Sixth Symphony of the finale in slow tempo, though the Adagio ending of Haydn's 'Farewell' Symphony may be thought of as a distant precursor.)

During the 19th century the term 'finale' tends to appear in chamber music and in piano sonatas conceived on a large scale; in Beethoven's violin sonatas it is found only in the C minor op.30 no.2 and in the Kreutzer Sonata op.47. The concluding movement in a set of variations (e.g. Schumann's *Etudes symphoniques*, Brahms's Variations on a Theme of Haydn, and Elgar's Enigma Variations) is usually designated 'finale'. Such movements generally depart more radically than do the variations themselves from the theme, on which they become free fantasias sufficiently flexible in form and extensive in scale to produce a peroration and summing-up equivalent to that in the symphonic finale. The quest for new, poetically-inspired forms led Schumann to such suite-like structures as *Papillons* and the *Faschingsschwank aus Wien* in which there was also a need for a finale differing from the remaining pieces in character, scale or form. His *Ouvertüre, Scherzo und Finale* and Franck's *Prélude, Aria et Final* show a like preoccupation with departures from the usual format of the sonata scheme.

The operatic ensemble finale, developed during the 18th century, represents the most essential step from the late Baroque number opera to the continuous style of 19th-century post-Wagnerian music drama. After about 1750 most ensemble finales in Italian OPERA BUFFA were of the 'chain' type in which a number of distinct sections, usually differentiated in key, metre and tempo, succeeded each other in response to a developing dramatic situation. Such finales, of which that in Act 2 of Mozart's *Le nozze di Figaro* (1786) is a classic example, normally begin and end in the same key and visit nearly related keys in their course (the Mozart example, in E♭ major, ranges more widely, however, with sections in G, C, and F major); tempos may fluctuate in accordance with the action, but there is often an overall acceleration. Chain finales were slower to enter *opera seria*, where the Metastasian aria libretto held sway, and they tended at first to be confined to final acts; by 1791, however, when Mozart and Mazzolà adapted the ending of Act 1 of Metastasio's *La clemenza di Tito* as an action ensemble, they were common elsewhere as well.

During the 19th century a central, multi-sectional finale, bringing the action to an unresolved climactic point and ending with a rapid 'curtain', became a feature of Italian opera; it was frequently taken up outside Italy, too, for example by Wagner in Act 2 of *Die Meistersinger* (1868), where, however, the 'curtain' is delayed by the sounding of the Nightwatchman's horn and his dazed entrance on to an empty street. Romantic ballet, like opera, developed large-scale ensemble finales to each act,

and when incidental music to stage plays was written on a considerable scale, the finale was often treated in the same way (e.g. Mendelssohn's music for *A Midsummer Night's Dream*).

The *vaudeville final*, in which solo verses alternating with an ensemble refrain serve to point the moral of the plot, was much cultivated in the final acts of French *opéras comiques* in the second half of the 18th century (*see* OPÉRA COMIQUE and VAUDEVILLE, §5); Mozart wrote a *vaudeville final* to conclude his *Die Entführung aus dem Serail* (1782), and later examples include those in Rossini's *Il barbiere di Siviglia* (1816) and Stravinsky's *The Rake's Progress* (1951).

MICHAEL TILMOUTH/R

Finalmusik (Ger.: 'final music'). Term given to divertimentos, serenades, cassations and other similar compositions performed as part of the annual graduation ceremonies, usually in August, at the Salzburg Benedictine University. According to H.C. Koch it could be used to conclude an outdoor concert. At the end of the summer semester in Salzburg it was customary to honour a favourite professor with a serenade-like composition given under the name 'Finalmusik'. For such occasions Mozart composed his K100/62*a*, 185/167*a*, 204/213*a* and 251, and perhaps K203/189*b* and 320, all works of the serenade type. Like the term 'cassation', the title 'Finalmusik' does not appear in the autographs of the works concerned, but it is found in correspondence between Mozart and his father in 1773 (21 July, 12 August), 1777 (2–3 October) and 1778 (23 November), in the diaries of several students and notables of Salzburg and in Salzburg civic records, always in reference to works having the character of a serenade. Similar festivities with processions, laudatory speeches, cheers and the performance of music were presented in honour of the reigning prince-archbishop of Salzburg.

HUBERT UNVERRICHT/CLIFF EISEN

Finatti, Giovanni Pietro (*fl* mid-17th century). Italian composer. He is known by *Missae, motetta, litaniae B. Virginis, cum quatuor eius solennibus antiphonis* for two to five voices and instruments, op.2 (Antwerp, 1652), and by four other sacred pieces (in RISM 1659[3]).

Finazzi, Filippo (*b* Bergamo, ?1706; *d* Jersbeck [now Segeberg], nr Hamburg, 21 April 1776). Italian singer and composer. He was a castrato soprano and enjoyed considerable fame in Italy and Germany. His earliest known appearances were in Venice in 1726; between 1728 and 1730 he sang in the Italian opera at Breslau, where he contributed some arias to the pasticcio *Merope*. He had returned to Venice by 1732; three years later he became a member of the Accademia Filarmonica, Bologna, and by 1739 he was in the service of the Duke of Modena (late librettos describe him as the duke's *maestro di cappella*, but this claim has not been substantiated). In the summer of 1743 he joined the opera company of the impresario Pietro Mingotti in Linz, and appears never to have returned to Italy. In October the company moved to Hamburg where it gave regular seasons until 1747. Hamburg's German opera had closed in 1738, and Mingotti's company offered the first extended seasons of new Italian works, both serious and comic: *opere serie* and intermezzos, including *La serva padrona*, were regularly performed. Partly because of the singing of Finazzi, Francesco Arrigoni (another castrato) and the soprano Rosa Costa, the Italian opera was at first very successful and was patronized by members of the Danish court at Altona. From the evidence of cast lists, however, Finazzi appears not to have been a regular member of Mingotti's company after 1744, when he both composed for the company and toured with it to Prague and Leipzig; thereafter he sang only occasionally in Hamburg and made his last known stage appearance in February 1746 in the title role of his own *Temistocle*.

City records show that in 1746 he adopted the Protestant religion and became a resident of Hamburg; later documents, which also imply his year of birth, suggest that he supported himself for the next ten years by teaching. In 1756 he acquired a small country estate in Jersbeck, near Hamburg, where he was cared for by a housekeeper, a local blacksmith's widow, Gertrud Steinmetz, for the education of whose sons Finazzi made himself responsible; she nursed him after an accident in which he broke both legs. In 1761 the singer proposed to marry her but, because of his anomalous sexual condition, an act of the Hamburg senate was required for the ceremony to take place, in 1762. The state documents attested to Finazzi's good character and decent life, and according to Gerber both his character and his cultivation of mind were such as to win him friends within Hamburg's upper circle of society, including the poet Friedrich von Hagedorn, Baron von Ahlefeld, friend and counsellor of the King of Denmark, and (according to Stephenson) G.P. Telemann.

Most of Finazzi's operatic music is lost. Schmitz regarded his surviving cantatas as belonging to the Neapolitan school of virtuoso music, somewhat conservative in vocal style and unadventurous in instrumental accompaniment, but nevertheless containing 'numerous lively, fresh details' in the writing.

JAMES L. JACKMAN

Finch, Edward (bap. Kensington, 20 April, 1663; *d* York, 14 Feb 1738). English ecclesiastic, composer and copyist. He was the fifth son of Heneage Finch, first Earl of Nottingham. He was admitted to Christ's College, Cambridge, in 1677, obtained the MA in 1679, became a fellow in 1680, entered the Inner Temple in 1683 and represented his university in parliament, 1689–95. He was ordained in 1695 and became Prebendary of York in 1704, Rector of Kirkby-in-Cleveland in 1705, Rector of Wigan in 1707 and Prebendary of Canterbury in 1710.

Most of our knowledge of Finch's musical activities comes from his autograph manuscripts. One (*GB-Ge* R.d.39) contains composition and figured bass treatises by Gottfried Keller, Purcell and Finch himself, instructions for tuning the organ by Renatus Harris and the harpsichord by Keller and 'Mr Allen', rules for fingering keyboard music by Keller, G.B. Draghi, Charles Quarles and Handel, as well as church music, keyboard music and secular vocal music by Finch and others. Others in his hand may be found in York Minster and Durham Cathedral, those in the latter including consort music by Finger and vocal music by Handel, Steffani and Bull. The score of solo sonatas and vocal music, formerly in the Cummings collection, that contains the unique copy of the Sonata in G minor (Z780) attributed to Purcell was also copied by Finch.

Finch appears to have written much music; however, it is often difficult to tell which pieces in his autographs are his own. Many are extracts, and it is often unclear where pieces begin and end. The main pieces that seem to be by him are a sequence of 11 solo sonatas (dated 1716–20, but three were written during the reign of James II; *GB-Y*, *The Cuckow* was published in *The Second Part of the Division-Violin*, London, 2/1693); a *Te Deum* and *Jubilate* in G (*DRc*, *Y*); a *Te Deum* and *Jubilate* in G minor (*Lbl*, *Y*); an anthem, *Grant we beseech thee* (*DRc*, *Lbl*, *Y*); some catches and numerous chants. The sonatas include versions corrected by the Italian cellist and composer Lorenzo Bocchi, who may have taught Finch. Finch's style developed a great deal between the 1680s and 1720s; his music is reasonably competent and often attractive, but little of it seems to have been known outside his immediate circle.

PETER HOLMAN

Fincham & Sons. Australian firm of organ builders. It was founded by George Fincham (*b* London, 25 Aug 1828; *d* Melbourne, 21 Dec 1910), the pioneer of Australian organ building. The family originated in the English village of Fincham, Norfolk. George's father Jonathan George Fincham (1796–1863) and grandfather John (*b* 1754) were both organ builders. In 1901 George's son Leslie Valentine Hunter (1879–1955) became a partner in the firm, which continued under the direction of Leslie's son George Bowring (*b* 1917) and grandson David George (*b* 31 Jan 1944).

George Fincham was apprenticed to Henry Bevington in London (1843–9) and then worked as foreman for James Bishop & Son, London, and Forster & Andrews of Hull. He emigrated to Australia in 1852, intending to establish an organ-building enterprise; he set up his first factory in Richmond, Melbourne, in 1862. In 1878 he bought the firm of Lee & Kayes, and in 1881, with Arthur Hobday, who had been his apprentice in 1866, set up a branch in Adelaide, which became known as Fincham & Hobday. Hobday was co-manager of the Adelaide branch with J.E. Dodd, who became sole manager in 1888 and bought the firm in 1894 (*see* DODD (ii)). Dodd was also a junior partner of the Melbourne firm, also called Fincham & Hobday from 1889 until it was restructured in 1897. Fincham & Hobday produced some noteworthy instruments, including the organ for the Australian Church, Melbourne (1890; four manuals, 53 speaking stops), and many reconstructions and enlargements of earlier organs. Hobday returned to New Zealand and died there in 1912. Fincham opened other agencies and branches, in Perth (1897), Brisbane (1902) and Sydney (1904).

Fincham's first organ (one manual, 10 stops) was sold to the Congregational Church, East Melbourne, for £180. The second (two manuals, 17 stops), dated 1864, was the first comparatively large organ to have been built in Australia and may have been used as a demonstration instrument in his factory. In 1866 Fincham was awarded £100 by the government of Victoria in recognition of his founding of an Australian organ-building industry. He subsequently won prizes at several exhibitions in Australia and London. One of his most notable instruments was that produced in 1880–81 for the Melbourne International Exhibition; having four manuals and about 70 stops, it was the 18th largest organ in the world at that time.

Fincham produced about 200 organs, the larger instruments including those for St Joseph's Cathedral, Dunedin (1866), and St Mary's Cathedral, Hobart, Tasmania (1894). Many smaller organs were produced during these years, some for private residences, others for parish churches (e.g. St Ignatius, Richmond, Melbourne, 1874). He was also involved in restoration and maintenance work, and the production and sale of components to other Australian organ builders. The firm's later work has included the organs for Christ Church Cathedral, Ballarat (1930), St Patrick's Cathedral, Melbourne (1962–4), St Francis's Catholic Church, Melbourne (1973), and Corpus Christi College Chapel, Clayton, Victoria (1978), as well as restorations, such as the organ in the Australian Church, renovated and installed in Wilson Hall, University of Melbourne (1956). Although Australian organ building prospered during the middle of the 20th century, it became evident that various factors such as spiralling labour costs, waning church finances and fewer applicants

for apprenticeships would greatly affect the viability of the trade in the future. Consequently the firm diversified and by the end of the 20th century was concentrating on the restoration of historic woodwork and the production of hand-made furniture. Their last new organ was built in 1982 for John XXIII College, Australian Catholic University, Canberra, and their last work undertaken in 1998 (a restoration of the organ built by John Courcelle in the Church of Christ, Geelong).

The consoles and façades of Fincham's organs tend to be very stylized, the latter being impressive in their use of decorated pipes. The tonal plan of the many small single-manual organs of 1866–76 was based on Diapasons, flutes and Dulcianas, with only occasional use of a reed or mixture. The larger two-manual organs made greater use of reeds: on the Swell usually an Oboe, but occasionally a Cornopean, and on the Great a mixture and Trumpet. Strings were not used until the 1890s when a Clarinet stop replaced the Trumpet. On larger three-manual organs the Choir organ was based on strings and flutes, not Diapasons, and the basic Fincham Pedal organ consisted usually of a Bourdon, or Open Diapason, a Bass Flute being added to the design in the 1880s. Trackers were used in the early organs, but these soon gave way to tubular-pneumatic actions. Given the diversity of the Australian climate, producing a reliable pneumatic action proved expensive and difficult, and this, coupled with the economic depression of 1929–34 and the two World Wars, had an adverse effect on the fortunes of the firm. However, the quality of the firm's pipework has always been excellent, and even in the early days few pipes were imported; Fincham won a prize for his spotted metal and metal pipes in the Colonial and Indian Exhibition, London, of 1886, and pipe manufacture played a big part in the prosperity of the firm during its early stages.

W.D. JORDAN

Finck, Heinrich (*b* ?Bamberg, 1444 or 1445; *d* Vienna, 9 June 1527). German composer.

1. LIFE. The scant information about Finck's life given in his great-nephew Hermann Finck's *Practica musica* (Wittenberg, 1556) must be regarded with caution, for Hermann did not know him personally and had to rely on the reports of others, who may have embroidered the colourful nonconformist biography of the composer. He was probably the son of a master builder and councillor of Bamberg and thus, like Paul Hofhaimer and Thomas Stoltzer, seems to have had his origins in the wealthy middle class. According to Hermann Finck he was in Poland when still a boy, probably as a choirboy after 1454, staying on there in the service of the king. Hermann further described him as one of the musicians active about 1480 who were better composers than the representatives of the older art such as Du Fay and Busnoys. In summer 1482 a 'Henricus Finck de Bamberga Bavaria' matriculated at Leipzig University. The designation 'bonus cantor', then a high distinction and usually reserved for a famous musician with an above-average reputation, almost certainly refers to the composer. By that time he was 37 or 38, but in the 15th and 16th centuries it was not uncommon for men of that age to study at university. Finck must have returned to Kraków, there meeting the German humanist Conradus Celtis, who taught at Kraków University from 1489 to 1491. In a letter to Celtis of 7 April ?1492, which is the earliest surviving document written by him, Finck told how he left Poland as a poor man and visited kings, princes and other high-ranking people to obtain an appointment, but without success. After travelling for several years he returned once more to Poland. By 1498 at the latest he was in Vilnius as Kapellmeister to Prince Alexander of Lithuania. In 1501 Alexander became King of Poland and Finck moved back to Kraków again with the chapel. His name appears in the royal account books until 1505. By 1510 Finck had left Poland for good. After long negotiations he was appointed 'Singemeister' of the ducal Kapelle in Stuttgart on 5 November 1510 with the high yearly allowance of 60 florins. He appears to have composed his splendid mass for six to seven voices for the extravagant wedding of Duke Ulrich and Sabina of Bavaria on 22 March 1511. The disbanding of the Kapelle in 1514 left him once more without a livelihood. Moser supposed, probably correctly, that for a short time he was in the court Kapelle of Emperor Maximilian I. In March 1517 he sent greetings from Mühldorf, Bavaria, to his friend the humanist Joachim Vadian; he had probably belonged to the household of Cardinal Matthäus Lang in Mühldorf from 1516. After Lang became Archbishop of Salzburg in 1519 Finck seems to have moved there, where he worked as composer to the cathedral chapter. In a letter from Salzburg of 10 May 1524 to Vadian he bemoaned the turbulent life at court and hinted that he wanted a change. It is clear from the letter that he was not a priest as was formerly thought. Finck spent the last years of his life in Vienna, where he formed a Kantorei in the Schottenkloster with Erasmus Lapicida. On 1 January 1527 Ferdinand I appointed him court Kapellmeister, but five months later Finck died. Ferdinand had a memorial medal struck for him (now in the British Museum; see illustration), which captures his impressive likeness. Among his pupils were Johann Zanger, Stephan Mahu and, in Salzburg, Rupert Unterholtzer. In his later years in Kraków he probably also taught Thomas Stoltzer.

2. WORKS. Finck's unusually long composing career stretched from about 1465 until the third decade of the next century, that is, from the period of Du Fay's later works to that of Josquin's last years. Hermann Finck's claim that his great-uncle was an established composer as early as 1480 is borne out by the appearance of works by him in three manuscript collections (written in about 1500) of music from that period: the manuscript which belonged to Magister Nikolaus Leopold of Innsbruck (*D-Mbs* Mus.ms.3154), that of Magister Nikolas Apel (*D-LEu* 1494) and the manuscript *D-Bsb* Mus.40021. Unfortunately these sources contain relatively few pieces by Finck. Most of his works written before 1500 are lost; all that remains from his Polish years are some small incomplete pieces in organ tablature (mostly in *H-BA*).

Heinrich Finck: memorial medal, 1528 (British Museum, London)

Similarly, only a small proportion of works from his last 20 years survives. Partly to blame is the rule which was in force in almost all courts, including that of Salzburg, forbidding composers to give their compositions to outsiders, but other circumstances must also have been responsible for the particularly large losses in Finck's output. The 1544 inventory of the Neuburg court Kapelle lists (according to Lambrecht) 26 compositions by him, including three masses and no fewer than 18 motets for the Mass Proper, but of these only the *Missa super 'Ave praeclara'* (which exists in other sources) and two motets have survived. Modern research has authenticated a total of 119 compositions by Finck: seven masses or settings of parts of the Mass, 42 single motets and motet cycles for the Proper of the Mass, 28 hymns and 38 songs and instrumental pieces. Whereas the masses and motets have frequently come down in incomplete form, with parts missing, the hymns and songs have survived almost without loss because they were printed in the 16th century by Rhau and Formschneider. As with Stoltzer, a strong interest in the Reformation is evident in Finck's work. The most important manuscripts and publications either come from or have close connections with mid- and south Germany. No works printed after 1570 survive. But as late as 1650 a manuscript copy of his Christmas sequence, *Grates nunc omnes*, was in the possession of Zachariáš Zarewutius.

Finck's creative life, which lasted for about 60 years, spans three generations of composers, beginning with the first flowering of German polyphony. His style was therefore subject to considerable change. He retained into his 60s and 70s an admirable readiness to rethink his ideas and to assimilate the 'modern' music written after 1500 by Isaac, Josquin and others. After Finck's death, young musicians had difficulty in understanding his early works, and described his style as crude ('hart') in its harmonies (Hermann Finck) or as 'a peculiar art, turned in a strange manner' (Ulrich Brätel in his song *So ich betracht und acht der alten Gsang*), and likened his style to Alexander Agricola's. These judgments did not, however, lessen Finck's importance for his contemporaries; on the contrary, the 16th century could not resist the peculiar fascination and exotic charm of this bold and masterly style.

The striking differences between the work of Finck's youth and his old age are best shown by his four surviving masses. His mass for three voices, much of which is composed without a cantus firmus, is an early work. Its difficult contrapuntal lines, frequent melismas and canon and sequence technique make great demands on singers. The *Missa dominicalis*, on the other hand, was probably composed during the last ten years of his life. It is indebted to late Netherlandish examples in its imitative technique and migrant cantus firmus, but in the details of its construction Finck's personal stamp is unmistakable, for example in the Sanctus and Agnus Dei. The extent to which his later style was characterized by full harmonic textures and the increased use of the bass as the foundation of the composition can be seen in the six- to seven-voice mass probably composed for Duke Ulrich's marriage in 1511. The mass is based on a plainsong cantus firmus throughout except in the Credo where a songlike melody is used; although this has not yet been identified, it may have some connection with the probable occasion for the composition. The *Missa super 'Ave praeclara'* for five and six voices, discovered in the 1970s, is probably one of Finck's late works. All the movements are linked by a characteristic head-motif, and the virtuosity of the Kyrie and Agnus Dei is balanced by constructivist elements (such as are found in the Credo) and word-painting. The few extant complete settings of parts of the Proper of the Mass are all of a late date with the exception of an old-fashioned alleluia and two introits. The sequence *Quae miris* demonstrates how far the elderly Finck adopted Josquin's choral style and timbre. There is an enormous gulf between the transparent composition technique and graphic interpretation of the text and the melismatic style of the three-voice mass.

The other surviving motets probably date from Finck's middle and late periods. Ambros recognized the seven-voice motet *O Domine Jesu Christe* as a mature work. The clear, expressive setting and the climax in the last section, which includes the canon *O passio Domine magna*, once more show his individual treatment of the Netherlandish style. The three complete and one incomplete four-part *Magnificat* settings can also be classified as late works because of their varied technique. The seven great five-voice responsories now in Zwickau (*D-Z* 73) and Regensburg (*D-Rp* B 211–15) were probably composed much earlier, perhaps before 1500. In these there is a balance between retrospective features (long-note cantus firmi, fauxbourdon technique, etc.) and 'modern' elements (imitation, dividing of choirs and full harmonic textures). They are among the most important examples of their kind.

Finck's hymns and songs are also outstanding, and it seems that the greater part of those written after 1500 has survived. Two early hymns in the Apel Codex (*D-LEu* 1494) present the melody in a succession of semibreves, without rests. On the other hand, the 22 compositions published by Rhau in his *Sacrorum hymnorum liber primus* (Wittenberg, 1542[12]) show great variety, particularly in the treatment of the cantus firmus. Long and short notes, migrant cantus firmi with anticipatory imitation in the other parts, some 'modern' cadences and other techniques offered a profusion of possibilities of construction, which young composers such as Stoltzer repeatedly

quoted in their own settings of the texts. The 28 genuine polyphonic German Tenorlieder, printed in 1536, probably belong to Finck's last 20 years. The two sacred pieces *Christ ist erstanden* and *In Gottes Namen fahren wir* resemble motets in their size and scope and strong cantus firmi, whereas many of the secular songs are limited, and often set syllabically in *semiminime*. It is striking that Finck preferred folksong texts to the stilted court song. He was particularly fond of simple, warmhearted love songs such as *Allein dein G'stalt*, *Ach herzig Herz* and *Von hinnen scheid ich*. Many of the melodies of his Tenorlieder are unique and he may have written them himself. Song melodies play an important part in many early sacred works too. Outstanding among the earlier songs, circulated only in manuscript, are *Lieber Herr St Peter*, the five-voice *Greiner zanner*, which is based on an unusually coarse text, and the five-part quodlibet *Amica mea/Ich stund an einem Morgen*.

WORKS

only complete works and principal sources are given; for sources of concordances and fragments see Hoffmann-Erbrecht (1982)

Edition: *Heinrich Finck: Ausgewählte Werke*, ed. L. Hoffmann-Erbrecht, EDM, 1st ser., lvii (1962), lxx (1981) [H i-ii]

MASSES

Missa, 3vv, H i; also ed. *AmbrosGM*, v, ed. O. Kade (Leipzig, 1882, 3/1911)
Missa super 'Ave praeclara', 5–6vv, H ii
Missa dominicalis, 4vv, H, i
Missa, 6–7vv, H ii (as Missa in summis); also ed. in Cw, xxi (1932, 2/1953), as Missa in summis

OTHER SACRED

Magnificat septimi toni, 4vv, H ii
Magnificat octavi toni, 4vv, H ii
4 motet cycles, 4vv, H i
7 responsories, 5vv: Apparuerunt apostolis, *D-Z* 73; Christus resurgens, H ii; Felix namque, *Z* 73; Illuminare Jerusalem, *Z* 73; Ite in orbem, H ii; Petre amas me, H ii; Verbum caro factum est, *Rp* B.211–15
2 ants, 5vv: Et valde mane una sabbatorum, Veni Sancte Spiritus: H ii
2 ints, 4vv: Puer natus, Resurrexi: ed. in EDM, 1st ser., xxxii (1956)
9 other motets (in *Bsb* Mus.ms.40021 unless otherwise stated): Ave Jesu Christe, 4vv; Deo dicamus, 4vv; Dies in laetitia, 4vv, 1567[1]; Gloria laus et honor, 4vv; In medio ecclesia, 4vv, *ABG* 1248; Lieber Herr St Peter, 4vv; Misereatur Dominus, 4vv; O Domine Jesu Christe, 4–6vv; Salva nos, 5vv, H ii
24 hymns, 4, 5vv, 1542[12], *LEu* 1494; ed. in EDM, 1st ser., xxi (1942), xxv (1943), xxxii (1956), 10 also ed. in Cw, ix (1931), xxxii (1935)

SECULAR

[30] Schöne ausserlesene Lieder, 4, 5vv (Nuremberg, 1536) [2 doubtful], 27 ed. in H ii
3 songs: Amica mea/Ich stund an einem Morgen, quodlibet, 5vv, H ii; Greiner zanner, 5vv, H ii; Wär ich ein Falk, 4vv, ed. in EDM, 1st ser., xxxiii (1960)
5 textless pieces, 4vv, ed. in EDM, 1st ser., xxxiii (1960)

LOTHAR HOFFMANN-ERBRECHT

Finck, Henry T(heophilus) (*b* Bethel, MO, 22 Sept 1854; *d* Rumford Falls, ME, 1 Oct 1926). American music critic. After graduating from Harvard in 1876 with highest honours in philosophy (he also studied music with John Knowles Paine), he went to Europe and reviewed the first Bayreuth Wagner Festival for the New York *World* and *The Atlantic Monthly*. He returned to Harvard for graduate study a year later and won a three-year scholarship which gave him the opportunity to pursue his studies from 1878 to 1881 in Berlin, Heidelberg and Vienna. While abroad he continued to contribute articles to various American periodicals. In 1881 he returned to the USA and became music critic of *The Nation* and the New York *Evening Post*, positions he held until his retirement in 1924. He lectured on music history at the National Conservatory in New York from 1888 until his death. One of the most prolific and influential critics of his day, Finck embraced the musical aesthetics of the Romantics and was an ardent and eloquent champion of Liszt, Wagner, Grieg and MacDowell. He wrote 24 books on music, anthropology, psychology, travel, diet and horticulture, and also edited four collections of songs.

DAB (F.L. Twinner Cole)

MARGERY MORGAN LOWENS

Finck [van de Vinck], **Herman** (*b* London, 4 Nov 1872; *d* London, 21 April 1939). British conductor and composer. He first studied with his father, a Dutch immigrant who, as Louis von der Finck, was a theatre violinist, conductor and composer in London. Herman Finck began to play the violin in theatre orchestras at 14, studied with Henry Gadsby, entered the Guildhall School of Music at 16 (his compositions there included violin sonatas) and learnt theatre orchestration from Edward Solomon. At the Palace Theatre of Varieties Finck was a pianist and violinist (from 1892), a leader and sub-conductor to Alfred Plumpton (from 1896) and a conductor (from 1900). In 1919 he moved to the Queen's Theatre, and in 1922–31 was musical director at the Theatre Royal in Drury Lane, where he conducted the London premières of romantic musicals such as Rudolf Friml's *Rose Marie*. From 1933 he conducted the Sunday night concerts at Southport. His memoirs were published in 1937.

Finck composed, arranged and orchestrated a great deal of music, particularly revues, for the Palace Theatre. He also wrote musical comedies including *My Lady Frayle* (Howard Talbot, 1916) and many light orchestral pieces. His thorough grasp of technique and lightness of touch are well displayed in the dance *In the Shadows* (1910) and in the song *I'll make a man of you* ('On Sunday I walk out with a soldier') from the revue *The Passing Show* (1914).

ANDREW LAMB

Finck, Hermann (*b* Pirna, 21 March 1527; *d* Wittenberg, 29 Dec 1558). German theorist, composer, teacher and organist. He was the great-nephew of the composer Heinrich Finck. After early training, presumably in Pirna, it is thought that he joined the chapel of King Ferdinand I of Hungary and Bohemia. In 1545 he matriculated at Wittenberg University, where in 1554 he became a teacher of music. Three years later he was appointed organist in Wittenberg. He does not appear ever to have lived in Poland, as has been suggested on the basis of the dedication of his most important work, the treatise *Practica musica*, to members of the Gorca family (Polish nobility prominent in Wittenberg).

Finck was involved with the intellectual life of Wittenberg, then a centre of Lutheranism and humanism. In particular he gained the support of Melanchthon, two of whose poems he set to music and whose *Epistola complectens commendationem musicae* provided much of the text of the dedicatory epistle in the *Practica musica*. Finck also wrote motets for the weddings of important persons. Two of his compositions are included in a manuscript written by a Wittenberg student, Wolfgang Küffer (*D-Rp* AR 940–1); it contains passages that are also found in Finck's own *Practica musica* (Josephus Flavius on the inventors of music and the distichs of Simon Proxenus). His compositions have been confused with those of Heinrich Finck.

The *Practica musica*, a comprehensive treatise presenting the rudiments of music for students, is divided into five books: the elements of plainchant; the elements of measured polyphony; canons; the modal system; and performing practice. The treatise contains 83 compositions as illustrative examples, given without attributions, mostly from the works of leading composers of the time, notably Josquin Des Prez.

In the explanation of the basic rules of music Finck, as was customary in a treatise of this kind, drew from the works of other leading theorists, particularly Heinrich Faber, but also including Listenius, Rhau and Spangenberg, all of whom at some time were connected with Wittenberg. The main importance and interest of the treatise lie in the digressions that appear from time to time, where Finck for the most part expressed his own ideas, not only on the definitions and rules, but also on historical and aesthetic matters. These include, in addition to the much-quoted explanations of *tactus* and the early history of music, accounts of the solmization syllables, the modal system (with particular reference to polyphony), the various mensurations and the proportions. The extended treatment of canon in the third book and all of the fifth book are of the same character. The fourth book includes a brief statement on how to determine mode in a polyphonic composition: each point of imitation must be regarded separately to ascertain the mode to which it corresponds; the mode that most have in common is to be assigned to the entire piece.

From the treatise it is clear that Finck was deeply concerned with the state of music in his time. His reflections on the history of music are contained in the preliminary comments to the first book and in the fifth book. He included Flavius's conventional account of the mythological origin of music, taken over from Ricchieri's *Lectionum antiquarum*, but then went on to interpret the music of his own time. He made a distinction between older composers – those of the late 15th century among whom he included Gaffurius, Tinctoris and Du Fay, who established the principles of the art, and more recent composers such as Josquin and Gombert (the latter being singled out for particular praise), who stressed euphony, the proper setting of the text, and imitative counterpoint. The distinctions between different composers are made on the basis of style and technique of composition. Finck's humanistic preoccupation is revealed by his preference for contemporary composers and his concern for the proper expression of affections of the text in a composition. His interest in history is shown by the unusually detailed presentation of proportions and canon, both associated primarily with earlier music. The fifth book of the treatise also deals with the difficult circumstances in which German musicians found themselves at the time.

The *Practica musica* concludes with a discussion of the proper performance of ensemble polyphony. Finck urged that the singers maintain proper intonation throughout a piece and that while the individual voice-parts should be kept in balance, the musical subjects of the imitative entries should be sung louder than the rest. Finck explained how embellishments ('coloraturae') are to be applied in performance, particularly at cadences, and

provided an example of his own – the four-part motet *Te maneat semper* (text by Melanchthon) – in which all such embellishments are written out.

WRITINGS

Practica musica … exempla variorum signorum, proportionum et canonum, iudicium de tonis, ac quaedam de arte suaviter et artificiose cantandi continens (Wittenberg, 1556, enlarged 2/1556/*R*)

F.E. KIRBY

Fincke [Finke, Finck]. German family of organ builders. They were active in Thuringia in the 18th century. Johann Georg Fincke (*b* *c*1685; bur. Saalfeld, 26 May 1749) is described in the records as a 'citizen and organ builder' of Saalfeld. He married twice: on 14 Oct 1709 and in 1718. Another Johann Georg Fincke (*d* Neustadt an der Orla, 2 Nov 1774), presumably the son of the elder J.G. Fincke, is described in church records as an organ builder and citizen of Neustadt. Christian Finck (1648–1715) and Johann Philipp Finck are also mentioned as organ builders in Saalfeld, but their relationship to the two J.G. Finckes is not clear. Several other Finckes are mentioned in Jena, Neustadt, Saalfeld and Gera but the family relationships are obscure.

There are significant similarities of style between the elder J.G. Fincke and T.H.G. Trost, who was active in Thuringia at the same time. There are similarities in their organ specifications, the basic tonality of the instruments, and in further details of register construction, their use of Tierces in their Mixtures, scaling and technical layout. They probably had the same teacher, as yet unidentified. Striking features of the specifications include the uninterrupted structure of the Principals and a preference for flute stops, although string stops do occur with increasing frequency (Viola di gamba 8′, Spitzflöte 8′, Quintadena 16′, Violonbass 16′). In 1724 J.S. Bach wrote a report on the elder J.G. Fincke's organs in the Salvatorkirche (1720) and St Johannis (1724) in Gera. Other organs built by the elder J.G. Fincke include those at Camburg (1707), St Johannis, Saalfeld (1712), Schwarzburg (1713), the Stadtkirche, Gera (1715), Altenbeuthen (1716) and Neustadt/Orla (1728). The younger Johann Georg built an organ at Ruttersdorf (1755) and repaired several others.

An organ builder called Johann Georg Fincke is mentioned in the records at Wittenberg as 'deputy organ builder', but it cannot be proven whether this is one of the masters mentioned above. Two designs by this builder exist for an organ of 1738 in Stolpen in Saxony.

FELIX FRIEDRICH

Finco, Giuseppe Francesco. *See* FARINELLI, GIUSEPPE.

Findeyzen [Findeisen], **Nikolay Fyodorovich** (*b* St Petersburg, 5 Aug 1868; *d* Leningrad, 10 Sept 1928). Russian musical journalist and historian. He studied at the Ye. Shreknik Commercial College in St Petersburg (1878–87). He gained his musical education at the K. Dannemann and N. Krivoshein Music School (1886–9), and studied counterpoint privately with Nikolay Sokolov (1890–92). Two years later he published, under the initials N.F., a short study of Verstovsky's music. In 1894 he founded the monthly *Russkaya muzïkal'naya gazeta*, which was published weekly from 1899 until it ceased publication in 1917; the quality of its main contents – to say nothing of its concert notices, reviews and news – quickly earned it a unique position in Russian musical journalism. Findeyzen not only edited the *Gazeta* but contributed numerous biographical and critical articles on Russian musicians and music, and printed quantities of hitherto unpublished letters and other documentary material, some (but by no means all) of which appeared later as books or pamphlets. In 1903 he founded another outlet for similar material in *Muzïkal'naya starina*, a 'collection of articles and materials for the history of music in Russia', of which six numbers appeared irregularly during 1903–11. He edited the third and fourth volumes of Serov's collected critical writings (St Petersburg, 1895), two volumes of Glinka's letters (1907–8), a selection of hitherto unpublished letters by Stasov (1912), a volume devoted to Dargomïzhsky, containing his autobiography, letters, and recollections by his contemporaries (Petrograd, 1921), and a small collection of studies in musical ethnography by various contributors (Leningrad, 1926). He translated Emil Naumann's *Illustrierte Musikgeschichte* (St Petersburg, 1897) and was responsible for two Russian editions of Riemann's *Musik-Lexikon* (1901 and 1916). In 1899 Findeyzen became a corresponding member of the International Musical Society in Berlin. In 1909, together with Ziloti, he founded the Society of Friends of Music. After the Revolution he was president of the Commission for the Study of Folk Music set up by the Russian State

Geographical Society, and a member of the artistic council of the State Opera and Ballet Theatres. He was professor of musical archaeology and palaeography at the Petrograd (Leningrad) Archaeological Institute (1919–26), and founder principal head of the Museum for the History of Music (1919–28).

Findeyzen's major work, *Ocherki po istorii muzïki v Rossii s drevneyshikh vremyon do kontsa XVIII veka*, was published partly posthumously without his final supervision. With its 123 pages of musical examples, it remains the foundation-stone on which all later work on the history of Russian music before the 19th century has been built. An English translation by S.W. Pring, commissioned by the American Council of Learned Societies, remains unpublished.

GERALD ABRAHAM/LARISA GEORGIEVNA DAN'KO

Fine (It.: 'end'). An indication of the point at which a piece finishes, used particularly in those forms (e.g. in da capo arias or minuet and trio movements) where the notation ends with the second section, but the performance ends with the repeat of the first.

ROBERT DONINGTON

Fine [Van Eynde, Von Ende], **Arnoldus de** (*b* ?Antwerp; *d* Elsinore, 13 Nov 1586). Danish composer, organist and choirmaster of Flemish birth. He is said to have left his native country because of religious persecution under Philip II, but he may have been invited to Copenhagen by the Danish King Christian III, who had good connections in other European countries. He was first named as an organist in the Danish royal chapel in April 1556; he was replaced in 1560, remaining at the court as the queen's organist. In 1563 he was appointed to the king's chapel by Christian's successor Frederick II, who held him in high esteem and granted him several benefices including two at Roskilde Cathedral. When the royal chapel was reorganized after the Seven Years' War with Sweden, Fine was appointed *sangmester* on 5 June 1571. His long and faithful service was rewarded with a canonry at Århus Cathedral in 1583. Although little is known about his musical activities, he was responsible for the education of the choirboys throughout his career, and he must have organized the music for Frederick II's wedding to Sophie of Mecklenburg in 1572.

Fine was highly regarded by his own and the next generation (see e.g. H.M. Ravn, *Heptachordum danicum*, 1646), but very little of his music has survived, all German sacred lieder for four voices. A well-written and effective setting in cantional style of *Wann mein Stündlein vorhanden ist* occurs in the Flensburg collection (*D-FLs* Mus.ms.4, ed. O. Kongsted, *Liber cantionum*, i, Copenhagen, 1993). A similarly shapely setting of *Das alte Jahr vergangen ist* must have been very popular at the end of the 16th century, as contemporary copies are found in a number of European libraries (e.g. *D-Dl, Z*). *Ich hab mein Sach tzu Got gestelt* was attributed to Fine in a transcription in the collection of Otto Kade (*D-SWl* 4757/25), but the original manuscript (in *D-DL* Mus. Pi Cod. III, no.7) was badly damaged during World War II and the attribution can no longer be seen. No compositions have survived in Danish sources.

Fine's descendants are very numerous in the Danish-Norwegian monarchy. One son, Petrus Arnoldi de Fine (*d* 1620) was a singer in the royal chapel; another, Arnoldus de Fine, was an instrumentalist in the chapel from 1603 to 1627.

OLE KONGSTED

Fine, Irving (Gifford) (*b* Boston, 3 Dec 1914; *d* Boston, 23 Aug 1962). American composer, teacher and conductor. He studied composition with Hill and Piston at Harvard University (BA 1937, MA 1938), and later worked with Boulanger and studied conducting with Koussevitzky. He taught at Harvard (1939–50) and was then appointed to the faculty of Brandeis University; at the time of his death he was Walter W. Naumburg Professor of Music and chairman of the Brandeis School of Creative Arts. From 1946 to 1957 he also served on the composition staff of the Berkshire Music Center. His awards included two Guggenheim Fellowships, a Fulbright Research Fellowship, an award from the National Institute of Arts and Letters and several MacDowell Association grants. His commissions included those from the Ford Foundation, the Library of Congress, the Koussevitzky Foundation, the Juilliard School and the American League of Composers.

Copland included Fine in what he called the American 'Stravinsky School'; indeed, some of Fine's early works were influenced by Stravinsky as well as by Hindemith. Although his style was essentially dissonant, he did not come to grips with serialism until the String Quartet (1952) in which he felt that he had combined his earlier, tonal approach with the then new technique; the Fantasia for string trio (1956) is similar in style. In later works Fine's strongest interest appeared to be in contrapuntal and rhythmic organization, but he continued to experiment with serialism. His turning to 12-note methodology may have been brought about by a reassessment of his own neo-classicism and a liking for more contemporary practices. He wrote articles and reviews for *Modern Music*, *Notes*, *Musical America* and the *New York Times*.

CHARLES H. KAUFMAN

Finé, Oronce, Sieur de Champrouet (*b* Briançon, 1494; *d* Paris, 6 Oct 1555). French mathematician and music theorist. He studied at the Collège de Navarre, Paris, and was appointed professor of mathematics at the University of Paris by François I. His theoretical works *Protomathesis* (Paris, 1532), *Epistre exhortatoire touchant la perfection . . . des arts liberaulx mathématiques* (1532) and *De rebus mathematicis* (1556) do not deal with music, as is generally thought. His passion for music encouraged him to persuade his friend Attaingnant to publish a short treatise dealing with practice and theory: *Epithoma musice instrumentalis ad omni modam hemispherii* (Paris, 1530). The *Tres breve et familiere introduction pour entendre et apprendre par soy mesmes a jouer toutes chansons reduictes en la tabulature de lutz* (Paris, 1529) has also been attributed to Finé, but there is no evidence to support the attribution.

PHILIPPE VENDRIX

Fine, Vivian (*b* Chicago, 29 Sept 1913; *d* Bennington, VT, 20 March 2000). American composer and pianist. At the age of five she was a scholarship piano student at the Chicago Musical College. She later studied the piano with Djane Lavoie-Herz (1924–6) and Abby Whiteside (1937–45), composition with Ruth Crawford (1926–8) and Roger Sessions (1934–42), and orchestration with George Szell (1943). Henry Cowell, Dane Rhudyar and Imrie Weisshaus were also supportive of her talent. She made her compositional début at the age of 16 when her compositions were performed in Chicago, New York (at a Pan-American Association of Composers' concert) and Dessau (at an International Society of Contemporary Composers' concert). After moving to New York in 1931, she acted as accompanist and composer for dance companies led by Doris Humphrey, Charles Weidman and Hanya Holm. A member of the Young Composers' Group, she participated in the first Yaddo Festival of Contemporary American Music (1932). She was one of the founding members of the ACA, musical director of the Rothschild Foundation (1953–60) and a faculty member at Bennington College, Vermont (1964–87). Her

awards included a Guggenheim Fellowship and grants from the Ford, Rockefeller and Koussevitzky foundations. In 1980 she was elected to the American Academy and Institute of Arts and Letters.

Fine's early compositional style is characterized by rhythmically flexible modernist counterpoint. While in New York, her musical language changed to a tempered tonality, exemplified by *The Race of Life* (1937) and *Concertante* (1944). She later returned to a freely dissonant style in works such as *The Great Wall of China* (1947–8) and *A Guide to the Life Expectancy of a Rose* (1956). Her compositional approach continued to be marked by a diversity of techniques: *Paean* (1969), *Missa brevis* (1972) and *Teishō* (1975), experiment with kaleidoscopic layering. *Momenti* (1978) and *Lieder* (1980) transform the musical gestures of Schubert and Wolf. *Double Variations* (1982) and *Toccatas and Arias* (1986) explore the contrapuntal procedures of retrograde and inversion. She set texts on women's issues in an oratorio (*Meeting for Equal Rights 1866*, 1976) and two operas (*The Women in the Garden*, 1977; *The Memoirs of Uliana Rooney*, 1993).

WORKS
(*selective list*)

STAGE

The Race of Life (ballet, choreog. D. Humphrey, after drawings by J. Thurber), pf, perc, 1937, New York, 23 Jan 1938; arr. orch
Alcestis (ballet, choreog. M. Graham), orch, 1960, New York, 29 April 1960, cond. R. Irving
The Women in the Garden (chbr op, Fine), 5 solo vv, chbr ens, 1977, San Francisco, 12 Feb 1978
Memoirs of Uliana Rooney (chbr op, S. Friedmann), S, 2 Bar, 2 female vv, fl, cl, vn, va, vc, db, pf, perc, 1994, New York, 1994
4 other stage works

ORCHESTRAL

Concertante, pf, orch, 1944; Alcestis, suite, 1960 [see STAGE]; Drama, 1982; Poetic Fires, pf, orch, 1984; 4 other works

CHAMBER

4 or more insts: Capriccio, ob, str trio, 1946; Str Qt, 1957; Concertino, pf, perc ens, 1965; Chbr Conc., solo vc, ob, vn, va, vc, db, pf, 1966; Qnt, tpt, str trio, hp, 1967; Brass Qt, (2 tpt, hn, b trbn)/(2 pt, 2 trbn), 1978; Qnt, ob, cl, vn, vc, pf, 1984 [from Drama, orch]; Dancing Winds, ww qnt, 1987; Madrigali spirituali, tpt, str qt, 1989; Hymns, hn, vc, 2 pf, 1991; 8 other works
2–3 insts: 4 Pieces, 2 fl, 1930; Sonata, vn, pf, 1952; Duo, fl, va, 1961; Fantasy, vc, pf, 1962; Lieder, va, pf, 1979; Music for Fl, Ob, Vc, 1980; Pf Trio, 1980; Sonata, vc, pf, 1986; Emily's Images, fl, pf, 1987; Portal, vn, pf, 1990; Songs and Arias, hn, vn, vc, 1990; 5 other works
Kbd (pf, unless otherwise stated): 5 Preludes, 1939–41; Sinfonia and Fugato, 1952; 4 Pieces, 1966; Momenti, 1978; Double Variations, 1982; Toccatas and Arias, hpd, 1986; Toccatas and Arias, 1987; 6 other works
Other solo inst: Variations, hp, 1953; Melos, db, 1964; The Song of Persephone, va, 1964; The Flicker, fl/pf right hand, 1973; 3 other works

VOCAL

Choral: Paean (cant., J. Keats), nar, women's chorus, brass ens, 1969; Sounds of the Nightingale (Keats, R. Barnefield, and others), S, women's chorus, 9 insts, 1971; Meeting for Equal Rights 1866 (cant., 19th-century Amer.), S, Bar, nar, mixed chorus, orch, 1975; Teishō (trad. Zen), small chorus/8 solo vv, str qt, 1975 [parts arr. vn, pf]; Oda a las ranas (P. Neruda), women's chorus, fl, ob, vc, perc, 1980; 6 other works
Solo vv and insts: The Great Wall of China (F. Kafka), medium v, fl, vc, pf, 1947; A Guide to the Life Expectancy of a Rose (S.R. Tilley), S, T, fl, cl, vn, vc, hp, 1956; Missa brevis, 1 taped v, 4 vc, 1972; Ode to Pucell (G.M. Hopkins), medium v, str qt, 1984; 5 Victorian Songs (C. Rossetti, Hopkins, E.B. Browning), S, fl, cl, vn, va, vc, 1988; Asphodel (Williams), S, fl, cl, vn, va, vc, pf, perc, 1988; 5 other works
Solo vv, pf (1v, pf, unless otherwise stated): 4 Elizabethan Songs (Donne, J. Lyly, W. Shakespeare, P. Sidney), 1937–41; 2 Neruda Poems (Neruda), 1971; Canticles for Jerusalem, 1983; Inscriptions (Whitman), 2vv, pf, 1986; The Garden of Live Flowers (L. Carroll), S, T, Bar, pf, 1988; 4 other works

HEIDI VON GUNDEN

Fine Arts Quartet. American string quartet. It was founded in Chicago in 1946 and its most recent members are Ralph Evans and Efim Boico, violins, Jerry Horner, viola, and Wolfgang Laufer, cello. The quartet's original first violinist, Leonard Sorkin, retired in 1982, the original cellist, George Sopkin, in 1979. Horner joined the group in 1980 and Boico in 1983. From 1946 to 1954 the Fine Arts was the resident quartet of ABC, Chicago; it has also recorded many programmes for the National Educational Television Network. In 1961 it began an annual chamber concert series at the Goodman Theater of the Art Institute, Chicago. Its players were made professorial members of the University of Wisconsin, Milwaukee, in 1963. In addition to annual concerts there, it has toured North America, Europe, Australia, New Zealand and East Asia. The quartet has recorded and given the premières of works by such composers as Babbitt, Wuorinen, Husa, Shifrin and Wellesz, as well as playing much of the Classical and Romantic repertory. Despite personnel changes in the early 1980s, the quartet has maintained its characteristic large and rich sound, even enhancing its long-standing reputation.

TULLY POTTER

Finetti, Giacomo (*b* Ancona; *fl* 1605–31). Italian composer. He was a Franciscan friar and was choirmaster of Iesi Cathedral in 1605 and 1606 and of SS Sacramento, Ancona, from 1609 to 1612. He spent the rest of his career in Venice: he was organist at S Maria Gloriosa dei Frari and also directed music at the Ca' Grande, which was then a convent.

Finetti was one of the more prolific composers of liturgical music in northern Italy at a time when the new concertato style was emerging. Most of the music that he published before he went to Venice is for specific rites – Vespers (psalms and, unusually, prayers), Compline and Christmas music, the last two not often found in practical compilations. The vesper psalms are among Finetti's few works for double choir. His music for the modern medium of a few voices and organ was more popular, as the frequent appearances of most of his publications of it testify; his three-part psalms (2/1618) show too that he did not adhere to an outmoded style for such texts, as others did. Several publications in northern Europe show that he had a high reputation there as well.

In the *Concerti ecclesiastici* the best music is in the duets, of which *O Maria quae rapis corda hominum*, a simple, attractive setting with some effective chains of suspensions at the end, is an outstanding example. Finetti employed word-painting, but some of the ornamentation is rather stereotyped, and his melodic imagination somewhat limited. He relied rather too much on echo effects between voices – in one of the motets of *Corona Mariae* there is an actual echo duet in which one tenor repeats (no doubt from a concealed position) the other's cadences, a somewhat trite device. However, he was concerned to produce convincing formal structures, as is clear from his refrains and other repeated material.

WORKS

Completorium, 5vv (Venice, 1605)
Orationes vespertinae, 4vv (Venice, 1606)
Omnia in noctis Nativitatis Domini, 5vv (Venice, 1609)
Psalmi ad Vesperas, 8vv (Venice, 1611)
Motecta, 2vv, bc (org) ad lib (Venice, 1611)
Concerti, 4vv, bc (org) (Venice, 1612, not 1st edn)
Sacrae cantiones, 2vv, bc (org), bk3 (Venice, 1613)
Sacrarum cantionum, 3vv, bc (org), bk4 (Venice, 1613)
Salmi, 3vv, bc (org) (Venice, 2/1618)
Concerti ecclesiastici, 2–4vv, bc (org) (Antwerp, 1621)
Corona Mariae, 4vv, liber 5 (Venice, 1622)
Motetti, concerti et psalmi, 2–4, 8vv, 7 vols. (Frankfurt, 1631); a collected edn from previous pubns
Tripartus SS. concentuum fasciculus (Frankfurt, 1621); contains works from previous pubns, and works by Pietro Lappi and Giulio Belli
Motets in 1616[2] (6 motets), 1623[2] (13), Exercitatis musica (Magdeburg, 1624, 2 motets), 1626[2] (7), 1626[4] (1), 1627[1] (19), 1627[2] (24), 1637[3] (7), 1638[5] (1)

J. Roche: *North Italian Church Music in the Age of Monteverdi* (Oxford, 1984)

JEROME ROCHE

Finger, Gottfried [Godfrey] (*b* ?Olomouc, *c*1660; *d* Mannheim, bur. 31 Aug 1730). Moravian viol player and composer. Georg Finger, his father or brother, was cantor at St Moriče, Olomouc. Gottfried was presumably in the service of Prince-Bishop Karl Liechtenstein-Kastelcorn, for pieces composed and copied by him survive in the prince-bishop's music collection at Kroměříž. According to Riemann, Finger was in Munich in 1682, and he was in London by spring 1687: he received a post in James II's new Catholic chapel by a warrant dated 5 July 1687, backdated to 25 March. In 1688 he published his op.1, which he dedicated to James II, stating that the music was intended for use in the Catholic chapel. Finger did not follow the king into exile in 1688, but remained in London and started a successful freelance career. He began by publishing three collections of easy and tuneful music designed to appeal to amateurs: *VI Sonatas or Solo's* (1690), the first collection published in England of sonatas for solo instrument and continuo, *A Collection of Choice Ayres* (1691) and *A Collection of Musick in Two Parts* (1691). The last was published by John Banister (ii), who added a four-part suite of his own and may have promoted concerts with Finger. Finger certainly provided music for flat trumpets for the 1691 St Cecilia's Day celebrations, composed the 1693 St Cecilia's Day ode, and gave concerts with Giovanni Battista Draghi at York Buildings from at least November 1693.

Finger's career in the theatre seems to have begun in 1695, when Thomas Betterton and his colleagues seceded from the United Company and began acting at Lincoln's Inn Fields. He wrote a suite and a song for their first production, Congreve's *Love for Love* (30 April 1695), and contributed to at least seven more plays between then and spring 1697. Nothing is known of his activities between 8 April 1697 and 17 February 1699, when a 'Consort of Vocal and Instrumental Music, after the Italian manner' was given at York Buildings for his benefit. Perhaps he spent the time abroad, in France or Italy: his music library was advertised in a London newspaper on 1 December 1704 as 'A Choice Collection of Vocal and Instrumental Music in Italian, French and English, composed by several great masters (the Italian music being most of them originals)'.

On his return, Finger plunged once again into London's theatrical life, writing music for plays and semi-operas put on by Christopher Rich's company at Drury Lane, though his career in England came to an abrupt end soon after he entered the competition to set Congreve's masque *The Judgement of Paris* and came fourth, beaten by John Weldon, John Eccles and Daniel Purcell; his setting was performed at Dorset Garden on 28 March 1701, and again with the other three on 3 June. According to Roger North, 'having lost the cause', Finger 'declared he was mistaken in his musick, for he thought he was to be judged by men, and not by boys, and thereupon left England and has not bin seen since'. By December he was in Vienna, where the British ambassador reported that, despite complaining that the Duke of Somerset had been partial to Eccles and Weldon, he planned to perform Eccles's setting in Hamburg.

In 1702 Finger was in Berlin in the service of the Queen of Prussia, Sophie Charlotte, where according to Walther he composed 'more German operas'. During this period a number of his instrumental collections were published by Roger of Amsterdam. By 1706 he was in Breslau in the service of Duke Karl Philipp of Neuberg, the younger brother of the Elector Palatine. He remained in Karl Philipp's service for the rest of his life; in October 1707 he was a Kammermusiker in the Innsbruck Hofkapelle and rose to the position of Konzertmeister in 1708. In that same year Finger was back in Berlin, where his operas *Der Sieg der Schönheit über die Helden* and *Roxane und Alexanders Hochzeit* were performed. He seems to have maintained his post as Konzertmeister when he followed the court to Neuberg an die Donau in 1717, to Heidelberg in 1718, and to Mannheim in 1720. Finger's last years were largely spent composing chamber music and stage works for the court at Mannheim and Düsseldorf. His name disappears from the Mannheim court records in 1723.

Finger was a bass viol virtuoso, and was appointed to teach the instrument in the abortive scheme for a Royal Academy in 1695. He did not publish any solo bass viol music, but manuscript sources (*GB-Ob* and *D-SÜN*) reveal him to have been one of the most important composers for the instrument of his time. His output includes sonatas and suites for one, two, and three bass viols, as well as trios with violin, violetta or baryton – the earliest surviving ensemble pieces for the instrument. He wrote boldly and idiomatically for the viol, and also popularized in England the central European type of ensemble sonata, with its ear-tickling combinations of

trumpets, oboes, recorders, strings and continuo. He was heavily influenced by his compatriots; his skilful trumpet writing is particularly indebted to P.J. Vejvanovský. Finger was a prolific but uneven composer. In his best music – such as some of his English theatre suites – he created an effective synthesis between the Purcellian idiom and the folk-like and bizarre elements of the music of his native Moravia.

WORKS

ENGLISH THEATRE

for arrangements of some theatre suites and airs see 'Instrumental' (1701–2)

Suite, 4 str, *US-LAuc*, I tell thee Charmion, song (London, 1695), in Love for Love (play, W. Congreve), 1695
Suite, 4 str, *LAuc*, in The She-Gallants (play, G. Granville), 1695
Suite, 4 str, *LAuc*, in The Husband his own Cuckold (play, J. Dryden the younger), 1696
Entertainment of Instrumental Musick, lost or unidentified, in The City Bride (play, J. Harris), 1696
The secrets of peace, song, lost, in The Royal Mischief (play, M. Manley), 1696
At least 3 songs (London, 1697), in The Loves of Mars and Venus (masque, P. Motteux), perf. in The Anatomist (E. Ravenscroft), 1696, other music by J. Eccles
Suite, 4 str, *LAuc*, in The City Lady (play, T. Dilke), 1696
Suite, rec, 4 str, *GB-LEc*, *US-LAuc*, in The Mourning Bride (play, Congreve), 1697
Awake unhappy man, song, [1699][4] in Bussy D'Ambois (play, T. D'Urfey), ?1699
Suite, 3 str, 4 str, *GB-Cmc*, *US-Cn*, in The Constant Couple, or A Trip to the Jubilee (play, G. Farquhar), 1699
Suite, 4 str, *GB-LEc*, in Iphigenia (play, J. Dennis), 1699
The Invocation to Diana, song, lost, in Achilles (play, A. Boyer), 1699
Dance (for sources see Price, 1979), in The Pilgrim (play, J. Vanbrugh), 1700
Calms appear when storms are past, song, A Collection of the Choicest Songs & Dialogues (London, 1703), in The Secular Masque (Dryden), perf. with The Pilgrim, 1700
Suite, 4 str, Harmonia anglicana, i (London, 1701), in Love at a Loss (play, C. Trotter), 1700
Suite, 4 str, Harmonia anglicana, ii (London, 1701), in Love Makes a Man (play, C. Cibber), 1700
The Rival Queens, or The Death of Alexander the Great (semi-op, after N. Lee), London, Drury Lane, ?20 Feb 1701, *Cfm*, Harmonia anglicana, ii (London, 1701), collab. D. Purcell
Suite, 4 str, Harmonia anglicana, ii (London, 1701), in The Humors of the Age (play, T. Baker), 1701
The Judgement of Paris (all-sung masque, Congreve), London, Dorset Gardens, 28 March 1701, lost
Suite, 4 str, Harmonia anglicana, ii (London, 1701), in Sir Harry Wildair (play, Farquhar), 1701
The Virgin Prophetess (semi-op, E. Settle), London, Drury Lane, ?12 May 1701, *Cfm*, *Lcm*, Harmonia anglicana, ii (London, 1701)
Suite, 4 str, *Lbl*, in Wives Victory (?lost play)
Suite, 4 str, *Lcm*, in Farewell (?lost play), possibly extracted from Weep, all ye muses (see Other vocal)
Untitled theatre suites, airs, 1–4 str/rec, *F-V*, *GB-Ckc*, *Cmc*, *Lbl*, *Lcm*, *Ob*, *US-LAuc*

OTHER STAGE

all lost

Der Sieg der Schönheit über die Helden (op, J. von Besser), Berlin, Dec 1706, collab. A.R. Stricker and J.B. Volumier
Roxane und Alexanders Hochzeit, Berlin, 28 Nov 1708, ?collab. Volumier
Ovs. to L'allgrezza dell'Eno (serenata, G.D. Pallavicino), Innsbruck, 1708, ?other music by J. Greber
Sinfonia to Rinaldo richiamato al campo (dramma per musica), Innsbruck, 1714, other music by B. Aprile
Sinfonia to Crudeltá consuma amore (drama boschereccio, G.M. Rapparini), Neuberg an die Donau, July 1717, other music by Greber and Stricker
Sinfonia and ballet music in L'amica in terzo, overo Il Dionigio (op, Rapparini), Neuberg an die Donau, March 1718, other music by Cavalierere Messa, Stricker, J.D. Heinichen
Ov. to Das Fünfte Element der Welt (serenata), Heidelberg, 4 Nov 1718, other music by C.L. Pietragrua

OTHER VOCAL

11 songs, 1694[7], 1695[7], 1695[12], 1696[9], A Collection of the Choicest Songs & Dialogues (London, 1703): Celia whose charms, In a dark and lonely den, I'o Victoria, I promised Sylvia to be true, My suit will be over, Our hearts are touched with sacred fires, She that would gain a faithful lover, Think not sighs or tears can move, Unhappy 'tis that I was born, While her the fair Amarillis, While I with wounding grief did look
When Death shall drive our souls away, dialogue, 2vv, bc, *GB-Lbl*
Cecilia, look down and see (T. Parsons), St Cecilia ode, 22 Nov 1693, lost
Weep, all ye muses (Mr Purcel's Farwel; J. Talbot), ode on the death of Henry Purcell, 13 Jan 1696, lost
In sole posuisti, motet, S, vn, org, *CZ-KRa*, anon., attrib. Finger
Missa con Clarin: e Tymp:, lost, formerly in Schloss Harburg, Germany

INSTRUMENTAL

Sonatae XII pro diversis instrumentis, op.1 (London, 1688/*R*); ed. in *TCMS*, viii (1990) [d, F, A, vn, b viol, bc; B♭, F, A, 2 vn, viola da basso, bc; e, g, D, 3 vn, bc; G, E♭, C, 2 vn, va, bc]
VI Sonatas or Solo's (London, 1690/*R*) [B♭, F, E, vn, bc; G, d, F, rec, bc]
A Collection of Choice Ayres (London, 1691) [4 suites, C, c, F, f, 4 airs, C, F, 2 rec; 2 suites, C, G, 3 rec]
A Collection of Musick in 2 Parts (London, 1691) [2 suites, C, G, 2 rec; suite, B♭, 2 vn; sonata B♭, rec, bc; suite, F, rec; 3 grounds, C, G, F, rec, b]; incl. suite a 4 by J. Banister (ii)
3 airs, F, d, vn, 1691[5]
4 airs, F, C, 2 rec, 1693[8]/*R*, collab. J. Banister (ii)
4 sonatas, F, F, g, F, 2 rec, 2 ob/vn, bc, 6 sonates (Amsterdam, 1698), with 2 by G. Keller
6 Sonatas, F, c, C, B♭, g, G, 2 rec, op.2 (London, *c*1698); see also 6 Sonatas (1703)
3 airs, g, 2 rec, A Collection of Ayres (London, 1698)
3 sonatas, C, d, G, rec, bc, 6 Sonatas or Solos, 3 for a Violin and 3 for the Flute . . . by Mr Wm. Crofts & an Italian Mr. (London, 1699/*R*), ed. I. Payne (Hereford, 1998); no.3 attrib. Finger in *D-W*
10 sonates, F, c, B♭, g, C, B♭, F, F, d, F, rec, bc, op.3 (Amsterdam, 1701/*R*)
Air, B♭, vn, Apollo's Banquet Newly Reviv'd (London, 8/1701)
2 sonatas, d, rec, ob/vn, bc, g [= op.5 no.6, opp.4 and 6 no.8], 2 rec, bc, in W. Corbett, VIII Sonatas, op.2 (Amsterdam, *c*1701)
6 Sonatas, C, d [op.5 no.9], G [= op.5 no.8], C, C, F, 2 rec, bc, op.4 (Amsterdam, *c*1701–2); all repr. in 1703 as pt of opp.4 and 6 (see below)
41 pieces, rec, b, Airs Anglois, ii, iii (Amsterdam, *c*1701–2/*R*), some arr. from theatre suites
X suonate, F, B♭, d, a, A, e [= opp.4 and 6, no.8, and in W. Corbett's op.2 (see above)], b, E [= op.4 no.3], b [= op.4 no.2], 2 vn, vc/bc; C, vn,'violone'/bn, bc, op.5 (Amsterdam, 1702/*R*)
19 pieces, vn, Select Lessons for the Violin (London, 1702), incl. airs from The Virgin Prophetess, 1701 (see English theatre)
XII suonate, F, B♭, C [= op.4 no.1], d [= op.4 no.2, op.5 no.9], G, F [= op.4 no.6], C [= op.4 no.5], g [= op.5 no.6, and in W. Corbett's op.2 (see above)], C [=op.4 no.4], F, G [= op.4 no.3, op.5 no.8], c, 2 rec, bc, opp.4 and 6 (Amsterdam, 1703/*R*)
3 pieces, C, 2 rec, A Collection of Airs (London, 1703)
6 Sonatas, 2 vn (London, 1703), lost, ?arr. from op.2
Prelude, E, vn, Select Preludes or Volentarys (London, 1704); arr. rec, C, Select Preludes and Volluntarys (London, 1708)
Ground, g, rec, b, The First Part of the Division Flute (London, 1706/*R*)
Prelude, F, rec, The Second Part of the Division Flute (London, 1708/*R*)
Air, C, 2 rec/vn, Duos Anglois (Amsterdam, *c*1709/*R*)

PETER HOLMAN, ROBERT RAWSON

Fingerboard (i) (Fr. *touche*; Ger. *Griffbrett*; It. *tastiera*). The part of a string instrument over which the strings are stretched and against which the fingers of the player's hand press down the strings. The shape of the individual fingerboard is dictated by the characteristics of the instrument concerned. In bowed string instruments, such as members of the violin and viol families and the viola d'amore, the fingerboard is generally made of a strip of ebony glued to the upper surface of the neck and rounded throughout its surface to allow the bow to touch each string separately. Fingerboards of this sort extend from the pegbox end of the instrument well beyond the neck, over and above the belly, towards the bridge, the total length depending on how high the range of the instrument is to be. In the mid-18th century, for instance, a good violinist needed a fingerboard about 20 cm long in order to stay on the fingerboard and play up to the 7th position. By way of contrast, the modern violin fingerboard averages 27 cm in length. (For illustration and further information on the violin fingerboard *see* VIOLIN, §I, 2, figs.1 and 4.)

Similarly, the width of the fingerboard depends on the size of the instrument and the number of strings involved. The fingerboard of a bass viol with six strings must therefore be considerably wider than that of a violin. Fingerboards are generally narrower at the pegbox end than at the bridge end, a typical fingerboard of a modern violin measuring 2·5 cm at the narrow end and 4·5 cm at the other.

Frets are used on fingerboards in instruments of the viol family but not in those of the violin family or in the viola d'amore. In plucked string instruments, frets are also the rule – for example, on citterns, lutes, guitars and ukuleles – but their fingerboards are flat, not rounded, to suit the flat bellies of the instruments and their flat, low bridges (although some modern steel-strung acoustic or electric guitars have fingerboards with a slight camber).

In some cases (for example, citterns), the fingerboard may project over and above the belly (as with viols and violins); but in others, as in lutes and guitars, the flat strip of fingerboard continues directly onto the belly, or the fingerboard may be recessed into the neck so that fingerboard and neck form one continuous plane. Sometimes the fingerboards of plucked instruments, especially old guitars, are ornamented with designs of various sorts, occasionally executed with special decorative materials like mother-of-pearl. In certain neckless instruments, like zithers, the fingerboard is glued along the side or bottom of the instrument.

See also articles on individual instruments.

DAVID D. BOYDEN

Fingerboard (ii) (Fr. *ruban*; Ger. *Bandmanual*). A pitch control device, also known as a linear or ribbon CONTROLLER, used in some monophonic electronic instruments. Typically a horizontally mounted ribbon of non-conductive material insulates the performer from a resistance ribbon below it; beneath it a bar or wire carries an electrical current. When the fingerboard is depressed it brings the resistance ribbon into contact with the wire; different positions produce different frequencies in an oscillator. Sometimes a pressure-sensitive layer below the ribbon, such as a mercury-filled tube in the trautonium, permits further control over attack. In addition to glissandos, produced by sliding the finger along the ribbon, the performer can play discrete pitches by using a

1. Likely left-hand position (a) for the seventh in bar 5 of Buchner's 'Quem terra pontus' (middle of the first bar of ex.2) and likely right-hand position (b) in the first half of bar 10 of the same piece (middle of the third bar of ex.3, below)

normal finger technique. When there is no parallel keyboard, some form of pitch-orientating device is employed, such as a dummy keyboard or markers for selected pitches. An equivalent of the ribbon is used in the ONDES MARTENOT; a horizontal wire controls a variable capacitance by means of a ring into which the performer's index finger is inserted.

HUGH DAVIES

Finger cymbals. Small CYMBALS played in pairs, one on the thumb and the other on either the index or middle finger. They have been known since antiquity (*see* CROTALES) and are still used, chiefly by dancers, in the Islamic world (*zil*). In orchestral usage they should not be confused with JINGLES.

Fingering. This article deals with the history of fingering systems for musical instruments and with the notation used to indicate them to the player. Unless otherwise stated the numbering of the digits of each hand follows modern practice: for keyboard instruments, 1 = thumb, 2 = index finger, 3 = middle finger, 4 = annular, 5 = little finger; for bowed string instruments, 0 = open (i.e. unstopped) string, 1 = index finger, 2 = middle finger, 3 = annular, 4 = little finger. Fingering is not normally shown in music for wind instruments, while music for plucked string instruments (lute, vihuela, guitar, harp etc.) employs fingering techniques that are either embodied in the notation or outside the scope of this article.

I. Keyboard fingering. II. Bowed strings. III. Wind instruments.

I. Keyboard fingering

1. To 1750. 2. Since 1750.

1. TO 1750. The oldest known fingering rules for fast notes, summarized in ex.1, are from a manuscript of Hans

Ex.1 Buchner: *Fundament Buch*

Buchner's *Fundament Buch*, dated 1551 (some 13 years after his death). It would appear from these examples that he reserved 3 for weak notes. However, the manuscript also gives the fingering for an entire piece, and here 3 takes all the notes which have a mordent, and various minims weak or strong, but is generally reserved for weak crotchets, quavers and semiquavers. In exx.2 and 3, the actual duration of the first bass note (which completes a

Ex.2 Buchner: 'Quem terra pontus', bars 5–6

Ex.3 bars 15–19

phrase) has to match the crotchet or quaver in the middle voice. If various other minims are not also to be truncated drastically, the hand must perform some rather novel gymnastics (see fig.1). Probably the semiquavers in ex.4

Ex.4 bars 7–9

would be played with the back of the fingers facing left and the tips touching the keys as shown in fig.2. Only a player quite at home with manoeuvres of this kind can hope to distinguish between interesting fingerings and the mistake in ex.2, where the *c* was overlooked and the *c'* fingered accordingly. The proper emendation is to play the octave with 5 and 1, like all the other octaves; but *b* is still played with 3, as in the next bar.

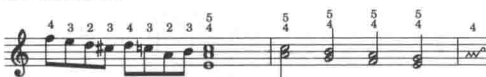
A ricercar by Christian Erbach is preserved with fingerings in a Bavarian manuscript of the 1620s. Once again, 3 has mostly weak quavers and semiquavers (ex.5),

Ex.5 Erbach: Ricercar, bars 2–3 (right hand), 6–7 (left hand)

and here also one finds certain fingerings which even a fairly thorough German tutor might not explain (as in

2. Likely points of contact with the keys in ex.4

3. Title-page illustration (detail) to Elias Ammerbach's 'Orgel oder Instrument Tabulator', 1571



ex.6, where the 4 on *d′* entails a cadential rubato and a relatively deliberate articulation). A very high wrist can

Ex.6 bars 13–14

facilitate some of the fingerings, such as $\frac{5}{4}$ for certain harmonic 3rds in the right hand (ex.7) and even for some harmonic 4ths.

Ex.7 bars 19–21

In Elias Ammerbach's two sets of fingered exercises (1571, 1583), 3 is used on weak or strong notes indifferently (exx.8–9), and the left thumb is applied to

Ex.8 Ammerbach, exercise (1583)

Ex.9 Ammerbach, exercise (1571), excerpt

the last note of certain groups (ex.9–10) even if it may be a chromatic note. (The right thumb is not explicitly called

Ex.10 Ammerbach, scale (1571, 1583)

for in any German Renaissance source.) Ammerbach fingered most groups independently of each other, and often the same finger has the last note of one group and the first of the next. Perhaps the weak note should be played with merely a finger motion but the following strong note with a hand motion as well. Ammerbach may well have used a moderately low wrist as in fig.3.

In these exercises and in Erbach's ricercar, to slur all those notes which can most readily be slurred would often make a very silly, 'hiccuping' effect (ex.11), so the

Ex.11 Unlikely phrasing for part of ex.5

phrasing is best achieved by shadings of articulation and tempo in a patina of marginal detachments. This is probably what the early tutors meant by terms like 'legato' and 'smooth'.

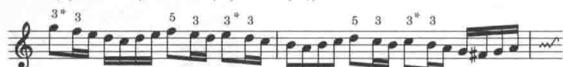
Our only 16th-century Italian source of information, part i (1593) of Girolamo Diruta's *Il transilvano*,

Ex.12 (a) Anon., exercise (*Wegweiser*)

(b) A. Scarlatti, 'Toccata prima', bars 135–138

(c) Hartung, 'Fantasien zwischen die Sylben zu gebrauchen', beginning

prescribes that the wrist be 'a bit high' ('alquanto alto') to keep the hand and arm level. Diruta dwelt upon the importance of a quiet hand, relaxed as if caressing a child, except that in dances one might instead strike the keys, 'harpsichord-style'. He said the arm should guide the hand, and the fingers should be 'alquanto inarcate', which has been rendered by various translators as 'slightly', 'somewhat' or 'rather' curved.



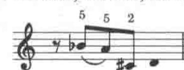
Diruta was the disciple of a renowned virtuoso, Claudio Merulo, yet it is hard to extract a clear picture of contemporary practice from his book. He finds that in right-hand passages moving away from the body, 2 (with no notes to play) tends to become straight and still ('sforzato'), that the thumb also grows stiff under the hand, and that 5 rather draws in. He reports that many organists had accustomed the hand to these defects, to the detriment of their playing, but he does not say whether they were well-known performers or nonentities. He reserves 3 for 'bad notes' ('note cattive'), but all the later Italian writers, including Banchieri in 1608, give the strong notes to 3 or are indifferent to the matter. Diruta reports that for scales the left hand should descend (2)3232 ... even though 'many eminent men' preferred to descend with 4, and that either hand should move towards the body (4)3232 ... even though many eminent men preferred to ascend with 1 and 2 in the left hand. He says bad notes which leap should be played with 3, adding that they can be played with 1 or 5 if the leap is larger than a fifth; but as none of his examples is fingered it is not clear whether a bad note before a large leap should ever be played with 3, nor whether a bad note after a leap might ever be played with 1 or 5.

According to Diruta, diminutions must be played 'cleanly, that is, not pressing a key down before the finger is lifted from the previous one, moving up and down at the same time'; however, his examples of diminutions include 7ths for which 2–5 would be the smoothest fingering not unmistakably contrary to his rules.

One reason why modern players have trouble with these fingerings is that in bringing the right hand to the keyboard they habitually lead with the thumb rather than with the index finger. The early fingerings oblige the player to orientate the right hand with some finger other than the thumb. Ex.12 may show that this way of approaching the keyboard remained in currency during the 17th and early 18th centuries, as did the use, in appropriate circumstances, of the same finger for two successive notes in a tune (ex.13 and 38–9). Where one hand had to take two parts this was a very familiar technique throughout the 16th, 17th and 18th centuries (ex.14). Some tutors implied that each kind of harmonic interval or chord was always to be played with the same fingers no matter what the context. Such rules may have been over-simplified, but this aspect of the technique was at any rate simpler than a Romantic organist could conceive.

We have no 16th-century Spanish music with fingerings, but the rules given in four treatises and prefaces (Bermudo, 1555; Venegas de Henestrosa, 1557; Santa María, 1565; H. de Cabezon, 1578) show that scales were taken with various fingerings. Bermudo prescribed 4321 4321 and 1234 1234. Cabezon, in his edition of the music by his blind brother Antonio, recommends to beginners: right hand up 343434, and down 323232; left hand up 4321 4321, but down 1234 3434. A preference for paired fingering away from the body is evident also in Venegas de Henestrosa's advice (again for beginners) that the left hand go up 4321 321, but down 1234 3434, and the right hand go down 4321 3 ... (or perhaps it might start with 5), but up 3434 (once 4 has been reached after starting from 1 or perhaps 2 or 3). Santa María's suggestions were the most elaborate; but for all fingerings alike he said that the hand should point towards the keys to be played next and the finger which has just played should be lifted before the next one plays. So if the thumb followed 4 in a scale away from the body, the hand was turned outwards

Ex.13 (a) Gibbons, Fantasia (cf, *MB* xx, 1), 6–5 bars from end



(b) Dandrieu, Gavotte in D, bars 3–5

(c) C. P. E. Bach, *Versuch*, tab.2, fig.66

and the thumb would approach its key as 4 was just releasing its hold.

The English may have been the first to use 5 at the end of right-hand runs (ex.15). This was corollary to taking

Ex.15 Gibbons, 'The King's Juell', bars 33–6

strong notes with 3 – a persistent habit (ex.16) which was, however, occasionally resisted to avoid a shift within

Ex.16 Bull, Prelude, bars 4–5

a three-note span (ex.17). The left thumb was most often used instead of 3 in ascending scales (ex.18). Repeated

Ex.17 Gibbons, Preludium (cf. MB xx, 2), bars 27–31

Ex.18 Anon., 'An easy one for a beginner' (*Gb Lbl* 36661), bars 1–4

notes would normally be taken with changing fingers (ex.19). (In the 18th century they were still usually played

Ex.19 Bull, Miserere, bars 12–13

in this way, as in ex.20, and only sometimes with the same finger as in ex.21).

A number of mid- to late 17th-century English manuscripts contain fingered music, but to assign a date to

Ex.20 Hartung, Minuet, bars 1–2

these fingerings would be so problematical that no-one has distinguished much between 'early' and 'late' techniques among the virginalists.

Ex.21 D. Scarlatti, Sonata (KK 96), bar 140

In north Germanic fingerings of the first half of the 17th century, 3 tends to take weak notes in the left hand but strong in the right (ex.22), with occasional exceptions for three-note spans (ex.23) or various other contingencies

Ex.22 Anon., 'Courrante Lavigon', bars 66–69

(as in ex.24). In view of this, and of the contrary earlier traditions for the role of 3 in paired fingerings, we might

Ex.23 'Courrante Lavigon', bars 36–42

expect to find many later examples of indifference, and we do (ex.25).

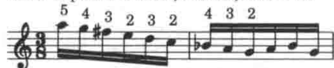
Ex.24 Anon., Praeludium (attr. elsewhere to Bull), beginning

During the first half of the 18th century the main trend was to add new technical devices without rejecting the

Ex.25 (a) Nivers, left-hand descending scales (1665 preface)

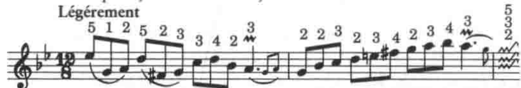
(b) A. Scarlatti, 'Toccata prima', bar 61

old ones, so the fingerings were rather unsystematic and dependent upon the immediate musical context. Given a suitable occasion, 4, 3 or even 2 might cross beyond 5 (ex.26); 5 might cross over 1 (ex.27) or under 3 (ex.28);



Ex.26 (a) Hartung, Menuet, beginning

(b) Zipoli and anon., Minuet, bars 27–30



Ex.27 Dlla Ciaja, Toccata (1727, p.15), bars 70–71

Ex.28 Handel, Ciacona, var.11, bars 6–7

2 and 4 might cross past each other (exx.29 and 31); the thumb might take a chromatic note (ex.30) or might not

Ex.29 Zipoli and anon., Minuet, bars 9–10

Ex.30 Handel, Ciacona, var.13, bars 5–8

(ex.31), and scales might be rendered by an elaborate choreography of both hands (ex.32). It was in this context

Ex.31 F. Couperin, 'Le moucheron', bars 14–16

of nimble permutations that the old Spanish unpaired scale fingerings apparently began to be taken up outside

Ex.32 Rameau, 'Les tourbillons' (1724), bars 35–8

Iberia in the 1720s: in Rameau's *Traité de l'harmonie* (1722, for slow bass notes as in ex.33), in a contemporary

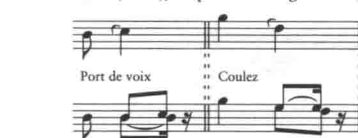
manuscript of Handel's G major Ciacona (ex.34), in Della Ciaia's *Sonate*, op.4 (?1727), and no doubt elsewhere. Various tutors from 1730 onwards prescribed them (ex.35), and Hartung in 1749 referred to 3434 and 3232 as 'that impoverished fingering'.

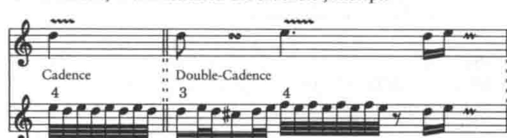
Ex.34 Handel, Ciacona, var.6, bars 1 and 7–8

The effect of these developments upon articulation is not entirely clear. In 1735 Mattheson stated that a teacher should tell his pupil 'never to apply the next finger until he has lifted the previous one'. Marpurg in 1755 said that while slurring and staccato were usually indicated by signs in the music, the ordinary procedure, namely to lift the finger from the preceding key very quickly just before touching the following note, was never indicated because it was always presupposed. Dom Bédos in 1778 dwelt

Ex.35 Prelleur (*c*1730), exercise



upon the necessity of little silences at the end of each note on any keyboard instrument, without which the music would be like an inarticulate series of vowels without consonants. Czerny in praising Beethoven's legato referred to Mozart's 'chopped-up and clipped-off playing'. On the other hand, Duphly told Lord Fitzwilliam, some time after 1754, that in *le jeu françois* 'one must not quit one key until after having taken another'. How then should one interpret Forkel's statement (1802) that J.S. Bach – whom he never heard play – had found a 'middle path' between too much legato and too much staccato, and so achieved 'the highest degree of clarity ('Deutlichkeit') in the playing of single notes as in the pronunciation of single words'?



Some earlier French sources are of interest in this regard. In 1665 Nivers, discussing *distinction* and *coulement*, said it was very appealing to 'mark all the notes distinctly, and to slur ('couler') some of them' as a singer

Ex.36 Nivers (1665), 'Exemples du coulement des notes'

would do. For instance, in a diminution or roulade of consecutive notes, one should raise the fingers 'soon and

Ex.37 Rameau (1724), 'Expression de agréments', excerpts

Ex.38 Raison, 'Demonstration des cadences', excerpts

not very high', whereas for *ports de voix* and the like as in ex.36, one should still distinguish the notes but 'not raise the fingers so promptly: this manner is between distinction and confusion'. His illustrations of descending scales are shown in ex.25; for ascending scales he prescribed: right hand (1)23 4343 4; left hand (4)32 12121.

In a rubric to his 'Démonstration des cadences' (1688) Raison said that the *port de voix* should be executed with an overlapping legato; Saint-Lambert concurred in 1702, and Rameau in 1724 (ex.37). Some of the ornaments in Raison's table are fingered (ex.38), and with this guide one can tell how nearly every note in certain ornament-laden passages in his music was to be taken (ex.39). This

Ex.39 (a) Raison, *Messe du sixiesme ton*, 'Second Agnus', bars 33–7

(b) Raison, 'Second Agnus', bars 49–51

French playing was as distinctive as the melodic style which it served.

Saint-Lambert (1702, 1707) said the fingers should be curved to reach no further than the thumb, and advocated as quiet a hand as possible; his exact meaning can be seen

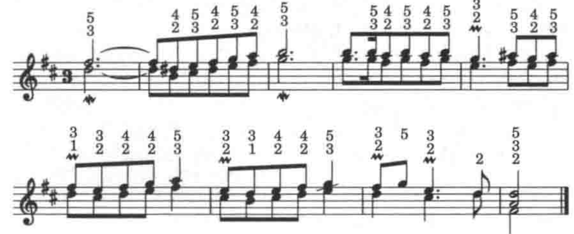
Ex.40 Saint-Lambert, Gavotte, bars 6–8

Ex.41 Dandrieu, Rondeau in C, bars 14–16

by comparing ex.40 with ex.41. He proposed that to slur an arpeggiation be taken to mean that each note be held

Ex.42 Saint-Lambert, slurred arpeggiation

through to the end as in ex.42, and Dandrieu adopted this proposal in 1713 (as in ex.43). Saint-Lambert also



Ex.43 Dandrieu, 'Gavotte tendre' in C, bars 3–4

suggested that for a run of quick notes towards the body, the customary right-hand fingering, 3232, which he himself had prescribed, was less convenient than the use, by the right hand, of corresponding left-hand fingering, 2121; this idea seems to have been ignored.

In his influential *L'art de toucher le clavecin* (1716) François Couperin said that the old-fashioned use of $^{4}_{2}$ for successive 3rds could not render them legato ('n'auoit

Ex.44 F. Couperin, Passacaille, 4th couplet, 7–15

nulle liaison'); his playing of 3rds is illustrated in ex.44. Sometimes Couperin used finger-substitutions (ex.45) –

Ex.45 F. Couperin, Première prélude, beginning

'too often and without need' according to C.P.E. Bach (1753). Couperin's scale fingerings (ex.46) imply an

Ex.46 F. Couperin, 'progrès d'octaves'

anacrusis leading into each beat, like the other exercises in the same set (ex.47), but he often phrased within the

Ex.47 F. Couperin, 'progrès de tierces; 'progrès de quartes'

beat as in ex.31 (or also ex.13*b*). His attitude to technical drills was equivocal; he had his pupils practise not only the *agréments* but also brief, progressive 'évolutions des doigts' (ex.47), and one of his pupils even learnt to trill in parallel 3rds with one hand, but Couperin would not give himself 'la torture' to master such trills to his own satisfaction.

Rameau in 1724 said that 'the raising of one finger and the touching of another should be executed at the same moment'. He prescribed that ex.48 be played over and

Ex.48 Rameau, five-finger exercise

over 'with equality of movement', thus anticipating the 19th-century conception of the five-finger exercise as a thing of beauty.

According to Forkel, the preliminary exercises which J.S. Bach gave to his pupils were cut from exactly the same musical cloth as the two-part inventions and the little preludes in Friedemann's notebook. Bach's pupils also had to practise, early on, all the ornaments in both hands – but apparently not scales, a considerable point of

difference between his teaching and that of his son, Emanuel. Nor did Emanuel say of his father's technique, as the standard English translation of the *Versuch* would have it, 'I shall expound it here'; but rather, 'I take it here as a basis' ('so lege ich solche hier zum Grunde'). Whatever the exact relation, the chapter on fingering merits a closer reading than the many infidelities of the translation allow.

Emanuel said that the thumb, which his father had promoted to the rank of 'principal finger', keeps the other fingers flexible because they must bend every time it presses in next to one or another of them. He said the fingers should generally be curved anyway (without saying how much), and the forearm should be a little lower than the keyboard. He gave a wealth of alternative scale fingerings (as in exx.49 and 53). Most of them fit his

Ex.49 C. P. E. Bach, *Versuch*, tab.1, fig.18

general rule that in moving away from the body the thumb should take a note directly after one or more chromatic notes, and moving towards the body should take a note just before one or more chromatic notes: thus for the left hand ascending in A major, he considered 21 321 432 'in most cases more useful' than 54321 321. (The latter, however, answers better to the rule which Kirnberger in 1781 attributed to J.S. Bach: that in most cases the thumb is placed before or after the leading note.) Such paired fingerings as Emanuel admitted, mainly 4343 and 2121, normally entailed, he said, the same technique that passing 3 or 4 over the thumb did: the longer finger crosses ('wegklettert') while the other 'still hovers over the key which it had depressed'. He declares that in scales with few or no accidentals, 4343 or 2121 would sometimes produce the smoothest effect, because without any chromatic notes the thumb has less ease to cross under. Fast thirds were to be taken mostly by one pair of fingers, but not slow ones; broken chords should sometimes be fingered differently from their unbroken counterparts (ex.50), because 'clarity is always produced

Ex.50 C. P. E. Bach, *Versuch*, tab.2, figs.54*d* and 55*l*

primarily by an even touch'; the fingering of ex.51*a* was to be used also for the analogous minor triads on C, C♯,

Ex.51 C. P. E. Bach, *Versuch*, tab.2, fig.50*a* and *b*

F♯, G, G♯, B♭ and B; and that of ex.51*b* for the major triads on D♭, E♭, E, A♭, A, B♭ and B. Ex.51 suggests that even though the thumb was now the 'Haupt-Finger' the others could still do without it more often than one might suppose.

The fingers were numbered in various different ways from the 16th century to the 19th; Table 1 shows most of them:

TABLE 1

	Left hand:	right hand:
modern:	5 4 3 2 1	1 2 3 4 5
old:	1 2 3 4 5	1 2 3 4 5
	1 2 3 4 5	6 7 8 9 10
	4 3 2 1 0	1 2 3 4 5
		0 1 2 3 4
	4 3 2 1 +	+ 1 2 3 4

2. Since 1750. The paired fingerings that had prevailed in pre-1750 tutors posed a considerable problem to teachers of C.P.E. Bach's generation. The older method had become such an established part of keyboard performance that they were reluctant to discard it entirely. Daniel Gottlob Türk, writing in 1789 when the modern manner had almost completely superseded the old, recalled that Friedemann Bach could play, with only two fingers (3 and 4), 'certain runs straight off and with astonishing velocity'. The initial criticisms of this manner arose not from the difficulty of passing a long finger over a short but rather from the apparent exclusion of 1 and 5. In *Die Kunst das Clavier zu spielen* (1750) F.W. Marpurg stressed that each finger was equally important, and ridiculed older techniques with the derisory comment that a singer might similarly hope to improve his performance by removing part of his tongue or some of his teeth. Marpurg therefore suggested the following fingerings for the right-hand major scales (beginning on the tonic and ascending one octave):

These, and their corresponding versions for the left hand and for all the minor scales, approximate very closely to modern methods. Marpurg also asked that the same fingering should, wherever possible, be maintained for each octave, both ascending and descending.

In view of his progressive approach it is perhaps surprising that Marpurg also retained many features from earlier keyboard technique. In many circumstances he considered crossing the fingers to be 'more comfortable' and readily advocated the right-hand fingerings shown in ex.52, provided they were used 'without stiffness or

Ex.52

distortion of the fingers'. M.J.F. Wiedeburg in *Der sich selbst informirende Clavier-spieler* (1765) mentioned that the left hand employed the passing of the thumb more freely than the right. The position at the keyboard described in various tutors of the period may have been partly responsible for this discrepancy. Marpurg, like Couperin, asked that the body, while adjacent to the middle of the keyboard, should be turned slightly to the right, with the knees apart and the right foot turned outwards. This enabled the little finger of the left hand and the thumb of the right to be held well towards the front end of the black keys, and clearly simplified the execution of the method preferred by Bach. The avoidance of the thumb when playing in keys with few sharps and flats was also governed by the comparatively short distance from the end of the black key to the end of the white on instruments of that period.

While the crossing of fingers persisted in some tutors until the end of the 18th century, there is clear evidence that the technique gradually became less widespread. In the fourth edition of *Die Kunst das Clavier zu spielen* (1762) Marpurg revised some of his own earlier such fingerings on the grounds that they were two awkward and uncomfortable. The growing tendency to restrict the crossing of fingers to 3 and 4 may be noticed also in Georg Friedrich Wolf's *Kurzer aber deutlicher Unterricht im Klavierspielen* (1783) and Türk's *Clavierschule* (1789). It is apparent that by that time the older manner was retained in many sources for its historical interest rather than its practical value. Yet J.H. Knecht in his *Vollständige Orgelschule für Anfänger und Geübtere* (1795) remarked that many players had not grasped the true necessity of using the thumb and little finger and that the earlier troublesome manner still persisted. As a consequence perhaps of their continuing devotion to the clavichord and their preference for the light touch of the Viennese piano, German keyboard players adhered to the old scale fingerings longer than their French, Italian and English contemporaries. Niccolo Pasquali, in *The Art of Fingering the Harpsichord* (?1760), said that in passages of more than five consecutive notes 'a proper manner of shifting the hand higher or lower' could be derived only 'from the right management of the thumb'. His treatise gained wide circulation and popularity, and within a very short time most English teachers, like Robert Broderip in his *Plain and Easy Instructions for Young Performers on the Pianoforte or Harpsichord* (*c*1788), agreed that the long fingers should 'never be turned over or under each other'. The preference for the 'thumbs-under' technique in England was also reflected in John Casper Heck's *The Art of Fingering* (*c*1766). On the title-page Heck acknowledged his indebtedness to the 'celebrated C.P.E. Bach of Berlin', and in many practical examples he closely followed Bach's methods. He did, however, omit all paired fingerings from his scale exercises.

The elimination of older fingering methods was hindered by some degree of inconsistency regarding the use of the thumb. In his suggestions for the right-hand scale of D minor, for example (ex.53), C.P.E. Bach had allowed

Ex.53

2 1 3 2 1 4 3 2
5 4 3 2 1 3 2 1

the thumb to be passed after either 4 or 3, and expressed a preference for the former. The main point at issue seems to have been the use of 5, which was evidently employed less readily than the thumb. Despite his rule that 5 should be held 'in reserve in stepwise passages, and used only at the beginning or when a run happens to terminate with it', Bach usually preferred the methods that excluded that finger entirely. Also, his rule that in scale passages the thumb should be used after one or more black keys had resulted in some curious left-hand fingerings, e.g. in the scale of A major (see ex.53), where the 'most useful' method is given directly below the notes).

Few teachers were directly influenced, however, by this aspect of Bach's *Versuch*, and when J.C.F. Rellstab published his *Anleitung für Clavierspieler, den Gebrauch der Bachschen Fingersetzung, die Manieren und den Vortrag betreffend* (1790), he took the opportunity of correcting the weakness in this aspect of Bach's method. He treated the rule appertaining to the use of the thumb as a general observation, and revised the fingerings accordingly. In the case of the A major scale (ex.53) he dismissed the 'unnatural' fingering preferred by Bach in favour of the second method, and in this way took a further vital step towards establishing the scale fingerings that have persisted until the present day as the basis of a clean and reliable keyboard technique. The transition to modern scale fingerings was completed at the turn of the century, when Milchmeyer, Adam, Dussek, Clementi, A.E. Müller and other teachers writing specifically for the piano finally discarded the older methods. The new principles of fingering were dealt with in several early 19th-century tutors, including those by Guthmann, Jean Jousse, Czerny and Charles Neate.

Since methods of fingering are, of course, closely allied to differing styles of keyboard compositions, it is only natural that more complex figurations of 19th-century piano music should have been accompanied by a more resourceful approach to problems of fingering. Yet the rules established during the latter part of the 18th century remained a firm basis for all subsequent developments. Czerny in his *Complete Theoretical and Practical Pianoforte School* op.500 (1839) advocated that, except in special circumstances (such as those obtaining in Chopin's Etude in A minor op.10 no.2), the long fingers should never be crossed over or under each other; the thumb is the sole pivot of the hand, and unnecessary changes of hand position should be avoided. The same finger should not normally be employed on two or more consecutive keys; this is permissible, however, between phrases, when rests intervene, in staccato passages, or when sliding a finger from a black to a white key. The thumb and little finger should not be placed on black keys in scalic passages, and only out of necessity in other figurations. He also advocated that when the same note is repeated several times the fingers should be alternated, and conversely that to maintain a legato style it is often expedient to change fingers on a note without sounding it again. In sequential passages, the same fingering should, if possible, be repeated to secure a perfect equality of execution; contraction of the hand is frequently essential. Arpeggio figurations, he said, are generally fingered according to the octave span between the thumbs and little fingers, the choice of intermediate fingers being governed by the natural fall of the hand in this extended position. The fingering for passages in 3rds and 6ths should relate to the articulation prescribed by the composer (ex.54). Finally, Czerny recommended the

Ex.54

3 4 3 4 3 4 3 4 5 3 4 5 3 3 3 3 3 3
1 2 1 2 1 2 1 2 3 1 2 3 1 1 1 1 1 1

glissando for fast unison, 3rd, 6th or octave passages lying solely on the white keys, a technique that had already been accepted in late 18th-century schools of keyboard playing.

With the exception of the glissando and such devices as Czerny's of striking one key with two fingers simultaneously, the rules given by early 19th-century teachers were intended primarily to secure a quiet and steady hand position. It was generally agreed that the action of the fingers should be entirely independent of the hands and arms and that the latter should merely serve to convey the

fingers laterally from one part of the keyboard to another. The more expansive keyboard style of the mid-19th century, however, required greater freedom and encouraged players to supplement their technique with movement other than simply that of the fingers. Ex.55 shows

Ex.55 Chopin, Nocturne, op.9, no.2, bars 26–28

that this was the case for Chopin, of whom Niecks reported: 'With one and the same finger he took often two consecutive keys (and this not only in gliding down from a black to the next white key), without the least interruption of the sequence being noticeable. The passing over each other of the longer fingers without the aid of the thumb … he freely made use of, and not only in passages where the thumb stationary on a key made this unavoidably necessary.

While earlier teachers had discouraged the use of 1 and 5 on black keys because of the excessive hand movement that this entailed, teachers of the later 19th century recommended that the technique should be employed quite freely. For this reason, Louis Plaidy in his *Technische Studien für das Pianofortespiel* (1852) invited advanced players to transpose the basic C major finger exercises into other keys, using the same fingering, 'in order that the hand may become accustomed to an equal and certain touch in different positions'. J. Alsleben, writing in Mendel's *Musikalisches Conversations-Lexikon* (1873), even stated that the conventional C major fingering could be applied to all scales, including those starting on a black key, and argued that the passing of the thumb in such circumstances was merely a question of practice. These exceptional methods, however, have never superseded the fundamental techniques of fingering established by earlier masters.

II. Bowed strings

Fingering on string instruments involves the stopping of the strings and is therefore more closely allied to intonation, tone-colour and expression than it is on keyboard instruments. Fingering systems and conventions have changed from one period to another in response to other changes: in the instruments themselves, in the material out of which strings are made, in the manner in which instruments were held and in musical taste (*see also* POSITION).

1. Viol family. 2. Violin: (i) To 1800 (ii) After 1800. 3. Violoncello: (i) Early history: to 1800 (ii) Duport and Romberg (iii) After 1800. 4. Double bass

1. VIOL FAMILY. Early viol fingerings are based on the left-hand technique of the lute, whose strings are tuned mainly in 4ths, like those of the viol, and whose fingerboard is similarly fretted. Among the earliest treatises dealing in detail with viol fingerings is the second volume of Ganassi dal Fontego's *Regola rubertina* (1543) in which some of the examples are written in Italian lute tablature (for an explanation, *see* TABLATURE, §3(ii), esp. fig.5), and fingering is indicated by the placement of dots in four different positions around the fret number (fig. 4). Ganassi's fingerings, as shown, are remarkably flexible

4. *Viol fingerings in Italian lute tablature: 'Recercar primo' from Ganassi: 'Regola rubertina' (1543)*

and farsighted, and include advice for playing in high positions above the frets (for examples *see* VIOL, §3).

One of the most distinguished 17th-century books on English viol playing was Christopher Simpson's *The Division-Violist* (1659). In his important advice on fingering Simpson suggested using 3 or 4 for the highest note when playing above the frets; in his exercises (but never in his pieces) he also gave specific fingerings includinga technique later known as 'creeping' (Ex. 56; in this case the substitution of 3 for 4 on the second C♯; the asterisk above the 4th finger on the *d′* points out to the beginner that this is an alternative fingering as the note could also be played on an open string). He advised that fingers should be allowed to remain on the strings as long as possible during playing, both for the 'better ordering of fingering; that the Fingers may pass more smoothly from Note to Note ... as also, to continue the sound of a Note when the Bow hath left it'. The concept of the 'hold' or the *tenue* was extremely important to viol technique and is mentioned in nearly every treatise concerned with the viol.

Jean Rousseau's *Traité de la viole* (1687) is very detailed in all aspects of technique. With his contemporary Sainte-

Ex.56 C. Simpson: *The Division-Violist*, Pt i,7

Colombe, there began a line of composer-players whose musical works are carefully marked with fingerings, bowings, dynamics, ornamentation signs and precisely written-out embellishments. The *pièces de violes* of Marin Marais and Antoine Forqueray, with their meticulously worded prefaces, constitute a precise school of viol playing unsurpassed in virtuosity. In his five books of viol pieces (1686–1725) Marais insisted that the performer follow his fingerings exactly, and the fact that so many notes are fingered leaves very little possibility of confusion – or even of choice. John Hsu categorizes the possible finger placings as shown in ex.57.

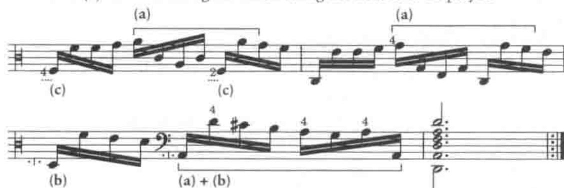
Ex.57

(a) normal, chromatic — 1 2 3 4
(b) normal, diatonic — 1 2 4
(c) normal, diatonic — 1 3 4
(d) extended, diatonic — 1 2 4
(e) contracted, chromatic — 1 2 4
(f) unusual, used only in multiple stops — 1 2 4

Practice and most sources bear out Hsu's analysis that the fingering system on the bass viol generally requires one finger for each semitone, with occasional extensions of a tone, almost always between 1 and 2. The treble viol, however, being half the size of the bass, is sometimes played with one finger for each tone. Danoville mentions such differences in fingering in *L'art de toucher le dessus et basse de violle* (1687/*R*) and Corrette devotes several chapters to fingerings on the pardessus in his *Méthod*

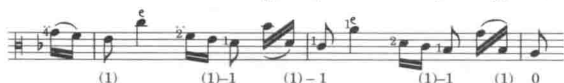
pour apprendre facilement à jouer du par-dessus de viole (1748).

Two important fingering signs used by French viol masters are shown in ex.58 and demonstrated in context



Ex.58

(a) ⌐‾‾¬ (b) ·2·



in exx.58 and 59: the sign for the *tenue* is shown in ex.58*a*. Another important fingering, allied to the principle of *tenue*, is the *doigt couché*, mentioned by Marais in the *avertissement* of his first book of *pièces de violes* (1686), for which he used the sign shown in ex.58*b* (Ganassi and Simpson also described it but did not use this term). Derived from lute technique (*see* BARRÉ), it involved placing the first finger, or very occasionally the fourth, across two or more strings, allowing the other three fingers to remain free to stop other notes. This is often needed when playing chords and arpeggios, and also in certain other passages in order to maintain the *tenue* principle. Another sign sometimes used by Marais to clarify fingering consists of a number of dots arranged around the finger number) indicating which string to play the note on: for example, the *f* that opens ex.59 should be fingered by 4 on the 4th string and the *g* at the beginning of ex.60 should be fingered by 4 on the 2nd string. Bol (1973) summarized the fingering rules of the period as follows: (1) in broken chords, the lower and upper notes are held as long as possible so that the sound may continue after a note is no longer bowed; (2) if possible, the same finger should not be used for two different notes on the same fret (except in *le doigt couché*); (3) a change of position is rarely made during a single bow stroke except by means of an open string, extension or '*le système-reptiles*' (creeping); (4) in a shift which moves by step, the finger which was used last in the position the player is leaving is used first, if possible, in the new position (see ex.59); (5) if two or more fingers are placed on the same fret, the lowest numbered finger normally plays on the lowest string.

Modern tutors for the viol, with instructions on fingering, have appeared in response to a revival of interest

Ex.59 M. Marais: '20e Couplet' from 'Couplets de folies', *Pieces de viole* [2e livre] (1701); examples of (a) *tenue*, (b) *doigt couché* and (c) dots indicating on which string the note is to be played

Ex.60 M. Marais: 'Allemande La Singuliere', *Pieces de viole* [4e livre] (1717)

in early instruments. However, many players today continue to base their fingerings on Simpson, Marais, Forqueray and their contemporaries.

2. VIOLIN.

(i) To 1800. The conventions for indicating fingering in violin, viola and cello music were not completely standardized until well into the 18th century. Nevertheless, the basic system (unlike modern keyboard practice) has always involved numbering the fingers from 1 for the index finger to 4 for the little finger. As with so many questions of performance practice, the most obvious sources of information regarding fingering systems in violin music from 1600 to 1800 are instruction manuals. For the second half of this period, these may be usefully supplemented by marked fingerings in printed collections of violin sonatas.

The earliest instructions for violin fingering are found in Mersenne's *Harmonie universelle* (1636–7). Mersenne marked the notes assigned to each finger in 1st position, advocating the use of the same finger for any note and for its chromatically-altered version (i.e. 2 for *b*♭ and *b* on the G string, 3 for g' and $g\sharp'$ on the D string etc.). The primary function of the little finger (except on the E string where it has a greater role) was to produce the flattened version of the notes available as open strings ($d\flat'$ etc.). Although he did not attempt any explanation of shifting, he indicated that the range of the violin extended to d''' on the E string. Many later publications are less sophisticated, none more so than that most amateur of all violin treatises, John Playford's *Introduction to the Skill of Music* (7/1674) which recommends that beginners fret their instruments and place one finger behind each fret (thus giving semitone fingering). Not until the great violin treatises of the mid-18th century (Geminiani, Leopold Mozart, Herrando, and L'abbé *le fils*) is a more advanced picture of left-hand technique promulgated. The advice given by both John Lenton (*The Gentleman's Diversion, or the Violin Explained*, 1693) and Michel Corrette (*L'école d'Orphée*, 1738), for example, is essentially the same as Mersenne's (though Corrette does describe positions up to the 7th and acknowledges the possibility of shifting on all strings).

The general acceptability of the timbre of open strings is one of the most obvious ways in which 17th-century performance practice differed from othodox modern playing. The preference for a fingered alternative to the open string emerged as an important new refinement early in the 18th century. Roger North commended this practice as the most important of 'certein late manners of touch introduc't – the result of the nicest skill and ability'. François Duval (*Les idées musiciennes*, 1720) and Pietro Castrucci (*Sonate*, op.2, 1734) specified fourth fingers where no player trained in 20th-century technique would think of using anything else. F.M. Veracini (*Sonate accademiche*, 1744) marked fourth fingers while leaving far more difficult technical problems unaddressed. By the second half of the 18th century (when Sir John Hawkins could refer to 'the disgusting clangor of an open string') good players tended to favour stopped notes. Leopold Mozart said that open strings were 'too loud compared with stopped notes and pierce the ear too sharply' (*Versuch einer gründlichen Violinschule*, 1756). Fourth-finger extensions were also noted in treatises and specified in printed music. Gasparo Zanetti, whose rather crude tablature in *Il scolaro ... per imparar a suonare di violino, et altri stromenti* (Milan, 1645) depends on the use of fingering numbers, used the figure 5 to indicate occasional extensions to c''' on the E string. This stratagem was adopted (coincidentally) by Castrucci, who used 5 to indicate an extension for the highest note in what is otherwise a passage to be played entirely in 5th position

(ex.61). Later, composers showed extensions by fingering both the note of the extension itself and the note

Ex.61 P. Castrucci: Sonata III, Gavotte (*Parte prima*, 1734)

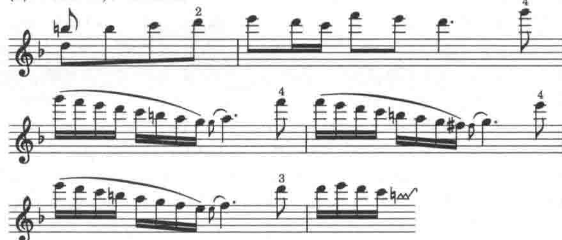
immediately following to re-establish the basic position (see ex.59*d*). L'abbé *le fils* (*Principes du violon*, 1761) placed the letter e above the number for the finger involved to indicate an extension (ex.62).

2nd position (referred to as 'half-position' by Mozart, Herrando and others) was also specified in sonata

Ex.62 L'abbé *le fils*: *Principes du violon*, p.50

collections, whereas 3rd-position passages (considered less remarkable) were often left unfingered. Piani's sonata collection of 1712, the earliest to contain printed fingerings, is a case in point. Likewise, Jean-Baptiste Miroglio (op.1, before 1750 and op.2, 1750) provided fingerings only for 2nd position passages. J.-A. Mathieu introduced the second and fourth sonatas of his op.4 (1764) with a rubric saying that they can be played in 2nd position. Less is said about what we now call 'half position'. Leclair *le cadet* indicated it in 1739 (ex.63). L'abbé *le fils* was the

Ex.63 J.-M. Leclair *le cadet*: Sonata VIII, Andante (*Premier livre de sonates*, 1739)



first to discuss the concept properly in his *Principes du violon*. He introduced it by showing that keys on sharp tonics (G♯ minor, F♯ major etc.) often call for 'borrowed fingers', meaning that these fingers are applied to notes other than those 'normally' assigned to them in 1st position. He stressed that in playing passages of this type the hand should not be shifted (i.e. half-position should be regarded as an extension backwards from 1st position).

The problem of how to finger passages in upper positions and, more particularly, how to shift to and from these positions was one which Mondonville ruefully admitted in his preface to *Les sons harmoniques* (1738) 'often discourages most of my followers'. Geminiani (*The Art of Playing on the Violin*, 1751) was quite systematic in his treatment of the difficulties of shifting. His scales utilising only a pair of fingers (especially one based on fingers 1 and 4) help develop a very flexible hand. Altogether, his instructions emphasize the independence of the thumb and fingers. He maintained that the thumb should be left behind, so to speak, as the hand moves into upper positions while, for downward shifts, the fingers should move first with the thumb following: 'it must be observed that in drawing back the Hand from the 5th, 4th and 3rd Order to go to the first, the Thumb cannot, for Want of Time, be replaced in its natural Position; but it is necessary it should be replaced at the second Note'. No other writer was quite so helpful in dealing with the mechanics of shifting. Herrando (*Arte y puntual explicación del modo de tocar el violín*, 1756) gave eight pages of scales and exercises for playing in higher positions (including 2nd position, which he regarded as of crucial importance). The English edition of Carlo Tessarini's violin method (*c*1765) contains a few basic 'lessons for the whole shift' etc. The full title of L'abbé *le fils*'s treatise *Principes du violon pour apprendre le doigté de cet instrument* emphasizes his concern for the question of fingering. The treatise includes a number of useful studies in which fingerings are marked and shifts are indicated by the letter D (for *démancher*). Corrette's first treatise, *L'école d'Orphée*, contains two short fantasias for practising in upper positions, but his later volume, *L'art de se perfectionner dans le violon* (1782) is, in fact, an anthology of difficult passages from well-known virtuoso works such as Vivaldi's *Four Seasons* with fingerings added. Corrette stressed in his preface to the latter volume the importance of 'being conversant with all the positions of four strings, having facility in shifting, and playing cleanly and distinctly'.

Leopold Mozart gave recommendations for planning shifts in the most manageable and musically-discrete ways. Downward shifts, for example, could be smoothly executed by waiting for a note which could be played as an open string, or for a repeated note, or for a dotted group where the slight lift of the bow on the dot allows time for a noiseless descent. He also pointed out that 'it is . . . easy to descend if similar passages are played with similar fingerings' (ex.65) Mozart's very orderly exposi-

Ex.65 L. Mozart: *Versuch*, chap.8, i, 17

tion of the principles involved in playing in upper positions is, in fact, a codification of the practice of the best violinists of the preceding generation. His rules match perfectly the fingering markings of players like the Leclairs. In the preface to his *Premier livre de sonates* (1723) Leclair *l'aîné* explained that he had 'taken care in certain positions or where the performer might find particular difficulty to mark in the figures for the fingers that should be used'. It is striking how often his fingerings serve as a warning that a shift to a particular position is needed to cope not with an immediate difficulty but with one that is coming up a bar or so later. Several of his fingerings are of the kind that encourage the performer to think beyond the concept of positions (or to use what Mozart termed the 'mixed position').

Leclair *le cadet*'s *Premier livre de sonates* (1739) is full of virtuoso passages, for many of which the composer offers fingerings. These often show a way of shifting down from a high position where the ascent has not been fingered. Leclair was particularly fond of sequential fingerings, often giving an easy descent in small stages from a high position (ex.64*a*). There is a striking economy about his fingering indications. He inserted fingerings for passages which, though at first appearing to require shifting, could in fact be played in one position (ex.64*b*). Often a fingering shows the smallest possible shift: in ex.64*c* the performer can get through to a rest – a natural place to make a large descent – simply by moving the second finger back a semitone. Similarly in ex.64*d* an extension is specified for the one note that lies outside 5th position and an open string is used for the descent to 1st position. In this case an open-string trill is acceptable. (Later Tartini was to advise Maddalena Lombardini to begin perfecting this ornament by practising first-finger trills on open strings.) Elsewhere a change of position is marked for the sake of a trill on *e″*, but this is to accommodate a turn at the end of the ornament (ex.64*e*). In the same year, Geminiani brought out the revised edition of his op.1 with added 'graces for the Adagios, and numbers for the shifts of the hand'. The copious fingerings cover every conceivable type of shift (though they still do not solve all the problems in the difficult fugal movements). The closing bars of the first sonata are fingered with a shift up to 2 on *d‴* (thereby avoiding a fourth-finger trill) followed by a descent in three stages where two would be possible. The last part of this move back implies the use of an open E string immediately before the first finger marked on *f♯″*.

Fingerings which indicate that string crossing is intended are almost as common as fingerings for upper positions and shifts. The few fingerings in Leclair *l'aîné*'s *Troisième livre de sonates* (1734) are all concerned with showing that a particular effect is to be achieved through string crossing. In Sonata VI there are several chords notated in a way which shows that they should be broken downwards; one of these has a fingering added to remove any possible ambiguity about the effect intended (ex.66).

Ex.66 J.-M. Leclair *l'aîné*: Sonata VI, Grave (*Troisième livre de sonates*, 1734)

There is a particularly interesting example in the second sonata of Jean-Baptiste Cupi (i)'s op.1 (1738), in which a third-finger extension is marked (ex.67) where an open

Ex.67 J.-B. Cupis: Sonata II, Vivace (6 sonates op.1, 1738)

string would disrupt the bowing pattern and where a fourth finger would disturb the 'frame' the left hand has adopted for the figure.

There is little specific guidance in the treatises on the fingering of double stops, chords and arpeggios. L'abbé *le fils* dealt with 'crossed' fingering for diminished and augumented 5ths, and later gave exercises for fingering arpeggios on three and four strings which stress the usefulness of extensions – especially backwards with the first finger – for changing position in sequential passages (ex.67). This strategy is indicated in some of the fingerings given by Leclair *l'aîné* (*Premier livre*). Leclair *le cadet*'s *Premier livre* is one of the more interesting sonata collections for its treatment of double stops. He was one of the earliest composers to mark 3rds with adjacent fingers, one of them extended. (ex.68*a*). Etienne Mangean

Ex.68 J.-M. Leclair *le cadet*: *Premier livre de sonates*
(a) Sonata III, Menuetto

(b) Sonata VIII, Aria: andante

used the same fingering in several sonatas of his op.3 (1744) and Mozart acknowledged the possibility of this fingering in one of his examples. One of Leclair's passages in 3rds has an extraordinary fingering that seems designed to ensure an audible slide between some of the slurred pairs. (ex.68*b*)

In contrapuntal passages, fingering indications can be used to clarify voice-leading. Mozart illustrated how backward first-finger extensions could be used to ensure that a suspension was properly sustained (ex.69). A

Ex.69 L. Mozart: *Versuch*, chap.8, iii, 10

fingering for a fugal movement in Geminiani's op.1 (1716) suggests that violinists should not necessarily try to sustain all the notes in contrapuntal passages for their full written value; the notation is designed first and foremost to make the voice-leading clear rather than as a literal instruction to the performer (ex.70*a*). In several other instances,

Ex.70 F. Geminiani: *Le prime sonate*

(a) Sonata II, Allegro

(b) Sonata V, Allegro

however, he advocated finger substitution on a sustained note precisely so that it would continue to sound against new notes in another voice (ex.70*b*).

One rather bizarre approach to the 'fingering' of chords in the early 18th century was the use of the thumb, as specified by Louis Francoeur in his *Premier livre de sonates* (1715); (ex.71) The device was adopted by Leclair

Ex.71 L. Francoeur: Sonata VIII, Allegro (*Premier livre de sonates*, 1715)

l'aîné and was one of the features of his playing commented on in the *Mercure de France* in 1738:

> He is the first Frenchman who, imitating the Italians, played double stops, that is to say, played chords of two, three and even – by means of the thumb – up to four notes; and he has taken this kind of playing so far that the Italians themselves acknowledge that he is one of the first in the field.

Leclair marked a passage for the thumb in Sonata XII of his *Premier livre* (ex.72). The technique was only

Ex.72 J.-M. Leclair *l'aîné*: Sonata XII, Allegro ma non troppo (*Premier livre de sonates*, 1723)

possible if the violin was held so that the thumb sat well up over the fingerboard, a position which, however unnatural it might seem to modern violinists, seems to have been endorsed by a number of early 18th century paintings and engravings.

The art of fingering is primarily concerned with being able to play as many notes as possible on the fingerboard. However, string players constantly face choices between alternative fingerings. The choice may be a matter of convenience, but is equally likely to be one of colour (notes played in 1st position on the upper strings have a much brighter, clearer tone quality than those fingered in the higher positions on the lower strings). Consideration of tone colour does not seem to have played much of a part in 17th-century fingering, when the practicalities of being able to negotiate a passage efficiently were the overriding concern, but this was to change in the 18th century. Leopold Mozart urged soloists to consider playing entire passages on one string 'in order to produce consistently the same tone quality', and in discussing the use of 2nd position he gave an example in which the highest note *f''* was to be played on the A string, explaining that 'in slow pieces the fourth finger is often used, not from necessity but for the sake of equality of tone and therefore also for the sake of elegance' (ex.73). 18th-

Ex.73 L. Mozart: *Versuch*, chap.8, ii, 10

century sonata collections occasionally specify fingerings for their particular colour. In Sonata VIII of Leclair *le cadet*'s *Premier livre* a shift to 4th position a little earlier than strictly necessary corresponds to a change from a section marked 'fièrement' to one marked 'gracioso' (ex.74).

The use of harmonics seems to have met with limited approval in the 18th century. Pincherle (1955) speculated

Ex.74 J.-M. Leclair *le cadet*: Sonata VIII, Aria: andante (*Premier livre de sonates*)

that Vivaldi's direction 'violini in tromba marina' indicated their use. Mondonville gave a thorough explanation in the preface to *Les sons harmoniques* though, on the face of it, he recommended them not as a special tone colour but as a way of avoiding difficult shifts when playing high notes. Leopold Mozart scorned their use saying that they resulted in 'a really laughable kind of music . . . owing to the dissimilarity of tone'. L'abbé *le fils* systematically explained the production of natural and artificial harmonics. At about the same time in Paris, Carlo Chiabrano published, under the name Charles Chabran, his *Six sonates à violon seul et basse continue* op.1, containing instructions for playing harmonics, which are then exploited in two of the sonatas. One of the main concerns in the second volume of Ignaz Schweigl's *Verbesserte Grundlehre der Violin* (1795) is the use of natural harmonics; like Mozart, he refers to these as 'flagoletti'.

The bowing techniques BARIOLAGE and *ondeggiando* have implications for fingering; more often than not, in fact, it is through marked fingerings (rather than any explicit verbal direction) that these devices are indicated. Guillaume Gommaire Kennis (*c*1740) provided an early instance of this (ex.75). Haydn used *bariolage* to quite whimsical effect in several of his quartets.

Ex.75 G. Kennis: Sonata VI, Allegro (6 sonates op.1, *c*1740)

(ii) After 1800. The 19th century brought a demand for bigger sounds and greater virtuosity from violinists and cellists. The practice (established in the early years of the 19th century) of attaching the neck to the body of the violin by a mortised joint in the top-block (*see* VIOLIN, §I, 2) meant that the combination of the neck and fingerboard no longer increased in bulk towards the ribs of the instrument. This more uniformly slender neck facilitated

shifting into and playing in higher positions, and quick passages and the use of high positions on the lower strings became common.

The Italian violinist G.B. Viotti, who went to Paris towards the end of the 18th century, had a great impact on what was to become the French school of violin playing. The Paris Conservatoire was founded in 1795, and in 1803 the official conservatory *Méthode de violon*, by Pierre Baillot, Pierre Rode and Rodolphe Kreutzer, was published. Together with Baillot's *L'art du violon: nouvelle méthode* (1834) it became the model for all future methods. The manner of holding the violin, with the chin to the left of the tailpiece and the instrument rather horizontal, is modern, as is the idea that the left hand should be held away from the neck so that left-hand freedom is guaranteed. (The chin rest, invented by Spohr in about 1820 and, by his own account, finding widespread acceptance by the 1830s, provided additional security for a virtuoso shifting technique.) Scale and arpeggio exercises are given in each of seven positions. There are three-octave chromatic scales with the sliding fingers first advocated by Mersenne (the third octave is fingered 1212121223344), scales in 3rds, double trills in 3rds, and 6ths with alternative fingerings. Not all the fingerings would be acceptable to players today (see ex.76). In Baillot's method there are studies in octaves

Ex.76 P. Baillot: *L'art du violin*, p.35

and 10ths, broken 10ths and fingered octaves (which, according to Flesch, were invented by Wilhelmj). The many examples from the violin literature of the period include fingerings that show a 19th-century liking for warm, rich sounds produced by lower strings in high positions, and for sliding in both directions.

The *Méthode de violon* (1858) by Charles-Auguste de Bériot formed the basis of the so-called Franco-Belgian School. His treatment of fingering in the upper positions (which includes the provision of numerous études based on his principles) is encyclopedic and shaped by musical rather than purely functional considerations. (Bériot, incidentally, did not acknowledge the existence of the chin rest in his instructions on holding the instrument; rather, he recommended the application of just enough chin pressure shared between the tailpiece and the belly on the left-hand side, to stabilize the instrument.) His fingerings for chromatic scales were based on the use of each finger in succession, an important step towards present technique.

The innovations of Paganini had tremendous influence on all aspects of violin playing. He rejected the classic concept of positions, thus opening up unlimited possibilities for the left hand. Guhr (*c*1830) gave many astonishing fingerings used by Paganini to play passages on one string, double stops and chords (ex.77).

In the 19th century, methods were not the only, or necessarily the most interesting, means of communicating fingering technique and musical style; there were also the many editions by violinists such as H.W. Ernst, Joachim, Ferdinand David, Hubert Léonard and August Wilhelmj. David's *Die hohe Schule des Violinspiels* is an astonishing collection of Baroque and Classical works fingered in 19th-century style, with expressive slides, high-position

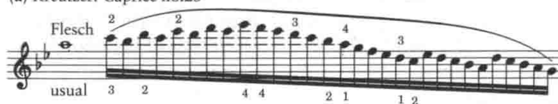
Ex.77 Guhr: *Über Paganinis Kunst*, p.45

(a)

(G string)

(b)

playing on all strings and additions to the original texts of double stops and chords. By the second half of the 19th century, extensions and contractions were well established as means of avoiding unwanted slides and of moving smoothly over the fingerboard. Alternative fingerings were given for scales and arpeggios in many methods. Joachim, for example, suggested that each three-octave diatonic scale, except for those of G and A, should begin with the second finger, but he also advised the student to learn each scale beginning in the 1st position.



Though the viola was comparatively neglected as a solo instrument during the 18th and 19th centuries, its left-hand technique kept pace with that of the violin, as can be seen from the early 19th-century methods, studies and compositions of Antonio Bruni, Bartolomeo Campagnoli and Alessandro Rolla, and from Brahms's sonatas.

At the beginning of the 20th century, Otakar Ševčík's publications, dealing with aspects of standard violin technique, were very influential, and they are still used today despite the fact that his placing of the hand in set positions is somewhat outmoded. Perhaps the most important modern book dealing specifically with fingering is Carl Flesch's *Alta scuola di diteggiatura violinistica*, which incorporates many ideas from his *Die Kunst des Violin-spiels*. He rejected the traditional concept of hand positions indicated by numbers and encouraged the player to adapt standard fingerings to his own style and technique. He admitted to a prejudice against stretching (extension), but indicated extension fingerings when they are necessary to avoid slides. He discussed the merits of open strings and fourth fingers in runs, fearing that the new steel E string might cause 'whistling'. He preferred to play chromatic scales with contiguous fingers and used half-position to avoid slides. Some of these points are illustrated in the fingerings he recommended for passages in works by Kreutzer and Paganini (ex.78).

Among the many 20th-century methods and studies including fingering systems Leopold Auer's *Graded Course of Violin Playing* (1926) has had enormous influence on left-hand technique. His method is largely for the highly gifted student, and the virtuoso repertory is

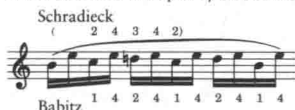
Ex.78

(a) Kreutzer: Caprice no.23

(b) Paganini: Concerto in D major

Flesch

usual



thoroughly explored. The fingerings are less modern than Flesch's, and include much use of slides and harmonics. Albert Jarosy, Sol Babitz and others have explored a new theory of fingering based on 'the natural fall of the fingers', which on the A string would be represented by ex.79. According to Jarosy, fingering is not an individual

Ex.79

matter, and 'what is needed is a law of fingering, the fundamental rightness of which would dominate all personal methods' (Jarosy, 1921). His concepts are often contradictory and illogical, but they open up new possibilities, which Babitz has explored, sometimes to a point that many violinists would consider extremely unnatural (ex.80). Nevertheless, Jarosy's and Babitz's

Ex.80 S. Babitz: *Principles of Extensions*, p.8

ideas about contraction, extension and relaxation of the hand are valuable, particularly when dealing with the often formidable difficulties of contemporary music.

Yampol'sky (1933) did not take up such an extreme position, and his book is an intelligent and disciplined survey of both past and present fingering techniques. He set out various fingering principles with great clarity and considered Kreisler's fingerings to be valuable as the expression of a unique musical personality, even if they were rooted in 19th-century conventions which have since fallen out of fashion. He stressed that the choice of fingering 'is a creative task, dependent on the musical instincts of the performer and the intellectual and emotional content of the work to be performed – in other words, its interpretation'. Joseph Szigeti also explored the whole subject in considerable depth. His fingerings of examples from Bach to Bartók in his books *A Violinist's Notebook* (1964) and *Szigeti on the Violin* (1969) show his awareness of musical styles, as do also his various editions. His extension fingerings often seem impossible for those with smaller hands than his (ex.81). Ivan

Ex.81

Galamian is important as the teacher of many outstanding violinists. His *Principles of Violin Playing and Teaching* (1962) embodies ideas about fingering which, while not new, have been widely adopted by players anxious to avoid unwanted slides.

Developments in violin fingering apply, by and large, to the viola as well and are enshrined in the methods of Dolejši (1939) and Primrose (1960) and in the 20th-century repertory for the instrument.

3. Violoncello.

(i) Early history: to 1800. There were two early systems of fingering for the cello: fingerings in which semitone spaces occur between each finger in positions below the half-string harmonic, or diatonic fingerings modelled on violin technique in which whole tones may occur between all fingers in the positions of the neck. Early cello technique was strongly influenced by that of the violin and viol, as cellists were often first players of those instruments. The postscripts to Bismantova's *Compendio musicale* (1694) present fingering for the *viola da spalla* (one of many terms for the small-sized bass violin) in the manner of the violin, using the fourth finger only on the A string to reach *e*′. The earliest musical evidence for advanced fingering technique is found in the *Ricercate* by Degli Antoni (1687) and Domenico Gabrielli's Ricercares for solo cello (1689). The range represented in the Degli Antoni works extends from C to *c*″; Gabrielli's Ricercares are the first known pieces to incorporate double stopping and chords. Works dating from the 1680s and 90s by Giovanni Bononcini and Antonio Caldara call for fingering in the higher positions of the neck and virtuoso passagework.

Early treatises on playing the cello devote significant space to fingering, as a well-established system of fingering did not at that time exist. Michel Corrette oriented the fingering principles in his *Méthode théorique et pratique pour apprendre en peu de tems le violoncelle* (1741) towards viol players and violinists taking up the cello for the first time, presenting several fingering options for passages in the lower positions. His fingerings for consecutive note patterns suggest the use of an oblique left-hand position as the use of the fourth finger is eliminated in passages above 3rd position, where the backwards-pointing thumb against the thick neck of the cello would inhibit the use of the fourth finger. Corrette referred to the chromatic system of fingering as an outmoded way of playing, practised on large bass violins and applied to the cello by players of the larger instrument. He described the violin-style fingering of Bononcini as the best system and the most commonly practised at the time. The works of Jean Barrière, published in the 1730s, provide evidence for the use of diatonic extensions without changing position. An example from Sonata no.5, bk 4 (1739) shows rapid arpeggios across two strings within the compass of an octave. Salvatore Lanzetti (*Principes ou l'application de violoncelle*, before 1770) applied diatonic fingerings to passages in the first two positions, with extensions between the first and second fingers, while for 3rd and 4th positions he advocated Corrette's fingering pattern, in which a whole-tone extension is used between the second and third fingers. Unlike Corrette, Lanzette employed the fourth finger above the half-string harmonic. Lanzetti's solo works also show the use of extensions between the second and third, and third and fourth fingers. An example from Sonata no.10 (12 *sonate*, op.1, 1736) requires the use of such extensions to execute the rapid passagework neatly without shifting.

As the 18th century progressed, fingerings based on semitone spacing between the fingers, and the use of extensions between the first and second fingers only in lower positions, became more common. However, there were still differences of opinion between schools of playing concerning fingering choices and the position of the left hand on the neck. In his *Instructions de musique, théorique et pratique, à l'usage du violoncelle* (1774), J.-B. Baumgartner advocated an oblique hand position on the neck, using an extension between the second and third fingers, and eliminating the fourth finger from the 3rd position upwards, where the third finger is recommended instead. The use of thumb position is avoided. On the

other hand, the French cellists J.B. Tillière (1764) and J.-B. Cupis (ii) (1772), in their respective treatises, demonstrated consistent principles applied to fingering in the first four neck positions. Both Cupis and Tillière were students of Martin Berteau and applied the principle of chromatic fingering, with extensions used between the first and second fingers only in the first four positions. Above 4th position, the fourth finger is used only exceptionally, and whole-tone extensions between the second and third fingers are applied. Available evidence suggests that the use of a more perpendicular left-hand position in relation to the neck by players of the French school facilitated the use of chromatic fingerings. John Gunn's *Theory and Practice of Fingering the Violoncello* (1789) was the first attempt to systematize cello fingering. He strongly advocated the use of the perpendicular, as opposed to oblique, position for the left hand. The use of scale fingerings encompassing a minor 3rd between the first and third fingers (using an extension between the first and second), given as an option by Gunn, can be documented to the end of the 18th century, and includes fingerings suggested by J.-B.S. Bréval in his *Traité du violoncelle* (1804).

The use of thumb position, in which the thumb is placed horizontally across the strings, thereby acting as a moveable nut, is documented in compositions dating from the 1730s. Some of Lanzetti's sonatas, for example, call for a tessitura well above the positions of the neck that could only be played by using thumb position. The discussion of thumb position in Corrette's *Méthode* suggests its use was well-known by 1741 and that cellists used the technique to play works for the violin as well as virtuoso cello pieces. Thumb position was based on the interval of a 4th between the thumb and the third finger when playing on one string, or an octave when playing on two strings. This octave spacing became the basis from which thumb position developed as a technique to expand the instrument's range and capacity for virtuoso playing. Performance practices emanating from the early Mannheim cellists Innocenz Danzi and Anton Fils were passed on in Austria and Germany through their students J.G. Schetky, Peter Ritter and J.B. Tricklir. These cellists were highly proficient in the use of thumb position and used the fourth finger over the entire compass of positions, including extensions between the third and fourth fingers. A characteristic feature in their use of the thumb was the employment of blocked hand positions across two or more strings in thumb position, from which a wide range of virtuoso devices could be executed. Works written by or for cellists in the Mannheim tradition, such as Haydn's Concerto in C, contain many passages written to show off this technique.

(ii) Duport and Romberg. The codification of the fingering system used by the French school occurred with the publication of J.-L. Duport's *Essai sur le doigté du violoncelle* (1806). Crediting Berteau with establishing the foundation of cello fingering, Duport's detailed treatment of fingering principles provided the basis for the modern left-hand technique. He advocated a left-hand position that is perpendicular to the neck, with the thumb placed on the neck behind the first and second fingers (the thumb moving with the fingers when shifting), and the use of well-rounded fingers. Like Gunn, Duport expressly advised against using the violin-style oblique position of the left hand on the neck, pointing out its lack of agility in passages in which the hand position must encompass two whole tones between the first and third fingers in quick succession. The overriding left-hand principle presented in the *Essai* is that of successive semitone spacings between each finger, with extensions possible between the first and second, and between the second and third but only above the 4th position. He occasionally allowed an extension to be taken between the third and fourth fingers but only in exceptional cases, such as specific arpeggio patterns. He strongly advised against sliding on the same finger when changing positions, a common fingering choice in earlier treatises, but which he judged as producing a disagreeable and tasteless effect. His exceptions to this rule are limited to intentional slides on one finger executed for musical reasons, such as the playing of portamento, or broken 3rds, where such slides are necessary in order to maintain the integrity of the hand position. He also advised that changes of bow direction be coordinated with left hand position changes to avoid shifting within slurs. Neatness of execution and purity of tone were of paramount importance to Duport, and he preferred regularity in fingerings to maintain consistency in the left hand technique, thereby affording better intonation.

Duport's fingering principles were disseminated through the Paris Conservatoire method, co-authored by J.-H. Levasseur who was one of his students, and other cellist-contemporaries whom he influenced, such as Nicolas Baudiot, Friedrich Dotzauer and Robert Lindley. A particularly influential teacher, Dotzauer subscribed to Duport's left hand principles and was instrumental in introducing these into the German school of cello playing, as illustrated in his *Violoncellschule* (1832).

B.H. Romberg's fingering technique differed markedly from that of his contemporary, Duport, as he advocated an oblique position of the left hand. He was particularly known for his skill in thumb position, and he extended the limits of this technique using blocked hand positions, developing a brilliant capacity to play in the upper register on the G and C strings. The frequent use of thumb position on the C string by German cellists sharply distinguishes this school of cello playing from that of the French, who avoided using the C string in solo compositions until after 1815. Unlike Duport, Romberg often used same-finger shifts when changing positions, and the fourth finger in thumb position. The use of the little finger in thumb position lost favour with French cellists through the 18th century and was re-introduced only at the beginning of the 19th century by German players, such as Romberg. Many passages requiring the use of the fourth finger in thumb position can be found in 19th-century works for the cello.

(iii) After 1800. Aspects of the fingering techniques of both Duport and Romberg were amalgamated by the early 19th-century cellist-teachers, Baudiot and Dotzauer. Whereas the thumb position fingering styles of Duport and Romberg were based on blocked positions, other effects became more frequently used than in the 18th century, such as 10ths (e.g. A.F. Servais, Caprice no.6, ?1854), and consecutive shifts on the thumb, including octaves and double stops. The Russian cellist Karl Davïdov adopted the ideas of the violinist Khandoshkin, using a completely mobile hand over the fingerboard without reference to fixed positions based on the thumb, in order to facilitate a more expressive, lyrical style of

playing. An important teacher as well as performer, Davïdov's fingering style had lasting influence in Russia throughout the second half of the 19th century. Friedrich Grützmacher's *Hohe Schule des Violoncellspiels* (1891) was also influential, reflecting 19th-century German taste for slides, harmonics and rich sonorities. David Popper employed the 19th-century German fingering system to its fullest potential, his pedagogical and musical works extending the compass of thumb position, using logical, fixed positions, to the highest possible range.

Pablo Casals is credited with taking the best aspects of earlier methods of fingering and developing them into the modern left-hand technique. Although Casals never published a method on cello playing, two of his pupils, Diran Alexanian and Maurice Eisenberg, wrote detailed expositions on cello playing and technique that were based on Casals's principles and received his approbation. Noteworthy aspects of Casals's fingering principles include his approach to the use of extensions, various means of shifting, and techniques for fingering chords and double stops. Extensions are normally only used between the first and second fingers, but are not limited to the interval of a tone, as larger extensions may be taken in cases where an extension is preferable to a shift. When changing position by ascending from a lower to a higher finger, or descending from a higher finger to a lower one, the slide is executed by the initial finger, with the new finger sounding only upon arrival. Conversely, when ascending by shifting from a higher to a lower finger, or descending by shifting from a lower finger to a higher one, the initial finger is withdrawn and replaced by the new finger upon arrival. When changing positions across two or more strings with the same finger, the effect of sliding should be minimized, by taking the slide and bow change together or, when the two notes are to be slurred, sounding the slide only a fraction earlier than the note of arrival. When changing positions and crossing strings, the shift should be executed on the first string to minimize the glissando effect in arriving at the new note. In playing chords or double stops, 5ths may be fingered with a temporarily oblique hand position so that notes on parallel strings may be played with neighbouring fingers rather than one finger across two strings.

The advancement in cello fingering technique, begun by Casals and continued throughout the 20th century, is reflected in the demands of many 20th-century works, which call for a highly flexible fingering technique that can accommodate extremely large intervals, unusual leaps, double stops and chords, left-hand pizzicato or physically awkward positions of the hand to achieve the composer's intentions. The final movement of Kodály's Sonata op.8 for solo cello (1915) is a good example of a work that extends the fingering requirements for the left hand, the closing bars necessitating a double stop that spans the interval of a 13th in the highest register of the instrument.

4. Double bass. Because of the instrument's size, double bass fingering has been subject to much experimentation, and a great variety of systems have been used. Modern methods have only partly standardized earlier systems and there are still many different fingering systems in use. Not only do these vary considerably but there is also no consistent method of identifying the positions. For instance, 'half-position' in one method may be called 'first position' in another and 'first degree' elsewhere.

Two systems are most commonly found. One, probably the most widespread, springs from bass methods published in Germany and Austria during the 19th century and is known as 'Simandl fingering'. The hand is positioned in such a way that a semitone lies between 1 and 2 and another between 2 and 4. The third finger is used only as a support for 4 until the higher positions are reached, when it is used instead of 4, which no longer reaches the fingerboard. J. Hindle in his *Der Contrabass-Lehrer* (*c*1850) fingered semitones 124 but brought 3 into use slightly sooner than the methods of Labro, Hrabě, Simandl, Nanny and White, which are largely the same in their approach.

Bottesini in his *Metodo completo per contrabbasso* (n.d., before 1870) fingered semitones 134 and some modern Italian methods retain this use of 3 in place of 2 (Billè, Petracchi). Sometimes Bottesini fingered a semitone 14 in the lower positions (the old Lombardy school). The use of 4 in high positions is also not uncommon, in which event the wrist and hand are brought further forward to compensate for the short little finger.

The other main system has its origins in viol or cello technique, and is frequently called 'extended fingering'. The hand is placed so that semitones lie between each of the fingers in all positions, thus avoiding many changes of position during playing. Advocates of the Simandl system say that extended fingering leads to poor intonation because of the stretching required. But as only two major diatonic scales (B♭ and F) are playable on a conventionally tuned bass without shifting, the advantages of extensions become obvious. Extended systems have been widely used on modern instruments with thinner strings and lower bridges to increase facility. In addition, the weight of the hand is placed with a rolling action over the playing finger, thus reducing the need to stretch. Studies by Billè, Möchel, Rühm, Hegner and Gullbrandsson all include various types of extensions.

Thumb positions and double stops on the double bass are required less frequently in the orchestral than in the solo repertory. Most systems use the thumb from halfway up the string, although some advocate its use much earlier. Natural harmonics can be produced at either end of the strings but, as with artificial harmonics, they are seldom called for in everyday playing.

III. Wind instruments

1. Instruments with side holes: (i) Theory (ii) History. 2. Valve instruments.

1. INSTRUMENTS WITH SIDE HOLES. Just as the vibrating length of a string is shortened by pressing down a finger, the vibrating air column in the bore of a woodwind instrument is shortened by opening a side hole (or tone hole). In both cases with keyboards a higher note is produced. The analogy stops there, however, because in string instruments the wind player's fingers operate only one hole each, and there is no way to alter the position of fingers (except by reversing hands) or holes. The concept of fingering on a woodwind instrument is thus concerned with the action of opening and closing the tone holes, and includes the specific combinations of closed and open holes required by any given instrument to give particular pitches, as well as the sequence of finger placements associated with a given scale or melody.

(i) Theory. An open tone hole functions as the end of the instrument's bore, thereby – in theory – diminishing or cancelling the acoustic effect of the holes below it. In practice, however, the air column below the first open hole never entirely loses its acoustic effectiveness; indeed, it is a major factor in determining the specific tone quality of the instrument.

In the European and Mediterranean regions, three basic concepts have influenced the development of the system of tone holes since the Middle Ages: (1) establishing a basic sounding scale through a careful placement of tone holes; (2) modifying the intervals of this scale by special fingerings or (from the end of the 18th century) by supplementary holes operated by closed-standing keys; (3) extending the range upwards or downwards by means of extra holes (for the high notes, thumb-holes or octave holes to induce harmonics; for the low notes, holes placed beyond the reach of the fingers operated by extension keys).

On a woodwind instrument the normal disposition is a row of three or six tone holes usually placed on the upper surface of the shaft (the lower surface generally taking holes destined only to be closed by thumbs). With the exception of the three-holed tabor pipe (*see* PIPE AND TABOR, which obtains its notes through harmonics, Western woodwind instruments have developed on the principle of six holes, three for the upper hand and three for the lower. The holes are placed for the comfort of the first three fingers of each hand, and in the optimum acoustical position for the production of the instrument's basic scale. On the smallest instruments the six holes are equidistant from each other, while on larger instruments, and those divided into two sections or more, the six holes form two separate groups each comprising three equidistant holes.

On most instruments these six basic holes are supplemented by others which allow for increased range, both lower (a seventh and eighth hole, closed by keys when they are beyond the reach of the little finger of the lower hand) and higher (a thumb-hole or octave hole that encourages a break to the upper register). The most common hand position was evidently left above and right below, although the reverse was used until the end of the 18th century. The addition of keys that required the use of the little finger of the upper hand, and the introduction

of key systems in the 19th century, obliged makers to limit the hand positions to left above right.

On an air column provided with six to eight tone holes, the easiest and most obvious fingering sequence is to open holes successively, starting with all holes closed and ending with all holes open. This produces a series of notes progressing from low to high that correspond to a recognizable scale. This sequence is known as the 'natural scale' of the instrument, and the fingerings can be termed 'simple fingerings'.

The precise positioning of the holes varies from instrument to instrument according to the modes characteristic of the music that it is made to play. Thus many bagpipes, for example, are made to play modes different from the diatonic major scale common to woodwind instruments of the Western art music tradition from the late 17th century onwards (*see* BAGPIPE). Indeed, it was not until about 1650 that the natural scale of certain woodwind instruments became to be standardized to conform to the diatonic scale. This standardization of tuning was made necessary by the development of the orchestra and ensembles of unlike instruments (as compared with earlier whole consorts or families of instruments), and is one of the basic elements that gradually separated the instruments and performing practices of art music in Europe from those of traditional music. This article will deal with the tuning and fingerings of the woodwinds used in art music.

Starting with the six-finger d′ as the reference or base note, the natural scale on a hypothetical instrument with six holes and no keys is shown in fig.5 The resulting scale is nominally that of D major. In practice the interval between the second and third steps of the natural scale is ambiguous on many instruments: on bagpipes and most oboes used in European traditional music it is a semitone, whereas on the early flutes and oboes used in art music it is usually closer to a whole tone. Assuming that the six-finger note is *d′*, the third step will be *f′* in the former case, and a rather flat *f♯′* on the flute, recorder and hautboy. Since the seventh step, played all-open, is a flat *f♯′* the simple-fingered scale on the latter three instruments gives a diatonic major scale in the key of D in mean-tone temperament.

5. Natural scale on instrument with six holes and no keys

If a seventh, lower hole exists (as on a recorder or hautboy), a further note can be played, which is usually a whole tone below the base note *d′*. On many early oboes ('hautboys': for explanation of this terminology, *see* OBOE, §II, 1 and 2) and bagpipe chanters, however, the seven-finger note is only a semitone below the base d′, thereby functioning as a leading tone to the base note of the instrument. The simple fingerings shown in fig.6 produce notes which have a remarkable uniformity of sound within the base mode or key, but the system does not provide for semitones.

Early and traditional fingering techniques use 'resistance fingerings' to obtain chromatic notes, and consequently increase the range of usable tonalities. On instruments that lack supplementary tone holes, two kinds of resistance fingerings can be used: half-holing and cross-fingering (the latter also called forked-fingering). Half-holing lowers a fingered note a semitone by half-closing the next lowest hole. For example the note *a′*, produced by closing holes 1 and 2 (fig.5), is lowered to *a♭′* by half-closing hole 3. Likewise, g′ fingered 1 2 3, becomes *f♯′* by closing half of hole 4. It is possible to obtain *e♭′* by half-holing the sixth hole; on some recorders and hautboys this hole (and the seventh) is doubled (i.e. divided into two smaller holes) to facilitate half-holing. Half-holing is only effective on holes of relatively large diameter, which means that it works poorly on instruments with small tone holes, and on the smaller tone holes of any instrument.

Cross-fingering involves lowering a simple fingering a semitone by closing one or more holes below the first open hole. For instance the *b′* produced by closing the first hole can be lowered to a *b♭′* by closing holes 1 and 3. Cross-fingerings may also be used to produce *f′*, *e′*, and *g♯′* (fig.6). The *g♯′* cross-fingering is effective on the simple flute and recorder but not on the hautboy, which uses a half-hole instead. In contrast to half-holing, cross-fingering is more acoustically effective with smaller tone holes, since unless the first open hole is of relatively small diameter in relation to the bore, the pitch is not altered enough to be usable. This is because closing a hole below the first open hole acts on the residual vibrations of the air column (i.e. those below the first open hole), and small holes are less effective at cancelling residual vibrations than large ones.

On this hypothetical instrument with six tone holes, using only simple fingerings and resistance fingerings, it is therefore possible to modulate to a dozen neighbouring tonalities. Modulating to more remote tonalities (i.e. those involving more than three sharps or flats) requires an increasing number of resistance fingerings, however, and thus multiplies the technical difficulties. But remote

6. Chart of cross-fingering of the first octave

tonalities were normally avoided in European music involving woodwind instruments until the end of the 18th century. The concern of instrument makers until that time was thus to make the resistance fingerings function as efficiently as possible. Cross-fingerings are relatively easy to use and offer greater control of intonation and sonority. To half-close a hole, however, requires absolute precision in the position of the fingers, and the sound produced by these fingerings remains uncertain in both pitch and timbre. Whenever possible, then, holes that had to be half-closed were doubled (on the hautboy holes 3 and 4, and, on the earliest instruments, 6; on some recorders, holes 3, 6 and 7) or made redundant by the addition of a supplementary tone hole with a closed-standing key (e.g. the E♭ key on the flute and hautboy. The primary purpose of the addition of supplementary keys and the development of complex key systems in the 19th century (*see* KEYWORK) was to eliminate the need for resistance fingerings, but their adoption radically changed both the acoustics of woodwind instruments and their fingering technique (*see* (ii), below). As late as 1800 the woodwind instrument maker Heinrich Grenser wrote of the flute.

> Not in the number of its keys; no, it is in striving for utter simplicity, with no sacrifice to elegance, that the true perfection of this beautiful instrument lies. To improve this or any note by adding a key is neither difficult nor clever. The keys are after all nothing new . . . . The real art . . . consists in making flutes on which everything can be achieved without keys. We must remove the deficiencies that still afflict such flutes in a way that is just as effective as a key.

The hypothetical instrument with six tone holes described above sounds only within an interval of a 7th. Extending the range upwards is accomplished by OVERBLOWING to obtain overtones. These are activated by opening an octave hole operated by the thumb of the upper hand (either directly or with a SPEAKER KEY), by augmenting the air pressure, and (on flutes) by adjusting the embouchure and the angle at which the air stream strikes the far edge of the mouth-hole; reed instruments require the adjustment of the pressure and position of the lips on the reed blade. In this way the grid of simple fingerings in the lower octave, as well as the resistance fingerings, can theoretically be replicated in the upper octave. Up to the *g″* this works well, but beyond that point the acoustic behaviour of the instruments makes it impractical. Thus most so-called Renaissance instruments played no more than three or four steps above the basic scale; the music they played did not require a larger range, and often the shape of the bore and the dimensions of the tone holes did not allow higher notes. That said, Ganassi (*Fontegara*, 1535) expected his recorders to be able to produce scales of up to two octaves and one note (a 16th) above the base (*see* RECORDER, §I, 2(ii); also §III, 1(ii), below). By the beginning of the 18th century the normal range of the woodwinds used in art music was at least two octaves, but it was occasionally found necessary to modify the lower-octave fingerings to obtain the notes above *g″*. The highest notes were sometimes obtained with 'harmonic fingerings' or 'long fingerings', which closely resembled cross-fingerings (fig.7). By closing holes in the middle and lower parts of the sounding column, the uneven overtones of the series were masked, thus facilitating the 'speaking' of the octave.

The principle of repeating fingerings an octave higher does not apply to reed instruments with cylindrical bores such as the clarinet. On these instruments overblowing the fundamental notes does not produce the harmonics in

7. Chart of harmonic or long fingerings of the upper register (1: flute (recorder); 2: oboe)

even numbers (2, 4, 6 etc.). In practical terms this means the first overblown harmonic is not the octave (2nd harmonic) but 3, a 12th (the 3rd harmonic). The octaves are obtained by means of supplementary tone holes operated by closed-standing keys placed in the vicinity of the embouchure.

The downward extension of the range of the hypothetical instrument poses a technical problem for the lower hand. Tone holes that will give notes below the six-fingered note usually have to be placed beyond the reach of the little finger; such holes must be operated by open-standing keys. (Only on some recorders is it possible to place a seventh hole that gives a convincing note; the hole can be offset to put it within reach of the little finger by turning the foot-joint.) Adding notes to the lower range implies lengthening the bore, which can only be done to a limited extent without lowering the pitch of the base note of the instrument. On the hautboy the extension amounts to a whole tone; on the modern oboe it is a major 3rd. On a bass instrument like the bassoon the extension of the sounding column allows the range to be augmented by a 6th, to *B″/B♭″*.

(ii) History. The fingering charts that formed a regular part of tutors and instruction books from the beginning of the 16th century offer insight into how finger technique evolved in conjunction with the evolution of the acoustic behaviour of the various instruments. In addition to giving a fairly clear picture of the tendencies and habits of musicians in tuning the scale (what we now call temperament), they reflect shifts of taste on questions of tone quality and interval placement.

In general, certain concerns were common to all periods:

(1) The attempt to achieve the widest possible range, particularly in the upward direction, given the physical limits of each instrument.

(2) Attention to the sizes of intervals, manifested in a scale that corresponded to the general tendencies of the period.

(3) The production of a quality of sound that conformed to contemporary tastes, by manipulation of acoustical options and choice of fingering.

(4) Consistency in the use of fingerings throughout Europe within any period.

Against these constants two great historical ruptures are discernible, each corresponding to a revolution in instrument design. The first is located in the 17th century

and has to do with the introduction of wind instruments in the new concerted style. This change is documented by many new instruction books and fingering charts for woodwinds that began to appear in the last decades of the century. The second radical change in woodwind design took place in the 19th century, and is symbolized by the Boehm system, which introduced elaborate key systems (*see* KEYWORK, §§3 and 4) and radically altered the relation between bore and toneholes. Each of these historical breaks was preceded by a gradual evolution in fingerings. Although in practice fingerings were probably more sophisticated and subtle than what is found in the stereotyped fingering charts (which through the 18th century were never more than directions for beginners), these charts are still essential landmarks in the development of fingerings.

The first codification of prevailing practices in art music occurred in the early 16th century in the context of large court chapels that were being formed in northern Italy, in the Holy Roman Empire and in Flanders, and the growing numbers of different kinds of instruments that were used. Virdung was apparently the first to publish a self-help instruction book, *Musica getutscht* (1511), which dealt with the organ, lute and recorder. Other tutors included woodwind fingering charts, such as those of Ganassi (*Fontegara*, 1535) and Jambe de Fer (*Epitome musical*, 1556). These were followed in the early 17th century by the encyclopedic works of Praetorius (*Syntagma musicum*, 1618) and Mersenne (*Harmonicorum instrumentorum*, 1635–6, and *Harmonie universelle*, 1636–7).

Fingering charts in this period show a gradual extension of the upper register, especially on flutes, and an increasingly systematic use of resistance fingerings. Whereas Virdung's recorder goes no higher than the seventh degree of the second octave, Jambe de Fer's includes two octaves, as does Mersenne's. This extension upwards reflects a physical evolution (the transition from cylindrical to conical bore and changes in the diameters of the tone holes), and demonstrates the discovery and use of harmonic (or long) fingerings. Virdung's chart presents a striking illustration of the hypothetical fingerings discussed in §III, 1(i) above. Starting with the seven-fingered note (C or F), it shows the natural scale of the recorder played with simple fingerings, equivalent to a D or G major scale, including fourth degree (F♯ or B natural), seventh (C♯ or F♯ played by closing only the thumb-hole), and octave (D or G, played all open). Cross-fingerings (giving *e♭′*, *e♭″*, *f♭′*, *f♭″*, *a♭′*, *a♭″*, *b♭′*, *b♭″* and *c″* on a recorder with lowest note c′) were produced with a single closed hole beyond the first open hole, and the same simple scale was reproduced at the octave, stopping on the seventh degree. No harmonic fingerings were employed.

Later changes of fingering, as seen in Jambe de Fer and Mersenne, are an indication not only of the physical evolution of the instrument, but also of changes in the conception of intervals of the scale. A cross-fingering was used to replace the simple fingering on the fourth degree; and, significantly, the all-open fingerings were avoided. Jambe de Fer supplemented the cross-fingerings on A♭/E♭ and F♯/B with additional half-holes for tuning refinement. Besides the recorder chart, he also introduced one of the first charts for the flute, offering a chromatic scale of two octaves on *d′* (although the *e♭′* was missing, along with the close-standing key that would have been necessary to obtain it). The chart regularly alternated simple and cross-fingerings without employing any half-holes. Above *a″*, harmonic fingerings were used to reach *d‴*. The cornett of this period offered a similar range and fingerings.

Nothing like the instruction books devoted to flutes and cornetts (the instruments used in art music) appeared for the double-reed instruments in the 16th century. During this period bagpipes and all types of shawm were primarily used in popular music or were played by professionals; in neither case was there a need for tutors or fingering charts (which were aimed at musically literate amateurs). The usable range, especially on the bag and wind-cap instruments (the bagpipes, crumhorns, and *hautbois de Poitou*), remained limited to one octave and a 4th or 5th; only on shawms and bagpipe chanters played without bag or cap, on which the player had direct lip control of the reed, was it possible to extend the range upwards. On the double-reed instruments, unlike the recorders and flutes, no evidence survives of the use of harmonic fingerings for high notes. At the beginning of the 17th century Mersenne indicated that the shawm had a range of two octaves, but the simple fingerings of the lower octave were duplicated without change in the upper register:

> As for the range of the *Hautbois* [i.e.'shawm'], each size, as for instance the treble, plays a 15th. When the player has produced as many natural notes as there are holes, he begins over again, stronger and higher, by blowing harder (1636; p.297).

Although cross-fingerings were clearly used, Mersenne did not mention them on these instruments. They were applied less consistently than on recorders and flutes, since shawms (playing mostly popular music) had less occasion to modulate or change modes.

The radical changes that woodwind instruments underwent in the 17th century inspired the appearance of a number of instrument tutors that included fingering charts. The changes in basic fingering were relatively minor on the recorder and flute, even though they (like the hautboys and bassoons) underwent major redesign and revision of technique at the hands of musicians at the court of France. The hautboy changed most radically in its physical form, altering not only its technique but its function and status. It became the most important treble wind instrument in the new orchestra (a formation that for the first time systematically combined wind and string consorts, groups that had traditionally been separate).

By the end of the 17th century the new French hautboy had inspired treatises in Italy (Bismantova, 1688), England (Banister, 1695; Anon, *The Second Book of Theatre Musick*, 1699) and France (Freillon Poncein, 1700). From the beginning, fingering charts included a range of two octaves and a note (*c′*–*d‴*), with a complete chromatic scale, including suggestions for producing *c♯′* (a note that could not be played without drastic changes of embouchure or an impractical finger combination). The high-note fingerings above *a″* remained 'natural', usually identical to the octave below, with a *c‴* played 'all-open'. There is evidence of the use of *e♭‴* in the early 18th century (Hotteterre, 1707; Dreyer, ?1727). J.S. Bach occasionally called for fingered *e‴* and *f♯‴*, especially in oboe d'amour parts; *f‴* appeared in Bissoli's oboe sonata (*c*1750). Harmonic fingerings for the high notes (using the fingers of both hands) originated in the latter part of the 18th century, although they had commonly been used on flutes since the mid-16th century. When keys were

added to the oboes the 'short' fingerings (the same as those of the lower octave) were reinstated.

At the end of the 17th century and the beginning of the 18th, the recorder in its Baroque form enjoyed an intense but brief vogue, generating a number of tutors, including those of Loulié (*c*1685–90), Hotteterre and Freillon Poncein. Although Loulié described the notes above *e*♭‴ as little used, Hotteterre in 1707 included notes up to *g*‴. The flute, an instrument played by both amateurs and virtuoso soloists, became extremely popular after the turn of the century; its career was accompanied by a series of tutors, of which the most famous and remarkable was that of Quantz, published in 1752.

The fingerings of the flute and hautboy were essentially identical in the early 18th century. Hotteterre, having already provided a chart of fingerings for the flute, saw no need to include another for the hautboy. He commented: 'All the natural notes [on the hautboy] are done as in the fingering chart in the flute tutor . . . except for the low and high Cs'. There were other differences, however; already at the end of the 17th century the flute went up to *g*‴, and Delusse in 1761 included *a*‴. The 18th-century flute normally went no lower than *d*′. (Jacob Denner's addition of *c*′ to the instrument, operated by a key exactly like that of the hautboy, is an isolated instance.)

The fingering charts show that players of woodwind instruments in the 18th century were concerned with the distinction in pitch between enharmonic pairs (such as G♯/A♭, C♯/D♭, D♯/E♭ and F♯/G♭), accomplished by the use of different fingerings. Quantz added an extra key to the flute to distinguish D♯ from E♭. Generally speaking, the different fingerings caused the flats to sound somewhat higher (normally a comma, or about 22 cents) than their corresponding sharps. As a result of these fingerings, the intonation of certain notes sounds strange to modern ears accustomed to a tuning model closer to equal temperament.

The hautboy treatises of the late 17th and early 18th centuries also devoted considerable space to fingerings for trills and other ornaments (Banister, Freillon, Pancein, Hotteterre and Anon, *c*1715). Special combinations were necessary, since ornaments that involved cross-fingered notes were ineffective without the use of alternative (or 'false') fingerings. These trill charts underline the basic importance given by musicians of the time to the technique and style of ornamentation.

In addition to the standard keys – E♭ on flutes, C and E♭ on hautboys – other keys gradually appeared after the middle of the 18th century: on flutes starting in the 1750s, on hautboys only rarely until the end of the 18th century. Garnier's hautboy method, appearing in the first years of the 19th century, made no mention, either in the exercises or the fingering charts, of extra keys beyond the usual two. The first added keys had no basic effect on fingerings until after 1810; they remained normally closed, covering supplemental holes. Their purpose was to replace cross-fingerings that interrupted the easy flow of scale passages, especially in extreme tonalities. They were meant to facilitate the slurring of large intervals, to give secure response in the upper register, and to equalize the timbre of all the notes (which had been impossible to achieve with resistance fingerings).

The new keys were superimposed on instruments that, from an acoustical point of view, were already highly sophisticated (see the passage by Grenser cited in §III, 1(i) above). The finger technique required by the new keys was thus both complementary to and concurrent with the established techniques that had been inherited from Baroque instruments. The oboe described in Vogt's tutor of 1816–25 (MS, *F-Pc*) included two additional keys, but his fingerings were still essentially those of the two-keyed hautboy. The new techniques were not accepted by everyone, and there is documentation of considerable reluctance to the addition of keys by many musicians and instrument makers.

Certain keys were essential to the instrument in order to achieve its basic scale, while others were optional, offering alternative possibilities that were seen as preferable. The first keys on the clarinet of this period, for instance, were essential to the production of the notes of the natural scale: closed keys for the upper notes, and (as on the bassoon) open-standing keys for those of the low register.

Key systems, originating in the 19th century primarily in France, were complex mechanisms that integrated the use of simple fingerings with the functions of the optional keywork developed in the Classical period. They were perfected on the oboe by the Triébert family, using metal rings and plates that not only closed tone holes but were connected to pivoting axles that controlled the simultaneous opening and closing of further holes. Key systems led to very different solutions of sound projection, equality of tone, and temperament from those of the 18th century. By 1850 Theobald Boehm had produced a flute that used a key system combined with radically changed acoustical proportions. The bore of the instrument was made cylindrical once again, while the principal tone holes were enlarged; this increased the instrument's volume, and tone production was made more direct through the application of a key system that eliminated resistance fingerings. This new approach to the acoustics of woodwind instruments (and, as a result, their technique) was soon applied to the saxophone, then to the clarinet and (briefly) to the oboe; it has been the guiding principle in the making of woodwind instruments ever since. Paradoxically, the very sophistication of the key mechanisms that were adapted to these instruments led to bores that were acoustically much simpler, and consequently to simplified fingering patterns for scales, similar to the succession of natural fingerings used on Renaissance and folk instruments.

20th-century experiments on woodwinds again brought into question the balance of timbre and tuning painstakingly perfected by recent generations of makers. Micro-intervals, for instance, produced by the use of cross-fingerings and harmonic fingerings, represent a return to the enharmonic fingerings systematically used on the woodwinds of the 18th century. The same is true of MULTIPHONICS, obtained by the use of harmonic fingerings combined with modifications of embouchure. It appears that the homogeneous scale and evenness of tone quality that have been the ideal on woodwinds for well over a century are once again being challenged by new aesthetic inclinations.

2. VALVE INSTRUMENTS. On the whole, the fingering of valve brass instruments is independent of the type of mechanism; the techniques used for piston valves can, for example, be applied without modification to rotary valves. The basic arrangement used almost universally is for the valve operated by the first finger to lower the pitch by two

semitones, the second finger by one semitone, and the third finger by three. The right hand is used for these three valves except on the french horn, where the right hand is positioned in the bell for hand-stopping and the left hand operates the valves.

In an alternative arrangement, used in the past mainly in Germany, the roles of the first and second fingers were reversed, and an arrangement known as *doigté ministériel* was widely used in France whereby the third valve gave a pitch lowering of four semitones. The valve passages can also be arranged so that operating the valve cuts out the extra tubing of the valve loop rather than adding it. This 'ascending valve' was for many years used on french horns in France for the third valve: operating the ascending third valve raised the pitch by two semitones. Many early valve instruments had only two valves; separately they lowered the pitch by one or two semitones, and together by three. With the longer tube length of the early 19th-century trumpet (typically 6′ F or 7′ D), two valves were sufficient for the repertory. Used together with hand-stopping, two valves allowed french horn players a complete chromatic compass.

Modern four-valve french horns generally have the fourth valve ascending, which raises the pitch of the instrument from 12′ in F to 9′ B♭ or from 9′ B♭ to 6′ F, and arranged to be operated by the left thumb. Orchestral tubas, in order to have a chromatic compass down to the lowest notes required, have at least four valves; usually the fourth valve lowers by five semitones and is fingered by the first finger of the left hand or the fourth of the right.

Using valves in combination can bring intonation problems: if a valve adds the correct amount of tubing to lower the pitch by a number of semitones, it will not add quite enough tubing to lower the pitch by the same interval when another valve is in use at the same time. With small instruments it is often enough to tune the third valve to lower the pitch by slightly more than three semitones and to avoid using it on its own; the player can then 'lip' any wayward notes up or down sufficiently for reasonably good intonation. Fitting the third valve tuning slide (and sometimes the first as well) with a finger-ring or sprung lever so that it can be moved by the player at least in slow-moving passages is common for trumpets and cornets. Some tubas are designed so that a tuning slide can be manipulated in performance. Some models of tuba have five or six valves, allowing the player some flexibility of fingering; there might, for instance, be two valves nominally giving a semitone but with one adding more tubing than the other.

The basic fingering of brass instruments as taught to beginners uses the open notes (no valves operated), the other notes being obtained with the least possible number of valves operated (except that 1 and 2 are preferred to 3 alone). The basic (descending) scale for a trumpet in C is *c″* open; *b′* 2; *a′* 1 + 2; *g′* open; *f′* 1; *e′* 1 + 2; *d′* 1 + 3; *c′* open.

The chromatic notes and notes in other octaves are obtained by appropriate use of the least number of valves. Advanced players use alternative fingerings for better intonation or greater facility. The 'compensating' valve system used on some french horns and many euphoniums and tubas gives improved intonation with the basic fingerings.

The most radically different fingering system was the 'independent pistons' system of Adolphe Sax whereby six valves (together with the open notes) gave the seven basic tube lengths, removing the need to use valves in combination and the consequent intonation problems. The fingering (which uses the first three fingers of each hand) has much in common with the seven basic trombone slide positions. This system was used for valve trombones in France and Belgium, more rarely for other valve brass.

In some instances the fingering is complicated by an extra valve for changing the tone colour by diverting the windway to an alternative bell (e.g. the echo cornet or the double-bell euphonium), or to correct the intonation when using a mute (the 'stopping valve' on a french horn). However, the additional valve for transposition on some instruments (e.g. the 'quick-change valve' on cornets and trumpets) is not sprung; it is set in advance of playing a passage, and its use is not part of the fingering technique of the instrument.

Fink, Bernarda (*b* Buenos Aires, 29 Aug 1955). Argentine mezzo-soprano of Slovenian parentage. She studied at the Arts Institute of the Teatro Colón, and in 1985 won Argentina's New Lyric Voices prize. Moving to Europe, she sang with leading orchestras and conductors, specializing in the music of the Baroque and earlier periods. As well as returning to the Colón, she appeared with immediate success in opera in Geneva and Prague, followed by a début at Salzburg as Dorabella in *Così fan tutte*. She has also become a noted recitalist, with concerts at Carnegie Hall in New York, the Wigmore Hall, London, the Sydney Opera House, Tokyo, Paris and Vienna. Fink's voice, rich and pure in quality, has character in it and takes well to recording. Fine examples of her art can be heard in recordings of several Monteverdi and Handel operas conducted by René Jacobs, while a bold but tasteful performance of Wolf's *Die Zigeunerin* shows her aptitude in a quite different repertory.

J.B. STEANE

Fink, Gottfried Wilhelm (*b* Sulza, Thuringia, 7 March 1783; *d* Leipzig, 27 Aug 1846). German critic, editor, theologian and composer. The son of a Reformed pastor, Gottfried was a chorister at Naumburg. In Leipzig he studied music and theology (1804–9) and served as a Reformed pastor (1810–16), establishing and directing a theological seminary (1814–27). He also composed many songs and in 1808 began writing for the *Allgemeine musikalische Zeitung*, of which he succeeded Gottfried Christoph Härtel as editor (1827–41). He taught at the Leipzig Conservatory (1838–43) and was briefly its director in 1842.

Fink was initially neutral in the controversy between Classicism and Romanticism, and was friendly with Weber, who gave his *Sechs Lieder* (1812) a warm review in the *Allgemeine musikalische Zeitung* and printed one song, *Die Liebenden*, in full. However, Fink later took up a stubborn stand against the younger Romantics. He published only half of Schumann's enthusiastic review (7 December 1831) of Chopin's 'Là ci darem' Variations, with its famous exclamation 'Hats off, gentlemen, a genius!', and showed his doubts about this fictional presentation of criticism and what was the first appearance of the characters of the later-named Davidsbund. He then proceeded to refuse all further articles by Schumann and to suppress all mention of him, to oppose Chopin, and to make a celebrated attack on A.B. Marx for his new method of teaching composition (1842). Schumann's foundation of the *Neue Zeitschrift für Musik* in 1834 was partly an act of defiance against Fink and all he represented.

Fink was a prolific contributor to the *Allgemeine musikalische Zeitung* as well as the dictionaries of Ersch and Gruber, Brockhaus and Gustav Schilling. He compiled two lieder collections: *Musikalischer Hausschatz der Deutschen* (1843) and *Die deutsche Liedertafel* (1845). He wrote a history of opera, an extensive history of music (unpublished) and numerous essays and books on music theory, pedagogy and composition (*Der neumusikalische Lehrjammer*, Leipzig, 1842). His compositions include works for piano and violin, songs (many of which are settings of his own poems) and *Häusliche Andachten* (terzets and quartets for male voices). His daughter Charlotte (*d* 1 Oct 1843) was a pianist who appeared in Leipzig, Dessau and Dresden from 1835.

JOHN WARRACK/CECELIA H. PORTER

Finke, Fidelio F(riedrich) (*b* Josefstal [now Josefův Důl, nr Jablonec], Bohemia, 22 Oct 1891; *d* Dresden, 12 June 1968). German composer and teacher. He received his first music lessons from his father, a music teacher, composer and conductor of an amateur orchestra, and also from his uncle, Romeo Finke, the first director of the German Academy of Music, Prague, and a distinguished piano teacher. From 1908 to 1911 he studied in Novák's composition master classes at the Prague Conservatory, where he was appointed teacher of theory and piano in 1915 and professor in 1926. He directed the composition master classes at the German Academy (1927–45) and he was national inspector of German music schools (1920–38) and president of the German Society of Music Teachers in Czechoslovakia from 1924, among other administrative posts. During his first 15 years in Prague he was also active as a conductor, pianist, organist and writer and he edited *Der Auftakt*. After the war he moved to Dresden as director of the Akademie für Musik und Theater (1946–51), where he took a master class in composition. He was professor of composition at the Leipzig Musikhochschule (1951–9) and was elected to membership of the German Academy of Arts, Berlin, in 1956. From 1959 he lived in Dresden. Awards made to him include the national prizes of Czechoslovakia (1928 and 1937) and the DDR (1956), and the Order of Merit of the DDR (1961).

Finke's creative work is marked by his connections with Germany and with Czechoslovakia, his craftsmanship and his openness to folk music and to new expressive means. The music of his first period, approximately up to World War I, was influenced by late 19th-century music. The ingenious *Reiterburleske*, a symphonic poem for piano, is typical: it is close to Strauss, but there is individuality in its Bohemian traits and its melancholy humour. In 1914 Finke completed his First Quartet, dedicated to Schoenberg, who had a great influence on him and with whom he came into personal contact. The première of the work, by the Amar Quartet at the 1921 Donaueschingen Festival, brought Finke sudden fame. He remained a figure of the avant garde, as the Expressionist Violin Sonata (1924) demonstrates. Nevertheless, during these years and later he was making efforts to shape his own style from tradition and innovation, from new ideas and folk music. In about 1930 he moved into a new period characterized by frugal neo-classical writing. Then after his move to East Germany his music became clearer and more popular in appeal. His chamber pieces are the best and most widely known.

WORKS
(*selective list*)

ORCHESTRAL

Eine Schauspiel-Ouvertüre, 1908; Suite no.1, str, 1911; Pan, sym., 1919; Pf Conc., 1930; Conc. for Orch, 1931; 8 Bagatellen, 1939;

Ciacona [after Vitali], 1944; Suites nos.2–3, 1948, 1949; Capriccio on a Polish Folksong, pf, orch, 1953; Suite no.4, 16 wind, perc, 1953; Suite no.5, wind, 1955; Suites nos.6–7, 1956, 1961; Suite no.8, 5 wind, 2 pf, str, 1961; Divertimento, chbr orch, 1964; Festliche Musik, 1965

CHAMBER AND INSTRUMENTAL

Pf Qnt, 1911; Str Qt no.1, 1914; Pf Trio, 1923; 8 Stücke, str trio, 1923; Sonata, vn, pf, 1924; Ciacona [after Vitali], vn, pf, 1925; Der zerstörte Tasso, S, str qt, 1925; Sonata, vc, 1926; Sonata, fl, pf, 1927; Chaconne, str qt, 1935; Sonata, 4 rec, 1936; 100 Stücke, rec, 1936; Sonata, hp, 1945; Sonata, hn, pf, 1946; Sonata, cl, pf, 1949; Suite, 3 rec, 1952; Sonata, va, pf, 1954; Wind Qnt, 1955; Primula veris, vn, pf, 1957; Konzert-Etüde, accdn, 1959; Sonatina, rec, pf, 1961; Sonatina, 2 rec, pf, 1962; Str Qt no.5, 1964; … ismen und … ionen, fl, hp, pf, va, vc, db, 1967–9, completed H. Simbriger

Pf: Intermezzo, 1909; 4 Klavierstücke, 1911; Notturno, duet, 1911; Eine Reiterburleske, 1913; Romantische Suite, 1916; Gesichte, 1920; 19 kleine Stücke, 1921; Marionettenmusik, 1922; Suite no.2, 1926; 10 Kinderstücke, 1927; Conc., 2 pf, 1931; 10 Stücke, duet, 1938; Egerländer Sträusslein, 1939; 3 deutsche Tänze, duet, 1940; Siciliano, duet, 1945; Sonatina, 1945; Neue Bagatellen, duet, 1946; 8 Stücke, duet, 1946; 2 Variationen über ein Adventslied, 1946; Polca grotesca, 1947; Ruth, die Ährenleserin, 1947; 12 Klavierstücke nach slawischen Volksliedern, 1952; 2 Bagatellen, 1953; 3 Sätze nach deutschen Volksliedern, 1954; 3 Sätze nach deutschen Volksliedern, 1960

Org: 7 Choralvorspiele, 1928; Fantasie, Variationen und Doppelfuge über 'Aus tiefer Not', 1928; Toccata und Fuge, 1930; Suite, 1930

STAGE AND VOCAL

Die versunkene Glocke (op, 4, G. Hauptmann), 1915–18; Die Jacobsfahrt (op, 3, Dietzenschmidt [A. Schmidt]), Prague, 17 Oct 1936; Lied der Zeit (Tanzpantomime), 1946; Der schlagfertige Liebhaber (comic op, 3, K. Zuchardt), 1950–54; Der Zauberfisch (Märchen ballade, 2, W. Hübner, after J.L. and W.C. Grimm), Dresden, 3 June 1960

Vocal orchestral: Frühling, S, T, orch, 1916; Abschied (F. Werfel), S, T, orch, 1917; 2 Gesänge, A, orch, 1937; Deutsche Kantate, S, B, chorus, boys' chorus, orch, org, 1940; 9 sudetendeutsche Volkslieder, 1v, small orch, 1940; Schein und Sein (W. Busch), A/B, pf/orch, 1950; Eros, cant., S, T, orch, 1966

Choral: Eine Weihnachtskantilene, boys'/female vv, insts ad lib, 1933; 6 Kanons (Busch), 1936; Chor der Toten (C.F. Meyer), 1938; Deutsche Volkslieder, 1940; Die Glocke, 1944; Russische Volkslieder, 1946; 3 Schulchöre, 1948; Das Göttliche (J.W. von Goethe), 1949; 7 Chöre (Des Knaben Wunderhorn), 1952; Der Maiensonne heller Stern, 1952; Freiheit und Frieden (cant., B. Brecht, P.N.R. Neruda), 1952; Seine Meinung, 1952; Wer leben will in dieser Zeit, 1952; Glaubensbekenntnis (cant., K. Boteff), 1959, arr. chorus, orch, 1962

Lieder: Gefunden, 1908; 3 frühe Lieder, 1909; Frühling, 1912; 3 Lieder (C. Bayer), 1918; 3 Lieder (R.M. Rilke), 1930; 8 sudetendeutsche Volkslieder, 1938; Auf, auf, ihr Hirten, 1939; Ich bin ein Haus (E. Merker), 1940; Lob des Sommers (Merker, Rilke), 1940; 8 deutsche Volkslieder, 1940; Beginn des Endes, 1945; 10 russische Volkslieder, 1945; Der Apfelbaum am Wegrand (M. Beniuc, G. Maurer), 1965; Kantate piccola (Busch), 1966; Der Rauch (Brecht), 1966; Epilog aus 'Der aufhaltsame Aufstieg des Arturo Ui' (Brecht), 1966; Das Atom (J.R. Becher), 1966

ARRANGEMENTS

L. van Beethoven: Septet, pf duet; A. Schoenberg: String Quartet no.2, S, pf duet; C.D. von Dittersdorf: Harpsichord Concerto, hp, str qt

Principal publishers: Beilage zur Deutschen Arbeit, Breitkopf & Härtel, Dresdner Verlag, Heinrichshofen, Hoffmann, Hug, Internationale Musikbibliothek, Litolff, Neue Musik, Peters, Universal

ERIK LEVI

Finko, David (*b* Leningrad [now St Petersburg], 15 May 1936). Russian composer, active in the USA. After studying at Leningrad's Institute of Naval Architecture (1953–9), Finko entered the Leningrad Conservatory (MM 1965), where his teachers included Vadim Salmanov. He emigrated to the USA in 1979, eventually settling in Philadelphia. His teaching appointments have included positions at the University of Pennsylvania, the University of Texas, El Paso, Yale University and Swarthmore College, among others. In 1991 he became composer-in-residence for the Delaware Valley Opera Company. Among his commissions are works for the Fromm Foundation, the Memorial Foundation for Jewish Culture, the Pennsylvania Council on the Arts and Orchestra 2001.

Finko's Russian-Jewish heritage is an important aspect of his music, often providing the subject matter (especially for his operas and tone poems) as well as motivating the thematic content. Musorgsky and Shostakovich, the music of the Russian Orthodox Church and Jewish folksong and synagogue music are all clear influences on his style. He has been especially interested in exploring the possibilities of the concerto and has composed numerous works for solo instrument, or instrumental ensemble, and orchestra. His Viola Concerto (1971) and the Concerto for Violin and Viola (1973) have been recorded.

WORKS

I. Art music

1. The Middle Ages. 2. The Reformation. 3. Secular music before 1809. 4. The Grand Duchy, 1809–1917. 5. Since 1917.

1. THE MIDDLE AGES. Christian influence had begun to infiltrate the provinces north of the Baltic during the late Viking era, before 1000. It was not until the second half of the 12th century, however, that these parts became a

mission area of the Roman Church, and St Erik and his successors on the Swedish throne began to enforce Christianity on the pagan Finns. The first such crusade, during which Bishop Henry of Uppsala suffered martyrdom, is believed to have taken place in 1155 or 1157. From that date the south-western and southern parts of modern Finland gradually became integrated into the kingdom of Sweden. Churches were built, spiritual life took ordered forms, and Latin chant was introduced. The Roman faith spread to the borders of Karelia, whose people were under the rule of Novgorod and therefore Orthodox. The first frontier between Sweden and the mighty eastern power was drawn at Pähkinäsaari in 1323.

Centres of Latin chant in Finland were the cathedral of Turku (Swedish Åbo), the churches of other mediaeval towns (Rauma/Raumo, Ulvila/Ulfsby, Naantali/Nådendal, Porvoo/Borgå and Viipuri/Viborg), the Dominican and Franciscan convents of Turku and Viipuri, and the schools, of which the cathedral school of Turku, founded in the latter half of the 13th century, was the most important. The Dominicans exerted a strong influence on spiritual life, and their liturgy was sanctioned as the official liturgy of the Turku see around 1330.

About 6300 parchment sheets of Latin chant from Finnish medieval churches and monasteries, detached from liturgical books during the Reformation and used as bindings of account books, are in the Helsinki University Library. The oldest pages, from before the 14th century, contain French and German types of non-diastematic neumes, and seem to have originated mostly from around Maastricht and Utrecht. Sheets from later periods up to the Reformation have mensural notation. Most of the material is still of foreign origin and was probably brought to Finland a long time after it had been written, but liturgical books were copied in Finnish monasteries as well, and original texts and music were written to commemorate local saints, notably St Henry of Uppsala, who had been declared patron of Finland and of Turku Cathedral. Towards the end of the Catholic era two liturgical books were printed: the *Missale Aboense* (Lübeck, 1488) and the *Manuale Aboense* (Halberstadt, 1522). Both contain only empty staves on which music was to be added by the priest; the *Missale Aboense*, in particular, reflects the profound influence the Dominicans had in Finland.

In the cathedral school of Turku, as in schools throughout Sweden, a repertory of *cantios* – monophonic songs with sacred, nonliturgical texts – was cultivated in the Middle Ages. 74 such songs were published by a Finnish student, Theodoricus Petri Nylandensis, as *Piae cantiones ecclesiasticae et scholasticae veterum episcoporum* (Greifswald, 1582), including some, for instance 'Ramus virens olivarum', which directly refer to a local origin, and 12 set in two, three or four parts. *Cantios* were apparently popular for a long time. A Finnish translation of the texts by Hemminki of Masku, a country priest, was published in 1616, and a new, enlarged Latin edition, with new arrangements of the polyphonic songs by Daniel Friderici, cantor of the Marienkirche in Rostock, appeared in 1625. Some songs were still being published in the 18th century and later, and some found their way into official Lutheran hymnbooks.

2. The Reformation. In Sweden the Reformation was set in motion during the reign of Gustav Vasa (1523–60), but not firmly established until the Convention of Uppsala in 1593. Lutheran services were held in churches in the Turku diocese from the 1520s on, and Lutheranism was reflected in a number of manuscripts, such as the Mathiae Joannis Westh Codex of 1546, which contains the text of the mass as well as sequences, responsories, hymns and antiphons in Finnish translations. In 1549 the first printed mass in Finnish, *Messu eli Herran Echtolinen*, was published by Mikael Agricola, and around 1583 Jacobus Petri Finno published the first Protestant hymnbook in vernacular Finnish. Later hymnbooks approved by the Church Assembly were issued in 1605, 1701, 1886, 1938 and 1986. The *Uusi suomenkielinen wirsi-kirja* ('New Finnish Hymnbook') of 1701 was later nicknamed 'Vanha virsikirja' ('Old Hymnbook') on account of its lasting popularity, and was supplemented in 1702 by *Yxi tarpelinen nuotti-kirja* ('A Necessary Notebook'), a collection of chorale melodies modelled after *Then swenska psalmboken* of 1697. Prior to this publication manuscript collections, such as the *Kangasalan koraalikirja* ('Kangasala Chorale Book') of 1624, were used in many churches, and in the 18th and 19th centuries cantors had to resort to such collections again, because the 1702 book went out of print and was not replaced until 1850, by *Suomalaisten wirtten koralikirja* ('Chorale Book of Finnish Hymns', ed. Antti Nordlund), the first four-part chorale collection printed in Finland. *Uusi koraalikirja* ('The New Chorale Book', ed. O.I. Colliander and Richard Faltin, 1888), provided melodies for the hymnbook of 1886, and the hymnbooks of the 20th century were given their respective chorale collections in 1944 (edited by Armas Maasalo and others) and 1987 (edited by Kaj-Erik Gustafsson and others).

Organs were bought or built for Finnish churches from the 17th century onwards. Most early organs fell prey to fire or destruction by the enemy, especially during the Great Nordic War of the early 18th century; the only extant one is the Positive of Nauvo (*c*1664) in the National Museum, Helsinki. Some 30 18th-century organs are recorded, but not until the 19th century did organs spread throughout the country. The instruments of the 17th and 18th centuries were Baroque organs of north German style made by Swedish masters, among them Johan Niclas Cahman, who built a 32-stop organ for Turku Cathedral in 1725–7. An instrument of this size was exceptional: an average organ had only one keyboard and 8–10 stops.

3. Secular music before 1809. Little is known of secular music in medieval Finland. In the countryside there was traditional rune singing and the playing of the *kantele* and other traditional instruments. In the six towns there must have been music outside the church as there was in other small towns around the Baltic, but the only evidence consists of names ('Michil pipare', 'Nis lekare', etc.) in a few 15th-century documents from the Turku region. It was still probable that wandering *jongleurs* and minstrels performed in inns and taverns and offered their services at weddings, seasonal fairs and on other festive occasions.

The professional musician first emerged with certainty in the 17th century as organs were installed. The church could neither keep organists sufficiently busy nor afford them alone, so city authorities generally paid part of the organist's salary and granted him exclusive rights to perform music in the town and its surroundings. In Turku, music at the university (Åbo Akademi), established in

1640, was the additional responsibility and later the privilege of the organist until the institution appointed a music master in the middle of the 18th century.

Court music existed only in the retinues of the Swedish kings and their representatives. Gustav Vasa gave his second son Johan the duchy of Finland, and Duke Johan took up residence in Turku Castle in 1556. Some musicians (e.g. 'Bertil luthenslagere', 'Mats fedlare') followed suit, still others accompanied Duke Johan on his travels, and the Polish princess Katarina Jagellonica, whom he married in 1562, apparently had some fiddlers in her service. In 1563, the last year he resided in Turku, several trumpet players are mentioned and, after he was taken prisoner by his half-brother Erik, a large number of wind instruments and some discant books were sent back to Stockholm.

In 1747 Carl Petter Lenning, organist of Turku Cathedral, was engaged by the university to establish a collegium musicum, the first orchestra in Finland. Beyond its function in academic life, it propagated music among educated people. When the secret society Aurora was founded in 1770 to promote literature, science, history, the Finnish language and the liberal arts, especially music, a large number of its members were able to play an instrument and soon formed a 'musical class' within the society, as well as an orchestra, which gave the first public concerts in Finland in 1773 and 1774. In its wake in 1790 came the Musikaliska Sällskap i Åbo/Turun Soitannollinen Seura (Turku Musical Society), the sole purpose of which was to promote music by sustaining an orchestra and giving concerts. The old privileges of the organists and city minstrels were being replaced by the activities of enthusiastic amateurs, and music was beginning to be considered as an art form.

This happened under the reign of the enlightened Gustav III. The only professional Finnish composer of the ensuing age was Bernhard Henrik Crusell, whose most important works were concertos, quartets and other pieces for his own instrument, the clarinet. In Stockholm, where he lived, his popularity was based mainly on his songs. Erik Tulindberg, a civil servant, composed a violin concerto and six string quartets in the style of early Haydn. The three violin sonatas of Thomas Byström, an artillery officer, show an original musical talent. Fluent in composition also were several members of the Lithander family, especially Carl Ludvig, a soldier, and Fredrick Emanuel, an accountant and piano teacher. Their piano and chamber works are still played in Finland.

4. THE GRAND DUCHY, 1809–1917. In 1809 Sweden lost her Finnish territories in a war against Russia, to which Finland was annexed as an autonomous Grand Duchy with most of the institutions of an independent state. Helsinki was declared the capital in 1812 and soon became more important than Turku, not least because of the disastrous Turku fire of 1827. The centre of the country's intellectual life, the university, was moved to the new capital and renamed the Keisarillinen Aleksanterin Yliopisto (Imperial Alexander University).

The 19th century was an era of growing national awareness. The publication of the Kalevala, the national epic, by Elias Lönnrot in 1835 (second, augmented edition 1849) directed the attention of the educated class to folk poetry and rune singing, and the discovery of this ancient oral tradition of poetry and music became a powerful source of inspiration for both composition and the fine arts. Subjects derived from the Kalevala intrigued several composers (Fredrik Pacius, F. von Schantz, Robert Kajanus) during the latter half of the 19th century, but its spirit was not reawakened until Sibelius's *Kullervo* (1892), whose stylistic elements are drawn from primitive modal rune singing. Sibelius's later style is a synthesis of the Kalevala heritage and the 19th-century symphonic tradition.

But archaic poetry could not fuel a keener nationalism. The national anthem *Maamme* (1848) has nothing to do with the Kalevala tradition; the melody is in mazurka style, and its composer, Pacius, who had been appointed music master of the university in 1835, was German-born. That Pacius's music was rooted in German Romanticism and Biedermeier (he was a pupil of Spohr) did not prevent it becoming nationally important. His opera *Kung Karls jakt* (1852) was enthusiastically received as a national classic, and he was dubbed the father of Finnish music.

An important vehicle for national feelings was the male-voice choir. Patriotic songs were increasingly cultivated towards the end of the century by student choirs such as the Akademiska Sångförening (Academic Choral Society, founded 1838) and Ylioppilaskunnan Laulajat (Helsinki University Chorus, founded 1883), their conductors often being composers as well. Meanwhile national Romanticism expressed itself in instrumental nature pieces evoking birds, butterflies, trees, lakes, rapids, the seasons etc. The language of this music is purely Romantic with a touch of impressionism here and there, and if folk music was used, it was the more recent folk music, not the ancient strand that seemed more appropriate to mythological subjects. Composers in this manner included Pekka Juhani Hannikainen, Oskar Merikanto, Armas Järnefelt, Erkki Melartin, Selim Palmgren, Toivo Kuula, Heino Kaski, Leevi Madetoja and Ilmari Hannikainen, whose works were rarely played abroad, whereas Sibelius gained a solid position in the international repertory, especially in Scandinavia, the United Kingdom and the USA.

In performance as well as composition there was considerable progress around the turn of the century. The Helsinki Philharmonic Society, set up by Kajanus in 1882, laid the foundation for regular orchestral concerts in the capital, and the Helsinfors Musikinstitut/Helsingin Musiikkiopisto was founded by Martin Wegelius the same year. Opera was performed mainly by visiting German companies until the inauguration of the Nya Teatern (New Theatre) in 1860. Performances there were in Swedish; the Finnish-language National Theatre took up opera in 1873. Domestic Opera (Finnish National Opera from 1956) was founded by Aïno Ackté and Edward Fazer in 1911.

5. SINCE 1917. In December 1917 Finland was declared independent. Sibelius, entering his final creative period, now held an unequalled position in musical life, and composers of the next generation felt overshadowed by his figure and reputation. Palmgren had success with his concertos and other piano works and Madetoja with his operas, particularly *Pohjalaisia* (1923), which was received as a kind of national opera. But the national Romantics were essentially miniaturists, writing for a domestic audience which has continued to value them.

The 1920s saw the rise of a new generation of composers opposed to nationalism and eager to open windows towards Europe, a generation including Ernest Pingoud,

1. Sibelius Congress and Concert Hall, Lahti, designed by Hannu Tikka and Kimmo Lintula, with Artec Consultants Inc., opened March 2000

Väinö Raitio and Aarre Merikanto. Pingoud, an emigrant from St Petersburg, wrote symphonic music in which late Romantic impulses are mixed with Expressionism, symbolism and mysticism in the manner of Skryabin. Raitio's most remarkable music consists of his works for large orchestra, a couple of small-scale lyrical operas and impressionist piano pieces. Merikanto wrote symphonic works, the opera *Juha* (1922) and advanced compositions for chamber ensembles. This music represented the ultimate modernism to conservative Finnish audiences, who, still captivated by nationalistic ideals, received it with ignorance if not hostility. Several of Merikanto's works, for example, including his masterpiece *Juha*, were not performed in his lifetime, and he and his colleagues were forced to turn to a more approachable style, with folk ingredients in a neo-classical framework. The expectations of audiences were better met in the music of Yrjö Kilpinen, a prolific composer of lieder, and Uuno Klami, whose orchestral music often draws from the Kalevala and other Finnish literary sources, but with the new influence of Stravinsky and Ravel.

In spite of a deep recession in the 1930s, musical life slowly developed. New municipal orchestras were founded in major cities, and in 1927 the Finnish Broadcasting Corporation set up an orchestra, which developed into a full symphony orchestra, the Finnish RSO. In 1939 the Helsinki Conservatory, heir to the music school founded in 1882, was granted college status and renamed the Sibelius-Akatemia (Academy).

After the war the nationalism of previous decades, nourished by political threats from elsewhere in Europe, gave way to more liberal thinking. A new feeling was introduced by a generation of composers who had served in the war. Einar Englund's First Symphony (1946) eloquently expressed and interpreted the traumatic feelings of the whole nation; that the work is related to Shostakovich's 'Leningrad' Symphony is at the same time surprising and logical. Another important source of new inspiration was Bartók, whose influence is audible in Englund's and Joonas Kokkonen's works, whereas the neo-classical Stravinsky was important for the orientation of Einojuhani Rautavaara and Usko Meriläinen. The discovery of 12-note composition took place as late as the 1950s, not as a result of a sudden admiration for Schoenberg or Webern, who were hardly known at all, but because the method itself evoked the curiosity of Erik Bergman and other composers.

In the 1960s the music of Stockhausen, Nono, Ligeti, Maderna and others was amply played in Finland, and the composers themselves gave lectures on their music and compositional techniques. A reaction against this line in musical thinking soon followed and manifested itself in many different ways. One group played with happenings, aleatory techniques and so on, but finally turned to leftist popular music; another sought shelter in neo-Romanticism; a third cherished subjects from national history. Simultaneous development in many directions finally led to a musical open society.

The rise of opera in the mid-1970s was an unexpected phenomenon. It started with Aulis Sallinen's *Ratsumies* ('The Horseman', 1974) and Kokkonen's *Viimeiset kiusaukset* ('The Last Temptations', 1975), which nourished Finnish self-esteem under political pressures of the cold war era and at the same time gained international

attention. The Savonlinna Opera Festival and the Suomen Kansallisooppera (Finnish National Opera, renamed thus in 1956) began to commission new works in a steady stream; Sallinen, Rautavaara, Paavo Heininen and Kalevi Aho produced one opera after another and other composers followed suit. That a new opera house was inaugurated in Helsinki in 1993 was to a great extent due to this creative fertility.

Since the 1980s the expansion of Finnish musical life has been fast and spectacular. A new generation of composers gathered around the Korvat Auki (Ears Open) association and found champions in the chamber orchestra Avanti!, set up in 1983. Most composers of this generation studied with Heininen and some with Rautavaara at the Sibelius Academy, and they closely followed the avant-garde musical scene in Europe. Eero Hämeenniemi, Kaija Saariaho, Magnus Lindberg, Esa-Pekka Salonen and others continued their studies in Italy, Jukka Tiensuu and Saariaho in Germany before heading for IRCAM in Paris, where Lindberg joined them. They all, with Pehr Henrik Nordgren, Jouni Kaipainen, Kimmo Hakola and others, won international notice. Their methods range from traditional to technically advanced; computer applications and live electronics play an important role in some of their works, especially those of Saariaho and Lindberg.

During the same period the general standard of music making has steadily risen as a result of measures taken since the 1960s in music education and administration. A network of about 150 music schools efficiently gathers together talented students from even the remotest corners of the country, and the education of those entering the profession is completed at the Sibelius Academy. A system of state scholarships guarantee a certain number of qualified musicians good working conditions. New concert halls have been built and are scheduled in many cities for the 13 professional and some 20 semi-professional orchestras, among which the Helsingin Kaupunginorkesteri (Helsinki PO), Radion Sinfoniaorkesteri (the Finnish RSO), the Lahden Kaupunginorkesteri (Sinfonia Lahti), Tapiola Sinfonietta, the Keski-Pohjanmaan Kamariorkesteri (Ostrobothnian Chamber Orchestra), the Suomalainen Kamariorkesteri (Finnish Chamber Orchestra) and Avanti! are internationally known. There are also many chamber music ensembles, and choral music, both traditional and contemporary, is cultivated by a large number of amateur and semi-professional choirs. Moreover, Finland had and has world famous singers (from Johanna von Schoultz and Aïno Ackté to Martti Talvela, Matti Salminen and Karita Mattila), instrumentalists (from Alie Lindberg to Ralf Gothóni, Olli Mustonen and Pekka Kuusisto) and conductors (from Georg Schnéevoigt to Paavo Berglund, Esa-Pekka Salonen and Jukka-Pekka Saraste). The conductor boom of the 1980s and 90s emerged from Jorma Panula's conducting class at the Sibelius Academy.

Important to contemporary Finnish musical life are the summer festivals, more than 50 in total, which include all-round events (Helsinki and Turku), a major opera festival (Savonlinna), one for jazz (Pori), several for chamber music (Naantali, Kuhmo, Uusikaupunki), one for new music (Viitasaari), one for folk music (Kaustinen) and one for the unexpected (Porvoo). The Helsinki Biennale (renamed Musica Nova Helsinki in 1998) and the Tampere Biennale are devoted to international new music. The most important international competitions are the Sibelius Violin Competition, the Sibelius Conductors' Competition, the Mirjam Helin Song Competition and the Paulo Cello Competition.

Musicology and related disciplines are taught at six universities and the Sibelius Academy. The universities and the FINNISH MUSICOLOGICAL SOCIETY (founded in 1913) have their series of dissertations, and scholarly articles are published in a couple of journals, notably *Musiikki* (1971–). Information in English on music in Finland can be found in the *Finnish Music Quarterly* (1985–).

II. Traditional music

1. HISTORICAL BACKGROUND. Finnish belongs to the Finno-Ugric family of languages; the most important linguistic minorities in Finland are the Swedish-speaking population along the coast and the Lapps in the far north. Whereas south-west Finland had close ties with the West, particularly Sweden, the eastern part of the Finnish-Karelian culture-area was orientated towards the south and Novgorod, whence they also came into contact with Byzantium. This dichotomy between western and eastern Finland is clearly evident in the ethnological traits of later periods. Another firmly established boundary is that separating the Lutheran and Orthodox areas (fig.2).

The Finnish cultural tradition can be divided into periods according to stylistic traits: pre-Finnish, which antedates poetry in the Kalevalaic metre and includes shamanic songs, animal and calendar rituals, creation myths etc.; early Kalevala (before 150–500 CE); vital Kalevala (before the crusades to Finland by the Swedes, first crusade 1155); medieval Kalevala (pre-Reformation, i.e. before 1523); late Kalevala; the society of social classes (the period before the advent of industrialization, marked by the spread of rhymed folksongs and literacy and ending about 1870–80); and urban, or industrial mass culture.

Differing social and historical circumstances have given rise to great cultural differences within the Finnish-Karelian area; in the late 19th century, before the advent of urban culture, the various counties or provinces had distinct cultural characteristics. South Pohjanmaa, having a homogeneous social background, was an area more conducive to integrated development, and here several

ideological and popular group movements sprang up that influenced the whole country. This area, being agrarian with a comparatively stable population, had impressive instrumental wedding music and rhymed *rekilaulu* and *polskalaulu*. The cohesiveness of the young people was a significant factor in the creation of fighting and derisive songs which served to increase solidarity. Although the Karelian isthmus had long been an area of Kalevalaic song, it rapidly developed a folk culture in many respects resembling that of Pohjanmaa. Varsinais-Suomi, Satakunta, Häme and Uusimaa entered the period of industrial and social upheaval early, and continually absorbed new

2. *Map of Finland showing the Lutheran and Orthodox areas*

influences from the West. All eastern Finland (Savo, North Karelia, Kainuu) was an area of energetic enterprise in which people sought new means of livelihood; an individualistic sparsely-scattered population worked the earth by burning and ploughing. Eastern Finland was always an underdeveloped area and even in the products of its traditional culture a temporary quality is many times evident. In Karelia, which belongs almost entirely to Russia, social interaction was based largely on ties with the clan; this is one reason why the Kalevala tradition survived in Karelia into the 20th century.

In the period of urban culture traditional folk practices rapidly yielded to commercially directed culture served by the mass media. Folk-dancing and early instrumental music continued to be fostered by a large number of enthusiastic amateurs. Since the 1950s interest in folk culture has increased, and large festivals accommodating various forms of folk expression are held throughout the country.

The oldest collections of folk music in Finland, especially manuscripts, are those of the Finnish Literature Society, established in 1831. A large collection of folk material is held by the Institute for Folk Tradition (founded in 1965) at the University of Tampere. The Folk Music Institute in Kaustinen was founded in 1974 as a result of a folk music revival which started after the first Kaustinen Folk Music Festival in 1968. The institute has a large collection of contemporary Finnish folk music. Other activities can be divided into four categories: service, education, research and publishing. Kaustinen is also the home of a folk music group Tallari, a folk music school 'Ala Könni-opisto' named after a famous folklorist and folk music collector Erkki Ala-Könni, and the Museum of Traditional Folk Instruments. There is folk music education at some music schools and universities, and a department of folk music at the Sibelius Academy in Helsinki.

2. Vocal music. Kalevalaic song, which originated when Finnish language was not separated from other Finnish languages in the Baltic area, was prevalent in western Finland until the 17th century and in eastern Finland until the 19th century. In Karelia traces of it have been found even in the 20th century. *Runonlaulu*, the singing of old poems or Kalevalaic songs, has been practised by almost all the Finnish peoples in the Baltic area (Finns, Karelians, Ingrians, Votes and Estonians). Kalevalaic metre consists of four trochaic feet of which the first is not bound by rules. In about half the verses the poetic accent coincides with the spoken accent. The lines are not arranged in stanzas, though lyric poems have some architectonic form. Kalevalaic poetry makes much use of parallelism, in alliteration, repetition of verses, repetitive formulae and patterned phrases. The texts include epics, lyrical poems, incantations and various festive and occasional poems. They originated in the pagan period and the Middle Ages; some of the more recent examples are compositions by well-known people.

With the exception of incantations all poems in Kalevalaic metre were sung, generally by a single voice to a one- or two-phrase melody with a narrow range, usually of a 5th. The range is widest in the west, while on the Karelian isthmus and in Ingria three- and four-note melodies are usual. The melodies are normally syllabic, melisma becoming more frequent towards the east. There are many types of rhythm and melody, of which the best known is the 'Kalevala melody'. This is often characterized by one- or two-line stanzas and 5/4 metre; the two last notes of each line are on the tonic or 2nd and are twice as long as the others (ex.1). Attempts have been made to find Finno-Ugric (i.e. pre-Finnish) elements in the melodies of Kalevalaic songs. Some of the music certainly dates from the stylistic period of the early Kalevala.

The songs were performed in different ways depending on area and poetic genre. Historical sources describe a typical manner of singing epic poems: two men held each other's hands and sang in turn, one repeating each verse sung by the other. In Viena, where the epic poems survived the longest, this method was not used at the time when the collection of melodies began in the 19th century. At that time a single singer generally recited the poems, though sometimes, for example in wedding poems, a chorus sang in unison. The manner of singing in Ingria and on the Karelian isthmus differed from that in other areas. There the songs belonged mostly to the women's repertory and were performed chiefly by a principal singer alternating with a choir singing in several parts. In the 17th century the early Kalevalaic metre began to give way to the four-line song using rhymed verse, which flourished in the mid-19th century until it was supplanted by commercial popular music after World War I.

Laments are improvised non-metric poems using traditional elements, metaphors and patterns and are recited to a melody that is adapted to suit the words. In the Finnish-Karelian culture area they belong to the traditions of the people living in Orthodox areas, and are part of the Lutheran tradition only in Ingria. The lament is a genre restricted to women, its function being the expression of grief and other strong emotions. It was an essential part of the rites connected with the changing of social

piäl- lä a - set - te - let - ta nuo ar - mo - set.

roles or status such as funerals or weddings. In Viena it has been known for a hired lament-singer to recite as many as 30 laments for the deceased on the burial day alone. At a funeral the deceased person is ushered from this world to the realm of the dead; similarly at weddings the bride is gradually made familiar with her new situation by means of laments. The wedding pageantry was richest in Ingria where, in addition to songs in Kalevalaic metre, the ceremony sometimes included over 50 laments. Besides funeral dirges and wedding laments, there are also occasional thanksgiving and recollective laments, and laments for a close relative going off to war.

Although there are many differences between individual reciters, the stylistic traits of people from different areas are as distinct. Since the lines of the text are not in a uniform metre, the melody consists of freely improvised lines and stanzas. The rhythm consists of the free alternation of units of duple and triple beats. The laments make abundant use of micro-intervals and also of micro-rhythm, which is often further increased by the multiplying melismas towards the end of the piece (ex.2).

The performance of a lament is an experience in total, unrestrained emotion, accompanied by streaming tears and sobbing that intermittently cut off the narrative song. The best reciters, like singers of Kalevalaic songs, have

Ex.3 Rhyming folksong from Suomussalmi using the *reki* rhythmic structure (Krohn, 1904, no. 1756)

Val - ke - an, rus - ke - an sam - ma - len al - la

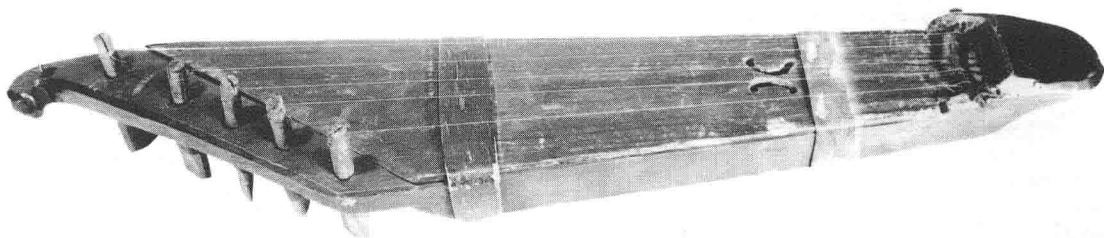
Kas - voi val - ke - a nau - ris; Tuo - pa - nei - to

maa - il - mass' On mie - les - tä - ni kau - nis!

been members of a particular clan. The lament has now almost disappeared from Finland: it still survives to a certain extent in Russian Karelia, in the regions bordering the White Sea and particularly around Olonets.

Vocal genres that were less important than Kalevalaic singing and laments, but which were part of the same early culture, include the *joiku* in north Viena, a type of song describing something (a person, animal or natural feature), related to the Lappish *juoigos* and part of the women's tradition only.

The newer rhymed folksong belongs to a period when social classes in Finland were becoming more differentiated. The form is similar to many Scandinavian and central European song types. The genre comprises subgroups with highly diverse content and contexts of performance. The commonest form is the lyrical *rekilaulu*, which often took shape from several stanzas linked together to suit the occasion. It is characterized by a description of nature in the opening lines, which sometimes bears only a loose relation to the rest of the text. The first ballads introduced to Finland from the West were transcribed into Kalevalaic metre; later examples were put into rhymed verse. Epic songs were often composed in the wake of important events and published as broadside songs.



The earliest of the newer folksongs had a musical structure *ABAB*; later the melodies became more complex. The type in which the last two notes of a couplet are held for twice their length spread rapidly from west to east and reached Karelia in the 19th century. The commonest rhythmic structure is the *reki* rhythm, where there are seven stressed syllables and eight stressed notes in a pair of stanzas (ex.3). The minor key is typical of the newer folksongs, although in quantitative terms more than half of them are in a major key. Typical of older melodic types, especially in south Pohjanmaa, is that the 7th is often minor, and the 6th is sharpened or doesn't exist. The rhymed song has absorbed many melodies and rhythms from instrumental music, e.g. *polskalaulu*.

The song texts reflect the life of 19th-century village communities which were experiencing a period of upheaval. They were often composed by young people and sung to ring-games and dances, at the village swings and on other occasions when the whole community was together at work or leisure.

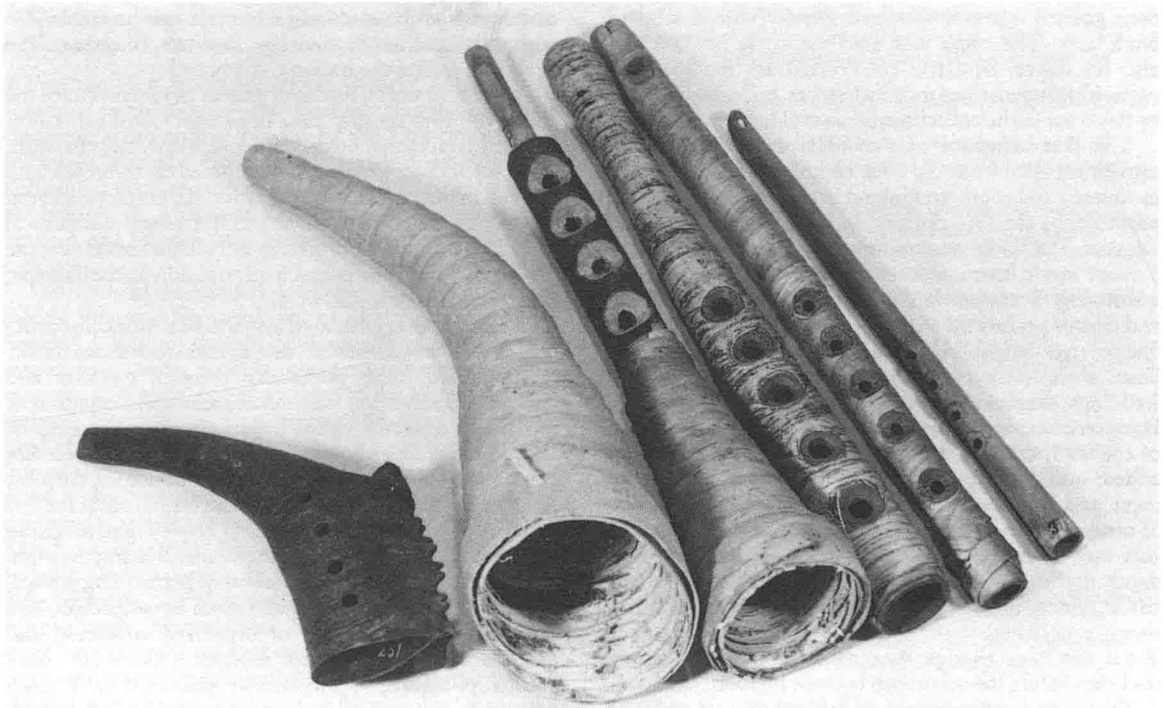
Religious folksongs do not constitute a single melodic genre. They can be divided into three main groups: chorale variants, variants of secular melodies, and independent religious melodies; they were sung in churches, meeting houses, homes and at festivals. The evangelical movement played a considerable role in the development of religious melodies. The most striking difference from printed chorales and secular melodies is the exceptional abundance of melisma. The music used by the Orthodox Church has had less significance for folk music than that of the Lutheran Church.

3. Instrumental music. The Kantele (fig.3), a string instrument well known in the entire Balto-Finnish region except the northernmost reaches of Finland and Karelia, is a plucked zither. Its nearest relatives are the Estonian *kannel*, the Lithuanian *kanklės*, the Latvian *kokle* and the north Russian *gusli svontšatije* or *gusli krilovidnije*.

There are two types of *kantele* in Finland: one small and carved, the other with a bigger box. The earliest

3. Kantele (board zither) from Savo (National Museum of Finland, Helsinki)

kantele in Finland was a five-string instrument, tuned to a pentachord. The *kantele* made from one piece of wood was usually carved or hollowed out from underneath or from on top. The instrument had a separate soundboard added made of either birch-bark or wooden pegs to make an enclosed resonating chamber. Playing styles are divided according to the manufacture of the instrument: those hollowed out from underneath are usually played with a covering technique and the other style included a plucking technique. The number of strings on the *kantele* gradually increased so that it was impossible to build the instrument from one piece of wood. Builders began making larger *kanteles* by combining individual pieces of wood to form an enclosed box. Also, the style of playing changed from older styles where the fingers where kept together to a new position where the right hand plays the melody and the left hand plays the bass and accompaniment. The strings were originally made by twisting horsehair. Later, bronze, iron and steel were used. In the 1920s a concert model of the *kantele* was developed which could be tuned by means of a special machine. The instrument is basically diatonic. There are seven spindles, and as a lever is pushed or pulled, each string is raised or lowered by a half step. This modern concert instrument is mainly used in art music. The concert *kantele* is held with the longest string closest to the player while originally the shortest string was held closest to the player. According to historical sources, a five-string *kantele* was used to accompany Kalevalaic songs, but most of the collected melodies are song- and dance-tunes and improvisations. Song and dance melodies were played on the largest instruments, and there were also *kantele* ensembles. Today the five-string *kantele* is a popular school instrument. Bigger *kantele* still exist in folk music, especially in central Pohjanmaa, but modern playing is usually a part of the existing Western art music teaching infrastructure.



The *jouhikko* or *jouhikannel* (fig.4, *see* STRÅKHARPA) is a two-, three- or four-string bowed lyre that reached Finland from Scandinavia and is related, *inter alia*, to the Welsh CRWTH. Its body is hollowed out from the front and is fitted with a soundboard, with a hole for the hand at one end to enable the melody string of the instrument to be stopped with the knuckles. The instrument is played sitting down. The strings are tuned to 4ths and 5ths and one string is usually left to vibrate freely, producing a continuous drone. Folk mastery of the *jouhikko* was last noted in parts of Savo and Karelia at the beginning of the 20th century. *Jouhikko* melodies suggest that the instrument was used chiefly to play dance music. Typical of the bowing style is to put an accent on the offbeat.

From archaeological excavations we know that the jew's harp came to Finland during the late Middle Ages at the latest. It was still played at the beginning of the 20th century.

The frame drum used by Lappish shamans was also an ancient instrument of the Finns. Among membranophones, the *nynnypilli* mirliton made of reed is well known everywhere. Among the few idiophones noteworthy are the *hongankolistaja*, a wooden stick used to beat time against forest pine trees, some sow and horse bells of wood, brass and iron, *puukello* and *räty* percussion tubes, the *lepenelauta* Karelian percussion board, the *rapapalli* rattle, a small ball made of strips of birch-bark and the *räikkä* cog rattle. There were also early aerophones. Throughout the Finnish-Karelian cultural area numerous types of wind instruments are used. They are traditionally

4. Jouhikko (bowed lyre) player from Ladoga Karelia, early 20th century

5. Herders' instruments (from left to right): pukinsarvi (goat's horn); tuohitorvi (birch-bark horn); the same, with the addition of a single vibrating reed; wooden horn covered with birch-bark; two duct flutes (National Museum of Finland, Helsinki)

referred to by their function, such as herder's instruments, an earthenware flute that plays bird calls, *pyypilli* and *rukoustorvi* decoy hunting whistles and a wooden trumpet used to call people to the house of prayer. Herder's instruments can be classified into various groups by sounds they produce: short end-blown whistles made from wood or other plants; tongue-duct flutes such as the *putkihuilu*, a short instrument without finger-holes made of wild chervil, and the *mäntyhuilu* flute known in many European countries, in which the tongue of the player directs the flow of air against the sharp edge of a hole; and block-and-duct flutes in which the block can either be detachable or non-detachable. Non-detachable flutes include the *pajupilli* whistle made from willow or other deciduous woods; it is made frequently in late spring to early summer when barks peel. There are usually no finger-holes. Duct flutes with detachable blocks include those with closed ends such as the *umpihuilu* willow bark or cow chervil flute, the *piisku* quill or bone flute, the *petäjäpilli* pine flute and those with open ends such as *lötkö* open flute without finger-holes made from willow bark and the *pitkähuilu*, a longer, natural-scale flute made of willow bark. Free aerophones were also commonly used, such as vibrating reeds with a split at the end or in the middle, made of wild chervil, a *pykäläpilli* ribbon reed made of a leaf, the *tuohipilli* framed birch-bark ribbon reed and the bullroarer *pärrä* made from a piece of birch-bark or leaf.

Early oboes were usually simple and ephemeral, such as the plant stalk *varsipilli*, the *kukkapilli* 'flower flute', and the pod *palkopilli*. Idio- and heteroglot clarinets are made from one or several pieces, and in many cases there is a birch-bark sound projector at the end. With or without finger-holes, idioglot clarinets are made of reed or straw and are referred to by a variety of names such as *ruokopilli* (reed pipe), *soropilli*, *toropilli* and *olkipilli* (straw pipe). The *tronvopilli* is of the same type but made of willow. The tubes of the following group of clarinets are constructed by twisting and pulling the heartwood out of a tree: the *huulipilli* (lip pipe), the *läveri* consisting of two tubes with finger-holes , and the *lävikkö*, which is similar but has a funnel made of birch-bark or horn at the end. The *kärjennoukka*, the *leropilli* and the *hautatorvi* with a funnel made of birch-bark, are constructed from a split and gouged piece of wood. A heteroglot clarinet made by pulling out the heartwood is known as the *mänkeri* and is found in western Finland. The Karelian *liru* is as musically versatile as the *mänkeri*. Other heteroglot conical clarinets were sometimes made of cow horn.

Two types of historical trumpets can be identified: straight and crooked. These trumpets were usually made from trees, birch-bark or horn. The *lehmänsarvi* (cow horn) crooked and short trumpets and the *pukinsarvi* (goat's horn) usually had three to five finger-holes (fig.5). In eastern Finland similar instruments were made of wood, such as the *puusarvi* (wooden horn) or the *lulletti* which had a strip of birch-bark wrapped around in a spiral. There is only one trumpet known throughout the Finnish-Karelian cultural area: the *tuohitorvi* is constructed by winding birch-bark around itself. More durable instruments were constructed of wood, such as the *luikku*, *totto* and the Karelian *brelo*, *turu* and *pullotorvi*. The Ingrian-born Teppo Repo (1886–1962) became popular not only in Finland but abroad as a player and maker of many herders' instruments. His favourite instruments included the *truba* trumpet with finger-holes made from a split piece of wood that has

been gouged out and wrapped spirally with a strip of birch-bark. The *truba* was used for horse herding and also for dance. Similarly constructed are the *soittu* or *paimensoittu* recorders used by herders. Instruments made by Repo are in the collections of several foreign museums.

The first mentions of the fiddle as a Finnish folk instrument date from the 17th century. It predominated in western and southern Finland in the 18th century and, particularly, the 19th century, but was rare in Viena and Olonets. The fiddle was traditionally used everywhere as a dance music instrument, especially at weddings having a distinctly Scandinavian character and the ceremonies and dances performed at them represent an exceptionally fine repertory of violin melodies in a Baroque style (ex.4). Since there were often two or three fiddlers at the weddings, the melodies were sometimes played in octaves. Harmonic accompaniment by the fiddles or, from the end of the 19th century, by a harmonium, was sometimes added; otherwise the fiddle was primarily a solo instrument, and its melodies incorporate a considerable amount of ornamentation. A short biting bow, differing from the sort used in concert music, was used to define an easy dance rhythm. The emphasis on unstressed notes of the bar is typical of the earlier tradition. The fiddle spread slowly everywhere in the country but in the eastern areas it did not have enough time to develop into a strong tradition before the accordion became popular.

The clarinet was adopted to folk music as a result of military bands after the beginning of the 19th century. Clarinettists often began by playing in army bands, and acquired a rich repertory of marches besides playing other dance music. Clarinets are used mainly in the western part of the country and many times along with the violin. The clarinet did not have a distinctive musical repertory and about half of known folk clarinettists have also played the violin. Many older instruments had only five keys.

Early versions of the accordion came to Finland some two or three decades after its development in the 1820s. It reached the country via two routes: from Russia in the east and from central Europe and Italy in the south. The accordion soon assumed a dominant role over the fiddle and *kantele* in providing music for dancing because of its relative affordability, ability to project a greater sound and accompany with chords, despite heavy opposition of the church and some folk music researchers. The earliest instruments were square boxes with one row of diatonic buttons and only two bass chords; the notes varied according to the direction of the bellows movement. Two-row accordions were also diatonic, but in some models where the bass buttons were arranged in uneven rows the bass notes remained constant irrespective of the bellows movement. Chromatic piano-accordions are common today in Finland, but more popular is the button accordion

Ex.4 First part of a violin tune for the young bride (Krohn, 1893, no.30)

that has three basic rows of buttons on the treble side with two additional rows to facilitate fingering. The keyboard used is the Italian C-keyboard.

The mouth organ has been played in Finland since the end of the 19th century. Less important instruments have been the *virsikannel* bowed zither from Sweden (Swedish, PSALMODIKON), which was developed in Denmark and Sweden in the early 19th century for accompanying hymn singing, the mandolin, zither, guitar, triangle and musical saw. There is little information in Finland concerning the *virsikannel*, nor is there much information on the bagpipe, the *säkkipilli* or the *rakkopilli*.

In contemporary Finland, instrumental music, in particular *pelimannimusiikki* or instrumental folk dance music, has achieved wide popularity through contests and festivals organized on traditional themes. Associations of folk music instrumentalists have thousands of members. Gramophone records of traditional melodies or melodies composed in the traditional style became among the most popular in the late 1960s, and at the beginning of the 70s especially because of Konst Jylhä (1910–84) and his group from Kaustinen. A typical development in instrumental folk music has been the formation of performing groups, usually of two fiddles, a harmonium or accordion, and double bass. As a result of organized education and promotion, historical and modern folk music have gradually assumed independent positions in Finnish culture. Some professional and semi-professional youth groups have gained international popularity as a part of the world music movement.

4. FOLK-DANCE. Three stages of development can be distinguished in the history of Finnish folk dancing: the period of ring- and song-dancing; the period of group and social dancing; and the period of dancing in couples.

To the first and oldest period belong the lyrical songs in Kalevalaic metre performed by girls from Ingria and South Karelia. These were characterized by a leading singer who alternated with a polyphonic chorus. Rhymed ring-dance songs in quatrains and other dance-songs belong to a later stage of the same period.

The oldest group dance is the POLSKA, which was popular in Finland by the beginning of the 18th century. Although most *polska* melodies have been collected in Pohjanmaa, the dance was known throughout the country except in the far north and Karelia. At old-fashioned weddings in Karelia only laments and Kalevalaic songs were sung, whereas further west the most important parts of the ceremony were the dances, of which the *polska* was the most common. The minuet, another early group dance, remained restricted to the western areas. Other dances of the same period were the QUADRILLE, which spread to Finland from both the west and the east, and the ANGLAISE. The old-fashioned waltz, a group dance, became known towards the end of the 18th century and spread in numerous versions and names throughout the country. Many times it was faster than the modern waltz which was often called the 'Yankee' waltz due to its return to Pohjanmaa with returning Finnish-American emigrants. Different counties have their favourite dances, such as the square *fyyrkantti* in Uusimaa and small square-dances in Häme. In Karelia the dances in Russian style are faster than dances native to the west, and Karelian dances often include solo exhibitions. The *purpuri*, a chain of dances for both groups and couples, is used particularly at weddings.

The most important couple-dances are the polka, mazurka, waltz, German polka, *jenkka* or *sottiisi*.

5. Finnish–Swedish traditional music. The Swedish-speaking population of the Finnish coastal areas had emigrated from central Sweden by the 12th century and settled in southern Finland. The Swedish settlement of Pohjanmaa occurred somewhat later, whereas the Swedish population of Ahvenanmaa, the archipelago between Finland and Sweden, was already permanent in the 6th century.

The music of the Swedish-speaking areas has in general closely followed the development of the corresponding Swedish tradition, though both vocal and instrumental music have been notably conservative; the Swedish minority in Finland belongs to one of the most culturally isolated Swedish-speaking areas. The most important kind of vocal music was the ballad, a form that persisted into the 20th century. The oldest dance melodies, the *polskas* and minuets, have survived in an unbroken tradition in certain parts of Pohjanmaa, and more minuets have been collected in Finnish-Swedish areas than in other Scandinavian countries. In Pohjanmaa ceremonial wedding melodies are also well represented. The counties further south, Ahvenanmaa, Varsinais-Suomi and Uusimaa, have been the readiest to assimilate new influences.

The most important instrument has been the violin; the clarinet was also popular, especially in Pohjanmaa, and the *psalmodikon* was used to accompany religious songs. In the late 19th century the accordion and the associated polkas and *schottisches* spread to all the Swedish-speaking areas. According to historical evidence, the Nyckelharpa (a Swedish keyed fiddle) and the jew's harp were also played.

The collection and study of traditional music, beginning in the 19th century, made the rural population more aware of their own culture. In late 20th-century Finland traditional music became used to strengthen the cultural identity and group solidarity of the Swedish minority. It is propagated through three main channels: recordings on discs and tape and published books of melodies; folk music clubs and societies; and folk festivals. Recordings are located in the Folk Music Institute, the Finnish Literature Society and the Finnish-Swedish Folk Music Institute.

ILKKA ORAMO (I), ILKKA KOLEHMAINEN (II)

Finlandia. Finnish record label. It was originally introduced by Pohjoismainen Sähkö Oy in 1949, and several hundred recordings, mainly of popular and sacred music, appeared on the label until it was acquired by Fazer in the late 1970s. Fazer, the largest record company in Finland, had occasionally issued classical recordings on various labels since World War II, featuring artists including the singers Aulikki Rautawaara and Kim Borg, and in 1979 the company decided to launch a classical label; the trademark Finlandia was chosen because of its association with the music of Sibelius.

Finlandia, aided by government subsidies, soon launched an ambitious recording programme, mostly for the music of Finnish composers. Its first successes were a collection of the solo songs of Oskar Merikanto, sung by Jorma Hynninen, and an album of modern Finnish choral music, performed by the Tapiola chorus. Finlandia also issued a large selection of the orchestral music of Finnish composers, most of it previously unrecorded, the Helsinki SO and Finnish RSO being the principal performers. The most ambitious releases were complete recordings of major Finnish operas, including *Juha* (Aarre Merikanto), *Viimeiset kiusaukset* ('The Last Temptations', Kokkonen) and *Punainen viiva* ('The Red Line', Sallinen). In 1993 the Fazer company was acquired by Warner and Finlandia became one of Warner's classical labels. After this, the recording programme was somewhat reduced, with less emphasis on new music.

PEKKA GRONOW

Finley, Gerald (*b* Montreal, 30 Jan 1960). Canadian baritone. He studied at the RCM and the National Opera Studio in London before making his professional stage début as Sid (*Albert Herring*) at Glyndebourne in 1986. He has returned to Glyndebourne on several occasions, most notably as Figaro in *Le nozze di Figaro* for the inaugural performances in the new house in 1994 (an occasion preserved on video), a portrayal near-ideal in both vocal and dramatic terms. He was equally admirable as Papageno both in Roger Norrington's 'Mozart Experience' on the South Bank in London, then in Gardiner's semi-staged, touring performances of *Die Zauberflöte* in 1995, also recorded on video and CD. His other Mozart recordings include Masetto and Guglielmo. He sang Demetrius in *A Midsummer Night's Dream* at Aix (1991), and appeared in Mozart's *Der Schauspieldirektor* the same year at the Salzburg Festival. Finley scored a notable success in the principal role of Harry Heegan in the première of Turnage's *The Silver Tassie* at his ENO début in 2000. He has also made a considerable name for himself in concert and recital (making his Wigmore Hall début in 1989), and has recorded works including Purcell's *Indian Queen*, Haydn's *The Creation*, Berlioz's *L'enfance du Christ* and Brahms's *A German Requiem*. His interpretations of a wide repertory of song disclose his firm, warm, easily produced baritone and his natural gift for unaffected, discerning interpretation.

ALAN BLYTH

Finn, William (*b* Boston, 1952). American composer and lyricist. Although he principally studied English, Finn received the Hutchinson Fellowship in musical composition when he graduated from Williams College (the same fellowship awarded to Stephen Sondheim 24 years earlier). At college Finn had composed three musicals on unconventional subjects, including the trial and execution of Julius and Ethel Rosenberg. By 1979 he had completed an early version of *In Trousers*, the first of a gradually evolving musical trilogy about the emotional and sexual evolution of Marvin, a neurotic urban professional. Having discovered his capacity for bisexuality in *In Trousers*, Marvin would leave his wife and son to live with another man in *March of the Falsettos* (1981). In contrast to most of Finn's other projects as composer or lyricist, *March of the Falsettos* gained a strong critical and modestly popular following. Nearly a decade later, but only two years later in the life of its characters, he completed the final musical of his trilogy, *Falsettoland* (1990), in which Marvin's lover Whizzer contracts and dies of the effects of AIDS. *Falsettoland*, generally regarded as the finest artistically and emotionally of the trilogy, received two Tony Awards for best score and lyrics and best book. In 1992 *Falsettoland*, with revisions to the book by James Lapine (the original director of *March of the Falsettos*), returned as the second of what seemed destined to remain a two-act drama (with 'I'm Breaking Down' from the otherwise abandoned *In Trousers* interpolated into the first-act *March*). All these musicals are sung throughout in a popular style that, in contrast to traditional operatic recitative, transforms everyday speech into short highly rhythmic, repetitive and distinctive melodic fragments (e.g. 'late for dinner, late again'). More conventional song forms are reserved for reflective and strongly emotional moments such as the lyrical love duet between Marvin and his dying lover, *Unlikely Lovers*.

WORKS
(*selective list*)

all are musicals, and dates are those of first New York performances unless otherwise stated; librettists and lyricists are listed in that order in parentheses

GEOFFREY BLOCK

Finnegan, Ruth (Hilary) (*b* Londonderry, 31 Dec 1933). Northern Irish anthropologist. She studied classics at Oxford (BA 1956) before taking the diploma (1959) and the doctorate (1963) in social anthropology at Oxford. After working as a senior lecturer at the University of Ibadan, Nigeria (1965–9), she took a post in 1969 at the Open University, where she was appointed reader in 1982, and professor in 1988, of comparative social institutions; during this period she left the Open University to spend three years as head of the sociology department at the University of the South Pacific, Suva, Fiji (1975–8). She was editor of *Man, The Journal of the Royal Anthropological Institute* (1987–9) and visiting professor of anthropology at the University of Texas, Austin in 1989. She became a Fellow of the British Academy in 1996 and an honorary Fellow of Somerville College, Oxford in 1997. Her work has been principally concerned with the anthropology of communication and expressive behaviour, with particular reference to verbal art, oral tradition and musical practice. Her study of 'hidden musicians' in Milton Keynes has been particularly significant in introducing anthropological method and theory to the study of local musics.

MARTIN STOKES

Finney, Ross Lee (*b* Wells, MN, 23 Dec 1906; *d* Carmel, CA, 4 Feb 1997). American composer and educator, brother of THEODORE M. FINNEY. His early musical experiences incorporated a wide range of interests: he played cello, piano and guitar, and was a member of a trio at the age of 12 and of a jazz group at 21. He continued to sing and play guitar for many years; as late as 1960 he toured Greece performing American folk music. His early study in composition was at the University of Minnesota with Donald Ferguson and at Carleton College, where he taught cello and history; he also studied with Boulanger (1927–8), with Edward Burlingame Hill at Harvard University (1928–9), with Berg in Vienna (1931–2), and with Sessions (1935).

From 1929 to 1948 Finney was a member of the faculty of Smith College Northampton, Massachusetts. He was awarded both Guggenheim and Pulitzer fellowships in 1937, and from 1943 to 1945 he served with distinction in the Office of Strategic Services. During the war years Finney turned from an eclectic international style to a more direct Americanism, introducing American folk materials into the String Quartet no.3 (1940) and producing *Hymn, Fuging, and Holiday* (in homage to William Billings, 1943) and the *Pilgrim Psalms* (1945). His Symphony no.1 (Communiqué 1943) was an important step in the definition of a personal style.

After 1947, when he was awarded a second Guggenheim Fellowship, Finney composed much chamber music and was particularly concerned with problems of structure. His concept of the tensions of opposing musical forces, which he called 'complementarity', his preference for strong rhythmic motivation, his concern with variation, and his fascination with time (as a philosophical as well as a musical phenomenon) were factors in forging this style. In 1949 he was appointed professor of music and composer-in-residence at the University of Michigan. Providing music for the chamber groups of the university's School of Music, and the need to define his ideas on the nature of music for his advanced students, contributed to a decade of great creative energy. A gifted teacher, Finney soon attracted a group of talented students, among them Albright, Crumb and Reynolds.

Finney then became more involved with serial techniques. The String Quartet no.6 (1950) uses three 12-tone series; the Fantasy in Two Movements (1958) uses one, with one permutation. In 1959 he began to serialize non-pitch elements, deriving changes in tempo and the proportions of formal divisions from the pitch series in such works as the Concerto for Percussion (1965). Most characteristic of Finney's technique is the use of a structured series, particularly with balancing or mirror-image hexachords. These hexachords are generative and are fulfilled both in interaction and compression – 'the greatest compression of the hexachord' Finney called a 'source set', a term first used in the Fantasy in Two Movements.

Finney used serial materials in elaborated forms, through juxtapositions of sections of driving impulse and floating sonorities, and this led him to a further exploration: of memory as a musical phenomenon, transcending simple nostalgia and the fashionable quotation of materials from other times and places. For Finney memory was a process, a flowing of complete and incomplete elements, of unexpected lucidity and frustrating indefinition, a process related to variation; Finney concluded that variation was not the repeating but the reexperiencing of the theme. His further experiments with the concept of memory culminated in the choral and orchestral trilogy *Earthrise: Still are New Worlds* (1962), *The Martyr's Elegy* (1967), and *Earthrise* (1978), works that are not only time-centred but also space-centred, bordering on the mystical.

Finney's many honours included the Brandeis Medal (1968), two honorary degrees, and numerous commissions, among them those from the Coolidge and Koussevitzky foundations and from Yehudi Menuhin for the Brussels World's Fair in 1958. In 1962 he was elected to the National Institute of Arts and Letters.

EDITH BORROFF

Finney, Theodore M(itchell) (*b* Fayette, IA, 14 March 1902; *d* Pittsburgh, 19 May 1978). American musicologist, brother of ROSS LEE FINNEY. He studied with Donald Ferguson at the University of Minnesota (BA 1924), in Berlin at the Stern Conservatory and the university (1927–8) and at the University of Pittsburgh (LittM 1938). After serving on the staff of Carleton College, Northfield, Minnesota (1925–32), he was supervisor of music for the public schools of Council Bluffs, Iowa (1933–6), subsequently being appointed professor and chairman of the department of music at the University of Pittsburgh. He retired in 1968 and became curator of the Warrington Collection of Hymnology at the Pittsburgh Theological Seminary. His career covered a wide range of musical interests: performance, scholarship, music education and librarianship. As a violinist he was a member of the Minneapolis SO (1923–5), and he was also active as a choral conductor. He wrote several music history and music appreciation textbooks, and from 1939 to 1950 he edited the *Proceedings of the Music Teachers' National Association*.

PAULA MORGAN

Finnish Musicological Society. Finnish organization. Founded in 1916, its activities centre on publishing and the organization of national congresses, including the International Sibelius Congress, held every four years. The society publishes the quarterly periodical *Musiikki* and a series of Finnish musicological dissertations, *Acta Musicologica Fennica*, several of which have been translated into English.

□

Finnissy, Michael (Peter) (*b* Tulse Hill, London, 17 March 1946). English composer and pianist. He was a foundation scholar at the RCM (1965–8) where he studied composition with Stevens and Searle and piano with Edwin Benbow and Ian Lake, followed by composition study in Italy with Vlad. He created the music department of the London School of Contemporary Dance, has taught at the Dartington Summer School, Winchester College, Chelsea College of Art and the University of Sussex, and was musician-in-residence to the Victoria College of the Arts, Caulfield, Australia (1982–3). From 1990 to 1996 he was president of the ISCM. He is currently professor of composition at the RAM and Southampton University.

As an accomplished pianist associated with the virtuoso solo repertory from Liszt to Xenakis, it is hardly surprising that the course of Finnissy's own creative development has been punctuated by significant piano works, as well as by hundreds of occasional pieces. The piano, for Finnissy, fulfils the gamut from sketch pad to full orchestra – from the brief yet expressive *Short but . . .* (1979) to the solo piano accompaniment to his second opera, *Thérèse Raquin* (1992–3). *English Country-Tunes* (1977), an epic nine-movement cycle, established Finnissy internationally as a voice of originality and distinction, and this has been followed by further large-scale statements for piano such as the *Folklore* cycle, as well as substantial sets of piano transcriptions: the *Verdi Transcriptions* (1972–95), *Gershwin Arrangements* (1975–88) and *More Gershwin* (1989–90).

These works attest the eclectic nature of Finnissy's musical imagination. He draws overtly on a wealth of musical sources, both in order to invigorate his own work, and to challenge contemporary audiences into re-evaluating their own musical heritages. Music by composers as disparate as Carver and Brahms, Purcell and the Strauss family, has all found its way into his works. More especially, following the example of Grainger, he is fascinated by the traditional music of many of the world's cultures. *Folklore* (1993–4) works explicitly with this material, treating a melody such as the negro spiritual

Deep River in a variety of different ways, eventually absorbing it entirely into his own musical vocabulary. *Speak Its Name!* (1996) begins with a kaleidoscope of over a hundred diverse folk melodies, all playing at the same time. By contrast, *English Country-Tunes* does not quote actual folktunes but expresses Finnissy's ambiguous attitude to his own history by inventing a lyrical 'English' pastoralism, which it then destroys. In all these cases, the presence of folk or folk-derived material symbolizes both some kind of 'innocent', 'original' response to music-making and the possibility of its corruption or obliteration in the modern world.

Politics – often a polemical kind – is central to Finnissy's work. Like Ives, an important precursor and influence, he believes that all music is, in some sense, 'programmatic', that is, it exists in a cultural context, it reflects the concerns of the composer and his or her culture, and it can be a genuine force for change. Hence his interest in folk music (which is never 'abstract'); hence his increasingly overt espousal of gay themes in works such as *Unknown Ground* (1989–90), *Shameful Vice* (1994–5) and *Seventeen Immortal Homosexual Poets* (part of *The History of Photography in Sound*, 1997–); hence his Christian works, such as *Anima Christi* (1991) and *The Liturgy of St Paul* (1991–5); and hence his active commitment as a pianist playing and commissioning new work from young composers, and as a distinguished teacher at all levels.

The breadth of expressive intentions of Finnissy's music is achieved through a correspondingly wide range of musical devices, from pseudo-plainchant melodies and simple accompaniments to densely layered textures, microtonal harmony and intricate rhythmic notation. Rarely is a single work concerned only with one kind of music: *English Country-Tunes* contains both manic *Totentanz* and simple, decorated monody; *Speak its Name!* moves from multiple, simultaneous melodic fragments to a unison tune. His music can manifest a profound violence – as many of the works from the 1970s demonstrate – as well as a contemplative spirituality, as can be heard in much of his music from the 1990s. Finnissy's music rarely fails to court controversy. He is often aligned with other exponents of the so-called 'new complexity', though it is a label he rejects because, he argues, even the 'simplest' music can be 'complex' – hence his continuing commitment to music for amateurs and children, e.g. *East London Heys* (1985–6) and *Wee Saw Footprints* (1986–90). Underlying these changing stylistic surfaces, however, is a consistent response to his varied musical materials: the 'complex' proliferation of detail out of something essentially 'simple', and an overriding concern for drama and directness of expression, equally evident in his grandest public statements – *The Undivine Comedy* (1985–8) and the primordial *Red Earth* (1987–8) – and in his smallest piano miniatures. Finnissy's is undeniably a unique and forthright voice in 20th-century British music.

JONATHAN CROSS

Finot [Finotto], **Dominique.** *See* PHINOT, DOMINIQUE.

Finscher, Ludwig (*b* Kassel, 14 March 1930). German musicologist. He studied musicology from 1949 to 1954 under Gerber at Göttingen University, where in 1954 he took the doctorate with a dissertation on Compère. After working as a research assistant at the Deutsches Volksliedarchiv under Walter Wiora and assistant lecturer at Kiel University (1960–65), he was appointed assistant lecturer at the University of Saarbrücken. He became editor of *Die Musikforschung* in 1961 and completed the *Habilitation* at Saarbrücken in 1967 with a study of the Classical string quartet. In 1968 he became professor of musicology at the University of Frankfurt. He also prepared editions of the complete works of Gaffurius (1955–60) and Compère (1958–72). From 1974 to 1977 he was president of the Gesellschaft für Musikforschung and from 1972 to 1977 vice-president of the IMS, of which he was president from 1977 to 1981; in 1975 he became co-editor of the Hindemith collected edition. In 1981 he was appointed chair of the musicology department at the University of Heidelberg. He retired in 1995. Among his many distinctions, he is an honorary member of the RMA and the IMS and was made a member of the Ordre pour le Mérite in 1994.

Finscher is widely regarded as the leading musicologist of his generation in Germany. His encyclopedic knowledge of music history – evidenced by his publications on music from the Josquin era to the first half of the 20th century – have earned him the important post of chief editor of the second edition of *Die Musik in Geschichte und Gegenwart*. He is also editor of the series Quellen und Studien zur Geschichte der Mannheimer Hofkappelle and Capellae Apostolicae Sixtinaeque Collectanea Acta Monumenta (with Helmut Hucke, from 1992), and has prepared many collections of essays (including *Die Musik des 15. und 16. Jahrhunderts*, 1988–90), Festschriften

(including Reinhold Hammerstein's Festschrift, 1986) and congress reports (including *Wolfenbüttel 1976*, *Wolfenbüttel 1980* and *Paphos 1992*). Finscher's writings show both a broad and a detailed understanding of the works of Compère, Josquin, Bach, Handel, the Viennese Classics, the Italian Baroque and late German Romantic composers.

HANS HEINRICH EGGEBRECHT/R

Finsterbusch, (Daniel) Reinhold (*b* Mittweida, 27 Dec 1825; *d* Glauchau, 14 Sept 1902). German Kantor, composer and bass. He studied with A.F. Anacker at the Freiberg Seminary from 1840 to 1845, then became an assistant teacher in Chemnitz, the first of a number of teaching posts he held. In 1857 he succeeded Adolph Trube in a lifelong appointment as Kantor, music director and organist in Glauchau; his sacred music programmes, in which skilled soloists took part, were highly esteemed, and his direction of secular choral societies was noteworthy. Trained by Götze in Leipzig, he was also an excellent solo singer as well as being active as a poet, critic and politician. His output as a composer is dominated by vocal music. The large-scale sacred works include hymns, motets, psalm settings and an oratorio *Jesu Tod und Begräbnis*. He made significant contributions to smaller vocal genres, including the ballad, the male chorus and the mixed chorus.

WALTER HÜTTEL

Finsterer, Mary (*b* Canberra, 25 Aug 1962). Australian composer. She studied composition at the University of Melbourne (BMus, 1987; MMus, 1994) and with Louis Andriessen at the Royal Conservatory in The Hague. Since 1985 she has worked in Melbourne as a freelance composer, teacher and pianist. Finsterer's music draws on extra-musical elements in its expression of extremes of dramatic effect. *Madam He* (1988), based on Samuel Beckett's play, presents two sharply defined protagonists ('He' and 'She') through the use of a single soprano supported by chamber ensemble. The soprano is required to sing in a low, halting style as a male character and with tumultuous exuberance as a female. In *Ruisselant*, composed for Le Nouvel Ensemble Moderne's 'Forum 91' competition, the three formal sections are delineated by incessant streams of timbral, textural and gestural contrasts. *Ruisselant* was a prize-winner at the 1992 Paris Rostrum and was performed at the 1995 ISCM World Music Days in Essen. Finsterer exploited the traditions of polychoral brass writing in *Nextwave Fanfare* (1992) for orchestra. This work attempts to engender a childlike sense of wonder, excitement and awe in a burst of energetic colours and shapes. *Constans* (1994), with its static harmonic fields interspersed with explosions of filigree, made a direct and powerful impact at its 1996 Adelaide Festival première.

WORKS

MICHAEL BARKL

Finzi, Gerald (Raphael) (*b* London, 14 July 1901; *d* Oxford, 27 Sept 1956). English composer. The son of a shipbroker, he was educated privately, and studied music with Ernest Farrar (1915–16) then, when Farrar joined the army, with Edward Bairstow at York (1917–22). Finzi's shock when Farrar was killed in France, following his own father's death when he was eight, and that of his three elder brothers, confirmed his introspective bent, his recourse to literature, and the sense of urgency in his dedication to music. In 1922, drawn to the countryside of Elgar, Gurney and Vaughan Williams, he moved to Painswick in Gloucestershire, working (as in a deeper sense he always did) in isolation. On advice from Boult he took a course in counterpoint from R.O. Morris in 1925, then settled in London, moving for the first time in a circle of young musicians which included Arthur Bliss, Howard Ferguson, Robin Milford and Edmund Rubbra, meeting Holst and Vaughan Williams, and avidly going to concerts, exhibitions and the theatre. From 1930 to 1933 he taught at the RAM. Some of his freshest, most individual music was written at this time, as well as some weaker pieces: he later withdrew the *Severn Rhapsody* (Carnegie Award), a Violin Concerto conducted (1928) by Vaughan Williams and some songs. (His habit of revising compositions years later makes dating them problematic).

In 1933 Finzi married Joyce Black (1907–91), herself an artist, whose liberating warmth and practical efficiency eased his way; in 1935 they retired to Aldbourne in Wiltshire. Acutely aware of life's transience, Finzi had always a need to consolidate, collect and cultivate. In 1937 the Finzis found a 16-acre site on the Hampshire hills at Ashmansworth, and built a house designed to work in. Living frugally by worldly standards, there he composed, assembled a library and an orchard of rare apple trees, took such adjudicating, examining and committee work as came his way, and gave hospitality to friends drawn by his zest and sense of endeavour. His first published Hardy sets of songs attracted quiet admiration. More positive recognition was due when *Dies natalis* was to be performed at the 1939 Three Choirs Festival; war caused the festival to be cancelled, and the first performance took place modestly at the Wigmore Hall on 26 January 1940.

For all his carefully created environment, Finzi was politically alert, and, though he was an agnostic, his parents were Jewish (his father's forebears moved to England from Italy in the mid-18th century). By instinct and reason he was a pacifist, with a distrust of dogmas and creeds (an attitude that drew him to Hardy, as did his

Gerald Finzi, c1933

preoccupation with time, its changes, chances and continuities). His reluctant admission of the necessity for the 1939–45 war deepened his conviction that the creative artist is the prime representative of a civilization. In December 1940 he founded the Newbury String Players, a mainly amateur group which performed in local churches, schools and village halls, and kept the group going when he worked in London at the Ministry of War Transport from 1941 to 1945, and afterwards (when he died, his son Christopher took them over). Finzi was not a fluent pianist, and never a singer. This orchestra became his instrument; through it he gave many a hearing to young performers and composers, and fiercely involved himself in reviving 18th-century English works, his scholarly and practical research resulting in published editions. He also collected and catalogued Parry's scattered autograph manuscripts. He worked selflessly, too, for Ivor Gurney (they never met), being a force behind the *Music & Letters* Gurney issue in 1938 and the publication of his songs and poems.

The first performance of Finzi's *Intimations of Immortality* at the 1950 Three Choirs Festival brought discussion about whether Wordsworth's ode was suitable for musical setting, a controversy bound to pursue a composer who had also chosen texts from Traherne and Milton. Finzi's principle was that no words were too fine or too familiar to be inherently unsettable by a composer who wished to identify himself with their substance. He developed and formulated his ideas in the Crees lectures, a knowledgeable, stimulating and on occasion provocative survey of the history and aesthetics of English song.

In 1951 Finzi learnt that he was suffering from Hodgkin's Disease, and had at most ten years to live. He kept the knowledge within his family, and, between treatments, simply continued to work. During the 1956 Gloucester Festival he took Vaughan Williams up to nearby Chosen Hill church, where as a young man he had heard the New Year rung in (those bells peal through the exquisite *In terra pax*). The sexton's children had chickenpox, which Finzi caught; weakened by his disease, he suffered brain inflammation and died. In 1965 his library of music from about 1740 to 1780, considered the finest of its period assembled privately in England at that time, went to St Andrews University, Fife. His library of English literature, his sustenance and inspiration, is housed in the Finzi Book Room at Reading University Library. The Finzi Trust, formed in 1969, promotes recordings, concerts, festivals and publications of the music of Finzi and other English composers.

Finzi unerringly found the live centre of his vocal texts, fusing vital declamation with a lyrical impulse in supple, poised lines. He was little concerned with word-painting, and his songs are virtually syllabic (in contrast with Britten's and Tippett's). Hardy's tricky, sometimes intractable verse released his creativity, and his settings range from the loving *Her Temple* through the Wolfian bite of *I look into my glass*, and the distanced serenity of *At a Lunar Eclipse* to the dramatic *Channel Firing*. Few of his songs are plainly strophic; many are cast in an arioso style which can be colloquial or intense. Some, apparently improvisational, reveal a firm underlying structure. Finzi's sense of tonality and form was idiosyncratic. The accompaniments, not obviously pianistic, work excellently with the voice; often they are formed from the kind of close imitative texture much used in his shorter orchestral pieces. Some of his movements, meticulous in detail, are less sure in overall grasp, and his limited idiom and the regularity of his harmonic pace can become monotonous. These drawbacks are balanced in the Clarinet Concerto by the fertility and gaiety of the thematic invention, and in the Cello Concerto by a deeper passion – the turbulence of its first movement suggests a line of development cut short by his death.

Melodically and harmonically Finzi owed something to Elgar and Vaughan Williams; as well as occasional flashes of Bliss and Walton, Finzi's love and knowledge of Parry can be discerned. To none of these composers was he in debt for the finesse of his response to the English language and imagery, or for his vision of a world unsullied by sophistication or nostalgia. The adult's sense of loss at his exclusion from this Eden inspires some of Finzi's strongest sustained passages, from the melancholy grandeur that informs *Intimations* to the brooding power of *Lo, the full, final sacrifice*. Personal, too, is what he drew from Bach: in the Grand Fantasia the duality sets up a challenging tension, and in the aria movements from *Farewell to Arms* and *Dies natalis* the rare marriage of disciplined contrapuntal accompaniment and winged voice is logical and ecstatic. *Dies natalis*, a song cycle shaped like a Bach cantata to verse and poetic prose by Traherne, is a minor masterpiece of English music.

WORKS

ORCHESTRAL

op.	
3	A Severn Rhapsody, d, chbr orch, 1923
—	Violin Concerto, 1925–7, previously withdrawn
6	Introit, F, vn, small orch, 1925, rev. 1935, rev. 1942 [from Violin Concerto]
7	New Year Music, nocturne, c♯, 1926, rev. 1945–6
10	Eclogue, F, pf, str, late 1920s, rev. 1940s
11	Romance, E♭, str, 1928, rev. ?1951

20 The Fall of the Leaf, elegy, d, 1929, rev. 1939–41, orchestration completed by H. Ferguson
25 Prelude, f, str, 1920s
28 Love's Labour's Lost (incid music for a broadcast, W. Shakespeare), small orch, 1946
28a Love's Labour's Lost, suite, 1952–5; Introduction; Moth; Nocturne; The Hunt; Dance; Quodlibet; Soliloquies I–III; Finale
31 Clarinet Concerto, c, cl, str, 1948–9
38 Grand Fantasia and Toccata, d, pf, orch: Grand Fantasia, 1928, rev. 1953; Toccata, 1953
40 Cello Concerto, a, 1951–5

CHORAL

1 Ten Children's Songs (Songs to Poems by C. Rossetti), S, 2S, pf, 1920–21, rev. 1940
— Up to those bright and gladsome hills (H. Vaughan), chorus, org, 1922
— The brightness of this day (Vaughan), Bar, chorus, orch/org, ?1923
— Requiem da camera, Bar, chorus, chbr orch, 1923–5; Prelude; August, 1914 (J. Masefield); In time of 'The Breaking of Nations' (T. Hardy), 2 versions; Lament (W. Gibson)
— The Recovery (T. Traherne), chorus, orch/org, ?1925
5 Three Short Elegies (W. Drummond), SATB, 1926: Life a right shadow is; This world a-hunting is; This life, which seems so fair
17 Seven Partsongs (R. Bridges), 1934–7: I praise the tender flower, SATB; I have loved flowers that fade, SAT; My spirit sang all day, SATB; Clear and gentle stream, SATB; Nightingales, SSATB; Haste on, my joys!, SSATB; Wherefore tonight so full of care, SATB
26 Lo, the full, final sacrifice (R. Crashaw, after T. Aquinas), chorus, org, 1946, arr. with orch, 1947
27 Three Anthems: My lovely one (E. Taylor), SATB, org, 1948; God is gone up (Taylor), SATB, org/(str, org), 1951; Welcome sweet and sacred feast (Vaughan), SATB, org, 1953
29 Intimations of Immortality (Ode) (W. Wordsworth), T, chorus, orch, 1936–8, 1949–50
30 For St Cecilia (E. Blunden), ceremonial ode, T, chorus, orch, 1947
32 Thou didst delight my eyes (Bridges), TBB, 1952
33 All this night (W. Austin), SATB, 1951
34 Muses and Graces (U. Wood), S/Tr chorus, pf/str, 1951
35 Let us now praise famous men (Apocrypha: *Ecclesiasticus*), TB, pf, 1951
36 Magnificat, chorus, org, 1952, arr. with orch, 1956
37 White-flowering days (Blunden), SATB, 1952–3
39 In terra pax (Bridges, Bible: *Luke*), S, Bar, chorus, str, hp, cymbals, 1951–4, arr. with full orch, 1956

SOLO VOCAL

with orchestra or ensemble

2 By Footpath and Stile (Hardy), Bar, str qt, 1921–2: I went by footpath and by stile, rev. 1941; Where the picnic was; The Oxen, rev. 1941; The Master and the Leaves; Voices from things growing in a churchyard; Exeunt omnes
8 Dies natalis (Traherne), S/T, str orch, 1925–39: Intrada; Rhapsody; The Rapture; Wonder; The Salutation
9 Farewell to Arms, T, small orch/str orch: Introduction (R. Knevet), 1944; Aria 'His golden locks' (G. Peele), 1926
12 Two Sonnets (J. Milton), T/S, small orch, 1926–8: When I consider; How soon hath time
18 Let us garlands bring [alternative version of song cycle], Bar, str orch, 1929–42
28a Music for 'Love's Labour's Lost' (Shakespeare, anon.), lv, small orch, 1946: Songs of Hiems and Ver; Songs for Moth

with piano

— Before the paling of the stars (C. Rossetti), 1920
— Ceremonies (R. Herrick), 1920
— The Fairies (Herrick), 1921
— The Cupboard (R. Graves), 1922
13a To a Poet, A/Bar, pf: To a Poet (J.E. Flecker), 1920s; On parent knees (attrib. W. Jones), 1935; Intrada (Traherne); The Birthnight (W. de la Mare), 1956; June on Castle Hill (F.L. Lucas), 1940; Ode on the Rejection of St Cecilia (G. Barker), 1948
13 Oh fair to see, S/T, pf: I say 'I'll seek her side' (Hardy), 1929, rev. ?1950s; Oh fair to see (Rossetti), 1921; As I lay in the early sun (E. Shanks), 1921, rev. 1956; Only the wanderer (I. Gurney), 1925; To Joy (Blunden), 1931; Harvest (Blunden), 1956; Since we loved (Bridges), 1956
14 A Young Man's Exhortation (Hardy), T, pf: A Young Man's Exhortation, 1926; Ditty, 1928; Budmouth Dears, 1929; Her Temple, 1927; The Comet at Yell'ham, 1927; Shortening Days, 1928; The Sigh, 1928; Former Beauties, 1927; Transformations, 1929; The dance continued
15 Earth and Air and Rain (Hardy), Bar, pf: Summer Schemes; When I set out for Lyonnesse, 1932–5, also arr. Bar, small orch; Waiting both, 1929; The Phantom, 1932; So I have fared, 1928; Rollicum-Rorum; To Lizbie Browne; The Clock of the Years; In a Churchyard, 1932; Proud Songsters, ?1932
16 Before and after Summer (Hardy), Bar, pf: Childhood among the Ferns; Before and after Summer, 1949; The Self-Unseeing, 1949; Overlooking the River; Channel Firing, 1940; In the Mind's Eye, 1949; The too short time, 1949; Epeisodia, ?1932; Amabel, 1932; He abjures love, 1938
18 Let us garlands bring (Shakespeare), Bar, pf: Come away, death, 1938; Who is Sylvia?, 1938; Fear no more the heat o' the sun, 1929; O mistress mine, 1942; It was a lover, 1940
19 Till Earth Outwears (Hardy), S/T, pf: Let me enjoy the earth, before 1936; In years defaced, 1936; The Market Girl, 1927, rev. 1942; I look into my glass, ?1937; It never looks like summer here, 1956; At a Lunar Eclipse, 1929; Life laughs onwards, 1955
— I said to love (Hardy), Bar, pf: I need not go, before 1936; At Middle-Field Gate in February, 1956; Two Lips, 1928; In Five-Score Summers, 1956; For life I never cared greatly; I said to love, 1956

CHAMBER

21 Interlude, a, ob, str qt, 1933–6
22 Elegy, F, vn, pf, 1940s

DIANA McVEAGH

Fiocco. Flemish family of musicians of Italian origin.

(1) Pietro Antonio [Pierre Antoine] **Fiocco** (*b* Venice, bap. 3 Feb 1653; *d* Brussels, 3 Sept 1714). Composer. Nothing is known of Fiocco's life prior to the performance of his prologue to the opera *Alceste*, given at Hanover in 1681. By early 1682 he was living in Brussels, where he married Jeanne de Laetre on October 22. When his wife died early in 1691 he was left with three young children, including (2) Jean-Joseph Fiocco; a year later he married Jeanne Françoise Deudon, with whom he had 11 children, including (3) Joseph Hector Fiocco.

Fiocco probably served at the Brussels ducal chapel from 1687, succeeding Honoré Eugène d'Eve as director, though he was styled only *lieutenant de la chapelle*. With the appointment of Maximilian Emanuel, Elector of Bavaria, to the governorship of the southern Netherlands in 1692, Pietro Torri came to Brussels as general director of his employer's musical establishments, although Fiocco enjoyed almost complete autonomy. From 1694 to 1698 Fiocco collaborated with Giovanni Paolo Bombarda in the direction of the Opéra du Quai aux Foins, performing mostly works by Lully, including *Amadis*, *Acis et Galatée*, *Phaëton*, *Armide* and *Thésée*, for which Fiocco wrote new prologues in honour of the elector. During the War of the Spanish Succession, Torri followed Maximilian Emanuel's retinue, which paved the way for Fiocco's succession to *maître de musique de la chapelle royale de la cour* in 1703. At the same time he was appointed to a similar post at Notre-Dame du Sablon because of the church's association with the Spanish royal presence. He held both positions until his death.

Fiocco's understanding of French musical language is evident in his prologue and pastorale. His church music, however, reflects the Venetian style prevalent in Brussels throughout the 18th century. Following in this tradition, his motets are written for one, two or four voices with instruments. With delineated sections in related keys, they show little originality; the underlying harmonic constructions and melodic and rhythmic devices are entirely conventional. Although Fiocco was not connected to the collegiate church of Ste Gudule, the manuscripts housed in the Conservatoire Royal de Musique, Brussels, constitute part of the 'fonds Ste-Gudule'.

Motets, *Bc*: Ad ardores sacri amoris; Amor Patris; Ave regina coelorum; Cedant arma; Laetis vocibus; Regina caeli, doubtful, ? by J.H. Fiocco; Regina superum; Sanctorum meritis
Motets, *Br*: Creator Spiritus; Stabat mater; 2 Te Deum settings, 1, 1738; Venite exultemus
Motet, adapted by V. Nelson as Clap your hands, *GB-Lbl*
Motets, *Lcm*: Date palmas; Festinemus o mortales; Ille rector angelorum; Properemus ad hans gloriam; Si tu fons lucis; Stupete novum sidus; Sublevate vos; Vanae curae Ieves; Veni charae dulcis

OTHER WORKS

Le retour du printemps (pastorale), Brussels, 1699, *A-Wn*; prol for Alceste (op, A. Aureli), Hanover, 1681, formerly *D-HVs*, music by P.A. Strungk or M.A. Ziani; prols for revivals of Lully's Amadis, Acis et Galatée, Phaëton, Armide, Thésée, Bellérophon and other ops, all lost
2 Italian arias in Recueil d'airs sérieux et a boire, livre II (Amsterdam, 1696); 1 Italian aria in ibid., livre III (Amsterdam, 1697); sonata, fl, in 10 sonates pour les flûtes (Amsterdam, *c*1710)
Sonata, 4 insts; Symphonia: both *B-Bc*

(2) Jean-Joseph Fiocco (*b* Brussels, bap. 15 Dec 1686; *d* Brussels, 29 March 1746). Organist and composer, son of (1) Pietro Antonio Fiocco. Trained by his father and the musicians of the royal chapel, he became *maître de chapelle* at Notre-Dame du Sablon and at the ducal chapel following his father's death in 1714. In 1715 he married Marie Madelaine Claes, with whom he had one surviving child; shortly after her death in 1730 he married Anne Caroline Rottenburgh, thus connecting two of the city's foremost families of musicians. Eight of their nine children survived to adulthood. Fiocco quit Notre-Dame du Sablon following the fire of 1731 that destroyed the ducal palace, devoting all his efforts to rebuilding the musical establishment of the governor-general, Archduchess Maria Elisabeth. He retired from the ducal chapel in 1744, passing the directorship to Henri Jacques de Croes. He continued to advise other musicians until his death two years later.

Fiocco's melodic writing and imitative technique are more polished than that of his father, though less artful than Joseph Hector's. His two four-voice motets adhere to the French *grands motets* of the preceding century. His oratorios, written in honour of Maria Elisabeth, were performed in Brussels between 1728 and 1740; their Italian titles can only suggest their musical style, as all are now lost.

WORKS

[12] Sacri concentus, 4vv, 3 insts, op.1 (Amsterdam, n.d.)
Missa solemnis, 1732, *A-Wgm*, *B-Bc*
Partition de 8 psaumes ou motets, 2vv, bc, *F-Pc*
Motets, *B-Bc*: O Jesu mi sponse, S, insts; Ad torrentem, T, insts; Levavi oculos, 4vv, insts; Fuge Demon, 4vv, insts

Orats, perf. Brussels, lost: La tempesta di dolori, 1728; La morte vinta sul Calvario, 1730; Giesù flagellato, 1734; Il transito di S Giuseppe, 1737; Le profezie evangeliche di Isaia, 1738–40
9 répons de mort, ?lost, cited in *Vander StraetenMPB*

(3) Joseph Hector Fiocco (*b* Brussels, 20 Jan 1703; *d* Brussels, 21 June 1741). Composer, organist and harpsichordist, eighth child of (1) Pietro Antonio Fiocco and Jeanne Françoise Deudon. In 1726 he married Marie Caroline Dujardin, with whom he had two children. He was then serving at the ducal chapel under his half-brother and became *sous-maître* in 1729 or 1730. He resigned in August 1731 to accept the post of *sangmeester* (choirmaster) at Antwerp Cathedral, succeeding Willem De Fesch.

He returned to Brussels in March 1737 to serve as *sangmeester* of the collegiate church of St Michel and Ste Gudule following the death of Petrus Hercules Brehy, who had held the post for 32 years. As at Antwerp, Fiocco was a francophone at a predominantly Flemish-speaking institution. Fiocco moved with his family into the *choraelhuys* (*maîtrise*) where, as music director, he was required to teach the choirboys as well as compose frequently. He held this post until his premature death four years later. Despite his adequate salary, his widow complained she was penniless and sold the composer's music manuscripts to the collegiate church, where they became incorporated into the 'fonds Ste-Gudule'.

Fiocco's music exhibits greater stylistic diversity than that of his father and half-brother. His *Pièces de claveçin* demonstrate the strong influence of François Couperin in structure and harmonic movement, as well as in the melodic figures, which contain many of the compound and simultaneous ornaments of the French tradition; indeed, the table of ornaments is almost identical to Couperin's. The *léçons de ténèbres* are more varied. The first is highly sectionalized and contains the instrumentation, affective devices and dark sonorities associated with the French tradition; the second typifies the italianate aria style, while the third combines elements of the two. Fiocco's command of larger forms is seen in his other sacred music, which reveal a thorough grounding in the style of Vivaldi and his compatriots.

WORKS

3 missa solemnis settings, 1, *B-Bc*: 7vv, insts; 2, 2vv, insts
Motets, 5vv, insts, *Bc*: Homo quidem/Ecce panis; Salve regina

LEWIS REECE BARATZ

Fiorani, Cristoforo (*b* Ancona; *fl* 1620–35). Italian composer. In 1620 he was *maestro di cappella* of S Venanzo, Fabriano, and in 1635 held a similar position at the town of Ascoli Piceno. Of his several publications only three survive (and the last two of these incomplete): *Duo completoria quorum unum tam plena voce, quam ad organum decantari potest; alterum vero concertatum decantari debet quinque vocibus; cum letanijs B. Mariae Virginis, cum basso ad organum* (Venice, 1620); *Salmi concertati a quattro voci, in diverse maniere alla moderne* (Venice, 1626); and *Missarum liber secundus octonis vocibus concinendarum, quae tam plena voce, quam ad organum accommodate una vero ad concentum decantanda* op.7 (Venice, 1635).

□

Fioravanti, Valentino (*b* Rome, 11 Sept 1764; *d* Capua, 16 June 1837). Italian composer, father of VINCENZO FIORAVANTI. Although his early education was in literature and art, he soon obtained his father's permission to study music. His first lessons were with Gregorio Toscanelli, a singer at S Pietro, and he also had private counterpoint lessons from Giuseppe Jannacconi; in 1779 his father sent him to Naples for private lessons with Sala. In 1781 he returned to Rome, where he conducted at various theatres and composed his first opera, the intermezzo *Le avventure di Bertoldino* (1784). In 1787 the Teatro del Fondo in Naples commissioned a comic opera, *Gl'inganni fortunati* (1788), which secured his fame.

In Naples Fioravanti was a formidable rival to Paisiello, P.A. Guglielmi and Cimarosa. He toured Italy, writing both comic and serious operas for all the major theatres. His most popular, *Le cantatrici villane*, was written for Naples in 1799 during the revolutionary turmoil. An instant success, it was performed throughout Europe, becoming one of his few works to be revived in the 20th century (Vienna, 1907; Rome, 1951).

After the success of *Camilla* in Lisbon (1801) Fioravanti was engaged as director of the S Carlos theatre there, a post he retained for five years, until political strife made life uncomfortable. On his way back to Italy he visited Paris and wrote an opera, *I virtuosi ambulanti* (1807), for the Théâtre Italien. His fame had preceded him with performances of *La capricciosa pentita* in 1805 and *Le cantatrici villane* in 1806. The former, originally written

for La Scala in 1802, was famous (according to Castil-Blaze) for introducing the english horn to the French theatre orchestra. In Italy Fioravanti continued to receive contracts for operas. In 1816 he succeeded Zingarelli as *maestro di cappella* of the Cappella Sistina. His operatic career dwindled; after 1824 he wrote only sacred music, and his reputation faded.

Although remembered for his comic works, Fioravanti wrote an almost equal number of serious ones, borrowing some of his plots, as many others also did, from the French theatre and the 'larmoyante' tradition. The most unusual of these *melodrammi* was a trilogy entitled *Adelaide e Comingio*. The blood-and-thunder, Romeo-and-Juliet story, spiced with comic ingredients, was taken by the librettist A.L. Tottola from a popular series of plays (1789) by the Revolutionary poet Giacomantonio Gualzetti, derived in turn from French sources (a verse drama by François d'Arnaud, 1765, and a novel by the infamous Claudine de Tencin, 1735). The story was especially popular with the Neapolitans, but only the second opera of the trilogy, *Adelaide maritata*, was ever played outside Naples. This experiment in tragedy was significant for the history of Neapolitan opera; nevertheless, Fioravanti's greatest gift lay elsewhere, in the *opera buffa* (his sacred music, in the Accademia di S Cecilia, Rome, is pale and dull). Cimarosa particularly praised his 'parlati' (passages of comic dialogue over orchestral ostinato figures), even though he feared the younger man's undeniable talent and its effect on Neapolitan audiences. Fioravanti's music does not fall into platitudinous forms as readily as does that of some of his contemporaries; the musical language is flexible and lively, and the tempo changes within numbers unpredictably, suiting the situation. His harmonic language is uninventive for its time, but typical of Italian opera innocent of Haydn and Mozart. Comedy is everything, from complicated imbroglios in ensembles to the imitation of barnyard animals (in *La capricciosa pentita*); each dramatic situation receives an appropriate, witty musical treatment. Stendhal in his *Vie de Rossini* (Paris, 1824) paid Fioravanti his greatest compliment; he reported Rossini as believing that the art of *opera buffa* had already reached perfection before he began to compose and that in the particular comic style known as *nota e parola* there was no further progress possible after Fioravanti.

MARVIN TARTAK

Fioravanti, Vincenzo (*b* Rome, 5 April 1799; *d* Naples, 28 March 1877). Italian composer, son of VALENTINO FIORAVANTI. His father wanted him to study medicine; without consent, Vincenzo studied composition with his father's teacher, Giuseppe Jannacconi, but only when Valentino was away from Rome. When he was 15, he wrote a duet as an additional piece for an opera at the Teatro Valle, but after the rehearsal he withdrew the music. In 1816 his father called him to Naples, believing him to have finished his medical studies; eventually he grudgingly gave his son composition lessons. Vincenzo's first opera was *Pulcinella molinaro* (Naples, 1819). In 1820 he returned to Rome, sought Donizetti's advice and

found success with his second work, *La contadina fortunata*, at the Valle.

In order to marry, Fioravanti had to agree to his future father-in-law's demand that he abandon his interest in theatrical matters. It was a happy marriage, but after ten months his wife died. He returned to Naples but wrote nothing until *Robinson Crusoè nell'isola deserta* (1828) for the Teatro Nuovo. This initiated a series of works, mostly *opere buffe*, carrying on his father's tradition, which had been deserted by most of his contemporaries. His most popular opera was *Il ritorno di Pulcinella dagli studi di Padova* (1837); it was performed abroad, was constantly adapted by various singers and composers, and was on the stage for over 80 years. Part of its success was due to the irresistibly comic scenes in which the hero is thrown into an asylum for crazy musicians.

Soon after his father died, Fioravanti moved to Lanciano in the Abruzzi, where in 1839–43 he was *maestro di cappella* at the cathedral. During this time he wrote both sacred and operatic works, but it was not until he returned to Naples that his career reached its zenith. After 1856 he fell on hard times; he hoped to receive the composition chair at the Naples Conservatory, but instead it was made open to competition. In 1867 he was made director of the music school of the Albergo dei Poveri, but illness forced him to resign in 1872. He was compelled to accept charity, some of which derived from a sale of an *Album Fioravanti* published by his friends. He turned to writing graceful, epigrammatic verse. After his death his work was forgotten, but a reappraisal of his operas has restored his reputation.

MARVIN TARTAK

Fiorè, Andrea Stefano (*b* Milan, 1686; *d* Turin, 6 Oct 1732). Italian composer, son of ANGELO MARIA FIORÈ. He was a child prodigy: in the dedication of his *Sinfonie da chiesa* dated 20 April 1699 he explained that the pieces 'are the last squalls of my infancy, and the first expressions of my boyhood, I having just turned 13'. The title-page of this collection of 12 trio sonatas indicates that he was *musico di camera* of the dedicatee, Vittorio Amedeo II, Duke of Savoy, a member of the Bolognese Accademia Filarmonica (which he joined with his father in 1697), and Milanese by birth. The royal account books in the Turin State Archive (*I-Ta*) show that the duke sent Andrea Stefano (mistakenly named Giovanni Battista in a document), with G.B. Somis, to study in Rome. Several payments for the trip were made between 24 June 1703 and 20 January 1707 although Somis had returned to Turin in 1706. If *Engelberta*, an opera previously attributed to B.G. Marcello and performed in Milan in 1704, is Fiorè's work, as is now accepted, then he may have returned from Rome as early as 1704. An opera composed for Carnival 1707, *La casta Penelope* (if not also *L'Anfitrione*, attributed to Fiorè by Manferrari), was well received, and the Duke of Savoy soon thereafter appointed Fiorè his *maestro di cappella* (13 June 1707). Until his death in 1732 he was in charge of the 30 to 36 musicians at the Turin court and the singers at the cathedral. 16 scores of sacred music in the cathedral chapter archive (*I-Td*) testify to his direction of the choir there.

While Turin's Teatro Regio remained closed (1704–14), Fiorè was at liberty to produce operas elsewhere; three in Vienna (1708–10) and one in Reggio nell'Emilia (1713) imply trips to those cities. For the reopening of the Turin opera house in 1715 Fiorè composed *Il trionfo d'Amore*. Two of his later operas for Turin, *Sesostri* (1717) and *I veri amici* (1728), were written with G.A. Giai, his successor as *maestro* at the Savoy court.

In a letter to B.G. Marcello from Turin, on 2 February 1726, Fiorè expressed admiration for Marcello's counterpoint; Marcello printed the letter in his collection of psalm settings (Venice, 1726). Quantz, who visited Turin in June 1726 and praised Fiorè's orchestra and its leader Somis, wrote that he regarded Fiorè one of the best Italian composers of church sonatas. Until more scores of his operas come to light, modern judgment of Fiorè's music must be based chiefly on his published trios, a handful of solo cantatas and his surviving choral music.

SVEN HANSELL

Fiorè, Angelo Maria (*b* c1660; *d* Turin, 4 June 1723). Italian cellist and composer. The belief that Fiorè was born in Milan or Turin is conjecture; no 18th-century evidence about his birthplace, childhood or education has come to light. The first information on his career comes from Parma, where he served the Farnese court from 1 May 1688 to 15 February 1695 and played in the Madonna della Steccata church orchestra from 1689 to 15 September 1692. It is not known where he went in 1695, but in the following year he was listed among the 20 composers who contributed music to the opera *L'Etna festivo* performed in Milan. The birth there of his son Andrea Stefano in 1686 indicates an earlier association with Milan. In 1697 the two of them became members of the Accademia dei Filarmonici in Bologna. As cellist at the ducal court in Turin from 1697 until his death in 1723 Fiorè earned a reputation as one of the greatest virtuosos of his day (*HawkinsH*); he is often called the founder of the Piedmontese school of cello playing. Regrettably, little of his cello music survives besides his only publication, the *Trattenimenti da camera* of 1698. This collection of 14 duets is dedicated to one of the Ludovisi princes of Piombino and Venosa, suggesting a link between Fiorè and courts in Tuscany and further south. Between 1704 and 1705 he accompanied the Savoy ambassador to Paris. Although his expenses for this trip were not reimbursed until 1717, archival records (*I-Ta*) show that he earned 1500 lire annually as the Turin court's principal cellist for 25 years.

Fiorentino, Perino. *See* PERINO FIORENTINO.

Fiorenza, Nicola (*d* Naples, 13 April 1764). Italian violinist and composer. His earliest dated composition is a concerto for flute, two violins and continuo of 1726. For some years this highly talented but rather tumultuous individual was teacher of string instruments at the Neapolitan music conservatory S Maria di Loreto. He was elected to this post by a curious procedure. Unable to decide between five candidates for the post, the Loreto governors at their meeting of 22 May 1743 finally put the five names in a box and selected one at random; Fiorenza's name was drawn. He was dismissed on the last day of 1762 after complaints extending over several years that he was maltreating his students. Fiorenza was also a violinist in the Neapolitan royal chapel, to which he was appointed some time before 1750. Records of salary payments to chapel members (*I-Na*) show that he received pay increases on 23 April 1750, 22 May 1756, 24 April 1758 (when he was appointed head violinist of the chapel in succession to Domenico de Matteis, who had just died), and 14 February 1761. His surviving music is in manuscript at the Naples Conservatory S Pietro a Majella. The bulk of it consists of 15 concertos for various combinations of instruments and nine symphonies (many of them containing important solos for string or wind instruments and coming close to belonging to the concerto category). Nine of the concertos are dated and were composed during 1726–8. Several other concertos and symphonies may be assigned to the same approximate period on the evidence of their style and structure. Though a minor figure in the history of instrumental music, Fiorenza deserves more credit than he receives for his part in the development of the concerto and the symphony in southern Italy during the first half of the 18th century.

MICHAEL F. ROBINSON/R

Fiorillo, Carlo (*b* Naples, ?1590–95; *d* after 1616). Italian composer. He is known by a single collection of 21 five-part madrigals (Rome, 1616), which he dedicated to Cardinal Montalto, an important patron of music in Rome. His dedication mentions some canzonettas which have not survived and which he had also dedicated to the cardinal; it is not impossible that he worked for a time in Rome. In his madrigals, to texts drawn mainly from Carlo Fiamma's anthology *Il gareggiamento poetico* (1611), he repeated a limited number of musical ideas: many lines of poetry are set to phrases based on moderately chromatic chords, with identical flexible dotted rhythms and ending with cadences of uniform length.

KEITH A. LARSON

Fiorillo, Federigo (*b* Brunswick, 1 June 1755; *d* after 1823). Italian violinist, viola player and composer, son of IGNAZIO FIORILLO. He reportedly first became proficient on the mandolin and only later turned to the violin. He had probably been touring for some time before his first recorded appearance as a violinist in St Petersburg in 1777. He was in Poland from 1780 to 1781, playing both the violin and the mandolin, and from 1782 to 1784 he was conductor at Riga. In 1785 he played with considerable success at the Concert Spirituel in Paris, and the first of his numerous published works appeared shortly thereafter. He apparently remained in Paris for three years and then went to London, where in 1788 he began to play regularly as viola player in Salomon's quartet. According to Fétis his last public appearance was as soloist in a viola concerto in 1794, but the title-page of his op.29 (trios for flute, violin and viola), published some time between 1802 and 1811, indicates that he continued to play at some public occasions. His works continued to appear from various publishers throughout Europe until about 1817. According to one report, he left London in 1815, and Pohl stated that he spent some time in Amsterdam. It is possible, however, that he remained in London until 1823, when he went to Paris to undergo an operation. Fétis learnt from Fiorillo's publisher Sieber that he returned to London after his treatment.

Fiorillo's works appear to be both conservative and conventional. His violin compositions reflect a virtuoso's technique, but he chose to direct a large part of his prolific creativity (more than 70 opus numbers and some 200 works) towards current fashions, such as light piano pieces, divertimentos and arrangements of popular songs. Unquestionably, he succeeded with the public; his publications appeared in multiple editions throughout most of Europe. As a result, conflicting opus numbers are common, and his total output is in need of bibliographic clarification. Although great surprises are not likely to emerge, it is not possible to judge Fiorillo's achievement based on our present knowledge. Such present-day fame as he has rests almost entirely on one work, his 36 caprices for violin. These are études of good musical quality, and they have taken their place in the violinist's pedagogical repertory beside those of Rode and Kreutzer.

CHAPPELL WHITE

Fiorillo, Ignazio (*b* Naples, 11 May 1715; *d* Fritzlar, Hesse, June 1787). Italian composer, father of FEDERIGO FIORILLO. He studied with Durante and Leo at the Conservatorio di S Maria di Loreto in Naples. His début as an opera composer took place in Venice with *Mandane* (1736), and for the next few years he was active in northern Italy, producing at least seven operas in Venice, Milan and Padua. In 1745 he joined a travelling company; with it he toured central and northern Europe for the next four years. Three intermezzos by him were produced in Prague in 1748. The following year he left the company in Brunswick, where his opera *L'olimpiade* was successfully produced. It was followed in 1750 by *Demofoonte*, and in 1754 Fiorillo was appointed court conductor there. In the next eight years he wrote at least six Italian operas for Brunswick, all to librettos by Metastasio, as well as some church music. In 1762 he took up a similar position at the Hessian court in Kassel. He produced only four new operas there but continued to compose occasional church works, of which his Requiem was especially admired (see Apell). In 1780 he was pensioned and retired to Fritzlar.

Of Fiorillo's 18 or more operas and intermezzos fewer than a third have survived; much of his church music, including the Requiem, has also disappeared. His style was said to be in imitation of Hasse.

CHAPPELL WHITE
(work-list with MARITA P. McCLYMONDS, DON NEVILLE)

Fiorini [Fiorino], **Ippolito** (*b* Ferrara, *c*1549; *d* Ferrara, 1621). Italian composer and lutenist. Court payment records (in *I-MOs*) show that he was *maestro di cappella* at the Este court at Ferrara between the death of Francesco della Viola in March 1568 and the dissolution of the ducal chapel when Ferrara passed into papal control in 1597. From the surviving documentation it is clear that this was an administrative post as much as a musical one. Nevertheless, Fiorini was clearly actively involved not only with the chapel but also with the performances of the renowned *concerto di donne*. He was also in charge of the music at the Accademia della Morte, Ferrara, between 1594 and 1597. Libanori is traditionally regarded as being incorrect in suggesting that he was *maestro di cappella* at Ferrara Cathedral, and Eitner's claim that he was employed at the Gonzaga court at Mantua can only come from a misinterpretation of a payment document relating to the Este *cappella* but kept with the Gonzaga papers (in *I-MAa*). Several letters from him are extant (in *I-Fas*, *MAa* and *MOs*); all are from Ferrara and date from between 1588 and 1615. One six-part and five five-part madrigals by him survive in anthologies (RISM 1582[5], 1583[10], 1586[10], 1588[17], 1591[9] and 1592[14]), and he is also known to have composed a balletto, to words by Guarini, for performance by the famous court *balletto di donne*.

IAIN FENLON

Fiorino, Gasparo (*b* Rossano; *fl* 1571–4). Italian composer and singer. He was probably a singer at S Marco, Venice, about the middle of the 16th century. At the time of the dedication of his *La nobilità di Roma: versi in lode di cento gentildonne romane* (Rome, 1571[8], 2/1573[19]; ed. A. Pugliese, forthcoming) he was a 'musico' in the service of the Cardinal Ippolito d'Este, presumably in his Roman palace; a payment to him is recorded in 1570. Many of the pieces in this publication are dedicated individually to noble Roman ladies, a practice common in poetic anthologies of the period such as those of Mutio Manfredi, and one also occasionally adopted by composers such as Vincenzo Spada in his *Primo libro delle villanelle* (1589). Each of these three-part strophic pieces is printed alongside a lute accompaniment intabulated by Francesco di Parise, 'musico eccellentissimo in Rome'. Strong social connections inform his two other surviving music publications, *Libro secondo [di] canzonelle* and *Libro terzo di canzonelle* (both Venice, 1574), both for three and four voices. The former is dedicated to the ladies of Genoa and is one of the longest publications of its kind; the latter is dedicated to Giovanni Battista Doria and praises the military and naval achievements of various members of this distinguished Genoese family in its preface. The volume contains a number of pieces dedicated to the victors of the Battle of Lepanto (1571) including Marc' Antonio Colonna, Cardinal Gronvelle and Don Juan of Austria. The word 'canzonella' no doubt was intended as a fusion of 'canzonetta' and 'villanella'.

Fiorino almost certainly wrote his own texts. One further publication *Opera nuova chimata la fama libro primo…* (Lyons, 1577) contains sixty-one 'canzonelle alla napolitana' presented in sequence without music. It appears, classified as music, in Israel Sprach's bibliography, but even if a separate music fascicle were published no copies of it are known to have survived. As in his other publications, each of the pieces in the *Opera nuova* is dedicated to individual women; the choices here show him to have been well connected to some of the most prominent Lyonnais families including the Buonvisi, merchants from Lucca.

IAIN FENLON

Fioritura (It.: 'flourish', 'flowering'). Embellishment of a melodic line, either improvised by a performer or written out by the composer. The use of words meaning 'flower' or 'florid' to refer to the process of ornamenting melodies has long been common in most European languages. Jerome of Moravia (13th century) listed various melodic ornaments as 'flos harmonicus', and the Meistersingers of the 16th century referred to their ornaments as 'Blumen' ('flowers'). While 'fioritura' as a musical term would be understood by any Italian, it is (like 'coloratura') notably absent from Italian treatises, where ornamentation is elucidated with more precise terminology ('trillo', 'mordente', 'passaggi' etc.).

See also FLORID.

OWEN JANDER

Fioroni [Fiorone, Florono], **Giovanni Andrea** (*b* Pavia, 1715/16; *d* Milan, 19 Dec 1778). Italian composer. His death certificate (in *I-Mas*) indicates that he was born in 1715, but a document of 1726 (in *I-PAVc*) suggests 1716 as the year of his birth. This is supported by his burial certificate. As stated by Gervasoni, he studied with Leo in Naples for 15 years. On 10 June 1747 he was in Pavia, from where he sent an application for the post of *maestro di cappella* of Milan Cathedral. The competition judges, who included G.B. Martini and G.A. Perti, examined a composition in *stile antico* 'sopra canti fermi ambrosiani' (now in *I-Bc, Md*) and Fioroni was favoured 'per sapere e studio'. He held the post from 16 December 1747 until his death. He also held similar posts at S Marco from 1762 and at S Alessandro and S Maria della Visitazione (where he succeeded G.B. Sammartini) from 1775. He composed a number of pieces for the cathedrals of Como, Bergamo and Vimercate.

A few copies of his music dated in the 1780s and 90s suggest their continued use by his successors; Francesco Bianchi, for one, scored several of Fioroni's works between 1782 and 1783. A century later Fioroni's music was still being performed at S Maria presso S Celso where he had often helped select singers.

Fioroni's sacred music, written mostly for the fairly large forces of Milan Cathedral, is characterized by a strict simple and double contrapuntal style and by pleasing melodic lines often closely related to the text. Works composed for churches outside Milan are often in a freer style, revealing inspired lyrical writing and melodic creativity. The theatrical style of his lost oratorios and opera can probably be gauged from the attractive liturgical works for solo voices. The instrumental music, partly composed before his appointment at Milan Cathedral, displays lively imagination and originality as well as a good knowledge of the instruments for which he was writing. Fioroni was admired by, among others, Burney, La Borde, Manfredini, Florimo and G.B. Martini, whose correspondence with Fioroni still survives (8 letters in *I-Bc*). The Mozarts met Fioroni in 1770 (*Reisenotizen*, 23 January to 24 March), and Leopold described him and Sammartini as 'the best and most respected Kapellmeister of this town, upon whom all rely' (letter of 22 December 1770). Towards the end of his life Fiorini's influence both within and without Milan was considerable. His pupils included the composers Carlo Monza, Quirino Gasparini, Bonesi, Alessandro Rolla and Agostino Quaglia and the castrato Luigi Marchesi. Fioroni was accepted as a member of the Accademia Filarmonica, Bologna, on 24 November 1765 and participated in selecting *maestri di cappella* for various Italian churches.

Fipple. A word varying in meaning from one authority to another, associated with some part of the sound mechanism of the DUCT FLUTE. To Schlesinger and Galpin it was the sharp edge of the lip. To Marcuse and others it represented the whole head of the instrument. To Hunt and Blom it was the block. To Sachs it was the origin of the word 'pipe', deriving from Latin *fibula* and thus referred to the whole instrument. The earliest English usage, according to the *Oxford English Dictionary*, was by Bacon: 'Let there be a Recorder made with two Fipples, at each end one'. The *Concise Oxford Dictionary* defines the fipple as the flue (i.e. the windway). Since nobody can agree what the term means, to avoid further confusion its use should be abandoned.

Firenze (It.). *See* FLORENCE.

Fires of London. English chamber ensemble first formed in 1967 as the Pierrot Players under the joint direction of the composers Peter Maxwell Davies and Harrison Birtwistle. It was originally constituted on the basis of the singer (the soprano Mary Thomas) and five instrumentalists required for Schoenberg's *Pierrot lunaire*, which enabled a varied classical and contemporary repertory to be performed, with extra players added as required. Birtwistle withdrew in 1970, when the new name was adopted, and Davies became sole director. A staged version of *Pierrot lunaire* remained in the ensemble's repertory, which included music-theatre works involving a dramatic and scenic or mixed-media presentation, often with electronic elements. Notably successful examples of these include Davies's own *Vesalii icones*, *Eight Songs for a Mad King*, *Revelation and Fall* and *Miss Donnithorne's Maggot*, of which the ensemble gave the premières, as it did of the chamber operas *The Martyrdom of St Magnus* (1977) and *The Lighthouse* (1980). There also was a high proportion of specially written works by other composers, and the ensemble appeared at festivals in Britain and abroad as well as giving regular London concerts. An adventurous repertory scrupulously rehearsed significantly enlarged its audiences' range of musical experience. In spite of financial problems and changes in personnel (among whom only Mary Thomas and the pianist Stephen Pruslin remained constant throughout), the Fires of London sustained its missionery zeal; it was disbanded by Davies after its 20th anniversary concert in 1987. Among the ensemble's recordings are *Eight Songs for a Mad King*, *Miss Donnithorne's Maggot* and instrumental works by Davies, in addition to the Triple Duo by Elliott Carter, which it also commissioned and first performed (1983, New York).

NOËL GOODWIN

Firk. A lively and capricious English dance of the 17th century. Its name presumably derives from 'firk', meaning a freak, prank or caprice. Davenant's usage (*Man's the Master*, 1668, Act 3 scene ii) – 'Firk your fiddles' – has been taken to mean simply 'play your fiddles', but it is more likely to imply playing them in a frisky and capricious manner. Two firks by Matthew Locke are among the few extant examples of the form (they are in a group of four suites by him; ed., New York, 1947); they are in quick triple time with strongly contrasted iambic and trochaic rhythms. A 'Cuntery Firk', possibly by John Coleman, also survives (in *GB-Cfm* 24.E.15).

MICHAEL TILMOUTH

Firkušný, Rudolf (*b* Napajedla, Moravia, 11 Feb 1912; *d* Staatsburg, New York, 19 July 1994). American pianist of Czech birth. He had piano and composition lessons with Janáček (from 1919), and studied at the Brno Conservatory with Růzena Kurzová (1920–27) and the Prague Conservatory with Vilém Kurz and Rudolf Karel. He studied privately with Kurz until 1931 and composition with Suk (1929–30). Firkušný's own compositions include a piano concerto, first performed in 1930, a string quartet, and several piano pieces and songs. He made his début in Prague in 1922 and pursued an active concert career in central Europe while continuing his training and studies at Brno University. He first played in England in 1933, in North America in 1938, visited South America five years later, and Australia in 1959.

Although best known for his playing of the standard repertory from Mozart to Brahms, Firkušný gave the premières of concertos and other works by, among others, Barber, Ginastera, Hanson, Martinů and Menotti. He was a champion of Dvořák's neglected Piano Concerto, and, not surprisingly, involved himself with the work of his teacher, Janáček, whose complete piano music he recorded. Firkušný was more active in chamber music than many of his colleagues, and recorded sonatas with Pierre Fournier, Erica Morini, Gregor Piatigorsky and William Primrose. He taught at the Juilliard and Aspen schools of music. With an easy command of the instrument, producing a soft-edged sound of pleasing quality, he was a cultivated musician who made an impression less by the force than through the charm and grace of his playing. After many years' absence from his native Czechoslovakia, he returned there for a triumphant series of concerts in 1990.

His brother Leoš (*b* Napajedla, 16 July 1905; *d* Buenos Aires, 9 July 1950) was a musicologist and critic, and was one of the main initiators of the Prague Spring Festival after World War II. Apart from his studies of the composers Vilém Petrželka and Karel Weis, he wrote mainly about Janáček, particularly his operas and his relationship to Czech folk music.

MICHAEL STEINBERG/R

Firmian, Count **Karl** [Carlo] (*b* Trent, 1716; *d* Milan, 1782). Austrian patron of music. Born into a noble family, he studied initially for the priesthood in Bavaria and continued his education in Innsbruck and Salzburg. After travelling in the Netherlands, France and Italy, he was (from 1745) a counsellor to Francis, Maria Theresa's

husband and later Emperor Francis I. In 1758 he became Austrian minister plenipotentiary of Milan, and in this capacity he was responsible for many reforms in science, education and art. During Mozart's four visits to Milan (1770–73) Firmian was his most important patron: Mozart performed several tunes at his residence, the Palazzo Melzi, and his support was instrumental in the commissioning of many of Mozart's Milanese works, notably *Mitridate, re di Ponto*. His opulent lifestyle, library and portrait gallery are described by Burney, who visited Milan in 1770.

HARRISON JAMES WIGNALL

Firsova, Elena [Yelena] **(Olegovna)** (*b* Leningrad [now St Petersburg], 21 March 1950). Russian composer. She began to compose at the age of 12 and, four years later, began attending music college in Moscow, where she quickly blossomed as the schoolgirl composer of ten pieces (including opp.1–3) that still figure in her list of works. Entering the Moscow Conservatory in 1970, she became a composition pupil of Aleksandr Pirumov for the next five years; she also studied analysis with Yury Kholopov. A further ten works (opp.4–13) date from these student years, including her first three orchestral works and her first chamber opera.

The 15 years after leaving the conservatory took her from op.14 to op.47 – not counting a number of smaller pieces without opus numbers. Her music was first performed abroad in 1979, and her first foreign commission (from the BBC) came in 1984. Within a few years, changes occurred internationally and personally, and not long after the travel barriers were removed, Firsova and her husband, the composer Dmitry Smirnov, left Moscow. Arriving in London in April 1991 with their two young children, both composers survived by writing music to commission (Firsova herself completing six works in 1991 alone) and by means of short-term residency invitations from Cambridge University and from Dartington College of Arts; they were attached to the music department at the University of Keele from 1993 to 1998 and in 1998 they became British citizens.

Firsova's work may perhaps best be likened to that of the short-story writer; with the exception of her chamber opera, *Solovey i roza* ('The Nightingale and the Rose') few of her pieces extend much beyond a quarter of an hour's duration and most are cast in a single unbroken span. As in the one movement Piano Sonata (1986) she once thought to dedicate to Alban Berg, her mature harmonic language of the 1980s reveals its indebtedness to the early 20th-century Viennese composers; at the same time, loose-limbed rhythms and often unbarred metre owes much to the French influence of Messiaen and Boulez promoted by her friend and unofficial mentor Edison Denisov.

Like the partly private language of the poets she so admires and has so often set, her later musical secrets are contained by a more personalized library of characteristic gestures that may, but often do not, suggest narrative threads of a noticeably motivic kind. While the background pulse of her music is generally slow-moving, contrasts of speed and of mood are achieved less through metre or theme than through an increase or decrease in the amount of foreground activity that continues to animate the textures of the filigree style that she has made her own.

WORKS

STAGE

librettos by the composer

Pir vo vremya chumï [A Feast in Time of Plague], op.7 (chbr op, after A. Pushkin), 5 solo vv, chbr chorus, orch, 1972
Solovey i roza [The Nightingale and the Rose], op.46 (chbr op, 1, after C. Rossetti and O. Wilde), 3 solo vv, SSAATTBB, inst ens, 1991; London, Almeida, 7 July 1994

ORCHESTRAL

5 p'yes [Pieces], op.6, 1971; Chbr Music, op.9, str orch, 1973, withdrawn; Vc Conc. no.1, op.10, 1973; Stansï [Stanzas], op.13, perc, hp, cel, str, 1975; Vn Conc. no.1, op.14, 1976; Postlyudiya [Postlude], op.18, hp, orch, 1977; Chbr Conc. no.1, op.19, fl, str, 1978 (Moscow, 1984); Chbr Conc. no.2 (Vc Conc. no.2), op.26, 1982; Vn Conc. no.2, op.29, 1983; Chbr Conc. no.3, op.33, pf, orch, 1985; Osennyaya muzïka [Autumn Music], op.39, chbr orch, 1988; Nostal'giya, op.42, 1989; Cassandra, op.60, 1992; Mnemosyne, op.73, chbr orch, 1995; Chbr Conc. no.5, vc, hp, cel, str, 1996; Chbr Conc. no.6, pf, orch, 1996

VOCAL

words by O. Mandel'stam unless otherwise stated

Vocal-orch: Tristia (cant), op.22, 1v, chbr orch, 1979; Kamen' [The Stone] (cant), op.28, 1v, orch, 1983; Taynïy put' [Secret Way], op.52, 1v, orch, 1992
Choral: 3 stikhotvoreniya Mandel'shtama [3 Mandel'stam Poems], op.3, chbr chorus, 1970; Kolokol [The Bell] (S. Yesenin), 1976, collab. Smirnov; Proritsaniye [Augury] (W. Blake), op.38, chorus, orch, 1988; The Word, op.75, chorus, orch, 1995; The River of Time, mixed chorus, chbr orch, 1997
1v, ens: Sonetï Petrarki [Petrarch's Sonnets] (trans. Mandel'stam), op.17, 1v, inst ens, 1976 (Moscow, 1983); Noch' [Night] (B. Pasternak), op.20, 1v, sax qt, 1978; Sonetï Shekspira [Shakespeare's Sonnets], op.25, 1v, sax qt, 1981, arr. as op.25a, 1v, org, 1988; Zemnaya zhizn' [Earthly Life] (cant), op.31, S, chbr ens, 1984; Lesnïye progulki [Forest Walks] (cant), op.36, S, fl, cl, hp, str qt, 1987; Stigiyskaya pesnya [Stygian Song], op.43, S, ob, perc, pf, 1989; Rakovina [Sea Shell], op.49, S, cl, va, vc, db (1991); Omut [Whirlpool], op.50, 1v, fl, perc, 1991; Silentium, op.51, 1v, str qt, 1991; Rasstoyaniye [Distance] (M. Tsvetayeva), op.53, 1v, cl, str qt, 1992; Before the Thunderstorm, op.70, S, chbr ens, 1994; The Secrets of Wisdom (O. Khayyam), op.82, S, fl, rec, perc, 1997
1v, pf: 3 romansa (Pasternak), 1966–7, nos.2–3 (Moscow, 1986); Tvorchestvo [Creation] (A. Akhmatova), song cycle, high v, pf, 1967, nos.1 and 4 (Moscow, 1979); 3 romansa (V. Mayakovsky), 1969; Osenniye pesni [Autumn Songs] (Tsvetayeva, Mandel'stam, A. Blok, Pasternak), op.12, 1974; 3 stikhotvoreniya Mandel'shtama, op.23, 1980; Son [The Dream] (Pasternak), op.39a, Mez, pf, 1988; No it is Not a Migraine, op.76, Bar, pf, 1995
Other: 7 Khokku [7 Haiku] (M. Basyo), op.47, S, lyre, 1991; Insomnia (Pushkin), op.69, 4 male vv (A, 2 T, Bar), 1993

INSTRUMENTAL

5 or more insts: Scherzo, op.1, fl, ob, cl, bn, pf, 1967 (Moscow, 1975); Kaprichchio, op.15, fl, sax qt, 1976 (Moscow, 1979); Muzïka dlya 12 [Music for 12], op.34, 1986; Chbr Conc. no.4, op.37, hn, 13 pfmrs, 1987; Odyssey, op.44, fl, hn, perc, hp, vn, va, vc, 1990
Str Qts: no.1 (5 Pieces), op.4, 1970 (Moscow, 1983); no.2, op.11, 1974; no.3 'Misterioso', op.24, 1980 (Hamburg, 1982) [In memoriam Igor Stravinsky]; no.4 'Amoroso', op.40, 1989; no.5 'Lagrimoso', op.58, 1992; no.6, op.71, 1993; no.7 'Compassione', op.72, 1995; no.8 'The Stone Guest', op.74, 1995; no.9 'The Door is Closed', op.79, 1996

Other: Pf Trio, op.8, 1972; Verdehr-Terzett, op.45, cl, vn, pf, 1990; Far Away, op.48, sax qt, 1991; Meditation in the Japanese Garden, op.54, fl, va, pf, 1992; Phantom, op.61, 4 viols, 1993; Duos incl. opp.5, 27, 30, 55, 57, 59, 62, 63, 66, 67, 68 and numerous solo works

Also film scores (with Smirnov) and arrs., incl. vs of Denisov: L'écume des jours, prepared with Smirnov, 1980

Principal publishers: Boosey & Hawkes, Muzïka, Hans Sikorski, Sovetskiy kompozitor

SUSAN BRADSHAW

First-movement form. *See* SONATA FORM.

First subject group (Ger. *Hauptsatz*). *See* SUBJECT GROUP.

Firth, Hall & Pond. American firm of music publishers and music dealers. It made woodwind and brass instruments, pianos and guitars, and imported a wide variety of musical goods. Based in New York, it was among the most important of American music publishers, producing material for church, home, concert hall, school and military bands; it was also one of the few firms in the USA to publish European classical music. It published some of the better-known American composers such as Gottschalk and H.C. Work, songs by Stephen Foster and tunes made popular by Christy's Minstrels.

The firm's principal partners were John Firth (*b* Yorkshire, 1 Oct 1789; *d* Newtown, Long Island, 10 Sept 1864), William Hall (*b* Sparta, NY, 13 May 1796; *d* New York, 3 May 1874) and Sylvanus Billings Pond (*b* Milford, MA, 5 April 1792; *d* Brooklyn, NY, 12 March 1871). Firth emigrated to the USA about 1810 and learnt to make flutes and fifes in the shop of Edward Riley. Hall was apprenticed to a musical instrument maker in Albany and went to work for Riley in New York about 1812. Pond also went to Albany in his youth, engaging in the commercial music business first independently and then in partnership with John Meacham.

Firth set up a business at 8 Warren Street, New York, in 1815, and Hall did so on Wooster Street in 1820; in 1820 they formed a partnership at 362 Pearl Street. In 1832 they were joined by Sylvanus Pond and moved to 1 Franklin Square. Pond wrote many Sunday school songs and some secular music. His *Union Melodies* for Sunday school singing and *The United States Psalmody* (1841) for choirs and singing societies were very successful. The firm continued until 1833 when Pond left the business for a few years, returning in 1837; his name appeared again in the company name from 1842 onwards.

In 1834 the firm began investing in the woodwind-making firm of Camp & Hopkins in Litchfield, CT, completing the purchase by 1845. They also established a piano factory at Williamsburg, Long Island, and in 1845 acquired additional space at 239 Broadway. When the firm was dissolved in 1847, William Hall & Son occupied 239 Broadway, and Firth, Pond & Co., who published most of Stephen Foster's songs, continued at 1 Franklin Square. A further split in 1863 resulted in the firms of Firth, Son & Co. and William A. Pond & Co. (son of Sylvanus B. Pond). In 1867 Firth, Son & Co., and in 1875 William Hall & Son, were acquired by Oliver Ditson. William A. Pond & Co. continued into the 20th century.

Fischer, Adam (*b* Budapest, 9 Sept 1949). Hungarian conductor. He studied at the Kodály School in Budapest and went on to study conducting and the piano at the Bela Bartók Conservatory, also working with Hans Swarowsky in Vienna and Franco Ferrara in Venice and Siena. He held posts at Graz (1971–2), St Pölten (1972–3) and the Vienna Staatsoper, where he was assistant conductor in 1973–4. In 1973 he won the Guido Cantelli International Conducting Competition at La Scala, Milan, and the following year was appointed music director at the Finnish National Opera in Helsinki. Similar posts followed at the Karlsruhe Opera (1977–9), Freiburg (1981–4) and the Kassel Opera (1987–92). Fischer made his début at the Paris Opéra in 1984 in *Der Rosenkavalier*, conducted *Die Zauberflöte* at La Scala in 1986 and made his Covent Garden début in *Die Fledermaus* in 1989. In 1990 he conducted the first performance of Wolfgang von Schweinitz's *Patmos*. Fischer is the founder and music director of the International Haydn Festival at Eisenstadt and has recorded the complete Haydn symphonies with the festival's resident Austro-Hungarian Haydn Orchestra. Outstanding among his other recordings are several works by Bartók, notably *Bluebeard's Castle*, which he has recorded both for CD (with the Hungarian State Orchestra) and for BBC TV.

JESSICA DUCHEN

Fischer, Annie (*b* Budapest, 5 July 1914; *d* Budapest, 10 April 1995). Hungarian pianist. She studied at the Liszt Academy of Music with Arnold Szekely and Dohnányi. She made her début at the age of ten playing Beethoven's First Concerto, and two years later played Mozart's Concerto in A K488 and the Schumann Concerto with the Tonhalle Orchestra in Zürich. In 1933 she won the Franz Liszt International Competition in Budapest, astonishing both the jury and the audience with the maturity and

brilliance of her performance of Liszt's B minor Sonata. She embarked on an international career, interrupted by the war years which she spent mainly in Sweden. In 1949, 1955 and 1965 she received Hungary's highest cultural award, the Kossuth Prize. Fischer made her American début in 1961, playing Mozart's Concerto in E♭ K482 with Szell and the Cleveland Orchestra; but although she toured throughout the world she remained essentially a European-based artist. She performed the complete cycle of Beethoven concertos with Klemperer at the Royal Festival Hall, London.

Fischer established a reputation as a pianist of unique visionary intensity. Her range of keyboard colour was wide, her command of structure formidable. Mozart, Beethoven and Schubert were central to her repertory, but she could be equally masterly in Schumann, Chopin and Brahms. Inspirational and unpredictable, she disliked recording. But her discs of Mozart's concertos K467 and K482 and of works by Bartók, Beethoven, Schubert and Schumann are exceptional. A recording of Chopin's G minor Ballade taken 'live' from a Moscow recital in 1949 shows her at her most volatile and thrillingly spontaneous. The depth and spiritual serenity she achieved on her great days in, say, the finale of Schumann's C major Phantasie, were peculiarly her own; and in her performance of the fugue from Beethoven's Hammerklavier Sonata, offered as an encore at her final London appearance, she showed herself incandescent to the last. Fischer recorded the complete cycle of Beethoven sonatas for Hungaroton over a number of years, but intensely self-critical as ever, she disapproved of their issue.

BRYCE MORRISON

Fischer, Anton (*b* Ried, Swabia, bap. 13 Jan 1778; *d* Vienna, 1 Dec 1808). German composer and tenor, brother of Matthäus Fischer. After initial study with his brother he went to Vienna, joined the chorus of the Josefstadt Theatre and in 1800 went over to Schikaneder's Freihaus-Theater auf der Wieden. Apart from singing small roles he also composed Singspiels for the company and became assistant Kapellmeister under Ignaz von Seyfried in 1806, by when the company was established in its new home, the Theater an der Wien. By the time of his early and sudden death he had written a series of once-popular stage works that show a clear ability to meet the current demand for light, melodically pleasing songs and simple ensembles.

Of the Singspiels attributed to him in secondary literature, the following may be accepted as authentic (all produced at the Theater an der Wien unless otherwise stated): *Lunara, Königin des Palmenhains* (text by Waldon), Freihaus-Theater, 20 September 1800; *Die Entlarvten* (Schikaneder), 19 March 1803; *Die Scheidewand* (Castelli), 2 June 1804; *Die Verwandlungen*, 9 May 1805; *Swetards Zaubertal (Zaubergürtel)*, (Schikaneder), 3 July 1805 (41 performances in little over a year); *Die Festung an der Elbe* (Castelli), 3 May 1806; *Das Singspiel auf dem Dache* (Treitschke), 5 February 1807; *Das Hausgesinde*, 18 January 1808 (his greatest triumph, given 115 times in the Theater an der Wien, staged in many other places, and followed by two sequels); *Theseus und Ariadne* (Stegmayer), 11 March 1809. Among Fischer's arrangements *Raoul der Blaubart*, 1804, and *Die zwei Geizigen*, 1805, both of Grétry originals, deserve mention. *Das Milchmädchen von Bercy*, a Singspiel with libretto by Treitschke, was given in the two court theatres in May 1808, and *Die Ruinen von Portici* is stated to have been given at Stuttgart in 1807. Fischer also composed two cantatas, two masses, some songs, marches and piano pieces. His comic trio *Die Advokaten*, published by Eder in 1804, was arranged by Schubert in December 1812 (D37) and published by Diabelli as op.74 in May 1827.

PETER BRANSCOMBE

Fischer, Carl. American firm of music publishers. Carl Fischer was born in Buttstädt, Thuringia, in 1849. Trained in music, he went to New York in 1872 and opened a musical instrument shop at 79 East 4th Street. He recognized the need for musical arrangements for the diversely constituted orchestras that prevailed at the time, and began to reproduce music (with permission) in longhand, eventually adopting lithography. As demand increased, he employed an engraver and an arranger, and by 1880 he had to move to larger quarters at 6 Fourth Avenue, facing Cooper Union and its art school, and close to the principal concert halls of the city.

Fischer pursued a dual objective, both publishing music and selling instruments, music and methods (most of which were imported from Europe). Endeavouring to provide music suited to the tastes and styles of the period, he responded to the growing interest in band music and became the principal publisher of such figures as Arthur Pryor, John Philip Sousa and Henry Fillmore. Publication of *The Metronome*, a journal for bandleaders, was begun in 1885 and the firm still prides itself on its extensive band catalogue.

The field of school music received particular impetus under the leadership of Walter S. Fischer, who succeeded his father as president in 1923 (at which time the firm moved to its present 12-storey structure at 56–62 Cooper Square). The firm had always published the standard repertory of choral and orchestral music, and in 1907 began an invaluable monthly journal for professional musicians and music teachers, the *Musical Observer* (incorporated into the *Musical Courier* in 1931); it was to make important contributions with its accessible arrangements and easy methods (to replace the standard manuals). Leading instrumental performers provided arrangements of classical and contemporary works that have become standard material for concerts, recitals and masterclasses; Gustave Reeve was director of publications 1945–55.

In 1946 Frank H. Connor succeeded his father-in-law as president. He continued the founder's policies by publishing an increasing number of new works, and giving encouragement to young composers. In the 1960s the firm participated in the Contemporary Music Project, sponsored by the Ford Foundation, and other similar undertakings, as well as the Ford Foundation's subsequent Recording-Publication Project which encouraged collaboration between publishers and recording companies in the cause of contemporary music.

Composers represented by Carl Fischer, Inc. include Norman Dello Joio, Lukas Foss, Karl Kohn, John La Montaine, Peter Mennin, Douglas Moore, Randall

Thompson and Virgil Thomson. Among the most important items in the Fischer catalogue are the Coopersmith edition of *Messiah* and the more recent addition of several early works by Webern.

Frank Hayden Connor died in 1977 and was succeeded by his son, Walter Fischer Connor, who became President and Chairman of the Board. During his tenure, Fischer expanded its retail sales in New York and through branch offices in Chicago and Boston. Connor was also Chairman of Boosey & Hawkes which Fischer acquired in 1986. After Connor's death in 1996 Charles Abry, the great-grandson of the firm's founder, was chosen as the new President. Under his leadership the firm continues to maintain its large diversified catalogue that includes educational literature as well as concert music, while expanding its horizons with new acquisitions such as Band Music Press.

W. THOMAS MARROCCO, MARK JACOBS/GEORGE BOZIWICK

Fischer, Edwin (*b* Basle, 6 Oct 1886; *d* Zürich, 24 Jan 1960). Swiss pianist and conductor. From 1896 to 1904 Fischer attended the Basle Conservatory, where he was a pupil of Hans Huber. He then studied for some years with the Liszt pupil Martin Krause at the Stern Conservatory in Berlin. By the 1920s he was established as one of Europe's leading pianists, playing both 19th-century repertory and the then relatively little-played music of Bach and Mozart. He also formed a trio with the cellist Enrico Mainardi and the violinist Georg Kulenkampff (replaced after his death in 1948 by Wolfgang Schneiderhan). As a conductor he directed the Lübeck Musikverein and the Munich Bachverein in the late 1920s, and then founded his own chamber orchestra in Berlin, with which he conducted concertos from the keyboard. He taught at the Stern Conservatory and later at the Berlin Hochschule für Musik, and after returning to Switzerland in 1943 held masterclasses in Lucerne. Among his pupils were Conrad Hansen, Reine Gianoli, Paul Badura-Skoda, Alfred Brendel and Sequeira Costa. Health problems forced him to give up regular concert appearances after 1954. He provided for the establishment of the Edwin-Fischer-Stiftung, a foundation to help young musicians and those in need.

He composed songs, short piano pieces and cadenzas to some of the piano concertos of Mozart and Beethoven, and edited Mozart's piano sonatas, Bach keyboard works, and (with Kulenkampff) Beethoven's violin sonatas.

Fischer's repertory was wider than has sometimes been thought, but it was centred on a selection of composition of particular importance to him. His records, still admired today, are mainly devoted to these works; they include concertos and solo works by Bach, Mozart and Beethoven, Schubert's Impromptus, *Moments musicaux* and 'Wanderer' Fantasy, and the first complete recording of Bach's *Das wohltemperirte Clavier*. This legacy is supplemented by a number of live recordings, including some with his trio, which have been issued since his death.

Fischer's playing was not technically flawless, but he was noted for his integrity, expressiveness and beauty of tone. In the context of his time he was a progressive and scholarly interpreter, insisting on fidelity to the text and accurate editions, and he welcomed the influence of Busoni and Toscanini. He considered that one of the greatest secrets of interpretation lay in understanding a composition's harmonic progressions; but, he wrote, 'our aim should not be pure soil and sterile air in which nothing will grow'.

ROGER SMITHSON

Fischer, Emil (Friedrich August) (*b* Brunswick, 13 June 1838; *d* Hamburg, 11 Aug 1914). American bass of German birth. He studied with his parents (both opera singers) and made his début in Graz as the Seneschal (a tenor role) in Boieldieu's *Jean de Paris* (1857). He sang baritone roles with the Danzig Opera (1863–70); at some point during the 1870s he began to sing even lower roles. After seasons with the Rotterdam Opera (1875–80) and the Königliche Sächsische Oper, Dresden (1880–85), he made his Metropolitan Opera début in November 1885 and became a mainstay of the company during its German seasons. He sang Hans Sachs in the first American *Meistersinger* (4 January 1886); his was long considered the definitive portrayal. Although renowned for Wagnerian parts (including Wotan, Hagen, King Henry and King Mark), he was equally comfortable in the French and Italian repertory: he sang Boito's Mephistopheles and Verdi's Ramfis; he also sang the High Priest in Goldmark's *Die Königin von Saba* and the title role in Cornelius's *Der Barbier von Bagdad*. After Fischer retired from the Metropolitan in 1898, he taught singing in New York until he returned to Germany shortly before his death.

DEE BAILY

Fischer, Georg. *See* PISCATOR, GEORG.

Fischer, Irwin (*b* Iowa City, IA, 5 July 1903; *d* Wilmette, IL, 7 May 1977). American composer, conductor and organist. He took an arts degree at the University of Chicago (1924) and then studied at the American Conservatory in that city (MMus 1930). In 1928 he began to teach at the American Conservatory, where he was appointed dean in 1974. His later studies were with Boulanger in Paris (1931), with Kodály in Budapest (1936), and with Malko and Paumgartner at the Salzburg Mozarteum (1937). Active in the musical life of Chicago, he conducted several orchestras in the area and held important organ posts. Though basically conservative, his compositional style is quite individual. In the 1930s he developed a polytonal technique that he termed 'biplanal'. The Piano Sonata of 1960 marked a turning towards systematic serial structures, to which his work had long pointed. Fischer's orchestral works show the full

extent of his range; also of importance are the songs, which display an extraordinary variety of styles and techniques. His writings include contributions to *Clavier* and *A Handbook of Modal Counterpoint* (New York, 1967, with S. Roberts).

EDITH BORROFF

Fischer, Ivan (*b* Budapest, 20 Jan 1951). Hungarian conductor, brother of ADAM FISCHER. He studied the cello and composition at the Bela Bartók Conservatory in Budapest and went to Vienna to work with Hans Swarowsky (1971–4). He undertook additional studies in Baroque interpretation with Nikolaus Harnoncourt in Salzburg in 1975 and this area of repertory has remained one of his particular interests. First prizes followed in the Florence Conducting Competition in 1974 and the Rupert Foundation Competition in London in 1976; the same year he made débuts at the Royal Festival Hall with the RPO and at the Zürich Opera. In 1979 he became music director of the Northern Sinfonia in England, a post he held until 1982, during which time he also toured with the LSO. In 1983 he founded the Budapest Festival Orchestra, which soon won public and critical acclaim for the liveliness and precision of its performances. Fischer's recordings with the orchestra include a particularly fine disc of the Bartók piano concertos with Zoltán Kocsis. A year after the launch of the Budapest Festival Orchestra Fischer was appointed music director of Kent Opera, with which he worked until the company lost its Arts Council funding and was forced to close down in 1989; productions included *Agrippina*, *Le nozze di Figaro*, *Le comte Ory*, *Carmen* and many others. He was named principal guest conductor of the Cincinnati SO in 1988 and has appeared with other leading orchestras in the USA and Europe, including the St Paul Chamber Orchestra, the Royal Concertgebouw Orchestra, the Berlin PO and the Israel PO.

JESSICA DUCHEN

Fischer, J(oseph). American firm of music publishers. Joseph Fischer (*b* Silberhausen, 9 April 1841; *d* Springfield, OH, 24 Nov 1901) emigrated with his brother Ignaz to the USA in their youth, and established the business of J. Fischer & Brother at Dayton, Ohio, in 1864. When the firm moved to New York (1875), Joseph became sole proprietor, being succeeded at his death by his sons George and Carl T. Fischer. In 1906 the firm was incorporated, with George as president and Carl as treasurer; in 1920 George's sons joined the business, Joseph as secretary and Eugene as assistant secretary. At first the firm specialized in music for the Roman Catholic church; later it published piano music by Abram Chasins, Hans Barth and Guy Maier, as well as many songs by Cadman, Strickland, Eastwood Lane, J.P. Dunn, Samuel Gaines and Howard McKinney. It had a particularly large output of octavo choral music, including compositions by F.C. Bornschein, Harvey Gaul, William Lester, A. Walter Kramer, J.W. Clokey, Cecil Forsyth and Cyr de Brant; the catalogue also included two operas by Deems Taylor (*The King's Henchman* and *Peter Ibbetson*). In its last years the firm published some organ and orchestral music. It was acquired in 1970 by Belwin-Mills. *(DichterShapiroSM; Thompson9)*

ERNST C. KROHN

Fischer, Jan F(rank) (*b* Louny, northern Bohemia, 15 Sept 1921). Czech composer. He studied with Řídký first at the Prague Conservatory (1940–45) and then in the older composer's masterclasses (1945–8); at the same time he attended lectures on musicology and comparative literature at the university. He was a committee member of the Přítomnost association for contemporary music (1945–9) and of the Union of Czechoslovak Composers (1956–67). In 1990 he received a doctorate from Prague University.

Fischer is a versatile composer, his work permeated by Stravinskyan neo-classicism and by folksong, notably that of Czech and other Slavonic peoples. There are also elements of jazz. His melodic invention and technical fluency often facilitate the synthesis of highly varied ideas, particularly in the film scores. The music for *Hrnečku vař* ('Cook, Pot') won first prize at the 1953 Venice Biennale, and that for *Dědeček automobil* ('Grandfather Automobile') took second prize at the 1958 Brussels exhibition, where the *Pražské jaro* ('Prague Spring') score gained Fischer the prize of the international jury. He has also worked extensively for the stage and for broadcasting, composing much incidental music (many of the songs from these scores became popular numbers) and becoming associated, in particular, with the successful Czech television series 'There was Once a House'. In concert works Fischer's style is characterized by lively rhythm, striking colours and brilliant use of winds, while humour, lightness and wit dominate most of the operas.

OLDŘICH PUKL/JAN LEDEČ

Fischer, Johann (*b* Augsburg, 25 Sept 1646; *d* Schwedt, Pomerania, ?1716/17). German composer and violinist. He studied as a boy with the Augsburg Kantor Tobias Kriegsdorfer. In 1661 he went to Stuttgart to study with Samuel Capricornus, after whose death in 1665 he went to Paris and spent five years as one of Lully's copyists. He returned to Stuttgart in 1673 and a year later settled in Augsburg, where in 1677 he is heard of as a church musician. In 1683 he became a violinist at the Ansbach court chapel, where he stayed for three years as player, teacher and composer. From 1690 to 1697 he held a similar appointment in Mitau (now Jelgava, Latvia) with Duke Friedrich Casimir of Kurland. In the late 1690s he seems to have developed a restless passion for travel and in the first ten years of the 18th century he was constantly moving around Europe. In 1700 he sought employment in Poland, in 1701 in Lüneburg. In the latter year he became Konzertmeister to Duke Friedrich Wilhelm Mecklenburg at Schwerin. In 1704 he travelled to Copenhagen, where he hoped to gain employment at court but was disappointed. He was in Bayreuth in 1707, went to Scandinavia again in 1710 and contemplated a visit to England. He spent his last years as Kapellmeister to Margrave Philipp Wilhelm of Brandenburg-Schwedt. According to Mattheson he died at the age of 70.

Fischer was one of those who, like Kusser, wholeheartedly transplanted the French style of Lully into German music; several of his works reveal this influence. His surviving chamber music leaves no doubt about his gifts. His melodies are fresh and original, his rhythms and harmony varied and engaging. His music was widely played, and highly praised by Mattheson. Fischer was an important pioneer in requiring scordatura tunings in some of his writing for the violin and even for the viola.

GWILYM BEECHEY

Fischer, Johann Caspar Ferdinand (*b* Schönfeld, nr Carlsbad [Karlovy Vary], ?6 Sept 1656; *d* Rastatt, 27 Aug 1746). German composer. His italianate vocal compositions, liturgical organ works in the German tradition, and orchestral and keyboard works influenced by Lully were of high quality and influenced the generation of composers before J.S. Bach, as can be seen from references to Fischer in the preface to J.A. Schmierer's *Zodiaci musici Pars I* (1698) and in encyclopedia articles by T.B. Janovka (1701), Mauritius Vogt (1719) and J.G. Walther (1732).

1. Life. Fischer came from a family of craftsmen and attended the Piarist grammar school, or at least its final class, at Schlackenwerth in the Egerland, the residence of Duke Julius Franz of Saxe-Lauenburg. He must also have received a good basic musical education there, for the Piarist order performed contemporary music in its schools and churches and expected active participation from its members. He may have been first taught composition by the Kapellmeisters and court musicians Johann Hönel and Augustin Pfleger, and by Georg Bleyer. Since Duke Julius Franz sent gifted musicians to receive further training elsewhere, and had connections with the Dresden court, Fischer may have acquired his high degree of contrapuntal skill from Christoph Bernhard in Dresden. There is no evidence that he ever studied with Lully in Paris. Lully's works were known and performed in Bohemia through printed scores and from Georg Muffat's visit to Prague in 1677. Fischer could have made an intensive study of them during his journeys to Prague and Schloss Raudnitz on the Elbe in the course of his professional duties.

In 1689 or earlier Duke Julius Franz appointed Fischer to succeed Pfleger as Kapellmeister in Schlackenwerth; his name appears with that title in financial statements relating to the weddings of the two princesses in 1690. After the partition of the state at the end of 1690 Fischer may have been appointed Hofkapellmeister to Margrave Ludwig Wilhelm of Baden. The margrave had married the heiress of Schlackenwerth, Princess Sibylla Augusta, and made his residence there at the time of the war with France. There is clear evidence of Fischer's position in the titles of his printed works from 1695 onwards. The court moved to Rastatt in 1705, but because of reductions in the personnel during the war years Fischer did not accompany it. It was not until October 1715, after a Piarist foundation had been set up in the city, that he was finally given a post there, which he held until his death.

Fischer's link with the Augsburg publishing firm of Lorenz Kroninger and Gottlieb Göbel, which issued his

opp.1, 2, 3 and 5, was probably provided by the cathedral organist Johannes Speth, the son of a schoolmaster from Speinshart where there was a Premonstratensian monastery. Speth may have met Fischer through the Premonstratensian monastery of Tepl near Marienbad, bordering on the Schlackenworth estates. He presented Fischer's op.1 to the cathedral chapter of Augsburg in 1694, and his op.3 in 1701, and in a letter he mentioned making corrections to op.3. In 1691 Fischer married Maria Franziska Macasin, daughter of the mayor of Joachimsthal. His young wife's background, and the identity of his children's godparents, show that he was highly regarded in the circles where he moved. After his first wife's early death in 1698 Fischer re-married, probably at the beginning of 1700, and this marriage lasted until 1732.

The sacred works, operas and compositions for court festivities that Fischer wrote in Rastatt are all lost; only some texts survive. Two collections of compositions for keyboard instruments were published without opus numbers. Fischer may have met the engraver and publisher Johann Christian Leopold of Augsburg through the 23 *chinoiserie* engravings done at Schloss Ettlingen in Baden in January 1729. Schloss Ettlingen was Margravine Sibylla Augusta's residence in her later years, and one of the series of engravings shows the Hofkapelle in Chinese costume. A catalogue of Leopold's (in the Bavarian State Library, Munich) indicates that Fischer's two collections, *Praeludia et Fugae* for organ and *Musikalischer Parnassus*, must have appeared at the latest in 1736 (not 1738 as E.L. Gerber suggested for the *Musicalischer Parnassus*). The volume of organ music entitled *Blumen Strauss* was a reprint of the *Praeludia et Fugae*.

2. Works. Fischer's works for the Piarists' didactic theatre, as well as his staged dialogues and as dramatic works for court festivals, cannot be assessed, since none of them seems to have survived. Most of the texts were by the Viennese father superior of the Piarist monastery, Martinus a Sancto Brunone (1662–1733), a talented writer in both Latin and German; his lay name was Johann Jakob Schubart. French influence was probably evident in the dances, which, like those in Lully's operas, were part of the action rather than being performed at the end of the acts. The chorus, too, was employed repeatedly, not just at the end.

The eight surviving masses, like the lost requiem, are mostly for soloists, chorus, instruments and continuo. Fischer preferred chamber music instrumentation. Only one, *Magnae exspectationis*, is a *missa solemnis* with trumpets. The *Missa in contrapuncto* is of the *missa quadragesimalis* type, for voices and continuo only. There are three unusual features in this penitential mass: first, Fischer set two different Kyries, one for Advent and one for Lent; second, it is a *missa integra* on sacred melodies, not a *missa brevis* (Kyrie and Gloria) such as Knüpfer, Selle, Bernhard, Telemann and others wrote; third, Fischer worked a Gregorian melody, the *tonus in directum*, into the Gloria. All Fischer's masses show a high degree of contrapuntal skill in strettos, inversions, augmentations, diminutions, double counterpoint and so on. Ostinato sections, such as the final section of the Gloria of the *Missa Inventionis sanctae crucis* or the Benedictus of the *Missa Sancti Michaelis archangeli*, suggest a knowledge of north Italian and Roman settings of the Ordinary, for instance the *Messa sopra l'aria del Gran Duca* by Merula (1652) and the *Missa a quinque et novem* by Carissimi (1666). The same 'Amen' after the Gloria and Credo, the same 'Hosanna' for the Sanctus and Benedictus, and a return to earlier music in 'Agnus Dei' or 'Dona nobis pacem' all serve the purpose of formal unification. The 'Symphonia' after the Credo in the *Missa Inventionis sanctae crucis* may be intended as instrumental offertory music on the pattern of the *offertoires* by French composers such as Nivers, Raison and Couperin.

It seems strange that, with so many settings of the Ordinary to his credit, Fischer did not publish any masses, as did Kerll in Munich and M.F.X. Wentzely and Gunther Jacob in Prague. One reason may have been his straitened financial circumstances, particularly between 1705 and 1715; another may have been that his settings sometimes called for large forces: five solo vocal parts, a five-part string orchestra and a double choir.

The offertories are settings of non-liturgical texts. Some are scored for solemnity of effect (the *Offertorium in dedicatione templi* and the *Concertus de sancta cruce*), and they are diverse in form and always well-rounded. The printed psalms and litanies were known throughout central Europe on account of their simple scoring, their brevity and the way the music interprets the text (see Walter, 1990). Stylistically they stand between the works of Biber and Fux in the same genre, and they provided inspiration for Jacob, J.J.I. Brentner, J.F. Richter and Česlav Vaňura.

The eight orchestral suites of *Le journal du printems* show the influence of Lully, for instance in their scoring for five-part string orchestra (the only bass part being for bass viol), their introductory overtures with trio episodes, the use of two trumpets in nos.1 and 8, their metrically differentiated minuets, chaconnes and passacaglias, and their programmatic titles, such as 'Air des combattans', 'Plainte' and 'Echo'. Suites 1 and 8 frame the collection, being in the same key (one in the major and the other in the minor). The number of movements varies from four (no.3) to eight (no.6).

The *Musicalisches Blumen-Büschlein* and the *Musikalischer Parnassus*, containing eight and nine suites respectively, exemplify the French ballet suite transferred to a keyboard instrument. Few contain the usual movements of the suite (although nos.1 and 6 of *Blumen-Büschlein* and nos.1 and 9 of *Parnassus* approach that type); most consist of a number of free movements strung together. Two of the *Blumen-Büschlein* have only two movements: a prelude and figural variations (no.5) and a prelude and contrapuntal variations (no.8). A prelude always comes first, taking into account the 'sound-surface type' among other things; there are *passacailles en rondeau* in the inner movements of the suites, and each collection contains an extensive contrapuntal movement (a chaconne in *Blumen-Büschlein*, a passacaglia in *Parnassus*). Fischer clearly wished to unite the French and German styles in these two collections.

In *Parnassus* no.2 a French overture in two sections is the prelude; the minuet and trio and the rondo occur frequently; three character pieces are ranged side by side in no.8 ('Marche', 'Combattement', 'Air de triomphans'), reminding one of the similar structure of no.1 in the *journal de printems*. The number of parts varies in both keyboard collections, with three or four parts predominating. As in the keyboard music of French composers of the same period, such as J.-H. d'Anglebert (1689), Gaspar

Le Roux (1705) and François Couperin (ii) (1713), the outer parts in particular are lavishly provided with ornamentation. In *Blumen-Büschlein* Fischer provided instructions for their execution in Latin, with examples in musical notation. As Janovka said in his encyclopedia, these instructions for ornamentation were a great help to German musicians.

The compass in both collections is C to *c‴*, so that they can be played on either clavichord or harpsichord. A broken octave in the bass is taken as standard, with one split key sounding *D* and *F* and another *E* and *G*; stretches not only of 10ths but of 12ths are required in the player's left hand.

The theory that Fischer's son, also named Johann Caspar Ferdinand (1704–73), was the composer of *Musikalischer Parnassus* has been refuted (see Lebermann, 1971, and Walter, 1990). An entry in the Rastatt marriage register of 1738 describes the son as *nobilis dominus* and *consilii aulici cancellista*. In about 1740 he was transferred to Kirchberg in the Hunsrück and worked as an administrative official there for the rest of his life. Apel (1967, p.575) said of the two collections that 'the later collection is perhaps as good as the earlier, but is certainly not superior'. The *Notenbüchlein des J.K.F. Fischer*, edited by Franz Ludwig (Mainz, 1940), must have been a forgery and was probably the work of one of Fischer's pupils; the additional numbers are well below Fischer's level.

Of the two organ collections, *Praeludia et Fugae per 8 tonos ecclesiasticos*, a cycle of versets for alternatim performance in divine service, seems to date from the beginning of the 18th century but was not published until later. Although its themes (which are repeated and inverted in successive versets) are more malleable and its counterpoints more masterly, it is stylistically on a par with the composer's other organ collection, *Ariadne musica*. Because of the large number of keys employed, the 20 preludes and fugues of *Ariadne musica* are historically more important. The original print of 1702 is lost, but a manuscript copy in the Minorite convent in Vienna and a mention in Walther's *Lexicon* provide evidence of its existence. This series of pieces begins in C major and ends, after 18 keys with accidentals, in C minor (closing in the major). The collection contributed to the question of the tempered tuning of keyboard instruments, described most clearly and thoroughly by Werckmeister in his *Orgel-Probe* (1681) and more particularly in its second edition (1698). J.S. Bach knew and valued the collection, and adopted some of the themes in *Das wohltemperierte Clavier*.

Fischer's bold venture was probably the result of cooperation with an organ builder who had a liking for experiments. With the consent of Abbot Raimund Wilfert of Tepl, to whom *Ariadne musica* is dedicated, Fischer and Abraham Stark (1659–1709), an organ builder from Elbogen, tuned the choir organ of Tepl monastery to something approaching equal temperament in 1700. Their success was followed by the composition and printing of *Ariadne musica*, an experiment which Fischer repeated, although with fewer keys, in the litanies printed in 1711. He later added a conservative appendix to *Ariadne*: five ricercares on Catholic hymns, preludes to the main feasts of the church year.

Like his contemporary Georg Muffat, Fischer strove for a 'mixed style', if without actually saying so. His style may be described as 'German-Bohemian', like that of his countryman Wentzely. To quote from the perhaps excessively enthusiastic verdict of the Cistercian Mauritius Vogt in 1719 on Fischer's work as a whole, he could be called '*componista aevi sui probatus*'.

WORKS

INSTRUMENTAL

Edition: *Sämtliche Werke für Klavier und Orgel*, ed. E. von Werra (Leipzig, 1901/*R*) [W]

Le journal du printems, 8 suites, 5 str, 2 tpt ad lib, op. 1 (Augsburg, 1695), ed. in *DDT*, x (1902/*R*); suites 3 and 4 ed. in HM, ccxxvii (Kassel, 1976)

RUDOLF WALTER

Fischer, Johann Christian (*b* Freiburg, 1733; *d* London, 29 April 1800). German oboist and composer. According to Burney he was 'brought up at one of the common reading schools ... where all the children learn music, with reading and writing, as a thing of course' and learnt to play the violin. He first turned to the oboe 'in sport' but found that 'he could express his feelings better with the reed than the bow' and went to study with Alessandro Besozzi (ii). He performed Besozzi's G major Oboe Concerto in Warsaw in 1757 and at around the same time he composed a flute concerto and two oboe concertos.

From 1760 Fischer was a member of the Kapelle of Augustus III, King of Poland, in Dresden; following the dissolution of the Kapelle in 1764 he travelled to Berlin and joined the court of Frederick the Great, whose flute playing he accompanied, presumably on a keyboard instrument, for four hours a day for a month. Later that year he travelled to Mannheim and performed at the Concert Spirituel in Paris (with sensational reviews), and in 1765 he was in The Hague, where he was heard by the Mozart family. After visits to Germany and Italy he was for a short time a member of the Dresden opera orchestra (1766) and once more at the court of Frederick the Great in Berlin (1767). After further travels through France and the Netherlands, he arrived in London. His first concert there, on 2 June 1768, is notable for including the first solo public performance, by J.C. Bach, on the newly invented piano. Fischer was soon engaged to perform a concerto every night at Vauxhall Gardens and, according to Burney, such was his playing that the Drury Lane oboist John Parke 'used to quit his post, and forfeit half his night's salary in order to run to Vauxhall to hear him'. In 1774 he joined Queen Charlotte's chamber group, alongside his compatriots J.C. Bach and Abel, although his formal appointment did not take place until 1780. He performed at the Bach-Abel concerts where, according to Burney, only Fischer 'was allowed to compose for himself, and in a style so new and fanciful, that in point of invention, as well as tone, taste, expression, and neatness of execution, his piece was always regarded as one of the highest treats of the night, and heard with proportionate rapture'.

Fischer remained in London for the rest of his life, with just a few trips abroad, including concert tours to Dublin in 1771 and 1776. In 1780 he married Thomas Gainsborough's elder daughter Mary, to the painter's chagrin and with only his grudging approval (see illustration): the marriage was short-lived. His performance at the Handel Commemoration in 1784 was highly praised by George III, and in 1786 he left London for a tour of Europe, accompanied by the great Mannheim oboist Friedrich Ramm. Mozart heard him playing again in Vienna in 1787: his negative criticisms of Fischer's performance are in stark contrast to the otherwise universal praise. Fischer remained active as a performer for the following 14 years.

Johann Christian Fischer: portrait by Thomas Gainsborough, exhibited 1780 (Royal Collection, Buckingham Palace, London)

He died (according to Burney) after suffering an apoplectic fit while performing to the royal family. On his deathbed he bequeathed all his manuscripts to the king. These manuscripts preserve cadenzas and elaborations for several of the early concertos, as well as two unpublished concertos.

Although Fischer composed some chamber music, most of his works were concertos, mostly written for his own performance. His earlier works contain much sequential writing, with frequent changes of mode and a marked lack of periodic structure. In his first London concertos, however, the use of sequence is much more limited, and there is greater clarity of organization into regular sections with contrasting motifs. Some of the later concertos move away from the standard three-movement fast–slow–fast structure and also incorporate popular songs. The rondo finale of his first concerto became the subject of many keyboard variations, including some by Mozart (K179/ 189*a*). Fischer did not normally exploit the extreme ranges of the oboe. However, in the unpublished concerto in F major both the first and second movements contain low B♭s in the solo oboe part. This is the earliest known occurrence of this note for the oboe: there is no other evidence that the instrument could reach this note before Floth's addition of an appropriate key (*c*1803–7), more than 40 years after the concerto was written. Several of Fischer's London concertos were published in keyboard arrangements transcribed by J.C. Bach, Hoeberechts and Schroeter.

WORKS

Edition: *Johann Christian Fischer: Complete Works* (forthcoming)
published in London unless otherwise stated

CONCERTOS

Ob concs.: F, C, *c*1760, *D-Rtt*; no.1, C (before 1771), arr. hpd (n.d.); no.2, E♭ (before 1772), arr. hpd/pf by J.C. Bach (n.d.); no.3, C (before 1781), arr. hpd/pf (n.d.); no.4, G (n.d.), arr. hpd/pf (n.d.); no.5, B♭ (n.d.), arr. hpd/pf (n.d.); no.6, C (before 1779–80), arr. hpd/pf (n.d.); no.7 (Gramachree Molly), F (?1780), ed. J.T. Evans (DMA diss., CUNY, 1996), arr. hpd/pf (n.d.); no.8 (Lango Lee), C (n.d.), arr. hpd/pf (n.d.); no.9, F (n.d.), arr. kbd by L. Hoeberechts (n.d.); no.10, E♭ (n.d.), lost, arr. hpd/pf by J.S. Schroeter (n.d.)
Fl concs.: D, *D-KA*
Vn concs.: C, *A-M*; G–C (Marlbrook), *GB-Lbl*; A–D (Tweedside), *Lbl*
Doubtful: Hn conc., *c*1781, *S-L*, ed. N. Delius (Lottstetten, ?1987), also attrib. Quantz
Lost: Ob concs., C, d, listed in Breitkopf catalogue (1769); Ob conc., E♭, listed in Breitkopf catalogue (1771); Bn conc., C, listed in Breitkopf catalogue (1781)

CHAMBER

Sonatas: 10 for fl, vc/hpd (n.d.); 1 for fl, b, *S-Skma*; 1 for fl, hpd, *Skma*
Duets: 7 Divertimentos, 2 fl (n.d.), as 6 duetti (Paris, n.d.) and 6 duettes, op.2 (Berlin, n.d.); 6 for 2 fl, *D-BAUm*
Edns: 3 qts, 2 trios (n.d.) [composers unidentified]
Doubtful: 24 Polonaises, 2 vn, b, *S-Skma*
Lost: 3 Solos, ob, bn, listed in Breitkopf catalogue (1781)

MISCELLANEOUS

An Old Favorite Air, kbd, arr. J.B. Cramer (n.d.); Hornpipe, Ah ça ira, pf (New York, n.d.); The Princess Royal, rondo, 2 tr insts, hpd (n.d.); Minuet, rondeau (n.p., n.d.) and later arrs.; Rondeaux ... variés, vn (Amsterdam, *c*1772); Favourite Rondeau Call'd the New Bath Minuet, pf (Dublin, n.d.); Second Celebrated Rondeau, pf (Dublin, n.d.); How wellcome my shepherd, song (n.p., n.d.)

TUTORS

The Compleat Tutor for the Hautboy (London, *c*1770, rev. 2/*c*1780 as New and Complete Instructions for the Hautboy, and later edns, details in Warner)

T. HERMAN KEAHEY

Fischer, Joseph. German musician, son of LUDWIG FISCHER.

Fischer, Kurt von (*b* Berne, 25 April 1913). Swiss musicologist. He studied the piano with Hirt at the Berne Conservatory, where he obtained the diploma in 1935 and taught the piano and stylistic studies (1939–57); he was later a pupil of Marek. He studied musicology with Kurth and Gurlitt (then visiting professor) at Berne University, taking the doctorate in 1938 with a dissertation on Grieg's harmony, and completing the *Habilitation* in 1948 with a study of form and motif in Beethoven's instrumental works. He then taught at Berne University and in 1957 was appointed professor and chair of musicology at Zürich University, a post he held until his retirement in 1979. He also held visiting lectureships at Basle (1956–7) and CUNY (1987), and a visiting professorship in the Georges Miller Chair at the University of Illinois, Urbana (1967). He became an executive member of the IMS in 1958, serving as president from 1967 to 1972, and was appointed co-editor of *Archiv für Musikwissenschaft*. In 1968 began collaborating with Ludwig Finscher on the complete edition of Hindemith's works and in 1974 he became general editor of Oiseau-Lyre's series Polyphonic Music of the Fourteenth Century. From 1979 to 1989 he was president of commission for RISM, of which he became honorary president in 1989. He was made a corresponding member of the British Academy (1975) and the AMS (1980) and an honorary member of the Britisch Academy (1982) and the IMS (1987). He contributed to numerous important music dictionaries and encyclopedias.

In his early works, particularly in his dissertation on Grieg but also to some extent in his book on Beethoven, Fischer was influenced by his teacher Kurth; an example of this influence is in the specific association Fischer drew between (harmonic) analysis and musical form, a relationship which he interpreted as a psychologically motivated, dynamic process. His standard catalogue of Trecento works (1956) as well as his work for RISM on sources of polyphonic music from the 14th to the 16th centuries (with M. Lütolf, 1972) and numerous related essays

display a precise, methodical treatment of source material. In a further group of studies, aspects of 20th-century music, such as questions of 'modernity' or 'tradition' in music history, are fruitfully applied to earlier music. Fischer was also particularly interested in the Passion setting and in variation forms, and his publications on these reveal an extraordinary breadth of learning. His energy and enterprise were also evident in the way in which he established and expanded the musicology department at Zürich, and instigated new developments within the IMS, such as founding the international dissertation centre in Texas, increasing publication activity and, finally, encouraging a greater emphasis on ethnomusicology.

JÜRG STENZL

Fischer, (Johann Ignaz [Karl]**) Ludwig** (*b* Mainz, 18 Aug 1745; *d* Berlin, 10 July 1825). German bass. He studied the violin and cello, but first attracted attention at the age of 18 with his singing in a church choir and in student operetta in Mainz. He soon received a position at court as a supernumerary, and was noticed by the tenor Anton Raaff with whom he studied after 1770 in Mannheim. In 1772 he became *virtuoso da camera* at the court there (according to the libretto of Salieri's *La fiera di Venezia*, 1772) and was given a grant by Elector Carl Theodor to continue his education with Raaff. In February 1775 he took over instruction in singing at the Mannheim Seminarium Musicum. He created the role of Rudolf in Ignaz Holzbauer's serious German opera, *Günther von Schwarzburg* (1777), and by 1778 he received the highest salary among Mannheim court singers. In that year he moved with the court to Munich, where in 1779 he married Barbara Strasser (*b* Mannheim, 1758; *d* after 1825), who studied singing under Giorgetti. From 1780 to 1783 the couple worked for the court theatre in Vienna, where Fischer sang Osmin in the first performance of *Die Entführung*, much to the satisfaction of Mozart, who frequently wrote about him in his letters and arranged the aria *Non so d'onde viene* (K512) and may have written the recitative and aria *Aspri rimorsi atroci* (K432/421*a*) for him. When the Singspiel company was replaced by an Italian *opera buffa* company in 1783 Fischer went to Paris, where he performed at the Concert Spirituel with much success. He then secured his reputation with a tour of Italy and in 1785 visited Vienna, Prague and Dresden. The couple served the Prince of Thurn and Taxis in Regensburg from 1785 before Fischer received a lifelong appointment in Berlin, with J.F. Reichardt's intervention, in 1789. The title role of Reichardt's *Brenno* (1789) was the first of many collaborations between Fischer and composer. From this time on Fischer ceased appearing in comic roles. Guest appearances in London (at Salomon's invitation in 1794 and 1798), Leipzig (1798), Hamburg (1801–2) and elsewhere added to his fame until he gave up public performance in 1812, and retired on a pension in 1815.

In his day Fischer was regarded as Germany's leading serious bass singer. His voice, which was said to range from *D* to *a'*, was praised by Reichardt as having 'the depth of a cello and the natural height of a tenor'. Others, too, repeatedly compared his voice to a tenor's in its flexibility, lightness and precision. He also composed, but his only extant work is the virtuoso song pair *Der Kritikaster und der Trinker* (Berlin, 1802), containing the popular drinking song 'Im kühlen Keller sitz' ich hier'. His handwritten autobiography, which goes up to 1790, is located in the Staatsbibliothek zu Berlin. His son Joseph Fischer (*b* Berlin, 1780; *d* Mannheim, 1862) was a bass singer and lied composer of some success, and his daughters Josepha Fischer-Vernier (*b* 1782) and Wilhelmine (*b* 1785) were also distinguished singers.

ROLAND WÜRTZ/PAUL CORNEILSON, THOMAS BAUMAN

Fischer, Matthäus [Matthias] **(Karl Konrad)** (*b* Ried, Swabia, bap. 28 Nov 1763; *d* Augsburg, 5 May 1840). German composer, brother of Anton Fischer. The son of a village schoolmaster, he became a chorister at the Augustinian monastery of Heilig Kreuz in 1773. He was ordained priest in 1788, from 1784 being organist (and later choirmaster) of the foundation; he also reorganized and catalogued its library. In 1810 he moved to St George, Augsburg, as choirmaster, in 1820 returning to Heilig Kreuz and simultaneously holding an appointment at St Ulrich. His last appointment was as music director at St Moritz. A set of six masses was published as his op.1 at Augsburg in 1820; he also composed a number of Singspiels and occasional pieces for performance in the Jesuit College at Augsburg, and a quantity of other church music, some of which was much performed in Bavarian churches.

PETER BRANSCOMBE

Fischer, Michael Gottard (*b* Alach, nr Erfurt, 3 June 1773; *d* Erfurt, 12 Jan 1829). German organist and composer. After studying the organ and counterpoint with J.C. Kittel in Erfurt he became J.W. Hässler's successor there as organist at the Barfüsserkirche and director of the civic concerts, later succeeding Kittel at the Predigerkirche (1809). In 1816 he became music teacher at the Erfurt teachers' seminary, where he taught the organ and thoroughbass. Like J.C.H. Rinck and K.G. Umbreit, Fischer modelled his work on Kittel, who had developed a genre of short, expressive organ pieces based on Bach's techniques; Fischer's organ works, long popular with amateur musicians and praised as teaching pieces, show a flexibility of style avoiding the rigidity of post-Bach organ writing but at the same time standing apart from the newer style of J.H. Knecht and the Abbé Vogler. Fischer's orchestral works and chamber music with piano show a freer technique that led to a notable richness of sound, particularly in his concertos. His music, particularly his chorale settings (1820–21), long remained

popular. His fusion of melodically orientated chordal writing with a freer contrapuntal texture proved influential to later organ music. Among Fischer's pupils was A.G. Ritter (1811–85), author of an important early history of organ playing (1848).

WORKS

Vocal: 4 Motetten und 4 Arien, 4vv (Leipzig, n.d.); 12 Gesänge zur geselligen Freude (Erfurt, n.d.); 1 chorale (Berlin, n.d.); 1 motet (Berlin, n.d.); responsories, *D-Mbs*; motet, *RUS-KAu*

Orch: Sym., op.5 (Hamburg and Leipzig, n.d.); Bn Conc., op.8 (Leipzig, *c*1807); Conc., cl/ob, bn, op.11 (Leipzig, n.d.); 3 other syms., mentioned in *GerberNL*

Chbr: 2 Str Qts, op.1 (Offenbach, 1799); Pf Qt, op.6 (Leipzig, n.d.); Str Qnt, op.7 (Leipzig, n.d.)

Org: 12 Orgelstücke, op.4 (Erfurt, 1802); 12 Orgelstücke, op.9 (Erfurt, 1805); 12 Orgelstücke, op.10 (Leipzig, n.d.); 48 kleine Orgelstücke, op.13 (Leipzig, n.d.); Evangelisches Choral-Melodienbuch, op.14 (Gotha, 1820–21, 4/1846); 24 Orgelstücke, op.15 (Leipzig, ?1824); 8 Choräle mit begleitenden Canons, op.16 (Leipzig, n.d.); 6 Fugen, org/kbd, op.17 (Erfurt, n.d.); 6 fugues (St Petersburg, n.d.), mentioned in *EitnerQ*; 12 variirte Choräle (Erfurt, n.d.); chorales and postludes, *RUS-KAu*, *D-Bsb*, *Bhm*

Other kbd: Grande Sonate, op.3 (Erfurt, 1802); Sonate, kbd 4 hands, op.12 (Leipzig, n.d.); caprices, rondos, lessons

KARL GUSTAV FELLERER

Fischer, Wilhelm (*b* Vienna, 19 April 1886; *d* Innsbruck, 26 Feb 1962). Austrian musicologist. He studied with Adler at the University of Vienna, where in 1912 he received the doctorate with a dissertation on Monn. From 1912 to 1928 he was Adler's assistant, and he completed his *Habilitation* at Vienna in 1915 with a work on the genesis of the Viennese Classical style, becoming a university lecturer in 1919 (titular professor, 1923). In 1928 he was appointed reader in musicology at the University of Innsbruck, but was suspended from this post after the German annexation of Austria (1938). Expelled from the Tyrol he moved to Vienna (1939), where during the war years he was conscribed to forced labour in a metal factory. In 1945 he became director of the Vienna conservatories, and from 1948 until his retirement in 1961 he held the professorship at the University of Innsbruck.

During the 40 years of his university teaching Fischer was renowned for his wide knowledge and outstanding gifts as a teacher. As a scholar he gained an international reputation through his important systematic style study *Zur Entwicklungsgeschichte des Wiener klassischen Stils* (1915), his 'Geschichte der Instrumentalmusik 1450 bis 1880' (1924), his Mozart research, and his activity in the Zentralinstitut für Mozartforschung (chairman, 1951). Although modern musicology has moved beyond the methodology he laid out in 1915, the significance of his pioneering approach to style analysis remains undiminished. The term *Fortspinnung*, which he coined, continues to be used in both English and German. During the last years of his life Fischer was honoured with the Salzburg Mozart medal, with the *Ehrenring* of the city of Innsbruck, and on his 70th birthday with a Festschrift.

HANNS-BERTOLD DIETZ

Fischer, William G(ustavus) (*b* Baltimore, 14 Oct 1835; *d* Philadelphia, 12 Aug 1912). American composer of gospel hymns and Sunday school songs.

Fischer, William S. (*b* Shelby, MS, 5 March 1935). American composer. He learned to play the piano and the saxophone as a child and went on to study at Xavier University, New Orleans (BS 1956), Colorado College, Colorado Springs (MA 1962), and the Academy of Music and Performance, Vienna (1965–6). He taught at Xavier University (1962–6), in the New York Public School System (1967–75) and at Newport and Cardiff Colleges in Wales (1966–7). During the 1950s, he played the saxophone in jazz and blues ensembles and performed with musicians such as Muddy Waters, Ray Charles, Guitar Slim and Joe Turner. He began to work as a composer, arranger and musical director in the 1960s and 70s and collaborated in these capacities with Roberta Flack, Yuseef Lateef and Joe Zawinul.

Jazz and blues idioms permeate Fischer's large-scale compositions. Like many black American composers after World War II, he was comfortable writing for both

popular venues and the concert hall. His best-known works are *Experience in E* for jazz ensemble and orchestra, *Quiet Movement* for orchestra, an opera, *Jesse*, and the recording *The Rise and Fall of the Third Stream*.

WILLIE STRONG

Fischer-Dieskau, Dietrich (*b* Berlin, 28 May 1925). German baritone. He was one of the leading singers of his time, an artist distinguished by his full, resonant voice, cultivated taste and powerful intellect. He studied in Berlin with Georg Walter before being drafted into the German army and taken prisoner by the British in Italy in 1945. After the war he resumed his studies, now with Hermann Weissenborn. He made his concert début in Brahms's *German Requiem* at Freiburg in 1947 and his stage début the next year as Posa in *Don Carlos*, under Heinz Tietjen at the Städtische Oper, Berlin, where he then became a leading baritone. Also in 1948 he broadcast *Winterreise* on Berlin radio, and at Leipzig gave his first solo recital. In 1949 he began regular appearances at the Vienna Staatsoper and at the Bavarian Staatsoper, Munich, and in 1952 at the Salzburg Festival. He sang at the Bayreuth Festival, 1954–6, as the Herald (*Lohengrin*), Wolfram (a performance of outstanding nobility), Kothner and Amfortas. In 1961 he created the role of Mittenhofer in Henze's *Elegy for Young Lovers* at the Schwetzingen Festival. His first London appearance was in Delius's *A Mass of Life* under Beecham in 1951. That, and his performances at Kingsway Hall of *Die schöne Müllerin* (which he then recorded for the first time with Gerald Moore) and his *Winterreise* the following year, established his fame in Britain. Among his frequent return visits, two were particularly notable: the first performances of Britten's *War Requiem* in 1962 in the rebuilt Coventry Cathedral, and his *Songs and Proverbs of William Blake* (composed for Fischer-Dieskau) at the 1965 Aldeburgh Festival. That year he made his highly successful Covent Garden début as Mandryka in *Arabella*.

Some of Fischer-Dieskau's most vivid roles, with the dates when he first sang them, were: Wolfram (1949), John the Baptist (*Salome*, 1952), Don Giovanni (1953), Busoni's Faust (1955), Amfortas (1955), Count Almaviva (1956), Renato (1957), Falstaff (1959), Hindemith's Mathis (1959), Wozzeck (1960), Yevgeny Onegin (1961), Barak (*Die Frau ohne Schatten*, 1963), Macbeth (1963), Don Alfonso (1972) and the title role in Reimann's *Lear* (1978). He recorded many of these parts and in addition, most notably, both Olivier and the Count in different sets of *Capriccio*, Papageno (with Böhm), Kurwenal in the famous Furtwängler *Tristan und Isolde*, the Dutchman, and Wotan (in Karajan's *Das Rheingold*). After much hesitation as to its suitability for his voice, he undertook the role of Hans Sachs at the Deutsche Oper, Berlin, under Jochum in the 1975–6 season, and recorded it at the same time.

In spite of all this operatic activity, and a brief spell as a conductor in the early 1970s, Fischer-Dieskau's greatest achievement was in lieder. His repertory consisted of more than 1000 songs, a feat unequalled by any other singer. He recorded all Schubert's, Schumann's and Wolf's songs appropriate for a male singer, most of Beethoven's, Brahms's and Strauss's songs, and many by Mendelssohn, Liszt and Loewe. He has also written books on Schubert

Dietrich Fischer-Dieskau

and Schumann, compiled *The Fischer-Dieskau Book of Lieder* (London, 1976) and published a book of memoirs, *Nachklang* (Stuttgart, 1988; Eng. trans., as *Echoes of a Lifetime*, 1989). His interpretations set standards by which other performances were judged. They were based on command of rhythm, a perfect marriage of tone and words, an almost flawless technique and an unerring ability to impart the right colour and nuance to a phrase. He was sometimes criticized for giving undue emphasis to certain words and overloading climaxes. Though his Italian was excellent and his Count Almaviva, Don Giovanni, Posa, Iago and Falstaff were substantial achievements, he was probably at his happiest in German roles such as Busoni's Faust, Wolfram, Kurwenal, Barak, Mandryka, Mathis and Wozzeck. Since his retirement from singing Fischer-Dieskau has taken up conducting again and has made a number of recordings with his wife, the soprano Julia Varady.

ALAN BLYTH

Fischhof, Joseph (*b* Butschowitz [now Boskovice], Moravia, 4 April 1804; *d* Vienna, 28 June 1857). Austrian music historian, pianist, composer and teacher. He had some piano lessons as a child, and in 1822 went to Vienna to study medicine while taking instruction in the piano from Anton Halm and in composition from Seyfried. After deciding on a music career in 1827, he taught the piano for many years and in 1833 joined the staff of the conservatory of the Gesellschaft der Musikfreunde. Although well known in his lifetime as a pianist and composer, he is remembered chiefly as a collector and as the author of several articles and monographs, including a history of piano building (Vienna, 1853). His library,

one of the great private collections of the century, contained a large number of published scores, books on music theory and music manuscripts. Most of the major composers of the 18th and early 19th centuries and many of the minor ones were represented in manuscript; the concentration of manuscript sources for the works of J.S. Bach was especially impressive, including nearly 200 cantatas. After Fischhof's death his library was bought by the Berlin music dealer Julius Friedlaender, who sold most of it to the Berlin Royal (now State) Library.

DOUGLAS JOHNSON

Fischietti [Fischetti], **Domenico** (*b* Naples, ?*c*1725; *d* ?Salzburg, after *c*1810). Italian composer. He studied at the Conservatorio di S Onofrio under Leo and Durante. Florimo listed an opera by him, *Armindo* (Naples, 1742), performed when he was still a student (unless it was in fact by his father). Comic operas by him were given at Naples in 1749 and 1752 and Palermo in 1753. He then settled in Venice and began a collaboration with Goldoni that in the next four years produced four extremely successful comic operas: *Lo speziale* (the first of its three acts was composed by Vincenzo Pallavicini), *La ritornata di Londra*, *Il mercato di Malmantile* and *Il signor dottore*, all of which were widely performed in Italy and elsewhere, remaining popular throughout the 1760s.

Fischietti seems to have been in Prague by 1762, working with the Molinari opera company. He is definitely known to have been part of Bustelli's company, which began working there in 1764. A manuscript (in *D-Dl*) contains arias by him from several *opere serie* apparently performed there, although three are otherwise unknown (*Zenobia*, 1762; *Olimpiade*, 1763; *Alessandro nell'Indie*, 1764). Whether these were pasticcios or entirely composed by Fischietti is uncertain. Three other operas by him are definitely known to have been performed in Prague between 1763 and 1765. When the Bustelli company began performing in Dresden, Fischietti was also active there. In April 1765 he was engaged as court Kapellmeister (partly because he was prepared to accept a rather low salary). In this post he presented a revised version of *Il mercato di Malmantile* (1766) and composed an oratorio, *La morte d'Abele* (1767) and some small dramatic works, but no new full-scale operas.

Fischietti seems not to have been an effective Kapellmeister and in 1772 his contract was not renewed. He went to Vienna, where on 5 September the new Archbishop of Salzburg engaged him as Kapellmeister with a three-year contract. Again he seems not to have given entire satisfaction; he was still named in the court calendar as titular Kapellmeister between 1776 and 1783, but Rust was engaged as Kapellmeister in 1777 (remaining only briefly). Fischietti attempted to resume his career as an opera composer in Naples (1775, 1777) and Venice (1778), apparently without much success. Between 1779 and 1783 he taught at the Institut der Domsängerknaben in Salzburg. After Gatti's appointment as court Kapellmeister, Fischietti's name disappeared from the court calendar, but according to Villarosa he was still living in Salzburg in 1790, and, according to Florimo, as late as 1810.

Fischietti was a composer of importance only during the brief period in the 1750s when he produced his four famous comic operas. He was one of several composers trained in Naples who found success in Venice during the period of Galuppi's domination of the opera there (Ciampi and Cocchi having preceded him). Although Engländer has analysed his important operas in considerable detail, it still remains to set his work in a larger framework and to ascertain the extent to which he combined such characteristics as can be identified as Venetian and Neapolitan. The popularity of these works lasted until they were outmoded by the more modern style of the younger generation, of Paisiello, Guglielmi and others, a change regretfully acknowledged in La Borde's description (1780) of Fischietti as 'one of those good masters who lived through the change from the former taste, but was too old to change his own. His beautiful music now appears too simple and too bare, but it gives great pleasure to connoisseurs'.

WORKS

OPERAS

music lost unless otherwise stated

dg – *dramma giocoso*

dm – *dramma per musica*

Armindo (commedia per musica), Naples, Florentini, wint. 1742

L'abbate Collarone (commese chiamma, P. Trinchera), Naples, Pace, carn. 1749; rev. as Le chiajese cantarine, Naples, carn. 1754, addl music by N.B. Logroscino and G. Maraucci

Fischietto (It.). *See* WHISTLE.

Fiscorno (Sp.). *See* FLUGELHORN.

Fišer, Luboš (*b* Prague, 30 Sept 1935; *d* Prague, 22 June 1999). Czech composer. He studied at the Prague Conservatory (1952–6) with Bořkovec and at the Prague Academy of Musical Arts (1956–60) with Hlobil and Bořkovec. The first of his works to be publicly performed was *Čtyři skladby* ('Four Pieces') for violin and piano (1954); he took his diploma with the Second Symphony. After graduating he worked with the Vít Nejedlý Military Ensemble and his works were received with increasing approval. He won several Czech prizes as well as a UNESCO award for *Patnáct listů podle Dürerovy Apokalypsy* ('15 Prints after Dürer's Apocalypse') in 1966 and the 1969 Italia Prize for his score for Peter Weigl's film *Bludiště moci* ('Labyrinth of Power').

Having adopted a tonal, thematic style at the outset of his career, he began to employ contemporary techniques from the mid-1960s; works from this period display a tendency towards new expressive and compositional means, in particular the use of aleatory techniques. Melody, its repetition and modification, however, remained at the core of his music. In later works Fišer returned to determinate notation. Typical is the concentration on clearly defined contrasts within confined spaces, a principle most apparent in Fišer's single-movement sonatas. His aesthetic is characterized by a broad range of interests: *Nářek nad zkázou města Ur* ('Lament for the Destruction of the City of Ur') is a setting of Sumerian texts, *Písně pro slepého krále Jana Lucemburského* ('Songs for Blind King John of Luxemburg') takes its inspiration from the Middle Ages, and other works draw on great works of art, or from theorists such as Galileo and Einstein. His works often have an air of celebration or warning.

MILAN KUNA

Fiseysky, Aleksandr V. (*b* Moscow, 27 Feb 1950). Russian organist and teacher. He was a student at the Moscow State University from 1970 to 1975, studying the organ with Leonid Royzman and the piano with Vera Gornostayeva; he undertook postgraduate studies with Leo Kramer (Germany) and Daniel Roth (France) and took the doctorate in organ performance in 1982 at the Moscow Conservatory. He made his début in 1974 in the Minsk concert hall of the Belarusan State PO, became the orchestra's organist in 1975 and later played with the Moscow Television and Radio Orchestra. In 1990 he was appointed artistic director of the Soviet Cultural Foundation organ centre and, from 1992, president of the V. Odoyevsky organ centre. Fiseysky is known for his interpretations of Bach, Franck and Glazunov. A regular broadcaster on many international networks, he has made numerous recordings and has given first performances of several contemporary Russian works. He has written articles on the organ history of Russia for *MGG* and *Österreichisches Orgelforum* (1992). Fiseysky has performed at many international festivals, including those at Lucerne, Berlin, Vienna, Tokyo, London and Copenhagen, and has sat on the juries of international organ competitions such as Calgary (1994) and St Albans (1995).

PAUL HALE

Fishburn, Christopher (*fl* 1678–98). English amateur composer and poet. A nephew of Sir Christopher Wren, he was described in 1698 as 'Mr Fishbourn, an Inns of Court Gentleman'. He was commissioned ensign in Sir Henry Goodricke's regiment in 1678 – the same regiment as the composer Simon Pack – and served in Flanders in that year. His literary productions include the text of the St Cecilia's Day ode *Welcome to all the pleasures* set by Purcell in 1683. Eight songs by Fishburn were published in Playford's *Choice Ayres and Songs* (RISM 1684[3]/*R*1989

in MLE, A5a/b) and later reprinted in *Wit and Mirth, iii* (1707), *Songs Compleat, Pleasant and Divertive, v* (1719) and other similar collections (see *SpinkES*). They are by no means without merit and include an interesting multi-sectional setting of *Beneath a dark and melancholy grove*, which begins rather like Purcell's, though the words deviate after the opening lines. Its date of publication (1684) reflects the period of Fishburn's collaboration with Purcell on *Welcome to all the pleasures*.

IAN SPINK

Fisher, Alfred (Joel) (*b* Boston, 30 June 1942). Canadian composer and pianist of American birth. He studied at Boston University (BMus) and Michigan State University (MMus; PhD), and has taught at the University of Western Ontario, Acadia University, the University of Alberta (chair, 1986–9) and Queen's University, where he was director 1990–97. His compositional style has been described as post-Schoenbergian, employing a chromaticism controlled both by a limited number of pitch class sets and a sense of tonal hierarchy (Lewis, 1993). Many of his works are confessional. His fascination with the Canadian North has resulted in compositions such as *Cry Wolf* (1977), after a Cree Indian legend. In 1980 he began to explore themes from Jewish culture and history in works such as *Morning: Peniel* (1980), *Zakhor: Remember* (1983) and *Small Worlds* (1984). Several of these interests come together in *Six Fantasy Pieces* (1982), in which the technical exploration of the potential of an interval-class set introduced in the opening movement is combined with personal elements suggested by such titles as 'Reminiscences of Turandot' and 'There is my People Sleeping', a movement inspired by a book by Sarain Stump, an Amerindian artist and poet, and built around an old Jewish folk tune. He has also written about the role of the composer in late 20th-century music and culture.

WORKS

WESLEY BERG

Fisher, F.E. (*fl* 1748–73). ?English composer and string player. He may possibly be identified with Friedrich Ernst Fischer, a musician from Hessen-Kassel at Leiden University from 1741 to 1746, where he left for The Hague. Fisher was resident in Cambridge by 1752 and active in East Anglia as a violinist and cellist between 1748 and 1773; in those capacities he is known to have played in concerts with Charles Burney, when he led the orchestra. His compositions consist of two sets each of six trio sonatas for two violins and continuo. These sonatas disclose a composer with an unusual command of both the late Baroque and the early *galant* styles. His op.1 (dedicated to the Musical Society at Cambridge) includes opening movements influenced by the French overture, several lively double fugues and some graceful minuet finales. The sonatas of op.2 are more assured and more forward-looking. While no.1 in G minor is in the form of a French overture (with a powerful and well-worked fugue on a chromatic subject), no.4 is close to the style of a symphony, with a vigorous, homophonic first movement and a slow movement whose emotional sighing phrases are not unlike those of the Mannheim composers. In other sonatas too this unusual emotional intensity is found (for example in the sensuous opening of no.2), coupled with a melodic gift which found particular scope in gavottes and slow minuets.

WORKS

6 sonatas op.1, 2 vn, bc (London, *c*1753)

6 sonatas op.2, 2 vn, bc (London, *c*1760); nos.1 and 4, ed. R. Platt (London, 1980)

STANLEY SADIE

Fisher [Fischer; Breitenbach], **Fred** (*b* Cologne, Germany, 30 Sept 1875; *d* New York, 14 Jan 1942). American composer, lyricist and publisher. His parents, Max and Theodora Breitenbach, were Americans. He ran away from home at the age of 13, enlisting in the German navy and in the French Foreign Legion before coming to the USA in 1900. Fisher began composing in 1904; he also wrote the words for his first big success, *If the Man in the Moon were a Coon* (1905). In 1907 he started his own publishing business, in which the lyricist Joseph McCarthy was briefly a partner; this was remarkably successful. Fisher composed music for silent films and in the 1920s moved to Hollywood, where he wrote songs for films such as *Hollywood Revue of 1929* and *Their Own Desire* (1930). He returned to New York in the early 1930s.

Early in his career Fisher concentrated on ethnic songs; later he made something of a speciality out of geographical topics, as in *Norway* (1915), *Siam* (1915) and *Chicago* (1922). His music was unusually enduring, and in the 1940s several of his songs were widely popular, including *Peg o' my Heart* (1913), *Oui, Oui, Marie* (1918) and *Whispering Grass* (1940). The last of these was written with his daughter Doris Fisher Wald, and she and Fisher's two sons, Marvin and Daniel, pursued successful musical careers. Fisher had an excitable character, eccentric mannerisms and a contentious disposition: his most successful song, *Dardanella* (1919, to which he supplied only the words), was entangled in a lengthy series of lawsuits which persisted until the 1960s. Although some of his ballads and love songs were popular, his greatest strength was in comedy; he was especially gifted at devising quirky rhythms to highlight novel texts.

WORKS
(*selective list*)

all 1v. pf; most published in New York; lyrics by Fisher unless otherwise stated

If the Man in the Moon were a Coon (1905); My Brudda Sylves' (J. Lasky), (1908); Under the Matzos Tree (1908); Any little girl that's a nice little girl is the right little girl for me (T.J. Gray), (1910); Come, Josephine, in my flying machine (A. Bryan), (1910); Peg o' my Heart (Bryan), (1913); There's a little spark of love still burning (J. McCarthy), (1914); Who paid the rent for Mrs Rip Van Winkle when Rip Van Winkle went away? (Bryan), (1914); Norway (McCarthy), (1915); Siam (H. Johnson), (1915); There's a broken heart for every light on Broadway (Johnson), (1915); Ireland must be heaven for my mother came from there (Johnson and McCarthy), (1916)

They go wild, simply wild, over me (McCarthy) (1917); Oui, Oui, Marie (Bryan and McCarthy), (1918); Dardanella (1919) [music: F. Bernard and J.S. Black]; Daddy, you've been a mother to me (1920); Chicago (1922); Fifty million Frenchmen can't be wrong (B. Rose and W. Raskin), (1927); Blue is the night (1930); Your feet's too big (A. Benson), (1936); Whispering Grass (1940) [music: D. Fisher]

WILLIAM BROOKS

Fisher, John Abraham (*b* Dunstable or London, 1744; *d* Ireland, 1806). English violinist and composer. Under the patronage of Lord Tyrawley he studied violin with Thomas Pinto and made his solo début at the King's Theatre on 25 January 1765, at a benefit concert for the Musicians' Fund. He appeared there again as a soloist on 23 January 1767. Opportunities for composition led Fisher to the Theatre Royal, Covent Garden, where his contributions to the score of *Love in the City* were heard on 21 February 1767. He soon became attached to this theatre, where he served as orchestra leader from about 1768 to 1778. During the summer months, Fisher led the Vauxhall orchestra (1769 according to the journals of John Marsh), and composed instrumental and vocal works for presentation there. Fisher also took part in the musical activities of the Masonic order. He was commissioned to compose an anthem and an ode for the dedication of the New Freemasons' Hall (London) in 1776. Unfortunately, a dispute over the publication rights became so acrimonious that he was subsequently expelled from the order.

In 1772 Fisher married Elizabeth Powell (née Branston), widow of William Powell, a former theatre manager. As a result Fisher gained control of a 16th share of the Covent Garden Theatre property. In addition to composing for stage productions he took part in the theatre's administration. Of his contributions to Covent Garden productions those which enjoyed the greatest success were the pantomime *Harlequin Jubilee* (27 January 1770), the incidental music to the play *Zobeide* (11 December 1771), the all-sung masques *The Druids* (19 November 1774) and *The Syrens* (26 February 1776), and his overture for Kane O'Hara's burlesque, *The Golden Pippin* (6 February 1773). Fisher's confident and effective writing elicited the admiration of critics. The *Gazetteer and New Daily Advertiser* (28 February 1776) praised the music in *The Syrens*, stating that 'natural genius, and scientific knowledge, are happily blended in the music, and several of the airs would not disgrace the first Italian masters'. An experiment in light accompaniment which he tried in the 1776 Covent Garden revival of *The Beggar's Opera* was strongly criticized, however, in the *Morning Post* (2 October 1776). The years between 1769 and 1778 must have been busy for Fisher, who composed music for numerous stage productions, of which only a few were collaborative efforts.

In July 1777 Fisher graduated BMus and DMus from Magdalen College, Oxford. His graduating exercise was the oratorio *Providence*. This was performed at Oxford on 2 July with Fisher himself leading the orchestra, with subsequent performances in London for the benefit of the Middlesex Hospital (Freemasons' Hall, 28 May 1778), and again in 1780. After 1778 Fisher concentrated upon his performing career and, following the death of his wife on 7 May 1780, he undertook concert tours in France, Germany (attracting the attention of C.G. Neefe) and Russia. Kelly records his arrival in Vienna from Russia (1783) and his unusual courtship of the celebrated English singer, Nancy Storace. A marriage licence was issued on 21 March 1784, and the wedding itself took place shortly thereafter in the presence of Lord Mount Edgcumbe and other dignitaries. Temperamentally unsuited in the extreme, this marriage was ill-considered even in an age when such marriages were undertaken as financial arrangements or to boost career potential. When, by the autumn of 1784, rumours that Fisher beat his wife reached the emperor, it was suggested that the composer leave Austria. No official expulsion order exists; however, Fisher left Vienna and resumed his concert activities. Subsequent details of his career are few, although Lady Morgan records that Fisher 'was tempted over to Dublin immediately on his return from his tour in France, Italy and Germany, and a long visit to that royal *fanatico per la musica*, Frederic the Great'. Further meetings between Fisher and Nancy Storace (who remained legally married) were sufficiently acrimonious to attract the attention of the press (*The World*, 22 March 1787). Thereafter, Fisher settled in Dublin, where he supported himself by teaching and performing occasional concerts at the Rotunda. The Strachie papers record that he was dependent upon the generosity of Sir Owen Wynn during his final years. It is possible that his affected personality, so vividly recorded by Lady Morgan (Owen Wynn's daughter), undermined his popular support in the late years of his life. *The Gentleman's Magazine* records his death in Ireland in the June issue of 1806.

As a performer Fisher played with great temperament and technical facility. His flamboyant manner, however, led some to complain of charlatanism. The virtuoso element is displayed in his three long and difficult violin concertos, the second of which features frequent wide leaps, double stopping, arpeggiation and a variety of virtuoso bowing techniques, including *bariolage*. Fisher exploits the high range of the instrument and specifies colouristic effects such as harmonics and the use of the G string for some solo passages. The concerto has great rhythmic vigour, though it lacks sufficient harmonic variety. In contrast, his six violin duets, which are in fact charming three-movement sonatas, were clearly designed for amateurs. In them Fisher avoids the extreme upper range of the instrument, though they still contain double stopping and difficult passage work. The elements of sonata form are particularly well handled in Fisher's seven symphonies, and the orchestration is varied by the introduction of solo passages for wind instruments and the use of 'high' textures without a bass line. Mannheim

techniques (such as indications for dynamic contrasts, including the crescendo) are in evidence. Fisher appears to have been the first English composer to use a *ppp* marking in a published work. His *Music for the Opening of Macbeth* (1780), seemingly the last music he composed before undertaking his continental concert tours, was only rediscovered in 1982; the manuscript had been sold at auction in 1839. The score appears to be the first musical setting of the two witches' scenes in the first act of *Macbeth* to make use of an accurate version of Shakespeare's text. It is unfortunate that Fisher did not continue in the composition of incidental music for the play on a similar scale. The extant score vividly characterizes the three witches, and Fisher's depiction of natural phenomena is handled with skill and imagination. The popularity of Fisher's works later in the century, including his well-loved overture to *The Syrens*, is demonstrated in the surviving repertory lists for Vauxhall in 1790 and 1791.

WORKS

printed works published in London unless otherwise stated

STAGE

performed at London, Covent Garden, unless otherwise stated

pan – *pantomime*

The Court of Alexander (burlesque op, 2, G.A. Stevens, after N. Lee: *The Rival Queens*), 5 Jan 1770, music lost
Harlequin Jubilee (pan, H. Woodward), 27 Jan 1770, vs (1770)
Zobeide (tragedy, J. Cradock), 11 Dec 1771, incid music, vs (*c*1771)
The Monster of the Woods (pan), Sadler's Wells, 13 April 1772, vs (1772)
The Golden Pippin (burletta, 3, K. O'Hara, burlesque on Ovid: *Metamorphoses*), 6 Feb 1773, ov. and compilation of music, vs (*c*1773)
The Sylphs, or Harlequin's Gambols (pan), 3 Jan 1774, vs (1774)
The Druids (masque, after B. Jonson), 19 Nov 1774, vs (1774); ov. and sym. ed. in Studies in the History and Interpretation of Music, xlviii (Lewiston, 1996)
Ov. to Prometheus (pan), 26 Dec 1775
The Syrens (masque, 2, E. Thompson), 26 Feb 1776; ov., 2 vn, va, b, 2 ob, 2 hn ad lib (1777); ov. ed. in Studies in the History and Interpretation of Music, xlviii (Lewiston, 1996)
The Beggar's Opera (ballad op, J. Gay), 27 Sept 1776, accs. only
Harlequin's Frolicks (pan), 27 Dec 1776, ov. and addl music, reworking of Prometheus
The Norwood Gypsies (pan, J. Messink and C.A. Delpini), 25 Nov 1777, vs (1777)
Iphigenia, or The Victim (tragedy, 5, T. Hull, after Racine), 23 March 1778, incid music
Macbeth (tragedy, W. Shakespeare), 2 scenes from Act 1, opening scene performed during A Fete Anticipated (entertainment), 10 April 1780, later scene, inc., unperf.: both *CDN-VIu*; ed. in Studies in the History and Interpretation of Music, xlviii (Lewiston, 1996)
Music in Love in the City (comic op, 3, I. Bickerstaff), 21 Feb 1767, other music by C. Dibdin and others; The Seraglio (afterpiece, Dibdin and W. Thompson), 14 Nov 1776, other music by Dibdin and S. Arnold, vs (1776); The Tempest (dramatic op, 3, after Shakespeare), 27 Dec 1776; Love Finds the Way (comic op, 3, Hull, after A. Murphy: The School for Guardians), 18 Nov 1777, other music by Arne, Sacchini and traditional, vs (1777); Harlequin's Museum, or Mother Shipton Triumphant (pan), 20 Dec 1792, compiled by T. Goodwin from Pepusch, Galliard, Vincent, Boyce, Fisher, Arnold, with new music by W. Shield

OTHER VOCAL

The Favorite Cantata of Diana and Cupid, and a Collection of Songs . . . 1770 (1770)
2 Cantatas and a Collection of Songs sung at Vaux Hall and Ranelagh . . . bk 2 (*c*1772)
Vauxhall Songs and Cantatas, bk 3 (1772)
The Songs and Cantatas as sung at Vauxhall Gardens . . . 1773 (1773)
Vauxhall and Marybone Songs . . . bk 3, 1774 (1774)
Vauxhall Songs for 1775 . . . bk 4 (1775)
Behold, how good and joyful (Masonic anthem, after Ps cxxxiii), 1776, London, Library and Museum of the United Grand Lodge of England
What solemn sounds on Holy Sinai sung (Masonic ode), 1776, London, Library and Museum of the United Grand Lodge of England
Seek ye the Lord. An Anthem as sung . . . at Bedford Chapel and at the Cathedral in Lincoln (*c*1775)
The Morning Invitation (cant.) (*c*1775)
In vain I seek to calm to rest: a Favorite Song (*c*1775)
Providence (orat), Oxford, 2 July 1777, lost
Just what you will, song (*c*1778)
Diana and Acteon (cant.) (*c*1780)
A Comparative View of the English, French and Italian Schools, consisting of Airs and Glees . . . compos'd as Examples of their Several Manners, during Residence in Those Countries (Edinburgh, *c*1790)

INSTRUMENTAL

6 Solos, vn, bc (*c*1770)
6 Simphonies in 8 parts, vns, obs, hns, va, bc (1772); ed. P.F. Rice (Wellington, 1999)
6 Duettos, 2 vn (*c*1773); 3 ed. P.F. Rice (St. John's, 1998)
Capt. Hawkins & Wades Favourite Minuet: with Variations, hpd (London, ?1775)
6 Easy Lessons, vn, bc (hpd) (*c*1780)
[3] Vn Concs., vn, 2 vn, va, bc [2 ob and 2 hn ad lib], op.1(–3) (Berlin, *c*1783) [in some movts 2 fl instead of 2 ob ad lib]
Symphony, E♭ (inc.), *GB-Lbl* RM 21dF
Rondeaux, apparently from a conc. in C; Sussex Slow March, air arr. pf: both *Lbl* Add. 35040, rondeaux inc., both attrib. Fischer
Other works cited in Sainsbury and publishers' catalogues, lost

PAUL F. RICE

Fisher, Sylvia (Gwendoline Victoria) (*b* Melbourne, 18 April 1910; *d* Melbourne, 25 Aug 1996). Australian soprano. She studied at the Melba Memorial Conservatorium in Melbourne with Mary Campbell, then privately with Adolf Spivakovsky. While a student she made her operatic début (1932) as Hermione in Lully's *Cadmus et Hermione*, her only stage performance before she moved to Europe in 1947. She joined the Covent Garden company in 1948, making her début that December as Leonore, and remained a member of the ensemble until 1958. Her many London roles included the Marschallin, Ellen Orford, a moving Mother Marie in the British première of *Dialogues des Carmélites*, Elsa, Agathe and Sieglinde, and she was compared with Lotte Lehmann for warmth

of stage presence and vocal radiance. She scored a notable success as Kostelnička Buryjova in the first British production of *Jenůfa* (1956); she also sang Turandot, Brünnhilde (*Die Walküre*) and Isolde, but they were vocally too demanding so she later wisely abandoned them. After some years of retrenchment, she had a second career with the English Opera Group from 1963 as Lady Billows (*Albert Herring*), the Female Chorus (*The Rape of Lucretia*) and Mrs Grose (*The Turn of the Screw*); she created the role of Miss Wingrave in 1971 and repeated it at Covent Garden in 1973. When *Gloriana* was revived at Sadler's Wells in 1966 she triumphed as a commanding and dignified Elizabeth I. Her final appearances were in 1973 as a powerful Marfa Kabanicha (*Kát'a Kabanová*) for the ENO. She always managed to convey the essence of a role through her sympathetic identification with it, most notably as the Marschallin, Lady Billows, Elizabeth I and Miss Wingrave.

HAROLD ROSENTHAL/ROGER COVELL

Fisher, William Arms (*b* San Francisco, 27 April 1861; *d* Boston, 18 Dec 1948). American music editor and writer on music. His early musical training was in Oakland, New York and London. He studied with Horatio Parker and at the National Conservatory with Dvořák. He taught briefly at the National Conservatory, and in 1897 became editor and director of publications for the Oliver Ditson Co. in Boston; from 1926 to his retirement in 1937 he was vice-president of the company. He gained some reputation as a songwriter and is best remembered today for setting the words 'Goin' home' to the melody of the second movement of Dvořák's 'New World' Symphony.

Fisher was one of the earliest historians to recognize the vitality and value of 18th- and early 19th-century American music. His *Notes on Music in Old Boston* (Boston, 1918/*R*) treats its subject sympathetically and accurately, presenting many facsimiles and illustrations of music, musicians and advertisements. *One Hundred and Fifty Years of Music Publishing in the United States* (Boston, 1934/*R*) is a revision and expansion of the earlier book, emphasizing the contributions of the Oliver Ditson Co. His two historical anthologies, *Ye Olde New-England Psalm-Tunes, 1620–1820* (Boston, 1930) and *The Music that Washington Knew* (Boston, 1931), present this music in revised and edited form, unsuited to historical purposes. He also wrote *Music Festivals in the United States* (Boston, 1934) and edited several anthologies of Irish songs, Negro spirituals, etc.

KARL KROEGER

Fishman, Natan L'vovich (*b* Baku, 29 May/9 June 1909; *d* Moscow, 7 Nov 1986). Russian musicologist and pianist. He received his early musical education from his father, L.N. Fishman (1883–1936), conductor of an amateur theatre in Baku. In 1927 he graduated from M.L. Presman's piano class at the Baku Conservatory and in 1931 from L.V. Nikolayev's piano class at the Leningrad Conservatory. He then worked as a concert pianist (1925–40) and taught the piano in Moscow from 1935. He was principal conductor of the Malïy Theatre in Moscow (1943–50) and a senior research fellow at the Glinka Museum of Musical Culture (1951–78). As a musicologist Fishman became known particularly for his research on Beethoven. In 1962 he published a transcription and study of the Beethoven sketchbooks in the Wielhorski archives, for which he was awarded the doctorate in 1968. In 1970 he undertook to publish Russian translations of Beethoven's letters; the third and fourth volumes of this project appeared after his death. He edited several other books on Beethoven, and wrote articles on methodology, musical aesthetics and piano teaching.

LEV GINZBURG/ABRAHAM I. KLIMOVITSKY

Fisin, James (*b* Colchester, 25 Oct 1750; *d* Colchester, 9 Sept 1847). English violinist and composer. He was the son of a victualler, and was trained in music by the singer and organist Frederick Charles Reinhold, who worked in Colchester from 1760 to 1767. Fisin's early professional life was precarious, but in 1776 Thomas Twining recommended him to Charles Burney, who obtained a post for him in London with Sir Thomas Robinson, the director of entertainments at Ranelagh Gardens. Robinson soon changed his mind and, despite Burney's recommendation, Fisin failed to obtain a post in Newcastle in the winter of 1776–7. Nevertheless, he eventually established himself in London as a violinist at the Pantheon and elsewhere. In 1790 he led the orchestra for Colchester's first Handel festival, and played a leading part in the town's musical life over the next few years, while continuing to live in London. He moved to Chester in 1801, again on Burney's recommendation, and finally retired to Colchester in 1804. In his later years he received a government pension for his 'musical accomplishments and services'. Fisin was a competent and fairly prolific composer, mainly of songs and keyboard music, though in 1809 he published the last-known setting of Congreve's masque *The Judgment of Paris*. On 28 December 1823 he wrote an account of his life (now in *GB-Ge*), for Sainsbury's *Dictionary of Musicians*.

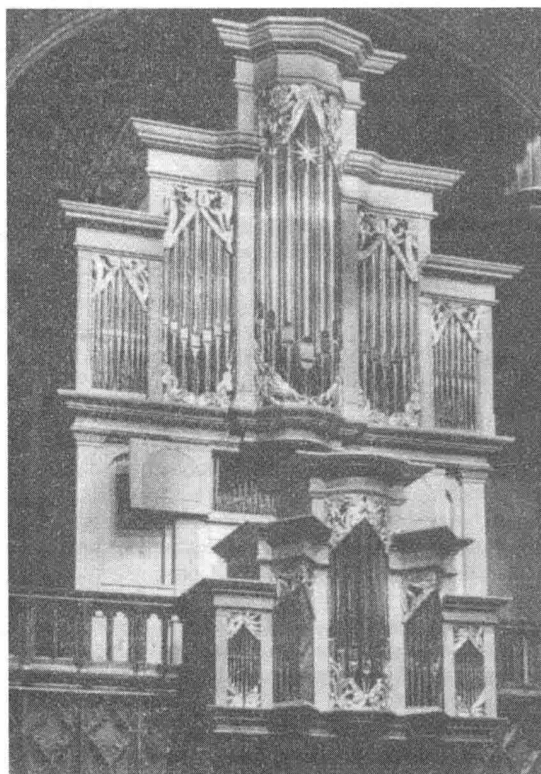
JOHN BENSUSAN-BUTT, PETER HOLMAN



Fisis (Ger.). F𝄪. *See* PITCH NOMENCLATURE.

Fisk, Charles Brenton (*b* Washington DC, 7 Feb 1925; *d* Boston, 16 Dec 1983). American organ builder. Educated at Harvard and Stanford universities, he was apprenticed to John Swinford (*d* 1972) and the elder Walter Holtkamp. In 1955 he co-founded the firm of ANDOVER with Thomas W. Byers of Methuen, Massachusetts, who had established a small business in 1949 doing maintenance and rebuilding work. In 1958 Byers sold his interest to Fisk, who in the same year began to devote himself solely to the building of organs with mechanical key action, becoming the first modern maker in the USA to do so. In 1961 the company, renamed C.B. Fisk, Inc., moved to Gloucester, Massachusetts.

Fisk's first important instrument, a sizable two-manual organ completed in 1961 for Mt Calvary Episcopal Church, Baltimore, focussed the attention of influential organists on his work, and helped to bring about a realization that American organs need not be inferior to imported instruments. His organ built for King's Chapel, Boston (1964), was the first modern American-made tracker-action organ with three manuals, and that for Memorial Church, Harvard University (1967), the first with four. The organ completed in 1970 for Old West Church, Boston, has been used frequently for concerts and recordings by such performers as E. Power Biggs, Mireille Lagacé and Frank Taylor.

During the 1970s Fisk went several times to the Netherlands, France and northern Germany to study and document historic instruments. This resulted in certain changes in his work: mechanically, he began to make greater use of suspended key action and the flexible winding systems of older organs; tonally, he incorporated pipes based exactly on historic models, and made greater use of lead pipework. He also began building organs in historic styles, including chamber organs based on the work of Snetzler for the Yale Music School and the New England Conservatory (1972), and an organ in the French classic style for the University of Vermont (1975). Perhaps his most important historical instrument was that completed in 1981 for Wellesley College (see illustration). Based on the work of Friedrich Stellwagen, it is tuned in mean-tone and has two sub-semitones to each octave. It has been extensively used in recitals and seminars dealing with the interpretation of 17th-century keyboard music.

After the completion of the large organ for the House of Hope Presbyterian Church, St Paul (1979), Fisk built a series of sizable instruments in which historic principles

Organ by Charles Brenton Fisk (1981) at Wellesley College, Massachusetts

are combined to form an eclectic design, providing an effective vehicle for music of all periods. Among these instruments are those in the First Presbyterian Church, Charleston, West Virginia (1980), Christ United Methodist Church, Greensboro, North Carolina (1982), Downtown United Presbyterian Church, Rochester, New York (1983), and Stanford University (1984). The Stanford University organ is a large instrument developed by Fisk in consultation with Harald Vogel; it has 17 pipes to the octave and may, by means of a shifting mechanism, be played in either mean-tone or well-tempered tuning. Most of Fisk's organs from the early 1970s onwards have mechanical stop action as well as key action, and they are distinguished visually by custom-designed casework in both traditional and contemporary styles. Since Fisk's death his work has been carried on by his former associates.

In 1993 Steven A. Dieck was named president of C.B. Fisk, Inc., with David C. Pike as executive vice-president and Robert Cornell as vice-president of engineering. Notable instruments built since 1983 include those for Mt Holyoke College, South Hadley, Massachusetts (1985), the Church of the Transfiguration, New York (1988), and the large concert organ in Meyerson Symphony Center, Dallas (1992).

BARBARA OWEN

Fisk, Eliot (Hamilton) (*b* Philadelphia, 10 Aug 1954). American guitarist. His teachers included not only Andrès Segovia, Oscar Ghiglia and Alivio Diaz, but also the harpsichordists Ralph Kirkpatrick and Albert Fuller at Yale, where he founded the guitar department and where he earned his BA (1976) and MM (1977). He made his solo début in 1976 at Alice Tully Hall, New York, and in 1980 won the International Classical Guitar Competition in Gargnano, Italy. His London début, at the Wigmore Hall, was in 1984. He taught at the Hochschule für Musik in Cologne, 1982–9, and in 1989 was appointed to the Salzburg Mozarteum. He has appeared frequently in solo recitals, as an orchestral soloist and in chamber music. In the tradition of his mentor, Andrés Segovia, Fisk has expanded the repertory of the guitar through his own transcriptions, which include works by Bach (the sonatas and partitas for unaccompanied violin), Beethoven, Haydn, Mozart, Paganini (the 24 Caprices) and Scarlatti. His playing is marked by a boldly personal interpretive sense and a prodigious ease of technique. In contemporary repertory he is especially noted as an exponent of the works of Berio and George Rochberg.

THOMAS F. HECK

Fiske, Isaac (*b* Holden, MA, 23 Dec 1820; *d* Worcester, MA, 17 Sept 1894). American brass instrument inventor and manufacturer. He worked in Worcester from 1842 until 1887. Between 1866 and 1873 he obtained five American patents for improvements in valved brass instruments. Although at least one keyed bugle by Fiske is known, and one cornet with double-piston Vienna valves, most of his instruments were made with rotary valves. Towards the end of his career he also made instruments with Périnet piston valves. The most distinctive of his designs was a triangular arrangement of three string-linkage rotary valves operated by rods passing through cylinders containing coil return springs. This type of arrangement was also patented by Joseph Higham of Manchester in 1857. Almost all Fiske's instruments were made of nickel silver.

Fiske was acclaimed one of the finest makers of cornets in the USA by Harvey B. Dodworth, the leader of the Dodworth Band in New York. His business continued in spite of a disastrous fire in 1854, and on his retirement in 1887 the business was sold to the C.G. Conn Co. Fiske's instruments are in many American collections, including the John H. Elrod Memorial Collection, Germantown, Maryland; the Henry Ford Museum, Dearborn, Michigan; the Shrine to Music Museum, University of South Dakota; the Sousa Collection, University of Illinois, Urbana; the Museum of Fine Arts, Boston; and the Worcester Historical Society.

ROBERT E. ELIASON

Fiske, Roger (*b* Surbiton, 11 Sept 1910; *d* Ambleside, 22 July 1987). English musicologist and music educationist. After taking the BA in English at Wadham College, Oxford, in 1932, he studied composition with Herbert Howells at the RCM, London, and criticism with H.C. Colles, until 1937, when he was awarded the Oxford DMus. In 1939 he joined the BBC, where he produced educational broadcasts for the armed forces (1948–53) and music talks for the Third Programme (1953–9). He left in 1959 but continued to be well known as a broadcaster, and often chaired broadcast musical discussions. From 1968 to 1975 he was general editor of Eulenburg (London) miniature scores.

Fiske wrote popular books on ballet, chamber music and the music of Beethoven, and his school books were very successful. He had a fluent and lively literary style. His more serious research touched on several areas, but was particularly concerned with English 18th-century theatre music; his book on the subject was an important pioneering work in a previously neglected area of study. He published an important historical and analytical study on Beethoven's Missa Solemnis and a survey of 'Scottish' music composed and performed outside Scotland by musicians of other nationalities, as well as editions, compositions (mainly songs for children), folksong arrangements and carols.

Fistoulari, Anatole (*b* Kiev, 20 Aug 1907; *d* London, 21 Aug 1995). British conductor of Ukrainian birth. His father, Gregor Fistoulari, a conductor who had studied with Anton Rubinstein and Rimsky-Korsakov, was his principal teacher. He conducted a performance of Tchaikovsky's Symphony no.6 in Kiev at the age of seven (according to his own testimony). In 1933 he was appointed conductor of Chaliapin's opera company (the Grand Opéra Russe), performing in Paris and elsewhere, and in 1938–9 he became well known in Europe and America as conductor of the touring Ballets Russes under Leonid Massine's artistic directorship. He was active in Britain during World War II: in 1942 he conducted the London production of Musorgsky's opera *The Fair at Sorochintsï* and in 1943–4 he was principal conductor of the LPO. He married Anna Mahler, the composer's daughter, in 1942; the marriage was dissolved in 1956. In 1954–5 he was a guest conductor with the Royal Ballet and in 1956 conducted the LPO on its visit to Moscow and Leningrad. Fistoulari also conducted orchestras in Israel, New Zealand and elsewhere. He made many recordings, particularly of ballet music, but also accompanying Menuhin, Curzon, Katchen and other soloists in concertos.

ARTHUR JACOBS/R

Fistula. Latin term for a pipe. Classical poets used the term to refer to the shepherd's SYRINX. It acquired a variety of meanings in the Middle Ages and Renaissance. Aegidius of Zamora (*c*1260) referred to a combination of *fistula* and *tympanum* (*see* PIPE AND TABOR). Other uses include: organ pipe (*fistula organica*); recorder (*fistula anglia, angelica* or *anglica*, 'English flute', or *fistula vulgaris*, 'common flute'); transverse flute (*fistula germanica*, 'German flute'); fife (*fistula helvetica*, 'Swiss flute' or *fistula militaris*, 'military flute'); shawm (*fistula pastoralis*, 'shepherd's pipe') or panpipe (*fistula pandi*). Medieval treatises on organs refer to the wind trunk as *fistula maxima*, and various organ stops are described as *fistula* with some modifier.

JAMES W. MCKINNON

Fitelberg, Grzegorz (*b* Dynaburg, Latvia, 18 Oct 1879; *d* Katowice, 10 June 1953). Polish conductor, composer and violinist. He studied composition with Noskowski and the violin with Barcewicz at the Warsaw Conservatory (1891–6); in 1898 he won the Paderewski Prize for his First Violin Sonata. Until 1904 he worked as a violinist in the Warsaw PO and at the Wielki Theatre, and in the 1904–5 season he made his début as a conductor. Together with Szymanowski, Różycki and Szeluto he established the Young Poland movement and the Young Polish Composers' Publishing Co., sponsored by Prince Lubomirski. On 6 February 1906 Fitelberg conducted in Warsaw the first concert associated with the movement. In 1908 he was appointed chief conductor of the Warsaw PO and visited Vienna, Berlin, Leipzig and Dresden; in the 1912–13 season he was conductor of the Vienna Staatsoper. He spent the years 1914–21 in Russia and was then a conductor for Diaghilev (1921–4), giving the première of Stravinsky's *Mavra*. From 1923 to 1934 he was again chief conductor of the Warsaw PO, then he organized the Polish RO, which he directed until 1939. Thereafter he worked as a conductor throughout western Europe and the Americas before returning to Poland in 1947 to direct the Polish Radio National SO in Katowice.

Fitelberg was an indefatigable champion of new Polish music: he conducted the first performances of most of the orchestral works of Karłowicz and Szymanowski, as well as some of those of Różycki. His activity as a composer was less fruitful, most of his pieces being written during the period 1905–8. Although his work was based on the German late Romantics, he was also influenced by Russian music of the second half of the 19th century. His most valuable orchestral works are the *Pieśń o sokole* ('Song of the Falcon') and the first *Rapsodja polska*, based on folk themes. Later he made many orchestral transcriptions, notably of works by Szymanowski, and he completed and orchestrated Karłowicz's *Epizod na maskaradzie* ('An Episode on Masquerade'). Following an instruction in Szymanowski's will, he reorchestrated the second movement of the Symphony no.2, having done the same with the first movement in collaboration with the composer.

WORKS
(*selective list*)

Orch: Vn Conc., d, op.13, 1902–3; Ov., op.14, 1905; Sym. no.1, e, op.16, 1904; Ov., op.17, 1906; Pieśń o sokole [Song of the Falcon], op.18, sym. poem, 1906; Sym. no.2, A, op.20, 1907; Protesilaus and Laodamia, op.24, sym. poem, 1908; Rapsodja polska, op.25, 1913 (1914); Rapsodja polska [no.2], 1914; W głębi morza [From the Depths of the Sea], sym. poem, 1914

TERESA CHYLIŃSKA

Fithele. *See* FIDDLE.

Fitkin, Graham (*b* Crows-an-Wra, West Cornwall, 19 April 1963). English composer. He studied at the University of Nottingham with Peter Nelson and Nigel Osborne (1981–4), then with Louis Andriessen at the Royal Conservatory in The Hague (1984–7). In 1985 he co-founded Nanquidno, a group of pianists at two keyboards. Piano music has been central to Fitkin's output; from the early multiple piano works, such as *Loud* (1989), *Log* (1990) and *Line* (1991), each composed for the British ensemble Six Pianos, Fitkin turned after 1991 to writing exclusively solo pieces.

The piano's neutrality and relatively unified sound quality are strong attractions for a composer much concerned with clarity, with music as abstract formal design and with an aesthetic that, despite a frequent use of quasi-programmatic titles and an often considerable urgency of expression, is essentially classical. Fitkin's style, as well as his aesthetic, has developed out of minimalism, notably the European variety associated with his Dutch teacher. Many of his compositions stress rhythmic propulsion allied to an individual timbral pungency. At the same time his style incorporates a pronounced lyrical streak and a harmonic language which ranges from the acidic to the plangent.

Fitkin lived in London from 1987 to 1991, before moving back to his native Cornwall. During the early 1990s he became increasingly in demand as a composer for contemporary dance, for music theatre (in works such as *Ghosts*, written for the Royal Opera House's Garden Venture scheme in 1994) and especially for large orchestra. In the 12 orchestral compositions written in 1994–8 (five while composer-in-association with the Royal Liverpool PO in 1994–6), Fitkin explores the full range of the conventional orchestra as well as the wind-dominated ensembles favoured by other post-minimalists. He formed a sextet, the Graham Fitkin Group, in 1996.

WORKS

KEITH POTTER

Fitzball [Ball], **Edward** (*b* Burwell, nr Mildenhall, 1792; *d* Chatham, 27 Oct 1873). English dramatist and librettist. He made his London début with the play *The Innkeeper of Abbeville* (1821–2). From 1828 onwards he wrote for Covent Garden, and from 1830 to 1838 for Vauxhall Gardens. He is best remembered as the author of *The Siege of Rochelle* (set by Balfe) and *Maritana* (Wallace). Fitzball's personal mildness of manner belied his ardently romantic nature. He prefaced his original surname with 'Fitz' (his mother's maiden name) for dramatic effect, and his Transpontine melodramas earned him the nickname 'the Terrible Fitzball'. His facility was inexhaustible, and he revelled in the creation of stage devilry and the lavish use of blue fire. His appeal to composers may be attributed to his professional shrewdness: he calculated for maximum effect and saw his job in terms of entertaining the public. He seems to have worked by having the numbers set as he wrote them, one by one, as he describes in his account of the composing of *Joan of Arc* (*Thirty-Five Years*, ii, 122–3):

> Balfe took home, piece by piece, the poetry, and, when finished came again to Twickenham for more, till poem and music were alike complete ... of all the composers I ever wrote for, Balfe was the best tempered, and delighted when the slightest opportunity occurred to bestow praise, which is so encouraging to an author, especially a sensitive one like me.

His autobiography, *Thirty-Five Years of a Dramatic Author's Life*, is a chatty and fascinating farrago of theatrical information.

WORKS

(*selective list*)

Waverley, or Sixty Years Since (Scottish drama), G.H. Rodwell, 1824; *The Flying Dutchman, or The Phantom Ship* (nautical drama), Rodwell, 1827; *The Earthquake, or The Spectre of the Nile* (burletta operatic spectacle), Rodwell, 1828; *The Night before the Wedding and the Wedding Night* (operatic farce), H.R. Bishop, 1829

Adelaide, or The Royal William (national and nautical musical burletta), Bishop, 1830; *The Black Vulture, or The Wheel of Death* (musical drama), Rodwell, 1830; *The Sorceress*, Ries, 1831; *Der Alchymist* (with T.H. Bayly), Bishop, 1832; *The Maid of Cashmere* (ballet op), Bishop, 1833

The Soldier's Widow, or The Ruins of the Mill (musical drama), J. Barnett, 1833; *Jonathan Bradford, or The Murder at the Roadside Inn!* (drama), J. Jolly, 1833; *The Siege of Rochelle* (original op), M.W. Balfe, 1835; *Joan of Arc* (grand op), Balfe, 1837; *Diadesté, or The Veiled Lady* (opera buffa), Balfe, 1838; *The Maid of Palaiseau*, Bishop, 1838; *Këolanthé, or The Unearthly Bride*, Balfe, 1841; *The Queen of the Thames, or The Anglers, or Uncle Brayling* (operetta), J.L. Hatton, 1842; *Pasqual Bruno* (comic op), Hatton, 1844

Maritana (grand op), V. Wallace, 1845; *The Maid of Honour*, Balfe, 1847; *Quentin Durward*, H.R. Laurent, 1848; *Berta, or The Gnome of the Hartzberg*, H.T. Smart, 1855; *Raymond and Agnes* (romantic op), Loder, 1855; *Lurline* (grand romantic op), Wallace, 1860; *She Stoops to Conquer*, G.A. Macfarren, 1864; *The Magic Pearl*, T. Pede, 1873

NIGEL BURTON

Fitzenhagen, (Karl Friedrich) Wilhelm (*b* Seesen, 15 Sept 1848; *d* Moscow, 14 Feb 1890). German cellist. Son of the town music director, Fitzenhagen started music lessons as a small boy: at five the piano, at eight the cello, and at eleven the violin. He also learnt several wind instruments sufficiently well to be able to deputize for members of his father's orchestra.

Plock, of the Duke of Brunswick's chamber orchestra, gave Fitzenhagen his first regular cello lessons; in 1862, having made his début as a soloist, Fitzenhagen became Theodor Müller's pupil. Three years later he played to the duke, who released him from all military service; in 1867 certain noble patrons enabled him to go to Dresden for a year's study with Grützmacher. A year later he was appointed to the Dresden Hofkapelle, where he started his career as a soloist. In 1869 he played at a festival in Leipzig, and the following year at the Beethoven Festival. Liszt tried to persuade him to remain at Weimar, but he chose to become professor at the Imperial Conservatory, Moscow, in 1870.

Fitzenhagen acquired a reputation as the greatest teacher in Russia and equally as a soloist and chamber music performer. Among the future celebrities he taught were Adamowski and Brandukov. He was appointed concertmaster of the Russian Imperial Musical Society and, in 1884, director of the Moscow Musical and Orchestral Society. He formed a rewarding friendship with Tchaikovsky and, as a member of the Russian Musical Society's quartet, gave the first performances of Tchaikovsky's string quartets opp.11, 22 and 30, and of the Piano Trio op.50.

In 1876 Tchaikovsky dedicated the Variations on a Rococo Theme op.33 to Fitzenhagen, who doubtless commissioned the work. Fitzenhagen somewhat altered the solo part even before giving the première of this inventive, elegant work on 30 November 1877 at the Russian Musical Society in Moscow under Nikolay Rubinstein. However, seeking ever greater adulation from his audiences, during subsequent solo tours he re-ordered all but the first two variations, altered and extended several passages and totally excised Tchaikovsky's final variation. This version was published in 1878 as Tchaikovsky's own arrangement for piano and cello, effectively without the sanction of the composer. The full score, similarly altered, was published in 1889; Tchaikovsky, who referred to 'that idiot Fitzenhagen' and complained of his poor proofreading, inexplicably added 'The devil take it – let it stand as it is'. It did so for up to 70 years until, after the publication of Tchaikovsky's original, Piatigorsky's emphatic advocacy and teaching made it known.

Fitzenhagen was himself an industrious composer, but of over 60 works few survive.

LYNDA MACGREGOR

Fitzgerald, Ella (Jane) (*b* Newport News, VA, 25 April 1917; *d* Beverly Hills, CA, 15 June 1996). American jazz and popular singer. She was an illegitimate child who never knew her father, and was brought up in Yonkers, New York. After her mother died in 1932, she lived with an aunt and then briefly at an orphanage, in Harlem. Having run away from the orphanage, she was homeless when in November 1934 she won an amateur contest at the Apollo Theatre. This led to an engagement in March 1935 with Chick Webb's band, and she soon became a celebrity of the swing era with performances such as *A-tisket, A-tasket* (1938, Decca) and *Undecided* (1939, Decca). When Webb died in 1939, Fitzgerald took over the direction of the band, which she led for three years. She then embarked on a solo career, issuing commercial and jazz recordings, and in 1946 began an association with Norman Granz's Jazz at the Philharmonic which eventually brought her a large international following. She also sang in a jazz group led by her husband, Ray Brown (1948–52). Early in 1956 Fitzgerald severed her longstanding connection with Decca to join Granz's newly founded Verve label. Among their first projects was a series of 'songbooks' dedicated to major American songwriters (*Ella Fitzgerald Sings the Cole Porter Song Book*, 1956; *Ella Fitzgerald Sings the Duke Ellington Song Book*, 1956–7; *Ella Fitzgerald Sings the George and Ira Gershwin Song Book*, 1959). The series made use of superior jazz-inflected arrangements by Nelson Riddle and others and succeeded in attracting an extremely large audience, establishing Fitzgerald among the supreme interpreters of the popular-song repertory. Thereafter her career was managed by Granz, and she became one of the best-known international jazz performers; she issued many recordings for Granz's labels and made frequent appearances at jazz festivals with Duke Ellington, Count Basie, Oscar Peterson, Tommy Flanagan and Joe Pass.

For decades Fitzgerald was considered the quintessential black female jazz singer, and drew copious praise from admirers as diverse as Charlie Parker and Dietrich Fischer-Dieskau. Her voice was small and somewhat girlish in timbre, but these disadvantages were offset by an extremely wide range (from *d* to *c‴*) which she commanded with a remarkable agility and an unfailing sense of swing. This enabled her to give performances that rivalled those of the best jazz instrumentalists in their virtuosity, particularly in her improvised scat solos, for which she was justly famous (for an example see SCAT SINGING). Unlike trained singers she showed strain about the break in her voice (*d″* and beyond) which, however, she used to expressive purpose in the building of climaxes. Fitzgerald also had a gift for mimicry that allowed her to imitate other well-known singers (from Louis Armstrong to Aretha Franklin) as well as jazz instruments. As an interpreter of popular songs, she was limited by a certain innate cheerfulness from handling drama and pathos convincingly, but was unrivalled in her rendition of light material and for her ease in slipping in and out of the jazz idiom. She influenced countless American popular singers of the post-swing period and also international performers such as the singer Miriam Makeba.

Fiume, Orazio (*b* Monopoli, 16 Jan 1908; *d* Trieste, 21 Dec 1976). Italian composer. After studying composition in Naples and the piano in Palermo, he took postgraduate courses in composition with Pizzetti and conducting with Molinari at the Accademia di S Cecilia in Rome. He established himself as a composer by winning various prizes, including the Premio Marzotto and the Premio Martucci in 1956, and the Grand Prix Reine Elisabeth de Belgique in 1957. Having taught composition at the conservatories of Parma (1941–51) and Milan (1951–9), he became director at Pesaro (1959) and then Trieste (after 1960). He was a member of the Accademia di S Cecilia in Rome.

Fiume's output is principally orchestral. Works like the *Sinfonia in tre tempi* and the two Concertos for Orchestra (which are among his most important pieces) use an essentially tonal language, occasionally enriched by chromatic collections and isolated serial elements. His only opera, *Il tamburo di panno*, displays a conventional dramatic and musical approach. (*DEUMM*, R. Zanetti; *ES*, A.M. Bonisconti; *GroveO*, R. Pozzi)

VIRGILIO BERNARDONI

Five, the [Moguchaya kuchka; Mighty Handful]. A group of 19th-century Russian composers led by Balakirev, the other members being Borodin, Cui, Musorgsky and Rimsky-Korsakov. Their aim was to follow in Glinka's footsteps and create a distinctly Russian school of music. Formed in St Petersburg before the foundation of the Conservatory of Music by Anton Rubinstein in 1862, they were consequently all self-taught. It was in a review of a concert on 12/24 May 1867 that Vladimir Stasov praised the conducting of Balakirev and the music of his group, ending the review: 'May God grant that [the audience retains] for ever a memory of how much poetry, feeling, talent and ability is possessed by the small but already mighty handful [*moguchaya kuchka*] of Russian musicians'. The term *moguchaya kuchka*, literally 'mighty little heap', stuck, and included, as well as The Five, would-be composers associated with Balakirev such as Gussakovsky and Lodïzhensky. The first reference to 'five' occurs in a letter from Balakirev to Tchaikovsky (in Moscow) written on 16/28 March 1870 in which Balakirev congratulated the younger man on the D♭ major second subject (love theme) in his overture *Romeo and Juliet*; Balakirev's group were fascinated by it, 'not excluding V. Stasov, who says "there used to be five of you, now there are six"'. But, although in the early 1870s some of Tchaikovsky's music was influenced by The Five in general and Balakirev in particular (he dedicated his *Romeo and Juliet* overture and, much later, his *Manfred* symphony to Balakirev), he never closely associated himself with the circle; he did not wish to give way to the 'dogmatically expressed' views of Balakirev, and was thankful that he lived in Moscow and they in St Petersburg.

The Five had all been opposed to the Conservatory, but after Rimsky-Korsakov joined the staff in 1871, with Balakirev's support, their disapproval evaporated, though conservative and 'routine' techniques were always eschewed. Rubinstein himself, having resigned from the Conservatory in 1867 to resume his career as a concert pianist and composer, was to embrace some of the 'nationalist' ideals in, for example, his musical character-picture *Ivan IV the Terrible* (1869), first conducted by Balakirev, and in Scene 3 of his opera *The Demon* (1871, première 1875), the latter in its turn influencing parts of Borodin's unfinished opera *Prince Igor*.

Musorgsky died in 1881 and Borodin in 1887, Cui's music had turned out to be less characterful than that of the others, and by the late 1880s Rimsky-Korsakov was going his own way, allying himself and his followers with the millionaire tycoon Belyayev to the disapproval of Balakirev. The group, never as tightly knit as has often been supposed, had by then ceased to exist. Meanwhile, the continuing polemical articles of Stasov were creating a mythology about them which, until recently, remained largely unchallenged.

Fixed forms. *See* FORMES FIXES.

Fizdale, Robert (*b* Chicago, 12 April 1920; *d* New York, 6 Dec 1995). American pianist. His entire career was as a duo pianist with Arthur Gold. They met at the Juilliard School, where Fizdale was studying with Hutcheson and Gold with Josef and Rosina Lhévinne. They made their début (as Gold and Fizdale) at the New School for Social Research in 1944 with a programme of 20th-century works including Cage's *A Book of Music* and Three Dances (first version) for two prepared pianos, both composed for them. Their New York Town Hall début

followed in 1946; that year they gave first performances of other works composed for them, including Bowles's and Haieff's sonatas for two pianos, and Milhaud's Concerto for two pianos (at Chautauqua). At a time when two-piano concerts chiefly connoted clatter and arrangements, they set a new standard for the art. In the ensuing years, Gold and Fizdale commissioned works from Rorem, Rieti, Barber, Thomson and Howard Brubeck, and from the French composers Auric, Milhaud, Poulenc, Henri Sauguet and Germaine Tailleferre. In 1972 with the New York PO they gave the first performance of Berio's Concerto for two pianos and orchestra, and they were also the first to revive Mendelssohn's early concertos in E and A♭.

Beyond the impressive refinement and intelligence of their playing, Gold and Fizdale were admired for the breadth of their repertory, which included almost all the two-piano literature, much music for piano duet (which, however, they played on two instruments), and works involving other performers, such as Bartók's Sonata for two pianos and percussion. Their recordings cover most of this repertory, and their tours took them all over the world. Gold and Fizdale wrote a biography, *Misia: the Life of Misia Sert* (1980). They retired from public performance in 1982.

MICHAEL STEINBERG/RUTH B. HILTON

Fjeldstad, Øivin (*b* Oslo, 2 May 1903; *d* Oslo, 16 Oct 1983). Norwegian conductor and violinist. He studied the violin at the Oslo Conservatory and with Davisson in Leipzig, making his début in Oslo in 1921. After joining the Oslo PO he became its leader, and also led the Norwegian RO. He first appeared as a conductor at Oslo in 1931, and had further studies with Clemens Krauss in Berlin. Appointed chief conductor of the Norwegian broadcasting service in 1946, he was awarded the Arnold Schoenberg Diploma at Salzburg in 1952 for his work on behalf of contemporary music. He was the first music director of the newly formed Norwegian National Opera, 1958–60 (with Flagstad as Intendant), and from 1962 to 1969 was music director of the Oslo PO. He toured widely as a guest conductor, and for several years took a close interest in the National Youth Orchestra of Great Britain, conducting it on a tour to Germany, the USSR and Scandinavia in 1961, and on later occasions, to 1968. His recordings include a number with the LSO and the Oslo PO, mainly of Scandinavian music, and the first complete version of *Götterdämmerung*, with Flagstad, Svanholm and Norwegian forces, issued in 1956. A Knight of the Order of St Olav, he also received honours from Belgium, Finland and the Netherlands.

Flaccomio, Giovanni Pietro (*b* Milazzo, nr Messina, *c*1565; *d* Turin, 1617). Italian composer. According to Mongitore he was director of the royal chapel of Felipe III of Spain, and then almoner to the Duke of Savoy at Turin. He was a scholar and a priest and came from a noble family; he held a high opinion of his own aptitude for music 'at which I have shown astonishing skill since boyhood'. In *Le risa a vicenda*, edited in 1598 by Flaccomio and dedicated to Cardinal Del Monte, nine composers set a two-part madrigal for five voices (a *proposta–risposta* between two lovers) from which the entire collection takes its title. Alternating with these nine works are ten settings of different texts: the first and last madrigals form a frame, their texts referring to the main poem, and most of the other eight texts are at least loosely connected with it. The book is therefore an example of the fashion of the time for madrigal anthologies with a unifying literary theme. The first setting of the title poem, by Gerolamo Lombardo, *maestro di cappella* of Messina Cathedral, was meant to serve as a model for the other composers, the most important Roman, Messinese and Milanese composers of the age.

Flaccomio's two volumes published in Venice in 1611 were dedicated from Madrid and addressed to members of the Spanish court. The madrigals are stylish and graceful pieces, for two high voices and one low, with a basso continuo part; stylistically they are canzonettas and *scherzi*, but formally they are madrigals, since they are through-composed. The refinement of musical style is matched by the excellence of the texts; many of them had already been set by others, either as polyphonic madrigals or in the new monodic style. The madrigals that survive from his settings of Guarini's *Il pastor fido* also demonstrate his skill in the older five-part polyphonic medium.

Flackton, William (*b* Canterbury, bap. 27 March 1709; *d* Canterbury, 5 Jan 1798). English composer and music collector. A son of John Flackton, bricklayer and cathedral contractor, he was a chorister at Canterbury Cathedral under William Raylton from 1716 to 1725. During this time he was also apprenticed to Edward Burgess, bookseller, stationer and cathedral lay clerk. In the *Kentish Post* (December 1727) he announced his return from London and his setting up as a bookseller. He was joined

in this business between 1747 and about 1767 by his brother John, a singer and horn player, in which latter connection John is said to be pictured in the painting reproduced as pl. xlix of Karl Geiringer's *Instruments in the History of Western Music* (London, 1943, 3/1978); William Flackton's song *The Chace* has a prominent horn part in its instrumental accompaniment. Between 1735 and 1752 Flackton was organist of St Mary of Charity, Faversham, where he presented an anthem of his composition at the installation of a new organ in 1737. The assertion in the obiturary notice in the *Gentleman's Magazine* that he was 'passionately attached to sacred music' is borne out not only by his sacred compositions, which include the *Hymns for Three Voices* he published in connection with his interest in education through Sunday Schools, but also by his work in assembling collections of manuscripts. The Flackton Collection (*GB-Lbl* Add.30931–3) represents the collectings of Daniel Henstridge, Raylton and Flackton himself. Many of the holographs by Purcell and Blow in these volumes were obtained by Henstridge while at Rochester, while other 17th-century copies were added in Canterbury by later owners. Philip Hayes used the collection in 1784–5, making notes in it and acknowledging it as a source in his own copies, while the copyist of *GB-Cfm* Mus 183 recorded his debt to Flackton in 1783. Flackton was one of the principal organizers of public concerts in Canterbury from the 1730s until late in his life, often in conjunction with the cathedral organist of the day and, in earlier times, with Canterbury minor canon William Gostling. His activities are chronicled in advertisements in the *Kentish Post* and *Kentish Gazette*.

Of Flackton's instrumental music, most interest attaches to his four sonatas for tenor violin (viola). In the preface to his op.2 sonatas (which were 'inspected' before publication by C.F. Abel) he stressed the claims of that neglected instrument and the need to increase its meagre repertory of solo music. Composing in a style already well outdated by the time of publication in 1770, he did so not only with ample competence but with considerable individuality and expressive power. In particular, the slow opening movement of the C minor viola sonata of 1776 has a haunting gravity of phrase which, though unmistakably in the idiom of the late Baroque, is far removed from mere echoes of stock material, and his viola sonatas survive for reasons beyond the mere paucity of the 18th-century repertory for the instrument. All his string music testifies to the regard of his contemporaries for his 'refined and elegant taste'.

WATKINS SHAW/ROBERT FORD

Flagellant songs. Songs sung during the penitential rites of the flagellants in the 13th and 14th centuries. *See* GEISSLERLIEDER.

Flagello, Nicolas (Oreste) (*b* New York, 15 March 1928; *d* New Rochelle, NY, 16 March 1994). American composer, conductor and pianist. He studied composition with Vittorio Giannini and conducting with Jonel Perlea at the Manhattan School of Music (MM 1950); he won a Fulbright Fellowship to continue his studies at the Accademia di S Cecilia, Rome (*Diploma di studi superiori* 1956). From 1950 to 1977 he was professor of composition and conducting at the Manhattan School. He was also active as a conductor at the Chicago Lyric Opera (1961) and the New York City Opera (1967), and appeared frequently as a pianist. His many recordings with the Rome SO and the Rome Chamber Orchestra span a broad repertory. Flagello's own music represents a distillation and intensification of European post-Romanticism, tempered by an American concision of structure. His early compositions reflect close ties to 19th-century models; however, with *The Judgment of St Francis* (1959), he arrived at a more mature, personal language characterized by tighter phrasing, denser textures, more astringent harmony and asymmetrical rhythms. Major works are often marked by brooding despair and violent agitation, which find release in massive climaxes. Yet even his later compositions retain a propensity for expressive melody and harmonic richness, with a clear anchoring in tonality at structural peaks. Despite its emotional effusiveness the music is tightly structured, with a skillful and imaginative use of subtle instrumental colours. Although his unfashionably romantic style attracted little attention during most of his life, his music began to find an enthusiastic audience after he ceased composing.

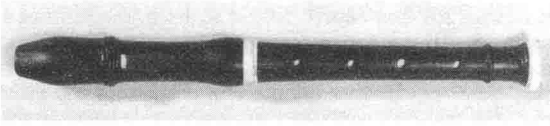
WALTER G. SIMMONS

Flageolet. A kind of DUCT FLUTE: the term, a diminutive of the earlier *flageol* (*flageot*, *flaiol*, *flajo*, etc.), appears in French literary sources from the 13th century onwards and seems to have been used for a variety of 'pastoral' pipes, including panpipes and reedpipes, the three-holed tabor pipe (*see* PIPE AND TABOR) and other duct flutes that were not true recorders.

1. 'Single' flageolet. 2. Double flageolet.



1. 'SINGLE' FLAGEOLET. The word flageolet had acquired a specific meaning by the 17th century. To Marin Mersenne (*Harmonie universelle*, 1636, pp.232–7) and Pierre Trichet (*Traité des Instruments de Musique*, MS, *c* 1640, *F-Psg* 1070, ff.27–33) 'flageolet' and *flageolet simple* implied a small duct flute in D with a 'beak' similar to that of the recorder, a flared foot, six finger-holes and a conical bore contracting slightly towards the foot. It was distinguished from the six-hole *fluste* by its very small size (Mersenne's flageolet measured 4½ *pouces* or old French inches) and the disposition of the holes (four finger-holes in front and two for the thumbs behind: an essential layout for such a tiny instrument. Mersenne produced the earliest known fingering chart, which was almost entirely diatonic; chromatic notes were to be obtained by half closing holes. He also included in his book a vaudeville by Sieur Henry le Jeune for four flageolets in three different pitches. Trichet himself owned a set of three different-sized ivory flageolets. The notated range of Mersenne's illustrated flageolet, using the bore exit as a seventh fingerhole, was *c′–a″* but the instrument must have sounded at least two octaves higher. A relative of this type of flageolet was the *arigot*, a type of *flajol* described in Thoinot Arbeau's *Orchesographie* (1588, f.17v). It had a similar finger-hole layout to Mersenne's flageolet but a more piercing sound and was traditionally made from a bird or animal bone. A surviving instrument of this type just over 15 cm long can be dated to 1608, when it was presented to a Flemish guild by Archduke Albert and his wife. Flageolets were usually made of ivory, ebony or boxwood. Cocus wood was also used in the 19th century. The attribution of the flageolet's invention to a Sieur de Juvigny from Paris, who played it in 1581, is based on a misinterpretation of the relevant text: Juvigny was acting as Pan and the instrument he played was most probably a panpipe, which was called a *flageolet a plusieurs tuiaux* by Trichet.

By the 1660s the flageolet had become popular in England and two instruction books were published there in 1667: Thomas Swain's *Directions for the Flagellett* and Thomas Greeting's *Pleasant Companion* (fig.1). Two further tutors were cited in Latin by J.F.B.C. Majer (*Museum Musicum*; 1732), but one of these may correspond to Greeting's book. In contrast to Mersenne, Greeting proposed cross-fingerings to produce a fully chromatic range.A six-line tablature notation with dots was used in such books for amateurs. Both Pepys and his wife played the flageolet, the latter studying with Greeting. Pepys mentioned the flageolet frequently in his diaries, naming John Banister as a celebrated performer.

The earliest known use of the flageolet in Germany was at a concert in Nuremberg in 1643. In 1666, the Nuremberg city council decided that flageolets and other wind instruments could be made by members of both the turners' and the decoy- and pipe-makers' guilds. Daniel

1. Flageolet player: engraving from the title-page of Thomas Greeting's 'Pleasant Companion, or New Lessons and Instructions for the Flagelet' (London: Playford, 1682 edition)

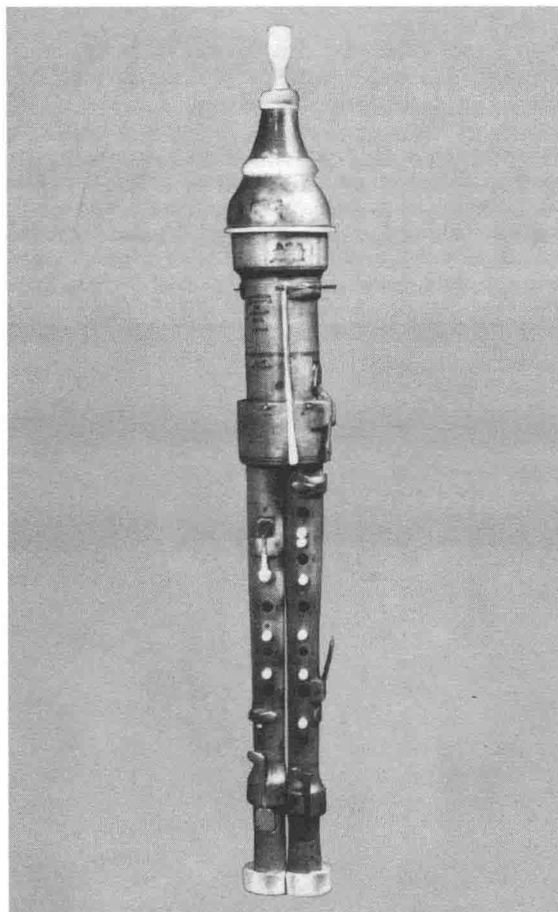
2. *French flageolet (Horniman Museum, London)*

Speer included a flageolet fingering chart in his *Grundrichtiger . . . Unterricht der Musikalischen Kunst* (Ulm, 1697, pl.IV). The flageolet was also to be found in the Low Countries in the 17th century. The instrument maker Richard Haka, who worked in Amsterdam in the second half of the century, is known to have made flageolets. The earliest surviving Spanish-language instructions were those published by Pablo Minguet y Yrol for the *flautilla* in 1754 but a late 17th-century literary reference to a *flautica muy pequeña*, used to teach birds to sing, may have been describing a flageolet.

In the 18th century composers occasionally scored for the flageolet, for example, Handel in *Rinaldo* (1711) and Rameau in *Platée* (1749 reduced score). It was mainly used to evoke birdsong or a pastoral setting. Meierott (1974, pp.247–9) has argued that the transposing *flauto piccolo* required in some works by German composers from the second half of the century (for example, Mozart in his *Die Entführung aus dem Serail*, 1782, and some of his *Tänze*) was a flageolet. The diminutive models of flageolet continued to survive throughout the 18th century as instruments for teaching birds to sing tunes. In the introduction to one such set of tunes, *The Bird Fancyer's Delight* (1717) the first mention is to be found of the sponge chamber, an oval or pear-shaped cavity located inside the instrument's head between the 'beak' and the 'window'. The sponge placed inside was to absorb the moisture from the player's breath and thus prevent condensation in the windway. From the middle of the century the beak of the flageolet was frequently replaced by a flat slender bone, ivory or mother-of-pearl mouthpiece.

The scarcity of scores and tutors from the second half of the 18th century suggests that the flageolet fell out of favour, possibly because of its comparatively weak tone and limited range. Interest revived at the end of the century when improved models, frequently with *d″* as the six-finger note, began to be developed. An 'English' flageolet that retained the sponge chamber was developed at the end of the 18th century with all six holes at the front. Some were subsequently made with a thumb-hole at the back and a seventh finger-hole in front. Ivory or bone studs were frequently placed between the holes to guide the fingers. Models with one to six keys were made in the 19th century. One of the most innovative makers was William Bainbridge of London (see also §2, below), who also proposed a numerical system of notation for amateur players. (A numerical system, similar to organ tablature, had previously been mentioned by Trichet.) The flageolet could be heard in the Promenade Concerts at the Crystal Palace and Queen's Hall in London. Although the flageolets played in concerts in Germany at the beginning of the century were probably of the French style, catalogues show that English flageolets were actually made in Markneukirchen and other German centres from the mid-century onwards. An eight-hole 'Viennese' flageolet, akin in fingering to the CSAKAN, was known in Russia as well as German-speaking countries at the end of the century. Instruction books for the English flageolet were being published in the USA during the early decades of the 19th century.

In France a flageolet in A, known as the 'quadrille' flageolet, was widely used by professional musicians playing in dance bands but, according to the second edition of Edmonde Collinet's *Nouvelle Méthode du Flageolet* (early 19th century), French flageolets were made in all the natural keys between *d′* and *d″* (*grand en ré* to *petit en ré*) as well as in *b♭′*. Several of the better-known instrument makers produced flageolets with the early Boehm system of ring keys. A wide range of models was still to be found in the catalogues of Parisian firms



3. *Domestic music-making with a flageolet: 'Music' by Samuel de Wilde, 1801 (City Art Gallery, Manchester)*

such as Besson and Ullmann at the beginning of the 20th century. As well as dance music – quadrilles, polkas, valses, etc. – and collections of short pieces for amateurs, some art music for the flageolet (see C.F. Whistling: *Handbuch der musikalischen Literatur*, Leipzig, 1817–27/*R*, 2/1828–39/*R*) was published in Paris and elsewhere. Some works, such as N. Pfeilsticker's *Concerto pour flageolet principal*, are both technically and artistically mediocre. In contrast, the solo *études, duos concertants* and *thèmes variés* contained in Carnaud's *Méthode pour le Flageolet* (op.56, *c*1835; also translated into Spanish) are competently written and require considerable skill by the performer. The flageolet was sometimes featured in the Jullien concerts in Paris (1836–8) and London (1841–59).

In 1843 an inexpensive version of the flageolet, known as the tin whistle or PENNYWHISTLE was invented by Robert Clarke, and continues to be played in traditional music in many parts of the world. It has become especially associated with Irish music.

See also ORGAN STOP and ZUFFOLO.

2. DOUBLE FLAGEOLET. A double duct-flute with inverse conical bores, invented about 1806 by the London maker William Bainbridge (*d c*1831). He made his standard model in two sizes: the 'Octave' pitched in G, and the larger or 'Tenor' pitched nominally a fourth lower in D.

4. *Double flageolet by William Bainbridge, early 19th century (Horniman Museum, London)*

It enables the non-expert, taught scales in the form of a sequence of thirds and sixths, to play in two-part harmony, requiring the fingers of a single hand only to service each side. An ivory beak mouthpiece inserts into a top joint that disperses the wind into six concentric channels; the ensuing resistance serves to conceal shortcomings of breath control on the part of the player. A second joint with circular cavity accommodates a sponge to absorb moisture. The third joint is a stock incorporating a labium and plug assembly at each side, each fitted with a manually operated 'wind-cutter' that can close off either at will. By silencing the right-hand flageolet, the left-hand pipe may then be played by both hands like a normal flageolet. Ivory studs between the finger-holes (six left-hand, four right-hand) guide fingers on to the holes, certain of which are part-plugged with ebony in order to tune the scale to the desired intervals and to act as speaker keys. On the standard seven-key tenor in G, the left-hand pipe has a range from written *f*♯ (or *c*♯ using both hands) to *a*″, the right-hand from *d*′ to *b*″. Models with extra keys (up to 17 in all) have an extended range from *b* (right hand) to *d*‴ (left hand).

The double flageolet capitalized on Bainbridge's 1803 model of 'octave flageolet' which, by changing the fingering of the tonic from six to three fingers, had allowed much of the range to be played by the fingers of one hand only, thereby enabling the other free hand to be usefully deployed. His first model had both windways drilled in a single cylindrical body. A rival maker Thomas Scott forestalled him in 1805 by patenting an instrument of somewhat similar design. However the fingering of this so-called 'Delecta Harmonia' lacked logic compared to Bainbridge's later model with separate flues, and this quickly outstripped its rival. Their fashionable success caused them to be widely copied by other makers in both London and Dublin, as well as in Germany and the USA. Bainbridge's firm remained in business until 1855, by which time demand had declined in England, although their manufacture continued abroad.

Two further models were developed by Bainbridge. His 'patent double flute-flageolet' (1819) was based on his 'flute-flageolet' (1807), a regular flageolet blown in the traverse position. In the mid 1820s he introduced his triple (or trio) flageolet; the upper three joints of the double flageolet were replaced with a single joint with ivory mouthpiece into the side of which the stopped third pipe is mounted. Working on the principle of the OCARINA, whereby in principle only one hole at a time is opened, and operated by the otherwise unoccupied left-hand thumb, its four closed keys sound a range of almost an octave. A wooden foot fitted at the base supports the instrument, the base of which is serrated to avoid slipping on the player's knee.

Flagg, Josiah (*b* Woburn, MA, 28 May 1737; *d* ?Boston, 30 Dec 1794). American conductor, bandmaster, engraver and tune-book compiler. He became an important figure in the musical life of Boston during the decade beginning in 1764, and was active in both sacred and secular music-making. He organized and performed in at least six concerts in Boston between 1769 and 1773, and also claimed to have founded and trained a regimental band in the city. No music-making by Flagg has been traced after 1773.

Flagg's two sacred tune books are devoted to the compositions of English psalmodists. *A Collection of the Best Psalm Tunes* (Boston, 1764), engraved by Paul Revere, was the largest collection of sacred music published in America to that time and the first to be printed on American-made paper. *Sixteen Anthems* (Boston, n.d. [1766]), intended not for beginners but for 'those who have made some proficiency in the art of singing', was engraved and printed by Flagg himself, and he may also have been the engraver of Billings's *The New-England Psalm-Singer* (Boston, 1770).

Flagg was one of the most versatile and energetic American musicians of the years immediately preceding the Revolutionary War. He was also an early champion of Handel's music in America, as is reflected both in his tune books and in the programmes for his Boston concerts.

RICHARD CRAWFORD/DAVID W. MUSIC

Flagstad, Kirsten (Malfrid) (*b* Hamar, 12 July 1895; *d* Oslo, 7 Dec 1962). Norwegian soprano. She came of a musical family: her father was a conductor, her mother a pianist and coach. While still a student, she made her début on 12 December 1913 at the National Theatre, Oslo, as Nuri in d'Albert's *Tiefland*. For the next 18 years she sang only in Scandinavia, where she appeared in a wide variety of parts, including operetta, musical comedy and even revue. On 29 June 1932 she sang her first Isolde, at Oslo; this was also her first public performance in the German language. Ellen Gulbranson, the regular Bayreuth Brünnhilde of the previous generation, chanced to hear her, and recommended her to Bayreuth, where she sang small parts in 1933, and Sieglinde and Gutrune in 1934. An engagement at the Metropolitan ensued, and her first appearance there, on 2 February 1935 as Sieglinde, followed four days later by Isolde, was the beginning of her world fame. Her first Brünnhilde performances, later in 1935, set the seal on her success. In 1936 and 1937 she sang Isolde, Brünnhilde and Senta at Covent Garden, arousing as much enthusiasm in London as in New York.

In 1941 Flagstad returned to Norway to join her second husband, who was arrested as a Nazi collaborator after World War II and died in 1946 while awaiting trial. Although she herself was acquitted of political offence by a Norwegian tribunal, her return to Nazi-occupied Norway during the war and a certain political naivety in her nature caused her afterwards to be looked at askance in America. Flagstad's return to English musical life, on the other hand, was quite uncontroversial. She returned to Covent Garden in 1948 as Isolde, and thereafter sang for three more seasons in her other Wagnerian roles, including Kundry and Sieglinde as well as all three Brünnhildes; her farewell came in *Tristan* on 30 June 1951. At the age of 55 she could still sing these heavy roles with majestic effect. In 1950, at the Albert Hall, she gave the first performance of Strauss's *Vier letzte Lieder* with Furtwängler as conductor. In 1951 and 1952 she sang Purcell's Dido in the little Mermaid Theatre in Bernard Miles's garden in St John's Wood, London; and when the permanent Mermaid Theatre opened its doors in the City of London, she reappeared in the same role, bidding farewell to the operatic stage there on 5 July 1953.

Meanwhile, she sang Leonore in *Fidelio*, under Furtwängler, at the Salzburg Festival (1948–50) and her Wagner roles in many major houses. In 1957, in honour of the 50th anniversary of Grieg's death, she sang some

Kirsten Flagstad as Isolde in Wagner's 'Tristan und Isolde'

of his songs, in Norwegian national costume, at a Promenade Concert. During her retirement she continued to be active, as director for a few years of the newly formed Norwegian State Opera, and in the recording studio, for which she even learnt music that was new to her, such as the part of Fricka in *Das Rheingold*. Over a period of more than 30 years she made many superb recordings. The complete *Tristan und Isolde* and her Brünnhilde in the complete *Ring*, live from La Scala (1950), both under Furtwängler, undoubtedly offer the finest memorial to her art; especially valuable, too, are her later sets of songs by Grieg and Sibelius. The majority of her discs were reissued on CD to mark her centenary in 1995.

Although Flagstad was not a singer of naturally ardent temperament, she was always a superlative musician, with a rock-like sense of rhythm and flawless intonation. The lasting purity and beauty of her tone, unsurpassed in the Wagner repertory, probably owed much not only to natural gifts and sound training, but to the enforced repose of the war years and the fact that she undertook no heavy roles until middle life. At 40 she sang with a voice of radiant quality in the upper range, and with heroic power which responded with an effect of ease to Wagner's utmost demands; but as Leonore, Senta, Elisabeth and Elsa she then revealed flaws in her legato. Later, her scale was perfectly consolidated. Her Isolde was a stately Nordic princess, more proud than passionate. No other Brünnhilde in her time seemed so much a Valkyrie born.

Flam. A type of stroke in side-drum playing. *See* DRUM, §II, 2, and ex.3.

Flamenco [cante flamenco] (Sp.). The generic term applied to a particular body of *cante* (song), *baile* (dance) and *toque* (solo guitar music), mostly emanating from Andalusia in southern Spain. It is also known as *cante andaluz*, *cante gitano* or *cañi* ('Gypsy song') and *cante hondo* ('deep song'). Although these terms have been used interchangeably, modern studies avoid such nomenclature, except for *cante hondo*, an important subdivision of *cante flamenco*. The origin of flamenco has been widely disputed; yet its evolution, its literary and musical genres and orally transmitted styles, as well as its interpreters, are the subjects of a continually growing literature contributed by poets, writers, travellers, musicians, dancers, folklorists, ethnomusicologists and, more recently, by flamencologists, anthropologists and sociologists. Gypsies played an important role in its development and propagation, but they were not its sole creators.

1. Origin and development. 2. Classification. 3. Andalusia's musical foundations. 4. Musical characteristics. 5. The *zambra*, *juerga* and *cuadro flamenco*.

1. ORIGIN AND DEVELOPMENT. There has been much speculation over the origin of flamenco on philological rather than on musicological grounds. According to Pedrell *cante flamenco* was brought to Spain by the Flemish (*flamencos*) immigrants during the reign of Charles V (also known as Charles I, who ruled Spain from 1516 to 1556). Borrow believed that the term characterized the Gypsies who arrived in Spain by way of Flanders. Fernández de Castillejo felt that the term lingered on as an appellative for the corrupt practices of the courtly Flemish who were installed by Charles I in responsible posts. Salillas explained that the term originally applied to men who fought in the regiments of Flanders, leading a wild and quarrelsome life, and that later it was used to describe the life and bravura of the Gypsies. De Onís (see Frank, 1926) ascribed its origin to the ostentatious dress of the courtly Flemish, applying this to the characteristic dress and manners of the Gypsies. Rodríguez Marín saw in the term an element of ridicule, in that it described those who sang with a fixed and erect posture resembling the flamingo (Sp. *flamenco*). García Matos connected it with the Germanic concept of *flammen* ('to be flamboyant', 'to blaze'), which could have entered Spain from the north. In general, the term 'flamenco' appears to have been linked to a way of life exemplified by generosity, boisterousness and recklessness.

Additional theories included the suggestion that *cante flamenco* were Arab songs that originated in north Africa and were later adopted by *flamencos* of the Low Countries, or by *flamenco* Gypsies who arrived in Spain with Bohemian troupes. Infante took the term for a corruption of the Arabic *felagmengu*, similar to the Castilian *campesino huido* ('fugitive peasant'), while García Barriuso believed it derived from *fel-lah-mangu*, or, as opined by L.A. de Vega, from *felhikum* or *felahmen ikum* ('labourers' or 'songs of the labourers'). Fernández Escalante postulated that the Brahman priests (*flámines*) brought their sacred formulae, rites and chants to Spain from India, hence the connection between Gypsies and *cante flamenco* derived from the name '*flámen*'.

Despite the varied conjectures concerning its origin, consensus confines the early history and development of *cante flamenco* to southern Andalusia, where the Gypsies began to settle in the latter half of the 15th century. As a persecuted subculture (until 1783, when they were granted Spanish citizenship by Charles III), they developed a song repertory of a special character, the essence of which, rooted in poverty, expressed the plight of their existence and gave impetus to poetic and musical forms that had become prominent around the mid-18th century. The most notable centres for this new art were Triana (the Gypsy quarter of Seville), Cádiz and Jerez de la Frontera. Gypsy songs and dances were becoming increasingly popular at public feasts and taverns. Since bourgeois society rejected this music, its principal interpreters remained the Gypsies and rural people, whose *coplas* ('stanzas') and melodies (primarily *fandangos*, *seguidillas*, *boleros* and *zorongos*) were adopted by playwrights of one-act plays and composers of the *tonadilla*, *entremés* and *sainete* (popular 18th-century theatrical genres).

In its second phase, from the emancipation of the Gypsies to about 1860, *cante flamenco* became an important dominant musical genre in Andalusia. In the early 1840s, *cante flamenco*, with and without guitar accompaniment, became such a popular entertainment in the *cafés cantantes* ('singing cabarets') established in cities such as Seville (the first of which was created in 1842), Cádiz, Jerez de la Frontera and Málaga, that it spread progressively throughout the towns and villages of Andalusia. With the *cafés cantantes*, *cante flamenco*

entered its third phase, which lasted well into the first decade of the 20th century. It was a period of professionalism, when even non-Gypsy performers were on the increase. While the songs of the *hondo* type predominated, other genres of song from Andalusia, other regions of Spain and Spanish America were introduced and 'Gypsified' (*aflamencada*) to satisfy an ever-growing public.

In the early 20th century, particularly with the first flamenco operas around 1920, much of the current repertory became theatricalized and commercialized. Even the attempt by Manuel de Falla and others to revitalize the tradition at the famous competition in Granada (1922) did not prove successful in combating this trend, which continued during and after the Spanish Civil War (1936–9). From then on the flamenco repertory continued to be 'Gypsified' by performers on radio and film, while other artists could not eke out a living. Notwithstanding the earlier effort by Falla, it was not until 1957 that the chair of flamencology was created at Jerez, preceded by the first reinstated competition and festival of song at Córdoba (1956). These events marked a renaissance for flamenco and the rise of a new generation of performers.

2. CLASSIFICATION. An indiscriminate classification of the *cante* as *hondo* or *flamenco* neglects the fact that *cante hondo* constitutes a major flamenco category. Nonetheless, two basic divisions of *cante flamenco* appear to have gained wide currency: the first, twofold, with *cante grande* comprising songs of the *hondo* type, and *cante chico* the remainder; and the second, threefold, with the category *cante intermedio* inserted between *grande* and *chico*. While there is wide disagreement as to which *cante* belong to the *intermedio*, the *hondo* and *chico* categories represent the most and the least difficult *cante* respectively in terms of their technical and emotional interpretation. Moreover, various *cantes* have achieved prominence by their links with individual singers (e.g. *soleá* Tomás Pavon, *siguiriya* El Manolito) or by their stylistic amalgamation with other *cante* (*chuflas por* ('sung in the manner of ') *bulerías*, *fandanguillos por soleares*, *saeta por siguiriya* etc.). In more recent studies, the *chico* category has been further enlarged to include popular flamenco (*flamenco árabe*, *flamenco pop* and *nuevas canciones andaluzas*), which takes into account current commercial repertories at theatres and night clubs (explained in greater detail by Manuel, 1989).

Table 1, comprising a selection of 44 *cante*, represents songs of the 'classical' flamenco repertory together with songs which have enjoyed a peripheral association, although many no longer exist. If the table were extended to encompass *cante* from the many subdivisions, it would exceed 300 items and variant forms. While the derivations of numerous *cante* have been firmly established, the identity of musical precursors for the remainder, as well as related forms, has been problematic. In some cases two or more derivations have been suggested for particular *cantes*. The *caña*, *fandango*, *polo*, *soleá* and *toná* constitute the most basic songs in the flamenco hierarchy. Such *cante* as the *mariana*, *murciana*, *palmares*, *policaña*, *roás*, *rosa*, *temporera* and *tirana* were once prominent but now either no longer exist or are in the process of extinction. The songs grouped under the generic name *cantiñas* comprise those with a smaller number of *coplas*.

The earlier inclusion of the *alboreá* (or *alboleá*), a Gypsy wedding song, is questionable as is the case of the extremely popular Gypsy songs *cachuca*, *mosca* and *panadero*. Songs and dances which have been associated with the repertory include the *bambera*, *bolera*, *camparsa*, *cantes de trilla* (work songs), *chufla*, *danza mora*, *macho*, *media granaína*, *medio polo* (*hondo* type), *olé* (*hondo* type), *panadero*, *rociera*, *seguidilla gitana* (=*siguiriya*), *soleariya*, *taranto*(= *taranta de Almería* and other localities), *vidalita*, *villancico*, *vito*, *zambra* and *zorongo*.

The *cantes aflamencadas* of Hispanic American origin, mainly associated with dancing, include *danzón flamenca*, *habanera flamenca*, *punto de La Habana*, *rumba flamenca*, *tango cubano* and *vidalita flamenca*. Additional *cantes religiosas aflamencadas* include the *campanillero* and *villancico* (mainly those sung for Christmas), whereas examples of *cantes folklóricos aflamencadas* (of Andalusian origin) comprise the unaccompanied *nana* (lullaby), *temporera* (work song) and *pajarona* (work song), as well as the *sevillana* (a species of the *seguidilla castellana*) which accompanied the dance. While the relationship of *cante flamenco* to Gypsy traditions has been more thoroughly investigated than the Arab and Celtic, the two principal streams from which the *cante* developed were the liturgical and the secular.

The predominant textual unit for the *cante* is the aforementioned *copla*, which varies according to the number of lines and syllable count. The popular octosyllabic and hexasyllabic quatrain structures, with second and fourth lines rhyming in assonance, point to the *romance* ('traditional ballad') as a significant antecedent. Also popular is the *seguidilla* strophe, with alternating hepta- and pentasyllabic lines.

3. ANDALUSIA'S MUSICAL FOUNDATIONS. Andalusia has long been a melting pot for varied musical traditions and systems, brought from the remote corners of the Mediterranean by Greek, Carthaginian, Roman and Byzantine settlers. In Visigothic Spain, Seville was one of the main centres for what later became known as Mozarabic chant. The Islamic invasion in the early 8th century may not immediately have added substantially to the musical traditions. However, with the arrival of the famous Baghdad musician Ziryāb, who founded a singing school at Córdoba during the reign of 'Abd al-Raḥmān II

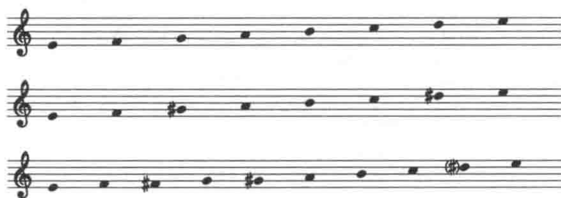
15. Accompanied by guitar
16. (*a palo seco*) Unaccompanied

Toque { 17. *Grande*; 18. *Intermedio*; 19. *Chico* }



20. Fell into disuse

(822–52), Persian music became influential. During the 10th century, under Umayyad rule, the Arabs began to cultivate a musical tradition that later rivalled those of the eastern caliphates of Damascus and Baghdad. Muslim and Jewish poets shared the splendour of the Andalusian courts, where they composed many of their poems on existing popular tunes. With the Spanish reconquest, well under way by the 13th century, the influence of Christianity brought with it the Gregorian musical system which undoubtedly assimilated with the indigenous styles. (To what extent Jewish liturgical music played an important role throughout the region has been difficult to determine.) Even as Castilian was making inroads in southern Spain, much of the popular music then current was being transformed; by 1492 and the achievement of Spain's Catholic hegemony, which led to the expulsion of Muslims and Jews, the music of Andalusia had a characteristically synthetic style that set it apart from other regions. The question remains whether the Gypsies, on their arrival in Spain around the mid-15th century, brought with them a new musical tradition or whether they simply nourished their own tradition from this synthesis. Some scholars believe that the Gypsies brought the flamenco style from North India, the region of their origin. Such arguments issue from the strong resemblance found in the singing of rāgas as well as in the nuances of the dance. Similar arguments have pointed to strong Arab influences in performing practices and modal theories.

4. MUSICAL CHARACTERISTICS. While generalities abound concerning the musical style and characteristics of flamenco, and several studies have concentrated on particular *cante*, no exhaustive study of the repertory had been attempted by the end the 20th century. Such an undertaking will require the gathering of notated examples from 19th- and 20th-century *cancioneros* ('song anthologies') and comparison with transcriptions made from field recordings as well as commercially recorded data. A search for possible melodic and structural antecedents in earlier Iberian musical sources is also a task still to be undertaken.

As in the popular music of Andalusia, the scales used for flamenco mostly exhibit an affinity for three principal types: firstly, the medieval Phrygian (or Greek Dorian); secondly, a modified scale resembling the Arab *maqām Ḥijāzī*; and thirdly, a bimodal configuration alternating between major and minor 2nds and 3rds (ex.1). The

Ex.1 The main scale types in flamenco

melodies are predominantly diatonic, with occasional leaps of 3rds and 4ths, and the Phrygian cadence (A–G–F–E) is a common feature. According to the individual *cante* of the flamenco repertory, the use of ornamentation varies from light to heavy, and ascending or descending appoggiatura-like inflections are commonly used to accentuate certain notes. Such inflections are microtonal and are a particular feature of *cante hondo*. It is here that comparisons with North Indian and Arab modal practices appear valid. The flamenco repertory incorporates many metres: binary, simple and complex; ternary; and combinations of both. Polyrhythmic passages also occur in which the vocalist, singing in binary metre, may be accompanied in ternary metre. Additional cross-rhythms are provided by *taconeo* (heel-stamping), *palmas sordas* (hand-clapping) and *pitos* (finger-snapping). Songs of a purely parlando-rubato nature are usually sung *a palo seco* (without guitar accompaniment).

5. THE ZAMBRA, JUERGA AND CUADRO FLAMENCO. Seville was the cradle of the Gypsy *zambra* (from Arabic *sāmira*, 'festival'), which may have been patterned on the all-night soirées that were popular in Muslim Spain and included singing and dancing. The *juerga* ('spree', 'carousal'), another type of gathering both informal and spontaneous, at which wine flowed freely and the merrymaking rose to a state of licentiousness, came to be regarded as infamous by Spanish society. The *juerga* assumed a new role during the period of the *cafés cantantes*, when it became a commercial enterprise revolving around *cante flamenco*. The high-spirited intimate settings of the 'closed door' flamenco sessions (*sesiones a puertas cerradas*) took over the informal role of the *juerga*.

The *café cantante* period also gave birth to the *cuadro flamenco* which comprised a group of singers, dancers and guitarists who sat in a semicircle on a *tablao* ('slightly elevated platform'). This ensemble has continued to be the most popular throughout the Hispanic world, although much of its traditional repertory has changed. A notable addition is the use of castanets, not originally a Gypsy practice (the introduction of which is attributed to the Sevillian dance instructor José Otero Aranda). Besides performing as a group, each member of the *cuadro flamenco* takes a turn as soloist while others in the ensemble provide the accompaniment; even during the group singing and dancing, each member performs as an individual. The performances usually begin with some form of *jaleo* ('shouts of encouragement'), arousing the enthusiasm of the audience by eliciting their verbal participation. The guitarists always provide a *tiento* or *temple* (introduction or prelude) for singing and dancing to create the proper atmosphere and mood. While preparing to sing the more traditional *cante*, particularly those of the *hondo* type, the singer literally tunes the voice (*temple*) before entering into the vocalized melismas (*salidas*), on the syllable 'ay', preceding the first line of the song. A good guitarist seems to know intuitively what the singer is going to do. The hoarse, nasal timbre (*rajo, a voz afillá*) of the voice is still highly respected in some circles, vocal quality being one of the most distinctive features of flamenco. The guitar, tuned in 4ths, plays a dual role as solo and accompanying instrument, but is chiefly used as a rhythmic instrument, providing three basic types of accompaniment: *rasgueado* (strumming), *paseo* (spritely melodic passage work) and *falsetas* or *rosas* (improvised melodic phrases between the sung strophes, including a prelude). *Cuadro flamenco* performances usually end with the *fin de fiesta*, a combination of songs and dances, which creates exciting and spectacular entertainment. Allied to the art of flamenco are the various classes of enthusiasts, ranging from *aficionados* and *entendidos* to *cabales*, who either practise the art (*prácticos*) or appreciate it (*téoricos*).

ISRAEL J. KATZ

Flamenco guitar. *See* GUITAR.

Flamingus, Johannes (*fl* 1565–73). Flemish composer. He is first recorded in Leiden, where he is thought to have been *phonascus* of St Pieter in 1565–7. In 1571 he was engaged at the music-loving Lutheran court of Mecklenburg in Schwerin as director of court music to Duke Johann Albrecht I, where he remained until 1572/3. He last appears as cantor in Zwickau in 1573. A great deal of his music survives, all in autograph copies. He was among the copyists of additional music in the Leiden choirbooks D, E and F (*NL-L* 1441–3): one mass, 26 motets, three settings of the Magnificat and four of the Nunc dimittis and one hymn are ascribed to him and complete; four masses, a motet, a Nunc dimittis setting and a hymn are incomplete; and one more mass, 12 complete and four incomplete motets and an incomplete hymn are probably by him though lacking any ascription (see Ruhnke). These are all four- or five-voice works on plainchant cantus firmi. A finely-bound set of six partbooks dated 1571 and dedicated to Johann Albrecht I of Mecklenburg, entitled *Opusculum cantionum*, survives (in *D-ROu*) from Flamingus's time at the court in Schwerin. It contains a five-voice mass and 10 motets, which may have constituted a liturgical cycle celebrating the conclusion of the Seven Years' War between Denmark and Sweden. Four of the motets have Low German texts, among them an attractive *O Lam Gades*. Another autograph from his Schwerin period is a *Missa nova 'Etsi me occiderit Dominus'* dated 1573 (*ROu*, Cantus 2 only). No music survives from his stay in Zwickau or later. Like so many other Netherlandish musicians who occupied positions in court chapels and cathedrals all over Europe in the 16th century, Flamingus was an uneven composer, but at his best his music is very fine indeed.

OLE KONGSTED

Flammer, Ernst Helmuth (*b* Heilbronn, 15 Jan 1949). German composer and musicologist. His first choice of study was mathematics and physics (1969–72), but in 1975 he changed his focus to music, studying counterpoint and theory with Peter Förtig and composition with Klaus Huber and Ferneyhough at the Musikhochschule in Freiburg. He also received occasional tuition from Dittrich. Over the same period (1974–80) he studied art history, philosophy and musicology at Freiburg University with Eggebrecht among others. He graduated (DPhil 1980) with a dissertation on Nono and Henze. From 1980 to 1981 he taught at the Staatliche Hochschule für Musik at Trossingen and from 1982 to 1985 at Freiburg University. After 1985 he served as a visiting lecturer at Newcastle University and Salzburg Mozarteum, in

Odessa, St Petersburg and Paris, and taught regularly at the Darmstadt international summer schools, where he also served as a jury-member for the Kranichstein prize (1986, 1994). From 1985 to 1987 he was artistic director of the Ensemblia festival in Mönchengladbach and from 1985 to 1990 ran the Freiburg 'ensemble recherche', of which he was a founding member. In 1993 he initiated the International Pianists' Forum (Contemporary Piano Music Festival) '... antasten ...' in Heilbronn. He has received awards from many sources, including the cities of Baden-Baden, Dresden, Freiburg, Hanover, Paris, Parma, Rome and Stuttgart.

Flammer's work as a composer, governed by an existential engagement, protests against the inhumane elements in society and against blind – or even overly simplistic – faith in science and technology. He demands from his interpreters and listeners, and from himself, a correspondingly high degree of artistic engagement, which expresses itself both in the complexity of his musical structures and in the progress of the musical material.

STEFAN FRICKE

Flanagan, William (*b* Detroit, MI, 14 Aug 1923; *d* New York, 31 Aug 1969). American composer and music critic. He came comparatively late to music, his first college education having been directed towards a career in journalism. In 1945 he went to the Eastman School of Music to study with Bernard Rogers and Burrill Phillips. At the Berkshire Music Center in 1947–8 he worked with Barber, Honegger and most particularly Copland, who became his major influence. He also studied intensively with David Diamond in New York for two years. In the mid-1950s, on the strength of his earlier education, he became a critic for the *New York Herald Tribune*, wrote also for periodicals such as *Musical Quarterly* and finally became permanent critic for *Stereo Review*. He was among the most skilful and caustic verbal commentators on music in the USA.

Flanagan's diversified musical instruction, however, never yielded a stable technique for structure or orchestration in his compositions; he had a natural bent towards the pure idea rather than the manipulation of that idea. Thus he preferred and excelled in the smaller vocal forms. His vocal works flow with a natural grace attractive to singers and are settings of the best of English-language poetry, usually of sombre content. *The Ice Age* was commissioned by the New York City Opera and *Silences* by the Thorne Foundation.

If Flanagan was indifferent to innovation for its own sake, he was passionately concerned with language and felt that American composers would never fully realize themselves until they came to grips with native inflection. It may safely be said that Flanagan, through both his warm music and his cool intellect, was directly responsible for the oral style in the early plays of his close friend Edward Albee, with whom he collaborated on several projects.

Flanagan's songs seem to be written with the soaring ease characteristic of many prolific composers; actually they are few and were produced with an anxiety which, coupled with the increasing stress of being an unappreciated conservative in a time of artistic upheaval, was partly responsible for his suicide.

WORKS

Ops: Bartleby (1, J. Hinton and E. Albee, after H. Melville), 1952–7; The Ice Age (Albee), 1967, inc.

Orch: A Concert Ov., 1948; Divertimento, 1948; A Concert Ode, 1951; Notations, 1960; Narrative, 1964

Chbr and solo inst: Divertimento, str qt, 1947; Passacaglia, pf, 1947; Chaconne, vn, pf, 1948; Suite from The Climate of New York, pf duet, 1949, orchd 1960 [film score]; Pf Sonata, 1950

Songs, 1v, pf: After Long Silence (W.B. Yeats), 1946; The Dugout (S. Sassoon), 1946; Buffalo Bill (e.e. cummings), 1947; Autumn Song (N. Rorem), 1948; Heaven Haven (G.M. Hopkins), 1948; Go, and Catch a Falling Star (J. Donne), 1949; Send home my long strayed eyes (Donne), 1949; A Valentine to Sherwood Anderson (G. Stein), 1949; A Very Little Snail (Stein), 1949; Song for a Winter Child (Albee), 1950–60; Times Long Ago (H. Melville), 6 songs, 1951; Moss (H. Moss): If you Can, See how they Love Me, The Upside-down Man, Plants cannot Travel, Horror Show, 1959–62

Other vocal: The Waters of Babylon (Bible), vv, str qt, 1947; Billy in the Darbies (Melville), SATB, pf/orch, 1949; A Woman of Valor (Bible), SATB, 1949; The Weeping Pleiades (A.E. Housman), B, fl, cl, vn, vc, pf, 1953; Goodbye, my Fancy (W. Whitman), 1v, fl, gui, 1959; The Lady of Tearful Regret (Albee), S, Bar, fl, cl, str qt, pf, 1959; King Midas, solo vv, orch, ?1961; Chapter from Ecclesiastes, SATB, str qnt, 1962; Another August (J. Merrill), S, pf, hpd, small orch, 1966; Silences (Moss), female vv, orch, inc.

Incid music to 4 plays by Albee: The Sandbox, perf. 1960, The Death of Bessie Smith, perf. 1961, The Ballad of the Sad Cafe, perf. 1961, Malcolm, perf. 1966; 2 film scores

MSS at BMI, *US-NYp*

Principal publishers: Peters, Southern

NED ROREM

Flanders, Michael. English lyricist and performer. *See under* SWANN, DONALD.

Flandrus, Arnoldus (*d* after 1607). Flemish composer and organist, active in Italy. He can possibly be identified with Arnoldo Fiamengo. He was a monk and was organist at Tolmezzo, north of Udine. He published *Sacrae cantiones ... liber primus* (Venice, 1595), for four voices, and the seven-part *Missa solemne ... intitulata Si fortuna favet* (Dillingen, 1608). A book of five-part madrigals (1608) referred to in 17th-century catalogues is lost. There are two eight-part manuscript motets by him (in *D-Bsb*). A three-part *laude* by Arnoldo Fiamengo (in RISM 1599[6]) may be by him. (*EitnerQ* ('Arnoldus Flandrus'); *Vander StraetenMPB*, i, vi; *VannesD*)

GODELIEVE SPIESSENS

Flanging. The effect of a type of signal processing unit on electronically produced sound: an enhanced form of 'phasing'. The unit is often operated by means of a foot-pedal. *See* ELECTRIC GUITAR, §2.

Flaschenspiel (Ger.). *See* BOUTEILLOPHONE.

Flat (Fr. *bémol*; Ger. *Be*; It. *bemolle*; Sp. *bemol*). In Western notation the sign ♭, normally placed to the left of a note and indicating that that note is to be lowered in pitch by one semitone. Such a note is described in English usage as 'flattened' or in American usage as 'flatted'. The adjective 'flat' is used to denote intonation below the notated pitch (though the phrase 'flat six' etc. is colloquially used to signify a note or chord of the flattened 6th by reference to the figuring '♭6').

A double flat (Fr. *double bémol*; Ger. *Doppel-Be*; It. *doppio bemolle*), the notational sign ♭♭, indicates that a note is to be lowered in pitch by two semitones.

RICHARD RASTALL

Flaté [flatté] (Fr.). *See* FLATTEMENT.

Flat-pick. *See* PLECTRUM.

Flatt and Scruggs. American bluegrass and country duo. Lester (Raymond) Flatt (*b* Duncan's Chapel, TN, 14 June 1914; *d* Nashville, TN, 11 May 1979; vocals, acoustic guitar) and Earl (Eugene) Scruggs (*b* Flint Hill, NC, 6 Jan 1924; banjo) played a major role in popularizing bluegrass music. From rural homes, they worked in textile mills before becoming professional musicians. Flatt began his career in 1939 and met Scruggs in 1945 when they joined Bill Monroe's band, the Blue Grass Boys. Scruggs had developed a distinctive style enabling him to play a wide variety of music with speed and clarity and they helped Monroe create the sound that became known as bluegrass. In 1948 they formed their band, the Foggy Mountain Boys, recording for Mercury and working at radio stations in the South-east. In 1950 they signed with Columbia, with whom they remained for the rest of their career together. Their band maintained a purely acoustic sound resembling Monroe's until 1955, when they diverged slightly with the addition of a guitarist playing a Dobro.

In 1953 Martha White Flour began sponsoring their performances on WSM radio, Nashville, remaining their sponsor for the rest of their career, and in 1955 they joined the country radio show 'Grand Ole Opry'. During the late 1950s their syndicated television shows were seen by millions in the South-east, and their recordings became hits in the country charts. Meanwhile their banjo-sparked acoustic sound found favour with folk music revivalists. While performing at a Hollywood folk club, they were noticed by the producer of the television show 'The Beverly Hillbillies', and subsequently recorded its theme *The Ballad of Jed Clampett*, a number one country hit for them in 1963. Five years later their 1949 recording of *Foggy Mountain Breakdown*, used in the film *Bonnie and Clyde*, was a hit in the pop charts. Musical differences brought the act to an end in 1969. Both continued to perform, Scruggs with his sons in the Earl Scruggs Revue, and Flatt with his Nashville Grass. In 1985 the duo of Flatt and Scruggs was elected to the Country Music Hall of Fame.

NEIL V. ROSENBERG

Flattement [flaté, flatté, tremblement mineur] (Fr.; Ger. *Bebung*). An ornament, not unlike a trill, used in woodwind playing, produced by a quick finger movement on the edge of or above a tone hole (usually the highest open hole). It was described in Dutch, English, French and German sources from 1654 to 1847, including Jacques Hotteterre's *Principes de la flûte traversière* (1707). One of the few collections where it was explicitly marked was P.D. Philidor's suites (1717–18). In English the ornament was described as a 'sweetening' or 'softening' of the note. Sometimes called a 'finger vibrato', the *flattement* was not intended to be perceived as a change of pitch. It was applied selectively, usually to long notes, and was often associated with swells. The sign for the *flattement* (rarely marked in music) was a horizontal wavy line. The *flattement* afforded considerable control of both speed and amplitude, and was better suited to the short and complex phrasing of the music of the 17th and 18th centuries than modern breath vibrato; the latter is not documented before the 1790s.

In string playing a similar ornament was termed *pincé* by Marais and others. It was described as a two-finger vibrato, produced by the rocking motion of two fingers pressed against each other. The terms 'flattement' and 'flaté' or 'flatté' were also applied to vocal vibrato. For further information and variant interpretations *see* ORNAMENTS, §8; *see also* VIBRATO.

BRUCE HAYNES

Flatterzunge (Ger.). *See* FLUTTER-TONGUING.

Flat trumpet. Trumpet built or adapted to play in 'flat', i.e. minor, keys. The term, and presumably the instrument, was used in England only for a brief period, between about 1690 and 1720. No original flat trumpets survive, nor are there any reliable iconographical sources; the best evidence is James Talbot's description (transcribed in Baines and Smithers). Unlike the continental SLIDE TRUMPET, which itself glided up and down the mouthpipe, the flat trumpet he examined had a J-shaped double slide that pulled out backwards past the player's left ear; to allow this, the trumpet was held at a slant, bell pointing to the right, and the mouthpiece plugged into a cranked mouthpipe. The shorter arm moved inside the trumpet's bell-yard (the straight section of tube ending in the bell) reaching as far as the boss (ornamental ball) when the slide was shut up tight. The longer arm fitted over the middle yard, sliding outside it and in closed position covering it completely.

Talbot does not mention any sort of mechanism for moving the slide. The overall length of the flat trumpet 'with the yards shutt' was the same as the 'common trumpet' (the trumpet in E♭). Yet Talbot's chart of slide positions ascends chromatically from *c* to *c'''*, and the notes of the C major arpeggio (*e* apart) are all played with the slide fully pushed in. The chart may have been obtained from John Shore, as were the ordinary trumpet scale and the cornett fingerings; either Shore used a crook to bring his instrument down to C or else transposed the results for easier reading. As a guide to flat trumpet playing technique the chart must be interpreted cautiously.

Shore, according to Roger North, invented a 'screw or worme' to control the movement of the slide on his concert instrument. He used this device instead of lipping 'to aid the tuning [of] some notes', and to play a number of 'exotick' (i.e. non-harmonic) notes otherwise beyond reach. How the screw worked, and whether Shore's special model counted as a flat trumpet too, are issues which remain unclear.

Only a very few late 17th-century scores call for flat trumpets explicitly. 'Flat' pieces like the March and Canzona of Henry Purcell's music for the funeral of Queen Mary are brief and mostly slow-moving, practicable on instruments of the Talbot type, however ungainly. But North's comments seem to suggest that shorter slides (slides with fewer positions) were also tried 'to adapt [the trumpet] to consort' rather than with the aim of achieving full chromaticism. Slide experiments of which Talbot knew only a little, and of which modern scholars know even less, might help to explain many apparent anomalies in English trumpet writing around the time of Purcell. The 19th-century English slide trumpet is clearly related to the flat trumpet, but whether it was independently re-invented or a conscious attempt to improve the earlier design is unknown.

ANDREW PINNOCK

Flautado (Sp.). *See under* ORGAN STOP.

Flauta metálica (Sp.). *See* PENNYWHISTLE.

Flautando [flautato] (It.). An instruction to produce a soft flute-like tone. It requires string players to draw the bow lightly and fairly rapidly across the string with a point of contact near to or over the fingerboard. A more precise term for such an effect is *sul tasto*, also referred to as *sulla tastiera* (It.; Fr. *sur la touche*; Ger. *am Griffbrett*), as in Paganini's *Caprice* no.9 which contains the direction *sulla tastiera imitando il flauto* ('over the fingerboard imitating the flute'). (*See also* BOW, §II, 3(xii).)

To a harpist (but not to a violinist), *flautando* or *flautato* might suggest the use of harmonics to achieve a flute-like tone, but composers normally indicate harmonic effects with more precise terminology (e.g. *armonici*, *sons harmoniques*).

DAVID D. BOYDEN/ROBIN STOWELL

Flautino (i) (It.: 'little flute'). Diminutive of *flauto*. In early 17th-century Italian music a synonym for *flauto* (treble recorder, lowest note *g'*); in late 17th- and early 18th-century Italian practice (as in Vivaldi), probably a small FLAGEOLET (*see also* ZUFFOLO); in German practice of the second half of the 18th century, generally a piccolo, occasionally (as in Mozart's *Die Entführung aus dem Serail*) a small flageolet. Since the early 19th century it has not been used for the piccolo, which in Italian is called *flauto piccolo*, or more commonly *ottavino*. The *flautino alla vigesima seconda* (small recorder at the 22nd, or third octave) listed in the first print of Monteverdi's *Orfeo* (1609) is probably a sopranino recorder in *g''*.

DAVID LASOCKI

Flautino (ii). *See under* ORGAN STOP.

Flauto (i) (It.). *See* FLUTE or RECORDER. Until about 1735, composers specified *flauto traverso* or simply *traversa* (not *traverso*) when they intended the flute; the word *flauto* without modification invariably meant recorder (especially the treble), to which the terms *flauto a becco*, *flauto diritto* or *flauto dolce* also apply. Composite terms mentioned in musical sources include: *flauto a culisse* (SWANEE WHISTLE); *fiauto d'echo*, scored for by J.S. Bach in his fourth Brandenburg Concerto (probably just a treble recorder, possibly an ECHO FLUTE); *flauto d'amore* (either a flute, lowest note *a*, a minor 3rd below the concert instrument, or occasionally an alto flute in G); *flauto di voce* ('voice flute': a recorder, lowest note *d'*, also a type of MIRLITON); *flautone* (a large recorder; since the 19th century an alto or bass flute); *flauto octavo* (a small recorder); *flauto pastorale* (occasionally applied to

panpipes); *flauto piccolo* (either a piccolo, which in Italian is now more usually called *ottavino*, or else a small recorder or flageolet); *flauto taillo* (tenor recorder); and *flauto terzetto* (flute, lowest note f′).

DAVID LASOCKI

Flauto (ii) (It.). *See under* ORGAN STOP (Flute). For *Flauto a camino* see under *Chimney flute*.

Flauto a camino (It.). *See under* ORGAN STOP (*Chimney Flute*).

Flauto diritto (It.). *See* RECORDER.

Flauto di voce (It.). Alto flute in G, with an extra hole covered by a vibrating membrane. It is also known as the 'patent voice flute'. *See* MIRLITON.

Flauto dolce (It.). *See* RECORDER.

Flautone (It.). An alto flute, pitched in G, a 4th below the concert flute. *See* FLUTE, §II, 3(iv).

Flauto pastorale. Term used by Telemann to denote PANPIPES.

Flauto piccolo (It.). Piccolo. *See* FLUTE, §II, 3(i).

Flauto traverso (It.). Transverse flute. *See* FLUTE, §II.

Flaviol. An alternative spelling of *flabiol*, the Catalonian tabor pipe. *See* PIPE AND TABOR, §2.

Flaxland, Gustave-Alexandre (*b* Strasbourg, 26 Jan 1821; *d* Paris, 11 Nov 1895). French music publisher. He first studied piano with J. Leybach in Strasbourg until sent at the age of 15 by his father to Paris to make a living. He worked at various commercial jobs and then left a banking position to enter the Paris Conservatoire. He was already a fine pianist, and gave lessons to pay for his studies. Flaxland was never considered an outstanding pupil of the Conservatoire, although he composed several small piano pieces and songs and developed musical skills which helped him as a music publisher and editor. He married London-born Fanny d'Eresby on 12 January 1847, and shortly afterwards they pooled their savings and bought a small shop at 4 place de la Madeleine, where they sold sheet music. The enterprise flourished and as their resources grew the shop became a musical and social centre in Paris, recognized for its publication of vocal anthologies. Particularly in the 1860s, Flaxland's was known for the distinguished circle of writers, musicians and wealthy patrons who convened there daily.

Flaxland's business prospered largely because he acquired the copyrights to the French editions of compositions by Schumann (piano pieces) and Wagner, but the rights to some of Wagner's operas were controversial. During the winter of 1859–60 Franz Schott (of the Mainz firm of B. Schott's Söhne) contacted Wagner and bought the German, French and English publishing rights of the full score of *Das Rheingold*; Wagner hoped to repay his debts to Otto Wesendonck, who had advanced him money for each completed score of the *Ring*, but as the 10,000 francs he received from Schott were devoted to three Paris concerts, he sought additional funds early in 1860 by selling the French rights of three earlier operas to Flaxland. *Der fliegende Holländer* and *Tannhäuser* had been published in Germany by C.F. Meser, and his Dresden successor, Hermann Müller, claimed that Wagner was not entitled to sell the copyrights; Müller also threatened legal action against Flaxland, who avoided it by paying Müller 6000 francs. Wagner eventually (1863) conceded the foreign rights to Müller (not to Flaxland, as suggested by Dubuisson). The third opera, *Lohengrin*, had been published by Breitkopf & Härtel, who did not object to an independent French edition, but insisted that they also had a right to sell in France. Although Wagner has been accused of cheating Flaxland and failing in *Mein Leben* to give him due credit for his efforts, it seems that Wagner assumed that a contract with a German publisher applied only to Germany, leaving him free to arrange for publication elsewhere. The correspondence and documents of this period show little basis for the insinuation that he knowingly misled Flaxland; indeed the two appeared to be on the friendliest of terms and Flaxland championed Wagner's music in Paris even when feeling against Wagner was strong in France.

On 30 December 1869 Flaxland sold his enterprise to Durand Schoenewerk & Cie. He devoted his last years to composition and the manufacture of pianos, and remained an affluent and respected member of musical and literary society until his death. His will attests that he left his family the sum of almost 10,000 francs.

THOMASIN LA MAY

Flebile (It.: 'mournful', 'plaintive'). A mark of expression particularly characteristic of the *galant* style. Boccherini used the direction *andante flebile* (G214).

Flecha, Matheo (i) (*b* Prades, ?1481; *d* Poblet, ?1553). Spanish composer. According to Fétis he studied music in Barcelona with Juan Castelló. In December 1522 he joined Lérida Cathedral as cantor and in the following year was appointed *maestro de capilla*, leaving that post before 31 October 1525. In 1533 his name appeared in the preparatory evidence for the synodial constitutions of the diocese of Sigüenza, and he was *maestro de capilla* there from perhaps 1537 to 1539. From May 1544 he held the equivalent post in the *capilla* of the Infantas María and Juana of Castile in the castle of Arévalo, an appointment he left in 1548, perhaps because of the marriage of María to Maximilian of Austria.

By 1557 – some years after his death – his work was still arousing enough interest for Pedro Pujol, a cleric of Valencia, to seek a licence to print it. 24 years later his nephew and namesake Matheo Flecha (ii), published in Prague the only known printed collection of his uncle's works, *Las ensaladas de Flecha* (1581[13]). These and his other compositions must have enjoyed great popularity in their day, to judge by the different sources and adaptations which have survived. Besides the Prague printing, works by Flecha are included in the Cancionero de Uppsala (1556[30]), the Cancionero de Barcelona (*E-Bc* M454), the Cancionero dela casa de Medinaceli (*E-Mmc* 607), *Le difficile des chansons* (1544[9]) and two manuscript collections of *ensaladas* dating from after 1581 (*E-Bc*

M588/I–II). Valderrábano, Pisador and Fuenllana adapted several of his works for voice and vihuela, and a mass by Morales and two other anonymous masses of the Medinaceli Cancionero parody *ensaladas* by him.

In his *ensaladas* Flecha frequently uses the device of quotation, which was in effect the basis of this kind of composition. According to Romeu, they were written for Christmas over a period of about 10 years (1534/35–43). He interwove his own melodies and those of others in a continuous musical flow in which homophonic passages alternate with more imitative writing. The quotations – in Castilian, Catalan and Latin – barely stand out in the whole because of his very unusual style, between learned and popular, probably an echo of the musical taste of some aristocratic circles of Spanish society of the first half of the 16th century. One of the best is *La viuda*, an autobiographical *ensalada* whose text names a series of individuals with whom Flecha may have been connected: it contains eleven different quotations, at least four of which involve musical material. One of his villancicos, *Si amores*, is mentioned in Luys Milán's *El cortesano* (Valencia, 1561), and was copied on one of the lost folios of the *Cancionero Musical de Palacio* (*E-Mp* II/1335). *Que farem* is one of the rare Renaissance villancicos with a text in Catalan. The *Miserere* attributed to Flecha in *E-Bc* M587 is stylistically more typical of the uncle's style than of the nephew's.

MARICARMEN GÓMEZ

Flecha, Matheo (ii) (*b* Prades, nr Tarragona, *c*1530; *d* La Portella, nr Berga, 1604). Spanish composer, nephew of Matheo Flecha (i). In 1543 he entered the service of the Infantas María and Juana, the daughters of Charles V, as a chorister. After the marriage of María to Maximilian of Austria in 1548 he remained in the service of Juana, but left to become a Carmelite friar in 1552. In 1564 he was in Italy, and from there he went to the Austrian court where from 1568 he held the office of 'Chaplain to the Empress and Musician to the Imperial Majesty'. In 1579 Rudolph II conferred on him the abbacy of Tihany in Hungary in recognition of his services. After various journeys to Spain, some of them on official business, he retired in mid-1601 to the Benedictine monastery of San Pedro de Portella, near Berga, of which he was abbot until his death.

Two copies survive of *Il primo libro de madrigali* (Venice, 1568; ed. M.C. Gómez, Madrid, 1985). There are 19 items in the collection; one is a Spanish villancico, and one was later transcribed for string quintet with the title 'Harmonía a 5' (*A-Wgm* 23573). His second vernacular publication (1581) corresponds to the famous compilation of *Las ensaladas* of his uncle and namesake, to which he added two *ensaladas* and a madrigal of his own (ed. in M.C. Gómez: *F. Matheo Flecha: La feria y Las cañas*, Madrid, 1987), an *ensalada* by Cárceres, and one by Chacón; the book survives incomplete. His last publication (1593) consisted of a book of poems linked by a 'short account of the life and death of the Most Christian Queen of France, Doña Isabel of Austria', some 'Epitetos a la Virgen' and nine sonnets on religious subjects. His *Divinarum completarum psalmi, lectio brevis et Salve regina, cum aliquibus motetis* (Prague, 1581) does not seem to have survived complete, and his mass (1576) is lost.

Flecha is one of the rare 16th-century Spanish composers who followed international trends in madrigal writing. His madrigals show a considerable mastery of contrapuntal technique in spite of a certain conservatism of style and a lack of dramatic tension; they were probably written in an Italian prison, to which he had been sentenced for debt, and the sounds he used are notable for their sobriety. His *ensalada Las cañas* is a four-part reworking of his uncle's *ensalada* of the same name; in *La feria*, an expansion of the anonymous ballad *En la ciudad de Toledo*, he used the alternation of contrasting passages typical of this genre.

MARICARMEN GÓMEZ

Flechtenmacher, Alexandru (Adolf) (*b* Iaşi, 23 Dec 1823; *d* Bucharest, 28 Jan 1898). Romanian composer, conductor, violinist and teacher of German descent. The son of a lawyer and schoolteacher from Transylvania, he received his first training in music from Paul Hette and Joseph Leitner, violinists in the French vaudeville company of Iaşi, and at the age of 11 became violinist in the company's orchestra. He then studied with Joseph Boehm and Mayseder in Vienna; there he became Konzertmeister of a theatre orchestra and began to compose. About 1840 he returned to Romania, stopping on the way in Russia and giving a successful concert in Odessa. He played the violin in the German opera orchestra in Iaşi, and later he was made orchestral conductor at the National Theatre, for which he also wrote overtures and incidental music to plays and operettas. *Baba Hîrca* ('The Witch Hîrca', 1848) is one of the earliest Romanian operettas. These works, together with his patriotic choruses and solo songs, earned him a place as one of the leading pioneers of Romanian music.

After the defeat of the Revolution of 1848 Flechtenmacher taught and conducted in various cities in Romania. He founded the Philharmonic Society of Craiova and the Bucharest Conservatory (1864), of which he was the first director and professor of violin; his pupils included

Eduard Wachmann, Constantin Dimitrescu and Robert Klenck. He married Ana Maria Mavrodin, an actress, poet and editor of a women's magazine. She wrote the texts for some of his vocal works, which were inspired by and often written for social and political events of the time; many of them became popular tunes. Most of his manuscripts were destroyed by a fire at his home in 1891.

WORKS

STAGE

BN – *National Theatre, Bucharest*
IN – *National Theatre, Iaşi*

Baba Hîrca [The Witch Hîrca] (operetta, 2, M. Millo), IN, 27 Dec 1848 (Iaşi, 1850)

ROMEO GHIRCOIAŞIU

Fleckno [Flecknoe], **Richard** (*d* ?London, *c*1678). English poet, playwright, lutenist, composer and courtier. He was a Roman Catholic priest. According to his *Relation of Ten Years' Travells in Europe, Asia, Affrique, and America* (London, 1656), he travelled extensively during the 1640s and 50s. He was unsuccessful as a poet and playwright and is best remembered as the butt of two satires: Andrew Marvell's *Fleckno, an English Priest at Rome* and Dryden's *MacFlecknoe*.

Fleckno's importance for the history of music lies in his two operas: *Ariadne Deserted by Theseus and Found and Courted by Bacchus* (London, 1654) and *The Marriage of Oceanus and Brittania* (London, 1659). Neither appears to have been performed and the music for both is lost. The libretto for *Ariadne*, published two years before Davenant's *The Siege of Rhodes*, describes the work as 'a dramatick piece apted for recitative musick, written and composed by Richard Fleckno'. An important preface (reprinted in Haun) gives Fleckno's ideas on opera, acquired during visits to Genoa and Venice and three years in Rome. He mentioned Monteverdi as a model, but declined to speak further of the music 'untill the publishing of it, as shortly I intend to do, with a Treatise of the Air of Musick, and of this particular, to shew, that as no composition seems more easy to the ignorant than it, so none is more hard to those who understand it'. The treatise was never published. *The Marriage of Oceanus and Brittania* described on the title-page of the libretto as 'an Alegoricall Fiction really declaring England's Riches, Glory, and Puissance by Sea, to be Represented in Musick, Dances, and Proper Scenes' shows the influence of Davenant's opera. The mixture of Italian recitative, French dance and English masque prefigured a characteristic English approach to opera for decades to come. Both librettos are well-wrought examples of their genre, showing a keen understanding of Italian opera of the 1640s. In his 'Of a petty French lutenist in England' (*Enigmatical Characters*, 1658) Fleckno railed against the music of [Denis?, Ennemond?, Jacques] Gaultier and Dufaut, claiming weak technique and a lack of variety in the playing of visiting French lutenists and denouncing the fashion among the English gentry for admiring and hiring those visitors. A canzonet by Fleckno, *Go Phoebus go*, was printed in Playford's *The Musical Companion* (RISM 1672[5]).

NEAL ZASLAW/SARAH ADAMS

Fleetwood Mac. English rock group. Formed in London in 1967, the group emerged out of the 1960s blues scene. Founding members Mick Fleetwood (*b* Redruth, 24 June 1942; drums), John McVie (*b* London, 26 Nov 1942; bass) and Peter Green (*b* London, 29 Oct 1946; guitar and vocals) had all played with John Mayall's Bluesbreakers. Together with Jeremy Spencer (guitar and vocals) and also later Danny Kirwan (guitar and vocals) the group enjoyed success in the UK, with four singles entering the top ten of the pop charts, including the instrumental *Albatross* (1968), which reached number one. In 1970 Green left the group suddenly for religious reasons; he was followed in 1971 by Spencer. Christine McVie (keyboards and vocals) joined the group in 1970. A series of personnel changes plagued the group until the McVies and Fleetwood relocated to Los Angeles and joined forces with Lindsey Buckingham (guitar and vocals) and Stevie Nicks (vocals). The reformed band released *Fleetwood Mac* (Reprise, 1975), which rose to the top of the US album charts, an achievement surpassed only by the group's next album, *Rumours* (WB, 1977), which not only rose to number one but stayed in that position for 31 consecutive weeks. Together these two albums contained seven hit singles. Subsequent albums *Tusk* (WB,

1979) and *Mirage* (WB, 1982) also did well commercially. In 1987 Buckingham left the group, followed in 1990 by Nicks and Christine McVie. The quintet regrouped briefly in 1993 and again in 1997. While Fleetwood Mac's music from the late 1960s was strongly influenced by American electric blues, their later music is much more pop- and folk-influenced, relying on strong songwriting, arranging and vocals. The group's tremendous success in the mid- to late-1970s makes them one of the most important and influential bands of the decade.

JOHN COVACH

Fleischer. German family of instrument makers. Christoffer Fleischer, lute and theorbo maker [Fleescher, Vleescher] (*fl* ?1622–?48) was probably of Dutch descent. None of his instruments survive. His son Hans [Johannes] Christoph(er) Fleischer (bap. Hamburg, 28 May 1638; *d* ?before 1692) is also known as a lute maker, but is said to have made keyboard instruments too. According to the latter's son Johann Christof(fer) Fleischer (bap. Hamburg, 4 July 1676; *d* *c*1730), he also made a replica of a Venetian gut-strung 'Clavicymbel' (harpsichord). Hans Christoph's widow married the organ and clavichord maker Johann Middelburg [Middelborg] (1648–?1710), who then ran the family workshop, in which Johann Christof and his brother Carl Conrad(t) Fleischer (bap. Hamburg, 13 Nov 1680; *d* 1721/2) were apprentices. From 1707 to 1709 Middelburg was in a dispute with the cabinet makers' guild; Johann Christof and Carl Conrad joined the dispute around 1708. The plague of 1712–14 was a further setback to the business. Johann Christof and Carl Conrad ran a separate workshop between 1705 and 1708 and another from 1718 until Johann Christof's death. Their 'Clavicordis' were praised by Mattheson (*Das neu-eröffnete Orchestre*, i Hamburg, 1713, 263 and 342) for their accurate though costly workmanship and their bright resonance. In 1718 Johann Christof advertised two instruments of his own invention, the 'Lauten-Clavessin' (lute-harpsichord) and the 'Theorben-Flügel' (theorbo-harpsichord). Surviving instruments by him include a harpsichord (1710) and five clavichords (1722–9). His clavichords of 1722 and 1723 are the earliest surviving examples of the new, larger type of clavichord that became associated with Hamburg makers in the 18th century (*see* CLAVICHORD, §4). Two harpsichords by Carl Conrad have been preserved, dated 1710 (see illustration) and 1720. Another may be a harpsichord, converted into a piano, that was auctioned at Sotheby's in November 1995, which certainly came from the Fleischer workshop.

Harpsichord with the signature 'Carl Conrad Fleischer Me Fecit In Hamburg 1710' (Museum für Hamburgische Geschichte, Hamburg)

ALEXANDER PILIPCZUK

Fleischer, Friedrich Gottlob (*b* Cöthen, 14 Jan 1722; *d* Brunswick, 4 April 1806). German composer. He studied in Leipzig, probably with J. Friedrich Doles. After 1747 he was ducal court musician and organist at the Lutheran churches of St Martin and St Aegidien in Brunswick. As ducal music master he taught the later Duchess Anna Amalia of Weimar among others. An important keyboard player, Fleischer moved in Lessing's circle, and also had contact with the professors Eschenburg, Zachariä and Jerusalem of the Brunswick Collegium Carolineum. Although contemporary opinion of his keyboard playing was uniformly high, his compositions brought mixed critical reaction. His songs were widely disseminated but do not rise above the average of their era. He also composed pleasant, virtuoso keyboard works orientated towards C.P.E. Bach, and the Singspiel *Das Orakel* (1771).

WORKS

Stage: Das Orakel (operetta, C.F. Gellert), vs (Brunswick, 1771); Comala (incid music, J.J. Eschenburg), lost

Vocal: Oden und Lieder, i–ii (Leipzig, Brunswick and Hildesheim, 1745–57); Cantaten zum Scherz und Vergnügen, nebst einigen Oden und Liedern (Brunswick and Leipzig, 1763); Sammlung grösserer und kleinerer Singstücke (Brunswick, 1788); lieder in contemporary anthologies

Inst: Clavier-Übung [sonata], kbd, i (Nuremberg, 1745); Sammlung einiger Menuetten und Polonoisen nebst anderen Stücken, kbd (Brunswick, 1762, enlarged 2/1769); Sym., *D-Dl*; Sonata, kbd, *B-Bc*; pieces, fl, bc, *D-ROu*

HEINRICH SIEVERS

Fleischer, Oskar (*b* Zörbig, 2 Nov 1856; *d* Berlin, 8 Feb 1933). German musicologist. He studied ancient and modern languages and philosophy at Halle University (1878–82), where he obtained the doctorate with a dissertation on Notker Labeo. He then studied musicology in Berlin with Philipp Spitta and in 1886 his study of Denis Gaultier's *La rhétorique des dieux* appeared. Two years later he became director of the Berliner Königliche Instrumenten-Sammlung and catalogued its holdings. He was appointed lecturer at Berlin University in 1892 and reader in 1895. In 1899 he founded the International Musical Society and until 1904 was coeditor of its *Zeitschrift* and the *Sammelbände*.

It is unfortunate that the framework of ideas which provides a point of reference for most academics' work included, in Fleischer's case, an element of fantasy and even fanaticism, which ensured a stormy reception for his later writings. After the very real advances made by his *Neumenstudien* (1895–1904), its sequel *Die germanischen Neumen* (1923) was an unsuccessful attempt to promote a new system of transcription of Gregorian melodies, which involved jettisoning the whole corpus of later chant manuscripts written with staves as unreliable, and even denouncing the parallel alphabetic and neumatic notation of the Dijon tonary (*F-MO* H159) as transmitting different melodies in the two notations. His idea that 'German' neumatic script (in itself a concept now untenable) was, apart from some Byzantine contribution, the fount and origin of all systems of chant notation, is reminiscent of the patriotic fervour that makes *Vom Kriege gegen die deutsche Kultur* (1915) such distasteful reading. After World War I his continuing nationalist sentiment led him to claim that the German race was responsible for all that was superior in music. As a regular contributor to the *völkisch* monthly *Die Sonne*, he expounded on the Germans' invention of diatonicism and polyphony and their strict adherence to the major mode. This claim prompted others to investigate the tonality of German folksong and trace the development of the 'idea of major' (*Dur-Gedanke*).

It is probably as a co-founder of the International Musical Society and as a Byzantine chant scholar that Fleischer will be remembered. The third part of *Neumenstudien* (1904) gave a facsimile of a papadikē (from the Basilean monastery of S Salvatore near Messina, now *I-ME* cod.graec.154), a short manual of late Byzantine music, together with a transcription, translation and commentary. The transcriptions of melodies in late Byzantine notation that he made in this volume were the first substantial step towards complete deciphering of the music (the rhythmic discoveries of Wellesz and Tillyard were still to come). His most important pupil was Hermann Abert.

DAVID HILEY/PAMELA M. POTTER

Fleischer, Tsippi (*b* Haifa, 1946). Israeli composer and musicologist. She studied at the Music Teachers' Training College (Tel-Aviv), the Rubin Academy (Jerusalem), New York University (MA 1975) and Bar-Ilan University (PhD in musicology 1995). She also studied Arabic language, culture and history, and Hebrew linguistics at Tel-Aviv University (BA 1969–72). In 1996 she was appointed to a post at the Music Teachers' Training College. Her honours include the Prize of Excellence in Israeli Music (1992), the ACUM (Israeli performing rights society) Prize (1994), the Composer's Residency Award of Villa Montalvo and the Prime Minister's Composition Prize (1998).

The ideology of East-West synthesis, characteristic of much Israeli music, has been deeply ingrained in Fleischer's personality. Her admiration for the qualities of Arabic poetry has found its expression in a series of settings that smoothly alternate between Western and Arabic idioms, as in the *Ballad of Expected Death in Cairo*. The trilingual *Oratorio 1492–1992*, written in commemoration of the expulsion of Jews from Spain, shifts freely between atonal and tonal harmonies, monophonic cantillation and patterns borrowed from Spanish folk music. *Four Old Winds*, a series of four multimedia works, employs tape, video and dancers, as well as sounds produced from palm tree branches. Israeli folk and popular song are among her research interests. (R. Fleisher: *Twenty Israeli Composers*, Detroit, 1997)

WORKS
(*selective list*)

Stage and multimedia: Rattles, Baskets and Kindling (ballet), vc, perc, 1978; Four Old Winds (4 multimedia works, Ugaritic, biblical Heb., Babylonian and Coptic texts), dancer, palm tree branches, tape, video, 1993–5; Medea (chbr op), S, fl + rec, cl + b cl + sax, vc, perc, 1995

Other works: Ballad of Expected Death in Cairo (S. El-Sabur), (T, 3 vn, pf)/(Mez, 2 vn, va, pf), 1987; Oratorio 1492–1992 (medieval Heb., Arabic, Sp. and Jewish texts), SATB, ens (gui, mand), orch, 1991; Hexappticon (J.I. Jabra), SATB/(A, baroque ob, vc, hpd)/hp/str qt/(hp, str qt)/pf 4 hands, 1996–7

Principal publishers: Israel Music Institute, Israeli Music Publishers, Israel Music Centre

JEHOASH HIRSHBERG

Fleischhauer, Günter (*b* Magdeburg, 8 July 1928). German musicologist. He studied classics with Erich Reitzenstein, music education with Fritz Reuter and musicology with Max Schneider at Halle University (1947–52), where he took the doctorate in 1959 with a dissertation on musicians' associations in Hellenistic and Roman antiquity. After working as an assistant (1952–9) at the Halle Music Education Institute, he began teaching at Halle University, and was appointed lecturer (1962), supernumerary professor (1990–92) and subsequently professor (1992–4). His main areas of research are the music of antiquity, Telemann and Handel. He was one of the founders of the Telemann Festival, held regularly in Magdeburg since 1962, and has edited a number of Telemann's works; he also wrote the volume on Etruria and Rome (1964) for the series Musikgeschichte in Bildern.

HORST SEEGER/WOLFGANG RUF

Fleischmann, Aloys (Georg) [Ó Rónáin, Muiris] (*b* Munich, 13 April 1910; *d* Cork, 21 July 1992). Irish composer, conductor and musicologist of German birth. After completing the BMus (1931) and MA (1932) at University College, Cork, he studied composition and conducting at the Akademie für Tonkunst, Munich, and musicology at Munich University (1932–4). On returning to Cork in 1934, he was appointed professor of music at University College, where he remained until his retirement in 1980. Acutely aware of the obligation of his generation to create circumstances in which modern Irish music could flourish in a recently independent Ireland, his involvement in all aspects of musical life was deep and committed. He founded the Cork SO (1934), which he conducted for almost 60 years, and the Cork Music Teachers' Association (1938), of which he remained chair for 50 years; he also co-founded the Cork Ballet Company (1948) with Joan Denise Moriarty. In 1954 he helped to found the Cork International Choral Festival, of which he was director until 1987, and in 1962 instituted public seminars in which works specially commissioned for the festival were discussed. He completed the DMus at the National University of Ireland in 1963, and received an honorary MusD from Dublin University in 1964. Other honours included membership in the Royal Irish Academy (1966), the Order of Merit of the German Federal Republic (1966) and the title of Freeman of the City of Cork (1978).

As one of the first group of composers to live and work in modern Ireland, the question of what it meant to be an Irish composer occupied Fleischmann greatly. He adopted the Irish pseudonym, Muiris Ó Rónáin, for a time feeling that his German surname was inconsistent with his nationalist aspirations. His early music, while outward looking, shows the clear influence of folk idioms. Terse modal diatonicism gradually gave way, however, to a freer chromatic style (from about 1960), but his sympathies remained with traditional forms of expression. His final years were largely occupied with *Sources of Irish Traditional Music*, a project he completed shortly before his death.

WORKS

Ballets: The Golden Bell of Ko, 1947; An Cóitín Dearg [The Red Petticoat], 1951; Macha Ruadh [Red(-Haired) Macha], 1955; The Táin, 1981

Vocal-orch: Clare's Dragoons (T. Davis), Bar, chorus, war pipes, orch, 1945; Song Cycle 'The Fountain of Magic' (F. O'Connor), S/T, orch, 1945; Bata na bPlanndála [The Planting Stick] (P. Ó Laoighre, D. Ó Drisceoil), dance suite, chorus, small orch, 1957; Amhrán na gCúigí [Song of the Provinces] (attrib. Alfrid), chorus, orch, 1963; Song of Colmcille (R. Farren), spkr, chorus, orch, 1964; Mass for Peace, unison chorus, orch, 1976; Festival Song (J. Montague), chorus, orch, 1978; Omós don Phiarsach [Homage to Pádraig Pearse] (P. Pearse), spkr, Mez, orch, 1979; Time's Offspring (Bishop Berkeley), spkr, chorus, orch, 1985; Clonmacnoise (O'Connor), chorus, orch, 1986

Other vocal: 3 hAmhráin [3 Songs] (M. Ó Murchú), S/T, pf, 1935, orchd 1937; Na Trí Captaení Loinge [The Three Sea Captains] (Ó Laoighre, Ó Drisceoil), dance suite, chorus, 1956; Mass, female vv, org, 1972; The Poet's Circuits (P. Colum), S, Irish hp, 1972; Song cycle 'Tides' (J. Montague), Mez/Bar, pf, 1973, orchd 1974; Poet in the Suburbs (T. Kinsella), chorus, 1974; Games (V. Popa, trans. A. Pennington), chorus, hp, perc, 1990

Inst: Suite, pf, 1933; Pf Qnt, 1938; Prelude and Dance, orch, 1940; The Humours of Carolan, suite, str, 1941–44; The Four Masters, ov., orch, 1944; Introduction and Funeral March, orch, 1960; Cornucopia, hn, pf, 1969, orchd 1971; Sinfonia votiva, orch, 1977

SÉAMAS DE BARRA

Fleischmann, (Johann) Friedrich (Anton) (*b* Marktheidenfeld, nr Würzburg, 18 July 1766; *d* Meiningen, 30 Nov 1798). German administrator and composer. When he was 11 his father Johann Friedrich Fleischmann, a school headmaster and amateur composer, sent him to the Mannheim Gymnasium, where he studied with G.J. Vogler and Ignaz Holzbauer. After finishing courses in philosophy and law at Würzburg University, he became private secretary and tutor to the *Regierungspräsident* von Welden's son at Regensburg (1786). From 1789 he was cabinet secretary to Duke Georg I of Saxe-Meiningen, where he exerted a great influence on the court's music.

Although Fleischmann had composed music for a Singspiel *Hanns und seine Frau Mama* by 1785, his extant compositions belong to his Meiningen period. His principal work, the Singspiel *Die Geisterinsel* (after Shakespeare's *Tempest*), was composed before the better-known settings of Reichardt and Zumsteeg, and produced at Weimar in 1798; the librettist Gotter had intended his work for Mozart. Fleischmann's setting of the *Wiegenlied* 'Schlafe, mein Prinzchen' (from Gotter's Singspiel *Esther*, 1795), published in 1796, is remarkably similar to the well-known setting of the same year by Bernhard Flies (formerly attributed to Mozart) and may have served as its model. A variant of Fleischmann's setting was used by Wenzel Matiegka under the title 'Mädchen, o schlumm're noch nicht' for variations in the last movement of his Notturno op.21, which Schubert later arranged as a guitar quartet.

Fleischmann also wrote an essay 'Wie muss ein Tonstück beschaffen seyn' (published posthumously in *AMZ*, i, 1798–9, cols.209, 225) that, by prescribing three-part structures for instrumental movements, has been considered an early description of Classical form. However, his description more closely applies to pre-Classical monothematic three-part forms, and aesthetically it is likewise still largely in the tradition of the older doctrine of the Affections.

WORKS

printed works published in Offenbach unless otherwise stated

Vocal: Hanns und seine Frau Mama (Spl, C.A.G. von Sekendorff), ?not perf., lost, text in *Neue Beyträge zum deutschen Theater aus Franken* (n.p., 1785), according to *Grove5*; Die Geisterinsel (Spl, 3, F.W. Gotter and F.H. von Einsiedel, after Shakespeare), Weimar, 1798, *D-Bhm*, ov., op.7 (*c*1807); Wiegenlied (Gotter), 1v, gui/kbd (1796); Einige Lieder (Fürstin von Neuwied) (Leipzig, 1798); Die Wollust, 1v, kbd (Leipzig, n.d.), doubtful; 3 lieder in Göttingen *Musenalmanach*; song in Romanze und Oden mit … Guitarre (Brunswick, *c*1800)

Orch: Conc., hpd/pf, op.1 (1794); Conc., hpd/pf, op.3 (1796); 1797: Zur Feyer des Friedens, pf conc., op.4 (1797); Sinfonie, op.5 (1800); Sinfonie, op.6 (*c*1806) [minuet by A. André]; double conc., kbd, vn, mentioned in *GerberNL*

Chbr: Air avec des variations, kbd (Vienna, 1787), lost; Sonate, hpd 4 hands, op.2 (1795); several Mozart ops arr. 8 wind insts, mentioned in *GerberNL*

KLAUS RÖNNAU

Fleischmann [Fleyshman], **Veniamin Iosifovich** (*b* Bezhetsk, 7/20 July 1913; *d* Krasnoye, near Leningrad, 14 Sept 1941). Russian composer. Although musical as a child, he was a schoolteacher before turning to music seriously. In 1937 he left the Musorgsky Music College, where he had studied with Mikhail Yudin, and entered the Leningrad Conservatory to study composition with Shostakovich. After composing settings of Lermontov and Goethe and a number of piano preludes (all of which were lost), in 1939 he started writing a one-act opera *Skripka Rotshil'da* ('Rothchild's Violin') using his own libretto based on a story by Chekhov. The score was almost finished by June 1941 when Russia became involved in World War II; Fleischmann volunteered and never returned from the front. Shostakovich completed the last few pages of the vocal score and by February 1944 had made a fair copy of the orchestral score. In musical language and dramatic plan the work belongs to the Russian tradition exemplified by Musorgsky and in particular to the tradition of shorter operas established by Rimsky-Korsakov and Rachmaninoff. The first concert performance of the opera took place on 20 June 1960 at the Central House of Composers in Moscow; the first staging occurred at the Experimental Chamber Opera Studio of the Leningrad Conservatory on 24 April 1968.

IOSIF GENRIKHOVICH RAYSKIN

Fleisher, Edwin A(dler) (*b* Philadelphia, 11 July 1877; *d* Philadelphia, 9 Jan 1959). American music patron. He studied at the William Penn Charter School in his native city and at Harvard University (BA 1899). In 1909 he founded the Symphony Club of Philadelphia to provide gifted young musicians with a free complete training in the performance of orchestral literature under profes-

sional conductors, who have included Johan Grolle, Camille Zeckwer, William F. Happich and Arthur Cohn. As many as 400 students a year have been members of the three orchestras and four theory classes. Fleisher frequently played viola in the orchestras. The club at first was limited to boys from ten to 16 years of age, but Fleisher soon did away with all discrimination on the grounds of age, sex, race or religion. He received the honorary degree of MusD from the Philadelphia Musical Academy in 1924. Originally a yarn manufacturer, he retired from business in 1925 to devote himself full time to music.

Since half of all rehearsals were given over to the sight-reading of new or unfamiliar works, Fleisher began to collect performance material on a large scale. After his retirement he visited the significant musical centres of Europe, returning with 1000 works by 350 contemporary composers. In 1929 he gave the club's large collection of scores and parts to the Free Library of Philadelphia, where it is maintained in quarters of its own, separate from the library's music department. During the Depression years of the 1930s, Fleisher Collection custodians, with the assistance of the Federal Works Progress Administration, copied by hand nearly 2000 compositions by contemporary Americans, at a time when no performance material for these works was available. In the 1940s Nicolas Slonimsky was sent to Latin America to acquire material, and returned with some 650 symphonic works.

Since 1929 the Fleisher Collection has grown from 4000 compositions to more than 15,000, making it the largest collection of orchestral performance material in the world. Although it was first intended as a reference collection, regulations were liberalized in order to permit orchestral groups throughout the USA and some foreign countries to borrow (without charge) otherwise unobtainable music for study and performance. A collection of tape and disc recordings is also maintained to facilitate the study of unfamiliar work. A catalogue of the music in the collection was begun in 1933, giving information on instrumentation, movements, duration and first performances, as well as other pertinent facts, which makes it an indispensable tool for libraries and conductors. A complete revision was published in 1979.

OTTO E. ALBRECHT

Fleisher, Leon (*b* San Francisco, 23 July 1928). American pianist and conductor. He gave his first public recital at the age of six, then went in 1938 to Schnabel, who was his teacher until 1948, in Italy and in New York. In 1942 he played the Liszt A major Concerto with Pierre Monteux and the San Francisco SO, and the next year the Brahms D minor. In 1944 he and Monteux again performed the Brahms, this time with the New York Philharmonic-Symphony. Monteux also taught him conducting. In 1952 he was the first American to win the Queen Elisabeth International Music Competition, Brussels, and his career became international. By the early 1960s he had made many recordings including a distinguished series of concertos with Szell and the Cleveland Orchestra. In 1963, with the composer conducting the Seattle SO, he gave the first performance of Leon Kirchner's Second Piano Concerto, which he had commissioned with a grant from the Ford Foundation.

In 1965 his right hand became disabled, and after some years he began to play the left-hand repertory, including Ravel's Concerto and chamber music by Franz Schmidt. In 1968 he became co-director of the Theatre Chamber Players in Washington, DC, and conductor of the Annapolis (Maryland) SO, a community orchestra. In 1973 he was named associate conductor of the Baltimore SO; he resigned in 1978 in order to accept more engagements as a guest conductor. His ailment was finally diagnosed as focal distonia; after extensive treatment, he returned in 1982 to the standard piano literature, appearing as guest soloist with Comissiona and the Baltimore SO at the inaugural concert of Meyerhoff Symphony Hall.

In 1959 Fleisher joined the faculty of the Peabody Conservatory of Music, where he later held the Andrew W. Mellon Chair in piano; he was also a visiting professor at the Rubin Academy of Music in Jerusalem. André Watts and Lorin Hollander were among his pupils. In 1985 he was appointed artistic director of the Tanglewood Music Center, where in 1994 he gave the première of Foss's Piano Concerto for left hand.

To Monteux, Fleisher at 15 was 'the pianistic find of the century'. When he was at his peak his playing combined intellectual power, warmth of feeling, grace, taste and sensuous beauty. Although not on the same technical level as his piano playing, his conducting has been marked by equally distinguished musical perception.

MICHAEL STEINBERG/R

Fleming [Flemming], **Paul** (*b* Hartenstein, Saxony, 5 Oct 1609; *d* Hamburg, 2 April 1640). German poet. He received a good early education at home from his theologian father and at 12 entered the Thomasschule, Leipzig, where Schein taught him Latin and German poetry. In 1628 he entered Leipzig University and studied medicine and the arts. He received the degrees of PhD and MA in 1633, when he also accepted a place on a mission of Duke Friedrich of Schleswig-Holstein to Moscow and Persia. During a one-year respite in Tallinn in 1635 he met the three Niehus daughters, whose beauty inspired many of his poems. From 1636 to 1639 he was again in Moscow and Persia. He left his post to marry Anna Niehus and then went to the university in Leiden, where he became Doctor of Medicine in 1640. He died suddenly while returning to his bride in Tallinn.

Fleming was the best and most admired German Baroque lyric poet. Under the influence of Opitz, whom he knew personally by September 1630, and his teacher Schein, he wrote reform verse with a depth and mastery of sound unsurpassed by his models and other contemporaries. His best poems are sonnets and odes, and he was specially expert at writing alexandrines. His powerful love-poems exerted a great influence on successors such as Finckelthaus, Zesen, Schirmer, Brehme and Stieler, and they have been continually republished since his death.

As early as his first year in Leipzig Fleming showed a deep love of music, and the musicality of his language testifies to Schein's encouragement and influence on him (after Schein's death in 1630 he sang his praises in a

number of poems). Hammerschmidt, C.C. Dedekind and Pohle each set some of his poems to music; Bach used his popular chorale text 'In allen meinen Taten' in his cantata no.97; and Brahms set 'O liebliche Wangen' as his op.47 no.4.

JOHN H. BARON

Fleming, Renée (*b* Rochester, NY, 14 Feb 1959). American soprano. She studied at SUNY and made some early appearances singing Gershwin with the New Harlem SO. After further study at the Juilliard School she won a Fulbright Scholarship to work in Europe with Arleen Augér and Elisabeth Schwarzkopf. In 1986 she sang her first major operatic role, Konstanze in *Die Entführung aus dem Serail*, at the Salzburg Landestheater. Some of the most coveted awards, such as the Richard Tucker and George London prizes, fell to her, and in 1988 she gained a Metropolitan Opera Audition Award, with a house début in 1991 as Countess Almavira in *Le nozze di Figaro*. This was also the role which introduced her to Vienna, Paris, San Francisco and Buenos Aires. At Glyndebourne she sang Fiordiligi in *Così fan tutte* (1992), and Covent Garden heard her first as Dirce in Cherubini's *Médée* (1989). On recordings she came to notice with a brilliant performance in the title role of Rossini's *Armide* at the Pesaro Festival of 1993. Fleming also confirmed her growing reputation as a concert artist in a recital at Lincoln Center that same year. On the opening night of the Metropolitan season 1995–6, her Desdemona to Domingo's Otello placed her among the leading singers of the day. The beauty of her voice and the charm of her acting were equally acclaimed on her Bayreuth début as Eva in *Die Meistersinger* in 1996. She has also been in demand for world premières, including Corigliano's *The Ghosts of Versailles*, Susa's *The Dangerous Liaisons* and Previn's *A Streetcar Named Desire*, which brought perhaps the greatest personal triumph of her career so far. Her voice combines the moderate power of a lyric soprano with the fullness and intensity of a more dramatic type. From the first, her recordings revealed an extensive range, considerable accomplishment in florid singing, and a distinctive, vibrant timbre. Later years have brought a deepening of her expressive powers in a steadily growing recorded repertory which includes such roles as Donizetti's Rosmonde and Dvořák's Rusalka, Schubert lieder and Strauss's *Vier letzte Lieder*.

J.B. STEANE

Fleming, Robert (James Berkeley) (*b* Prince Albert, SK, 12 Nov 1921; *d* Ottawa, 28 Nov 1976). Canadian composer. Following piano studies with Marjorie Wilson among others, Fleming was heard in 1937 by Arthur Benjamin, who recommended that he continue his studies in London at the RCM. His teachers there included Herbert Howells and Percy Buck. The following year he won the Exhibition Scholarship in piano, but returned to Saskatoon to study with Lyell Gustin. In 1941–2 he earned the Licentiate degree and won the Canadian Performing Rights Society (CPRS) scholarship for the first time. In 1942–4, after further study at the Toronto Conservatory with Healey Willan (composition), Ettore Mazzoleni (conducting) and F. Silvester (organ), he won three additional CPRS scholarships. After a brief period of service as a wireless operator for the Royal Canadian Air Force (1943–4) he recommenced his studies at the Toronto Conservatory. In 1946 on the strength of his film score *Red Runs the Fraser* (1946) Fleming joined the National Film Board (NFB) staff as a composer, conductor and music editor. He assumed the position of music director in 1957. In addition to his responsibilities with the NFB he continued to compose music for a variety of media. He returned to Ottawa in 1970 to join the faculty at Carleton University.

Songs and choral works are central to Fleming's output. When setting a text he paid particular attention to word stress, changing the metre as well as the rhythmic figures to accommodate the accentual pattern of a chosen phrase. While his compositional approach was primarily melodic, his harmonic language includes extended tertian harmonies and chordal streams of 4ths and 5ths. Ostinatos are a common textural feature. From 1946 his style became increasingly modal. The song cycle *The Confession Stone* (1966), on a set of religious texts by Owen Dodson, combines lyricism with marked dissonance.

Fleming wrote over 50 hours of music for films, including documentaries, features and short films on a wide variety of topics. In the course of this work, Fleming familiarized himself with much of Canada's folksong and indigenous music. This research also effected his concert music as he increasingly incorporated idioms initially developed for film scores (particularly those for the series *Canada at War*, *Struggle for a Border* and *Tuktu*) into other compositions. His use of folksong also reflected his close involvement with community musicians.

WORKS
(*selective list*)

DRAMATIC

Stage: Chapter 13 (ballet), 2 pf, 1948; Shadow on the Prairie (ballet), 1951; Laurentain Parade, Why There are No Frogs on the Queen Charlotte Islands, Square-dance: the Maple Leaf Forever (3 puppet plays), 1967

Film scores: Red Runs the Fraser, 1946; Mental Health (series), 1946–53; Stanley Takes a Trip, 1948; Canadian Cruise, 1949; Look to the Forest, 1950; Canada's Awakening North, 1951; My Prairie Home, 1951; Age of the Beaver, 1952; Musician in the Family, 1953; The Country Auctioneer, 1954; The Colour of Life, 1955; The Spruce Bog, 1956; La plume au vent, 1957; Railroaders, 1958; Les pêcheurs, 1959; Above the Timberline, 1960; The Saddlemaker, 1961; Jacky Visits the Zoo, 1962; Canada at War (series), 1962; Exploding Metropolis (series), 1963; Edge of the Barrens, 1963; Phoebe, 1964; Northern Research, 1965; Antonio, 1966; Canadian Artists (series), 1966; Tuktu (26-part series), 1966–9; Adventures, 1967; Struggles for a Border (9-part series) 1967–9; The Best Damn Fiddler from Calabogie to Kaladar, 1968; Matter of Fat, 1969; Family House, 1970

GODFREY RIDOUT/ELAINE KEILLOR

Flentrop, Dirk (Andries) (*b* Zaandam, 1 May 1910). Dutch organ builder. The firm of organ builders that bears his name was founded at Zaandam in 1903 by his father Hendrik (Wichert) Flentrop (1866–1950); Dirk Flentrop assumed direction in 1940. Dirk Flentrop learnt organ building in his father's workshop and at the firm of Frobenius in Denmark. Like his father, he had been trained as a church organist, and the two became interested in the restoration of early instruments as well as in the construction of new ones based on traditional principles of the 17th and 18th centuries. Among the first organs they restored (1936) was one built in 1756 by Christian Müller for the Grote Kerk at Beverwijk. Their aim was to return the instrument as far as possible to its original condition, rather than to modernize it.

By the end of World War II, Dirk Flentrop had become convinced that the traditional mechanical-action organ, housed in a shallow case, with scaling, disposition and wind supply based on the principles of early builders, represented the best direction for his own work. His first significant effort in this style was the organ made in 1950 for the Dutch Reform church in Loenen aan de Vecht. Implicit in this approach to organ building was his concern for the instrument's ability to play the Baroque and Classical repertories, as well as for its technical and artistic design. The disposition of the Loenen instrument was as follows: *Hoofdwerk*, Prestant 8′, Roerfluit 8′, Octaaf 4′, Spitsquint 2⅔′, Octaaf 2′, Mixtuur VI, Dulciaan 16′; *Rugwerk*, Gedekt 8′, Prestant 4′, Roerfluit 4′, Gemshoorn 2′, Quint 1⅓′, Scherp IV–V, Regaal 8′; *Pedaal*, Subbas 16′, Octaaf 8′, Nachthoorn 4′; manual and pedal couplers.

Flentrop's influence since 1950 has been strong both in Europe and in the USA, where his first major organ was built for the Busch-Reisinger Museum at Harvard University in 1958. Other notable instruments by him in the USA include the four-manual organ for St Mark's Cathedral, Seattle (1965), and instruments for Salem College, Winston-Salem, North Carolina (1965); Warner Hall, Oberlin College Conservatory, Oberlin, Ohio (1974); and Duke University Chapel, Durham, North Carolina (1976). In addition to the restoration of many smaller instruments in the Netherlands he has restored major organs there and in several other countries, including the Schnitger organ of 1721 in the Michaelskerk, Zwolle, the Netherlands (1955); the 16th-century instrument in the cathedral at Évora, Portugal (1967); and the two organs from the 17th and 18th centuries in the Metropolitan Cathedral of Mexico City (1977).

Flentrop has also been active in the Dutch Organ Builders' Association and was one of the founders of the International Society of Organ Builders, of which he was president from 1957 to 1965. He received honorary degrees from the Oberlin Conservatory in 1968 and Duke University in 1976.

On Flentrop's retirement in 1976 direction of the firm was assumed by J.A. Steketee (*b* 1936). The firm has continued to build and design new organs, including Seitoku College, Tokyo (1983); Holy Name Cathedral, Chicago (1989); Dunblane Cathedral, Scotland (1990); and the State Conservatory, Kazan′, Russia (1997). Major restorations include the Walcker organ in Riga Cathedral, Latvia (1983), and the Schnitger organ in St Laurenskerk, Alkmaar, the Netherlands (1987). Steketee was succeeded by C.P.W. van Oostenbrugge (*b* 1947) in August 1998. Significant works since then include a large new organ for the Muziekcentrum in Enschede, the Netherlands (1999), and the reconstruction of the organ in the Petrus-en-Pauluskerk, Ostend.

JOHN FESPERMAN/R

Flesch, Carl (*b* Moson [now Mosonmagyaróvár], 9 Oct 1873; *d* Lucerne, 14 Nov 1944). Hungarian violinist and teacher. He received his first violin lessons at the age of five. From 1886 to 1890 he studied at the Vienna Conservatory under J.M. Grün, then at the Paris Conservatoire, which he left in 1894 with a *premier prix*; his teachers were Sauzay and, particularly, Marsick. He made his début in Vienna in 1895 and in Berlin the following year. From 1897 to 1902 he taught and led the Queen's

String Quartet in Bucharest. He then moved to Amsterdam, where he became known as a teacher and chamber music player (1903–8). A milestone in his career was his series of five historical concerts in Berlin in 1905, illustrating the development of violin literature through the works of 50 composers from the 17th century to the 20th – a scheme which was afterwards adopted by other violinists.

After settling in Berlin in 1908, Flesch enjoyed growing international acclaim as a soloist, chamber music player (Trio Schnabel-Flesch-Becker) and teacher. In 1921 and 1922 he gave master courses at the Hochschule für Musik and was a professor there from 1928 to 1934. During the intervening years (1924–8) he was head of the violin department at the newly founded Curtis Institute in Philadelphia. His private summer courses at Baden-Baden (1926–34) attracted an international group of young violinists. In 1934 he moved to London. During World War II he was in the Netherlands, where he was detained by the occupying Germans. He was finally permitted to return to his native Hungary. From 1943 to his death he taught at the newly founded Lucerne Conservatoire and continued to perform in public.

Flesch was famous for his classical purity, his impeccable technique, and his intellectual grasp of styles. His interpretations of the Beethoven and Brahms concertos had noble grandeur and inner warmth, but he could also play virtuoso pieces by Paganini and Hubay with surprising élan. A technical speciality was his playing of fingered octaves with amazing speed and accuracy. He was not a 'born' violinist but developed through constant analysis and self-criticism. This diagnostic ability made Flesch into one of the greatest teachers of our time: he approached technical and musical problems in a rational way. His method is available in books and treatises which form the basis of modern violin playing. The most comprehensive is *Die Kunst des Violin-Spiels* and the most concentrated the *Urstudien* which reduce technique to a few basic motions. He also made many editions. His pupils included Max Rostal, Szymon Goldberg, Henryk Szeryng, Henri Temianka, Ida Haendel, Ginette Neveu and Alma Moodie.

The Flesch Medal, an award in his memory, was established through the initiative of Max Rostal and Edric Cundell, then head of the Guildhall School of Music and Drama, which then administered it. The first competition (1945) was won by Raymond Cohen, the second (1946) by Norbert Brainin. In 1968 the competition became part of the Festival of the City of London, and in 1970 it was opened to violists. As the City of London International Competition for Violin and Viola (Carl Flesch Medal), it was held every two years, and was one of the most important testing grounds for aspiring soloists up to the age of 32. The competition was suspended in 1992.

BORIS SCHWARZ/MARGARET CAMPBELL

Fleta, Miguel (*b* Albalate de Cinca, 28 Dec 1893; *d* La Coruña, 30 May 1938). Spanish tenor. He studied at the Barcelona Conservatory and then in Milan with Luisa Pierrich, whom he later married. He made his début in 1919 at Trieste in Zandonai's *Francesca da Rimini*, then sang in Vienna (1920), Rome (1920–22, including the première of Zandonai's *Giulietta e Romeo*), Monte Carlo (1921), Madrid (1921–2) and Buenos Aires (1922), in *Rigoletto*, *Aida*, *Tosca* and, above all, in *Carmen*. He appeared at the Metropolitan (1923–5), at La Scala (1924), where he returned to sing Calaf in the first *Turandot* in 1926, and at the Teatro Colón from 1922 to 1927; his Paris début, singing Cavaradossi, followed in 1928. His repertory included *Lucia*, *Pagliacci*, *Andrea Chénier* and *Manon*. He had a beautiful voice remarkable for its colour, range, evenness, sensual warmth and ease of inflection and expression, and was considered by Puccini to be the ideal performer of his works. He had also an exuberant and passionate temperament, but lacked taste and style, and failed to care for his voice, so that by 1928 he was already in decline. His virtues and failings are vividly exemplified in many recordings.

RODOLFO CELLETTI/R

Fletcher, Alice Cunningham (*b* Cuba, 15 March 1838; *d* Washington DC, 6 April 1923). American ethnologist. She devoted herself to the study of the Great Plains Indians, so completely winning their confidence that she was privileged to gather data and record ceremonials and rituals not usually witnessed by non-Indians. While living on the Omaha reservation in 1881, she became interested in the education of the 24-year-old son, Francis, of Chief Joseph La Flesche. She took him to Washington where he lived with her, as her 'son by adoption', until 1910; with him, Fletcher wrote an important monograph on the Omaha tribe (1911).

Fletcher, who was an assistant at the Peabody Museum of American Archaeology and Ethnology from 1882, began collecting ethnological and musical data in 1883 among the Omaha and Dakota Indians. She also wrote about other tribes and kinship groups and transcribed hundreds of songs including the first complete record of the Pawnees' Hako ceremony. Initially she notated melodies by ear, having her informants repeat each song until she was satisfied that she had an accurate transcription. Soon after the pioneer field use of the Edison

phonograph by Jesse Walter Fewkes in 1890, Fletcher adapted her procedure to incorporate it and that enabled her to obtain a greater quantity of material. Her wax cylinder recordings (1893) of Omaha and Osage songs were mostly published by the Peabody Museum; the originals were transferred to the Archive of Folk Song at the Library of Congress.

Fletcher's discussions and articles generated considerable interest in the scientific and aesthetic value of Indian music among other ethnologists and musicians. Fewkes, an ethnologist, and Benjamin Ives Gilman, a psychologist, followed her with their own pioneer work, applying scientific methods to the analysis of Indian melodies. For technical consideration of the music she collected, Fletcher turned to John Comfort Fillmore, with whom she worked closely from 1893 to 1896. As a result Fillmore became a prolific author of articles on American Indian music. Contemporary American composers began to use Indian music in their compositions: the first was Edward MacDowell in his 'Indian' Suite for orchestra (op.48, 1890); others included C.T. Griffes and Arthur Farwell.

Fletcher was also active in organizations, and held various offices in learned societies. Her publications include 46 monographs on aspects of Indian music and ethnology.

SUE CAROLE DE VALE

Fletcher, Harvey (*b* Provo, UT, 11 Sept 1884; *d* Provo, 23 July 1981). American acoustician. He studied at Brigham Young University in Provo (BS 1907), then at the University of Chicago, where he gained his doctorate in 1911 for research into the charge of the electron. In 1916 he joined the staff of Bell Telephone Laboratories in New York; he remained there for 33 years, becoming director of acoustical research in 1928 and of physical research in 1935. In 1949 Fletcher was appointed professor of electrical engineering at Columbia University, and in 1952 he returned to Brigham Young University as director of research. He became professor emeritus in 1974, and continued his research activity until his death. Fletcher was one of the great pioneers of the science of psychoacoustics, and his work on the human perception of sound was of fundamental importance. Responsible for the first public demonstration of stereophonic sound reproduction in 1934, he later worked intensively on theories of pitch perception and contributed to the understanding of the inharmonicity of piano strings. A co-founder of the Acoustical Society of America in 1929, he was made an honorary fellow of the society in 1949 and was awarded its Gold Medal in 1957.

WRITINGS

MURRAY CAMPBELL

Fletcher, John (*b* Leeds, 19 May 1941; *d* London, 6 Oct 1987). English tuba player. He studied natural sciences at Pembroke College, Cambridge, and as a tuba player was largely self-taught, with occasional tuition from Clem Lawton in Leeds. He gained initial orchestral experience with the National Youth Orchestra before joining the BBC SO in 1964. From 1968 to 1987 he was a member of the LSO. His most significant work was with the Philip Jones Brass Ensemble, with which he toured worldwide and made many recordings. His virtuosity allowed him to set new standards for his instrument in both orchestral and chamber settings, and made him a source of great inspiration. His solo recordings include Vaughan Williams's Concerto (with the LSO under Previn) and Edward Gregson's Concerto for tuba and brass band, which was written for him. He remained a tutor for the National Youth Orchestra until his death; a trust fund in his memory was set up to help young players in the orchestra.

EDWARD H. TARR

Fletcher, Maria. *See* MANINA, MARIA.

Fletcher, Neville (Horner) (*b* Armidale, NSW, 14 July 1930). Australian physicist and acoustician. He studied at Sydney University (BSc 1951) and Harvard (PhD 1956); after a period working in industry and with the Common-

wealth Scientific and Industrial Research Organisation (CSIRO) Radiophysics Laboratory, he was appointed in 1963 to a chair in physics at the University of New England, NSW. In 1983 he became director of the CSIRO Institute of Physical Sciences and in 1988 visiting fellow at the Australian National University. He studied the flute with Victor McMahon in Sydney and James Pappoutsakis in Boston. Most notable in Fletcher's extensively published research is his work with Suzanne Thwaites on sound generation in flutes and organ pipes, on flute performance techniques and on reed and lip-valve generators in woodwind and brass instruments. He also studied the vibration characteristics of gongs and cymbals, and with the composer Moya Henderson invented the alemba, a keyboard percussion instrument of tuned triangles. He is best known as co-author of the influential *The Physics of Musical Instruments* (1991). A fellow of the Australian Academy of Science (1976) and a member of the Order of Australia (1990), in 1998 Fletcher was awarded the silver medal of the Acoustical Society of America.

MURRAY CAMPBELL, CLIVE GREATED

Fletcher, Percy (Eastman) (*b* Derby, 12 Dec 1879; *d* Windsor, 10 Sept 1932). English composer, orchestrator and director of music. He trained as a violinist, pianist and organist, was in charge of the music successively at the Prince of Wales, Savoy, Daly's and Drury Lane theatres, and, for the last 17 years of his life, at His Majesty's Theatre. He conducted the record-breaking run of Norton's *Chu Chin Chow* (which he also mainly orchestrated). He also orchestrated the *Hiawatha* and *Minnehaha* suites from Coleridge-Taylor's posthumous music (1919 and 1925 respectively), as he did Woodforde-Finden's *Indian Love Lyrics*, *A Lover in Damascus* and *The Pagoda of Flowers*. His choral selections from Wagner's *Die Meistersinger* and *Parsifal* were once popular with choirs.

Fletcher's own musical output was vast. To succeed *Chu Chin Chow* in 1921 he wrote *Cairo*; its intermezzo is still played. Among his partsongs, *Ring Out, Wild Bells* shows his mastery of late Edwardian vocal styles, to which he added some unusual modulations of his own. *The Passion of Christ* (1922) displays the influence of Elgar. The tone poem *Labour and Love* (1913) and the *Epic Symphony* (1926) were commissioned for the Crystal Palace Brass Band Festivals. His instrumental suites, such as *Rustic Revels* (1918) or *Sylvan Scenes* (1921), suggest responses to Grieg and Coleridge-Taylor, while the solid craftsmanship and brilliance of his *Festival Toccata* (1915) for organ owe something to the French School. Fletcher is known today by the splendid waltz *Bal masqué* (1914).

WORKS
(*selective list*)

STAGE

Mecca (a mosaic in music and mime, 3, O. Asche), New York, Century, 4 Oct 1920 [perf. London, His Majesty's, 15 Oct 1921, under the new title Cairo]

The Good Old Days (romantic musical play, 3, Asche), London, New Gaiety, 27 Oct 1925

INSTRUMENTAL

Orch: The Spirit of Pageantry, grand march (1911); Folk Tune and Fiddle Dance, str (1914); 2 Parisienne Sketches (1914): 1 Demoiselle chic, int, 2 Bal masqué, valse caprice; Prelude to an Unwritten Sym., 1914; Rustic Revels, suite (1918); Woodland Pictures, rural suite (1920): 1 Introduction and Dance: In the Hayfields, 2 Romance: An Old World Garden, 3 Humoreske: The Bean Feast; The Crown of Chivalry, march (1927); Ballade and Bergomask (1931); In the Olden Style, suite; Vanity Fair, ov.

Brass band: Labour and Love, tone poem (1913); Epic Sym. (1926)

Orch and arrs.: Chu Chin Chow (F. Norton) (1916); Hiawatha (S. Coleridge-Taylor), ballet suite (1919); Minnehaha (Coleridge-Taylor), suite (1925); Indian Love Lyrics, A Lover in Damascus, The Pagoda of Flowers (A. Woodforde-Finden)

Org: Interlude (1901); Festival Toccata (1915); Fountain Reverie (1915); Festal Offertorium (1926)

Pf: Sylvan Scenes (1921): 1 In Beauty's Bower, 2 Sylvia Dances, 3 The Pool of Narcissus, 4 Cupid's Carnival; other pf works

Many arrs. of own inst works

VOCAL

Choral: The Walrus and the Carpenter (L. Carroll), children's cant (1910); The Passion of Christ (1922); Cupid's Garland, S, T, B, male chorus, orch (1931); many arrs., incl. selections from Die Meistersinger von Nürnberg (R. Wagner) and Parsifal (Wagner)

Many partsongs, incl. Ring Out, Wild Bells (A. Tennyson) (1914)

Songs: 4 Tennyson Lyrics (1926): 1 A Lullaby, 2 The City Child, 3 The Reign of Roses, 4 The Throstle; many other songs

Principal publishers: Boosey & Hawkes, Novello

GEOFFREY SELF

Fleuret, Maurice (*b* La Talaudière, 22 June 1932; *d* Paris, 22 March 1990). French writer on music and administrator. He studied music at the Paris Conservatoire with Dufourcq, Roland-Manuel and Messiaen, and was subsequently a lecturer (1955–65) and artistic adviser (from 1974) of the Jeunesses Musicales de France. His other activities included editing the review *Musique de tous les temps* (1958), directing the music department of the Centre National de Diffusion Culturelle (1960–64) and working as music critic of *France observateur* (1962–4) and *Nouvel observateur* (from 1964). From 1962 he was also a producer at ORTF and then at Radio-France, editing *Evénements-musique*, and in 1967 he became head of the music section of the Paris Musée d'Art Moderne. He was director of music and dance at the French Ministry of Culture from 1981 to 1986, and founded in 1986, together with Henry-Louis de La Grange, the Bibliothèque Gustav Mahler in Paris.

Fleuret's main interest was contemporary music, which he promoted in numerous writings, as well as radio and television programmes, concert series and festivals (notably Semaines Musicales Internationales de Paris, 1968–74, and an annual Fête de la Musique); as an ethnomusicologist he undertook fieldwork in West Africa (1966, 1967), travelled extensively throughout Africa and Asia, and organized many concert series in Europe. His papers are held in the Bibliothèque Gustav Mahler.

Fleuretis. *See* FLOS.

Fleurie (*fl* ?1385). French composer. He is probably to be identified with the Martin Florie who was chaplain at the Ste Chapelle in Paris in 1385. His only known composition is a three-voice Sanctus from the Avignon repertory (in *F-APT* 16*bis*), in discant style; surprisingly, it omits the Benedictus section (edn in CMM, xxix, 1962, p.120, and in PMFC, xxiii*a*, 1989, p.36).

GILBERT REANEY

Fleury, André (Edouard Antoine Marie) (*b* Neuilly-sur-Seine, 25 July 1903; *d* Paris, 8 June 1995). French organist and composer. His father, Gaetan Fleury, was a pupil of d'Indy and Paul Vidal. His teachers at the Paris Conservatoire, which he entered in 1915, were Henry Letocart, Gigout and Dupré. He also studied the organ privately with Marchal and Vierne, and composition with Vidal. From 1921 he was Gigout's assistant at St Augustin, and also assisted Tournemire at Ste Clotilde. In 1930 he succeeded Jean Huré at St Augustin, and in 1943 he became organ professor at the Ecole Normale. In 1949 he was appointed organist of Dijon Cathedral and piano professor at the Dijon Conservatory. In 1971 he returned to Paris to become co-organist, with Jean Guillou, of St Eustache. His recital career, which began brilliantly, was interrupted by a serious illness caused by the privations of the German occupation. In his prime he played in London for the BBC and for the Organ Music Society to which he introduced pieces from Messiaen's *La nativité du Seigneur* as early as 1937. A sturdy technique and exceptional rhythmic verve characterized his playing. Fleury's compositions reflect a pre-Messiaen and even pre-Dupré chromaticism within unequivocally tonal bounds. His Prelude and Fugue in F minor won the Halphen and Lili Boulanger prizes in 1929, and his Prelude, Andante and Toccata was awarded first mention at the Concours des Amis de l'Orgue in 1932. Apart from his organ works he wrote Three Pieces for piano (1935), an Andante for piano trio, two volumes of simple pieces for harmonium and four songs.

WORKS
(*selective list*)

Organ: Allegro symphonique (1927); Prelude and Fugue, f (1928); 24 Pieces (1930–33); Prelude, Andante and Toccata (1932); Postlude (1935); Sym. no.1 (1947); Sym. no.2 (1948); Prelude and Fugue, d (1957–9); Fantaisie, c (1969); Prélude, Cantilène et Finale (1980); other short pieces for liturgical use
Pf music, chamber music, songs

FELIX APRAHAMIAN/R

Fleury, Charles, Sieur de Blancrocher [Blanrocher, Blancheroche] (*b c*1605; *d* Paris, Nov 1652). French lutenist. The son of a *valet de chambre*, writers of the period refer to him as Blancrocher in their summaries of leading performers. His sudden death (following a fall down a flight of stairs) inspired a number of *tombeaux* from his contemporaries, Denis Gaultier, François Du Fault, Louis Couperin and Johann Froberger (the last witnessed the accident). Due to the paucity of attributed works, it appears that Fleury thrived mainly as an amateur performer; a single allemande (or gigue) is extant (*D-Kl*, *ROu*, *F-B* (*Manuscrit Vaudry de Saizenay*, 1699; facs., Geneva, 1980; ed. B.K. Burchmore, in preparation), *GB-En*, *Ob*).

BRUCE K. BURCHMORE

Fleury, Louis (François) (*b* Lyons, 24 May 1878; *d* Paris, 10 June 1926). French flautist. He studied at the Paris Conservatoire with Paul Taffanel, winning a *premier prix* in 1900. In 1902 he joined the Société Moderne des Instruments à Vent, succeeding Georges Barrère as director in 1905 and commissioning more than 100 new chamber works over the next 20 years. In 1913 he also gave the première of Debussy's *Syrinx* (originally called *La flûte de Pan*), which was dedicated to him. Fleury gained some experience as an orchestral player but, unusually for a flautist at that time, chose to concentrate on a solo and chamber music career, achieving success throughout Europe and America. Fleury was an elegant player and his broad musical and cultural interests also made him a perceptive writer and scholar. He revived and edited much 18th-century music for the flute and wrote extensively about the instrument and about musical life in general in many musical journals. He also completed the article on the flute which Taffanel had planned for Lavignac's *Encyclopédie de la musique et Dictionnaire du Conservatoire* (Paris, 1920–31).

EDWARD BLAKEMAN

Fleury, Nicolas (*b* ?Châteaudun, Eure-et-Loire, *c*1630; *d* after 1678). French composer, *haute-contre* singer and theorbo player. He is referred to in the *Mercure galant* for March 1679 as being 'from Châteaudun'. He served the Duke of Orléans as *ordinaire de la musique* from 1657, but by 1663 he was in England, where he was admitted as one of 'the King's French Musicians' by a warrant of 23 July, together with Jean de la Volée and Claude Desgranges. This appointment must have been short-lived, however, since the *Etat de la France* of 1665 lists Fleury as *Haute-contre ordinaire* among musicians serving the Duke of Orléans. Fleury's *Méthode pour apprendre facilement à toucher le théorbe sur la basse-continuë* (Paris, 1660/*R*) is a manual devoted to teaching

the realization of thoroughbass on the theorbo by means of tablature; his rules are especially directed to beginners. The work shows that quite early there was interest in France in thoroughbass practice as well as in the theorbo as an accompanying instrument. Fleury's *airs* reflect the vogue of his time for love songs and drinking-songs as well as for *airs spirituels*. His settings show particular concern with expressing the dramatic quality of the text, which he achieves largely through the use of ornamented melodic lines, vocal leaps, active basses, mild chromaticism and changes of metre to accommodate text scansion.

WORKS

Airs spirituels, 2vv, cont (Paris, 1678)
Depuis que de ces lieux, air, 1v, bc, 1692[3], 1692[5]
Qu'on est content, air, 1v, in Recueil d'airs sérieux et à boire (Paris, 1704)
Dialogue, Mars, la Victoire, la Paix, music lost, referred to in *Mercure galant* (March 1679)

ALBERT COHEN

Fleury Playbook. The title usually given to a separable unit of the manuscript *F-O* 201, ff.176–243. The four gatherings contain the following liturgical plays: *Tres filie*, *Tres clerici*, *Iconia Sancti Nicholai*, *Filius Getronis*, *Officium stelle*, *Ordo Rachelis*, *Visitatio sepulchri*, *Peregrinus*, *Conversio Sancti Pauli*, *Resuscitatio Lazari* (these are editorial titles used by Young). The provenance of the manuscript is traditionally supposed to be the Benedictine monastery of Fleury (St Benoît-sur-Loire); an argument for the abbey of St Lomer at Blois (see Corbin, 1953) has been questioned (Collins, see Campbell and Davidson, 1985). The plays date from the 12th century, and the manuscript was probably copied late in that century; the music is written in diastematic neumes. The literary texts have been edited by Young and others, and the plays complete with their music by Coussemaker (1860), and by Tintori and Monterosso (1958) with complete facsimiles of poor quality.

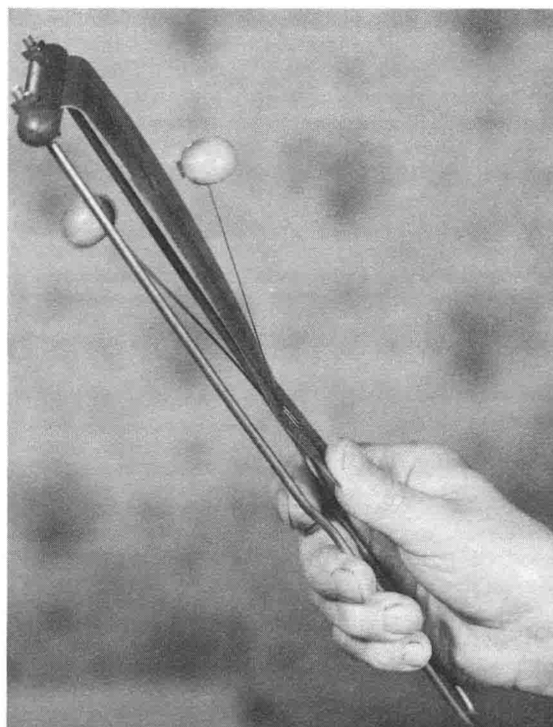
JOHN STEVENS/RICHARD RASTALL



Fleute a neufte trous. *See* RECORDER.

Flex (Lat. *flexa*). In Latin monophonic psalmody, a minor inflection. *See* INFLECTION, (1). *See also* PSALM, §II, 7(iii).

Flexa. *See* CLIVIS.

Flexa resupina. *See* PORRECTUS.

Flexatone. A modern instrument for special effects consisting of a small flexible metal sheet suspended in a wire frame ending in a handle. A wooden knob mounted on a strip of spring steel lies on each side of the metal sheet. The player shakes the instrument with a trembling movement which causes the beaters to strike the sides of the metal sheet. An eerie tremolo is thus produced, and the pitch altered by variable pressure on the sheet of

Flexatone

metal. It is extremely difficult to produce a particular required pitch, as the thumb pressure exerted on the frame to vary the pitch is subtle, and difficult to gauge. Different sizes of flexatone have varying ranges of pitch. An invention for a flexatone occurs in the British Patent Records of 1922 and 1923. In 1924 the 'Flex-a-tone' was patented in the USA by the Playertone Co. of New York, and introduced as an instrument to make 'jazz jazzier'.

During its brief success as a novelty instrument the flexatone attracted the interest of Honegger and Schoenberg. Honegger employed it in *Antigone* (1924–7) and Schoenberg in his Variations for Orchestra (1926–8), *Von Heute auf Morgen* (1928–9) and *Moses und Aron* (1930–32). In Khachaturian's Piano Concerto (1936) it plays the melody line with the strings in the second movement: there is evidence that the composer had wanted to use a musical saw but, as no instrument (or player) was available, substituted a flexatone. Other composers to score for the flexatone include Henze (*Elegy for Young Lovers*, 1959–61) and Penderecki (*De natura sonoris I*, 1966). The flexatone (like the musical saw) is often used in film music. In the Hornbostel and Sachs system it is classified as an indirectly struck idiophone.

JAMES BLADES/JAMES HOLLAND

Flexus (Lat.: 'curved', 'bent'). In Western chant notations an adjective describing a neume of more than two notes where notes in ascending order are followed by a final turn downwards. Thus a PORRECTUS *flexus* has four notes forming the following steps: down, up, down. (For illustration *see* NOTATION, Table 1; *see also* M. HUGLO: 'LES NOMS DES NEUMES ET LEUR ORIGINE', *EG*, I, 1954, PP.53–67.)

DAVID HILEY

Flickkanzone (Ger.). *See* QUILT CANZONA.

Flicorno (It.). A valved bugle of widely conical profile; the Italian equivalent of the Austrian FLUGELHORN, the Spanish *fiscorn* and the French SAXHORN. Family members include: *sopracuto* in B♭ or A; *sopranino* in E♭ or D; *soprano* in C, B♭ or A; *contralto* [*clavicorno, Genis*] in F, E♭ or D; *tenore* in C or B♭ (equivalent to the English baritone; *see* BARITONE (ii)); *baritono* [*bombardino*] in C or B♭ (equivalent to the EUPHONIUM); *basso* [*eufonio, bombarda a 4 pistoni*] in C or B♭ (same bore as the *baritono* but always with four valves); *basso-grave* [*bombardone*] in F or E♭ (used in the orchestra like the bass tuba in F or E♭; *see* TUBA (i)); and *contrabasso* in C or B♭ (equivalent to the bass tuba in C or B♭).

□

Flicorno baritono [flicorno basso] (It.). The tenor tuba in B♭. *See* TUBA (i).

Flicorno soprano (It.). *See* FLUGELHORN.

Fliessend (Ger.: 'flowing'; present participle of *fliessen*, 'to flow', 'run', 'melt'). A word often used as a tempo (and mood) designation, particularly in the context *fliessender Viertel* ('flowing crotchet').

Fliew. *See* PIROUETTE.

Flight, Benjamin (*b* London, *c*1767; *d* London, 1847). English organ builder. *See under* FLIGHT & ROBSON.

Flight & Robson. English firm of organ builders. The partnership began in 1806 when Benjamin Flight (*b* London, *c*1767; *d* London, 1847), was joined by Joseph Robson (*d* ?1842). Flight's father, Benjamin (*fl* 1772–1805) was credited with introducing the barrel organ to churches, and Flight and Robson maintained a reputation for ingenuity in the construction of mechanical organs demonstrated in the 'machine organ' for the Earl of Kirkwall (1811) and the more famous APOLLONICON (first exhibited in 1817). They also devised a system of handles and cranks for blowing the bellows (Trinity College, Cambridge, 1819) and disputed their apprentice J.C. Bishop's claim (*see* BISHOP) to have invented the COMPOSITION PEDAL.

The firm was declared bankrupt in 1832. Robson re-established himself in the old premises in St Martin's Lane, London; he was succeeded (*c*1842) by his son, Thomas Joseph F. Robson (*c*1800–76) who, by 1851, was employing 20 men. The firm built a number of progressive organs at this time, including St Dunstan-in-the-West, London (1834), St Michael, Chester Square, London (1845), and Buxton Road Chapel, Huddersfield (*c*1850). The Flights also continued on their own account: John Flight (*c*1802–90), son of the younger Benjamin Flight, benefited from the patronage of FREDERICK ARTHUR GORE OUSELEY, as a result of which he built organs in St Barnabas, Pimlico (1849), and St Michael's College, Tenbury (1854). Both firms had ceased work by the 1880s.

NICHOLAS THISTLETHWAITE

Fliyer, Yakov (Vladimirovich) (*b* Orekhovo-Zuyevo, 21 Oct 1912; *d* Moscow, 18 Dec 1977). Russian pianist and teacher. He graduated from Igumnov's class at the Moscow Conservatory in 1934 and two years later was awarded first prize at the Vienna Competition, in which Gilels was placed second. Fliyer taught at the Moscow Conservatory from 1937, and in 1945 was appointed professor, a post he held with great distinction until his death. An impeccable virtuoso, whose style was equally suited to large- and small-scale works alike, his international career was eclipsed by the Cold War. He did not make his United Kingdom début until 1962. Notable among the relatively few recordings he left is Khachaturian's Piano Concerto, with the composer as conductor. In latter years his reputation rested largely on his abilities as a teacher. A man of wide culture, he paid much attention to imaginative use of tone quality, and in matters of interpretation was sufficiently objective to allow the student's own response to the music to be the guiding force. Among his best-known pupils are Lev Vlasenko, Viktoria Postnikova, Mikhail Pletnev and the composer Rodion Shchedrin.

JAMES METHUEN-CAMPBELL

Flodin, Karl (Theodor) (*b* Vaasa, 10 July 1858; *d* Helsinki, 29 Nov 1925). Finnish writer on music, critic and composer. After attending Helsinki University (MA 1883) he studied music theory and composition in Helsinki with Richard Faltin, and in Leipzig (1890–92) with Jadassohn. He was music critic for the Swedish-language Finnish daily papers *Nya pressen* (1883–98, 1900, 1906–8) and *Aftonposten* (1899) and editor of *Helsingfors posten* (1900–05). In 1901 he founded the art and literature periodical *Euterpe* (1901–5), which supported the avant garde. Subsequently he moved to Buenos Aires (1908–21), where he was music critic for the German paper *La Plata*. He was one of the founders of professional music criticism in Finland (in Swedish); his judgments, though often dogmatic, were based on a wide knowledge of music, literature and the arts. His compositions include four cantatas, *Helena* (a lyric scene from Goethe's *Faust*), *Luca Signorelli* (a ballade for baritone and orchestra), *Cortège* for wind orchestra, and about 30 solo songs, 20 choral songs and over 80 piano pieces. They are less original than his writings, but show a refined lyrical taste and a strong Wagnerian influence in the harmony.

ERKKI SALMENHAARA

Flonzaley Quartet. American string quartet. It was established in 1902 in New York by Edward J. De Coppet, a banker of Swiss descent, for private performances in his house; there was a stipulation that the members, all trained in Belgium, should devote themselves entirely to rehearsing and playing together. They were Adolfo Betti, Alfred Pochon, Ugo Ara and Iwan d'Archambeau. Ara

left in 1917 to join the Italian army, and was replaced first by Louis Bailly, then in 1924 by d'Archambeau's brother Felicien, and in 1925 by Nicolas Moldavan. 'Flonzaley' was the name of De Coppet's summer estate, near Lake Geneva, where the first rehearsals were held. In 1904 the quartet gave a European tour with great success, and from then onwards it gave public concerts regularly in the USA and Europe. The finish, brilliance and beautiful tone quality of its playing were widely admired, and made it one of the most important quartets in the USA in the first quarter of the century. Its performances were, however, generally regarded as elegant and graceful rather than especially powerful or profound. The quartet was disbanded in 1928 and gave its last London concert in April of that year. It was one of the first quartets to make recordings; among them were works by Haydn, Mozart, Beethoven, Brahms (including the Piano Quintet with Harold Bauer), Dohnányi, Schubert and Schumann (including the Piano Quintet with Gabrilovich).

RICHARD ALDRICH/ROBERT PHILIP/R

Flood, W(illiam) H(enry) Grattan (*b* Lismore, Co. Waterford, 1 Nov 1859; *d* Enniscorthy, 6 Aug 1928). Irish music historian, organist and composer. He received his first musical education from his mother and was then educated at Mount Melleray Roman Catholic University, All Hallows College, Dublin, and Carlow College. Although intended for the priesthood he turned to antiquarian studies (chiefly musical) and was organist of Belfast Pro-Cathedral from 1876, Thurles Cathedral from 1882 and Enniscorthy Cathedral from 1895 to his death. He also taught music at St McCartan's College, County Monaghan, St Kieran's College, County Kilkenny, and Clongowes Wood College, County Kildare. Devoting himself to raising the standard of church music, he wrote three masses and numerous other church compositions. The National University of Ireland awarded him an honorary DMus (1907) and his services to Catholic church music were recognized by the award of the papal cross Pro Ecclesia et Pontifice and his elevation to the Order of St Gregory (1922). He was a member of the Coleraine Harp Festival and the Musical Antiquarian Society, vice-president of the Irish Folksong Society and president of the music section of the Celtic Congress, Brussels, in August 1910 and July 1913.

Flood is chiefly remembered for his work on the history of Irish music and for his studies on Tudor composers. Among his Irish works are studies of folksong, music theatre and visiting musicians as well as biographies of John Field and Vincent Wallace. He also published books on local history. Now regarded as unreliable for missing sources, his studies are characterized by an enthusiastic rather than thorough appreciation of detail. In some of his claims, such as the Irish origin of Dowland or Purcell, his patriotism led him to confuse clues with evidence. Flood was, however, a pioneer in the areas he touched upon. He had access to sources which were later burnt during the Irish civil war (1921–3) and he was the first to point out facts which were of immense value to later historians.

AXEL KLEIN

Floquet, Etienne Joseph (*b* Aix-en-Provence, 23 Nov 1748; *d* Paris, 10 May 1785). French composer. He studied in the *maîtrise* of St Sauveur at Aix and began his career by writing sacred music. He had motets performed at the age of ten, and a mass when he was 12. He was in Paris by 1767 and soon gained recognition, having sacred and secular works performed, such as his motet *Deus noster refugium* in 1769, and attracting aristocratic patronage. His first theatrical work, *L'union de l'Amour et des arts*, staged at the Opéra in 1773, is a *ballet-héroïque* with three independent entrées. In a period when tragic opera was languishing it won general approval; Floquet was the first composer to be called on stage after a performance at the Opéra, and the work was given 60 times up to January 1774. The following year Floquet joined the Opéra orchestra, playing the viola; and Gluck began to distract attention from native talent. Floquet's second *ballet-héroïque*, *Azolan*, was performed between *Orphée* and the revival of *Iphigénie en Aulide*. Its comparative failure (it was performed 20 times but never revived) was attributed to Gluckist intrigue: it soon acquired the sobriquet 'désolant'. Nevertheless, Floquet had faithful supporters (self-styled 'Floquetistes') who joined the cabal against Gluck's *La Cythère assiégée* in 1775.

Meanwhile, possibly on the advice of Grimm, Floquet went to Italy. He studied composition with Nicola Sala in Naples and counterpoint with Padre Martini in Bologna. When he returned in 1777, Piccinni was Gluck's established rival, and the Opéra showed little interest in native composers. He composed his first *tragédie*, *Hellé*, to a

libretto previously declined by Mondonville, and his first *opéra comique*, *La nouvelle Omphale*; they waited until 1779 and 1782 for performance. *Hellé* had only three performances; Floquet had been offered a greatly increased fee if it was successful. Its failure was attributed to Laguerre's poor performance in the title role, but Floquet was outstripped in the Italian style by Piccinni and in dramatic strength by Gluck. *La nouvelle Omphale* was well received, as was *Le seigneur bienfaisant*, which deals with the joys and mishaps (righted by the benevolent lord) of ordinary people. Although it was cordially despised by Gluck and his followers, its considerable charms attracted the public and it remained in repertory until 1787.

Floquet determined to try another tragic subject, a revision of Quinault's *Alceste* (*Le triomphe d'Alcide*). Both subject and occasion were unpropitious. Recent resettings of Quinault, by Philidor and Gossec, had failed; Gluck's *Alceste* was well known; and Piccinni had just triumphed with *Didon*. *Alceste* was rehearsed and provisionally accepted by the Opéra committee but it was never performed. Floquet was already in poor health, perhaps as the result of loose living; the disappointment with *Alceste* may have hastened his early death. He left two unfinished operas; one, *Alcindor*, was completed by Dezède and performed in 1787.

Floquet's talents suited the pastoral, the picturesque and sentimental, required of him in *Le seigneur bienfaisant*, rather than tragedy or real comedy. His early works show fashionable interest in Italian music, while remaining within the bounds of French taste. His adoption of an Italian style, fostered by his studies there, was never more than skin-deep. In *Hellé*, his most ambitious and most uneven work, the choruses are reminiscent of an older French style but several of the arias are italianate, particularly the florid piece for Legros (Neptune), with two obbligato clarinets. Of *Alceste* only the opening scenes survive; they suggest that Floquet, perhaps trying to imitate Piccinni, had fallen into prolixity.

WORKS

STAGE

first performed at the Paris Opéra unless otherwise stated

L'union de l'Amour et des arts [Bathilde et Chloé: Théodore; La cour d'Amour] (ballet héroïque, 3, P.R. Lemonnier), 7 Sept 1773 (Paris, ?1773)

Azolan, ou Le serment indiscret (ballet-héroïque, 3, Lemonnier), 22 Nov 1774, Acts 1 and 2 *F-Po*, excerpts pubd

Hellé (tragédie lyrique, 3, Lemonnier and La Boullaye), 5 Jan 1779, *Po*, excerpts pubd

Le seigneur bienfaisant (op, 3, M.-A.-J. Rochon de Chabannes), 14 Dec 1780 (Paris, ?1780); rev. (4), 23 Dec 1782 (Paris, 1782)

La nouvelle Omphale (cmda, 3, Beaunoir [A.L.A. Robineau]), Versailles, 22 Nov 1782 (Paris, ?1782)

Grisélidis, 1783 (oc, 3), unperf.

Le triomphe d'Alcide [Alceste], 1783 (tragédie lyrique, 5, P.-A. Razins de Saint-Marc, after P. Quinault), unperf., frags. *Po*

Les françaises, ?1784 (oc, 1, Rochon de Chabannes), unperf.

JULIAN RUSHTON

Flor, Christian (*b* Neukirchen, nr Oldenburg, Holstein, 1626; *d* Neukirchen, 28 Sept 1697). German composer and organist. He came from a well-known Holstein family of clergymen. He probably received his musical education in Hamburg or Lübeck. He was organist of the Marienkirche, Rendsburg, from 1652 to 1654, when he went to Lüneburg to become organist of the Lambertikirche. In 1668 he became deputy organist at the Johanniskirche, the town's principal church, and in 1676 organist there, while retaining his post at the Lambertikirche. He quickly achieved recognition in Lüneburg, and his work as composer, teacher and organ adviser extended beyond the town itself. Michael Jacobi, the Kantor at the Johanniskirche from 1651 to 1663, apparently befriended him, and probably introduced him to Johann Rist, two of whose volumes of poems he set to music. From 1658 on he played the harpsichord in performances of Passion music at the Johanniskirche. When Jacobi died in 1663, he dedicated a funeral motet to his memory. He applied for Jacobi's position as Kantor but was passed over in favour of Friedrich Funcke, 16 years his junior, who showed himself anxious to safeguard his superior status and limited his organist's sphere of activity. When Flor acquired municipal citizenship in 1683, his financial situation improved. After his death Georg Böhm succeeded him as organist of the Johanniskirche. His two youngest sons also became organists at Lüneburg – Johann Georg (1679–1728) at the Lambertikirche and Gottfried Philipp (1682–1723) at the Michaeliskirche.

The bulk of Flor's output consists of sacred strophic songs. The affected artistry of his melodies in Rist's *Neues musikalisches Seelenparadies*, however, deprived the poet of his expected success. His metrical experiments and use of remote keys did not serve the ideals of the Hamburg school of songwriters, and in a letter to Rist he freely admitted that he had written his settings not for laymen but for learned musicians. His surviving vocal concertos are in the motet style. A more significant work is his *St Matthew Passion*, which is one of the earliest oratorio Passions. Flor took the still unaccompanied liturgical

recitative from Melchior Vulpius's Passion of 1613 and composed new music for all the polyphonic movements; Funcke's *St Matthew Passion*, of later origin, corresponds closely to this work. Flor's harpsichord suites and arrangements of dances from Lully's operas show that he was familiar with the latest musical developments in France. His chorales for harpsichord are a synthesis of French harpsichord style and the German chorale.

WORKS

OCCASIONAL

Hochzeitlicher Freuden-Segen, 5vv, 2 insts, bc (Hamburg, 1656)
Hochzeitlicher Freudenklang, 1v, bc (Hamburg, 1659)
So hast du nun geendigt deine Stunden, 6vv, bc (1663) [for funeral of M. Jacobi]

OTHER SACRED

Das heisset wohl gelebet, 1v, bc (Jena, 1657)
164 melodies, bc, in J. Rist: Neues musikalisches Seelenparadies, i, ii (Lüneburg, 1660–62); 8 ed. in Winterfeld; 9 ed. in Zahn, ii–iv

HORST WALTER/ARNDT SCHNOOR

Flor, Claus Peter (*b* Leipzig, 16 March 1953). German conductor. He studied at the Musikhochschule in Weimar and the Leipzig Conservatory, then with Kubelík, Masur and Sanderling, winning first prizes at competitions in Poland and Denmark. His first appointment was as principal conductor of the Sühl PO, 1981–4, then with the Berlin SO, 1984–92 (from 1985 as music director), when he began to build a wider reputation. He made his American début with the Los Angeles PO in 1985 and first conducted the Berlin PO in 1988; the same year he toured Britain with the Berlin SO. He was principal guest conductor of the Philharmonia Orchestra in London, 1991–4, and conducted their 50th anniversary concert in 1995. In 1991 he was appointed principal guest conductor and artistic adviser of the Zürich Tonhalle Orchestra. An exuberant, voluble personality, Flor has also proved an invigorating conductor of opera, mainly in Berlin, Dresden, Hamburg and Munich. Flor's recordings of Mendelssohn's symphonies and music to *A Midsummer Night's Dream* have been much admired for their elegance and lucidity.
